Thevet's fortune was made by his accounts. Thevet, the modest Minorite, became almoner of Catherine de Medici, and later occupied the position of historian and cosmographer to the king. His further life was devoted to cosmographical studies wherein his imagination was allowed generous play.

Chevalier Villegaignon found numerous difficulties in Brazil, and resided for safety on an island in the bay. To Calvin, somewhat secretly, a request had been sent for aid and in March, 1557, a delegation, largely Huguenot, arrived at Fort Coligny. Two Calvinist ministers, Richer and Chartier, appeared as well as a student, Jean de Léry.

Villegaignon received the Calvinists most graciously and the favorable impression which he made is recorded in a letter to Calvin, sent immediately upon their arrival, by Richer and Chartier. Concerning the Chevalier they wrote:

'He embraces, nurtures, and cherishes us as sons . . . With honesty and prudence does he preside over his house which resembles that type of church that Priscilla and Aquila had in their house.'

In another letter Richer states that Villegaignon made public 'profession of his faith, to the great edification of those who were present.' To Calvin himself Villegaignon wrote a letter announcing the arrival of the colonists and recounting difficulties and trials and also a rebellion against his own leadership.

Even upon the day of their arrival the difficulties of life in Antarctic France were impressed upon the newcomers. A banquet was tendered them, at which the principal items of food were fish and a bread made from native dried roots, with rainwater as beverage. Richer wrote:

'The reign . . . has indeed no bread, nor does it produce wine or anything resembling wine, and indeed no fruit of any kind.' At night Indian hammocks were given them for beds.

Theological discussions as to baptism and the necessary composition of the bread and the wine for the Lord's Supper soon disturbed the serenity of the Island of Coligny. Villegaignon and Jean Contat opposed the views of the Calvinists. Political events in France and injunctions from the Cardinal of Lorraine may have assisted in the reconversion of Villegaignon which took place within a few months of the arrival of the Calvinist preachers.

As a result the majority of the Calvinists were then compelled to return to France upon a leaky bark whose captain was given letters of instruction to commend the wandering pilgrims as heretics to the nearest magistrate. Five turned back from the ship fearful of its frailty and three of these heretics were drowned by order of Villegaignon, they being the first Protestant martyrs in America. Others fled to the mainland where the Indians were cannibals and where the Portuguese were no lovers either of heretics or of Frenchmen in Brazil.

Léry gives a detailed account of the perfidy of Villegaignon. Incidentally Léry gives the date of the first Calvinist sermon as March 7, 1557, by Richer, on the text in Psalm 27:4: 'One thing have I desired of the Lord, that I will seek after, that I may

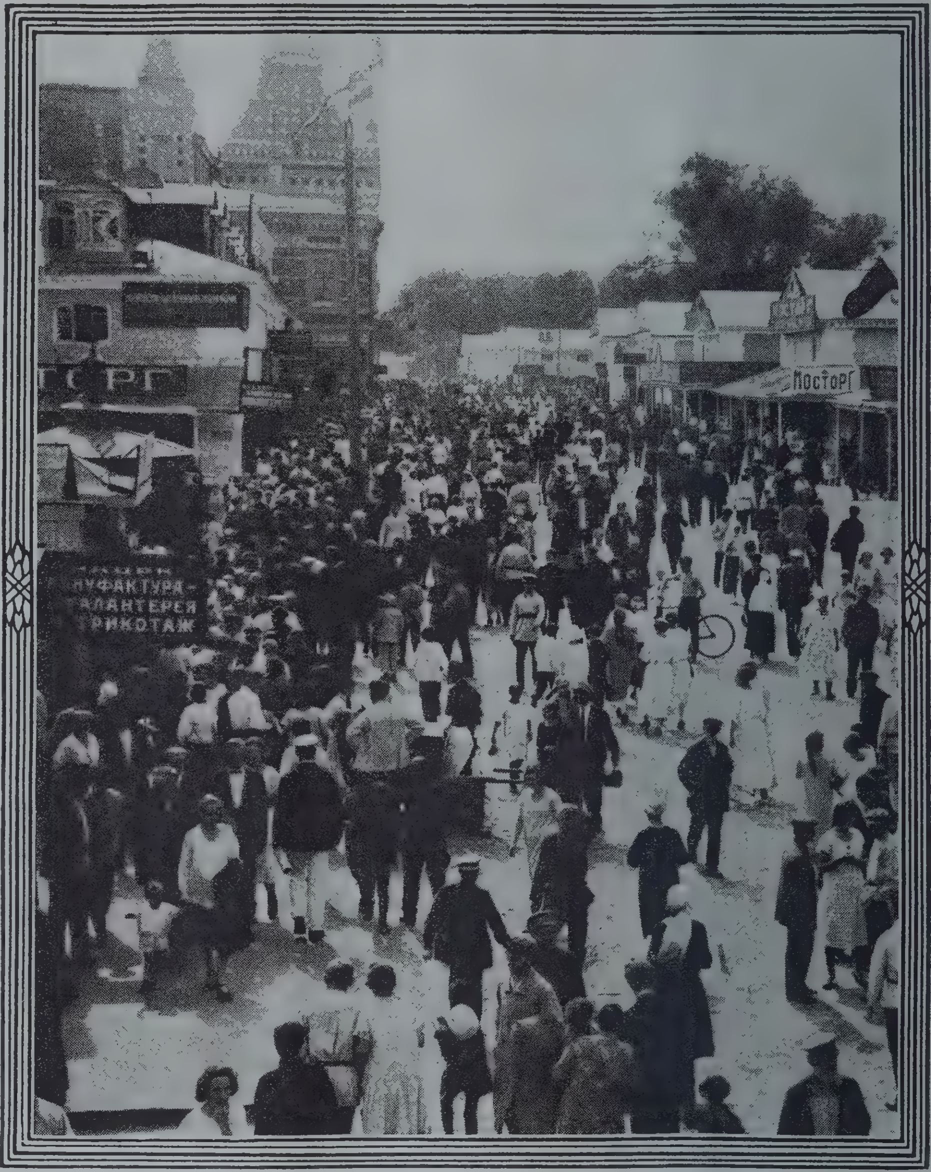
Shall the United States *Recognize*

YES,

Says

PROFESSOR JEROME DAVIS
of Yale University

THESE 'pro' and 'con' views of the advisability of the United States' entering into relations with the bolshevik rulers of Russia were written previous to the occurrence of important events in world diplomacy. Great Britain and France have since found it impossible to maintain relations with Russia, which situation probably provides the answer to the question whether the United States will seek to enter such relations.



—Wide World Photo.
General view of the crowds in attendance at the annual Nizhni-Novgorod fair.

ONE can disapprove of bolshevik theories; he can recognize that there is little or no freedom of speech or of press in Russia today, or he can condemn the hostility of the bolsheviki toward religion—yet none of these things exactly explains the American attitude.

Czaristic Russia was a gigantic country, over twice as large as all the rest of Europe, with a population speaking one hundred different languages or dialects. During a revolutionary period it was changing with lightning rapidity. Testimony differs because there were differing situations and differing truths. Then, too, each American looks at Russia through the social heritage and class bias of his own experience. To judge Russian institutions by American concepts is completely to misrepresent the situation.

Now we need scientifically ascertained fact, but instead we have been deluged with misinformation. Dr. Ross of Wisconsin University dedicates a book 'To my fellow Americans who have become weary of being fed lies and propaganda about Russia.' While there has been propaganda favorable to the bolshevik régime, the larger bulk of it has been from dispossessed property-holders and ex-officials. Once an antibolshevik complex was firmly established in the public mind, Americans have enjoyed having their prejudices played upon. Hence it has become profitable to retail every sort of slander about the bolshevik government, from their 'deadly and dangerous "red" propaganda' to the 'nationalization of women' story.

Finally, we have been too prone to look on the surface of international situations instead of analyzing their causes. After such a scientific study we shall be no longer so ready to blame the bolsheviki as the conditions which produced them.

In order to understand our problem we must isolate and analyze certain of the arguments which are commonly urged against Russian recognition today. Chief among these is that of confiscation of property and repudiation of debts. Now, of course, all Americans must recognize that the internal affairs of Russia are none of our business. To object to Soviet internal laws because they might affect Americans who go there is absurd. If we could do that, it would mean that we could dictate property laws all over the world. If Russian laws are disagreeable, Americans do not need to enter Russia; but that is no reason for withholding recognition.

American business men, even a former cabinet official, have gone there already to secure concessions in spite of the laws. The Harriman interests, the Standard Oil and Hugh L. Cooper & Co. are all doing business there. As far as internal affairs are concerned, the Russian government has the right to confiscate property and stand on their heads, economically speaking, and we have no right to object. As Americans we should be solely concerned with the confiscation of foreign property and the repudiation of American loans.

But the bolsheviki have repeatedly offered to assume these obligations. The decree annulling the foreign debt was not enacted for three long months in the hope that the Allies would recognize Russia,

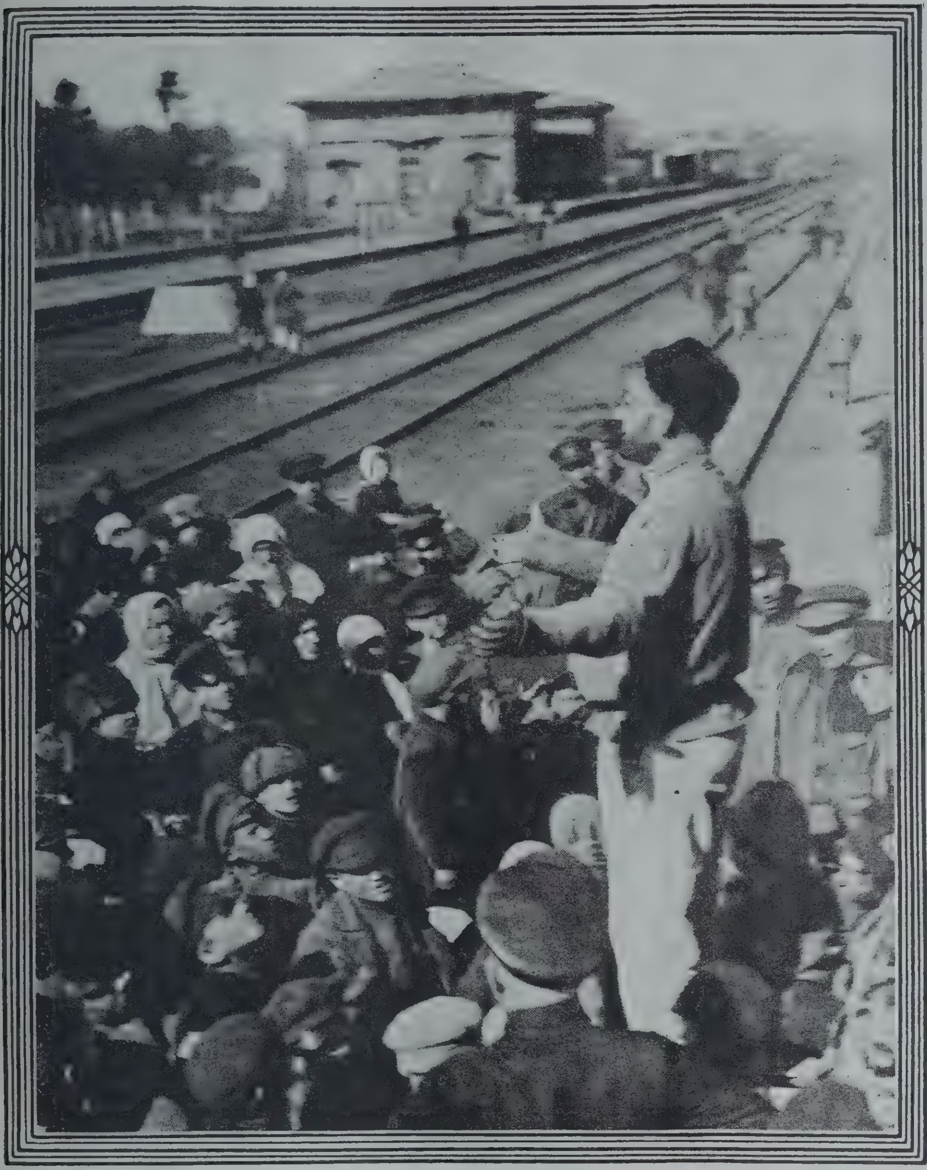
the Russian Soviet Government?

NO,

Says

United States Senator
GEORGE H. MOSES



—Ewing Galloway Photo.
A representative of the Soviet government lecturing to farmers at a railroad station in Russia.

LET me state in as emphatic terms as I can command that my repugnance to recognizing Russia is not based on the present form of its government. Most of us have a profound sympathy for the plight of the Russian people. Despite their great sacrifices and a century of struggle for better things they have simply passed from a fairly competent absolute monarchy to an incompetent and tyrannical dictatorship. The Russians are a wonderful people and deserve a better government than they have had under either the Czar or the Soviet régime.

But our interest in the Russian people cannot go further than heartfelt sympathy. We cannot and should not attempt to interfere directly or indirectly with their form of government. As long as they are willing to submit to it no one has a right to object.

What this country has a right to demand before recognizing the Soviet régime is that that government should 'recognize the sanctity of international obligations.'

This expression, 'recognize the sanctity of international obligations,' is from President Coolidge's message and is the diplomatic way of demanding honest and fair dealing with our Government and the people of this country. The objections to the recognition of the Soviet government with its present policy fall under two general heads:

(1) Its drive to spread communistic revolution to this country and to the Western Hemisphere.

(2) Its policy of repudiating debts to this country and its confiscation of the property of American citizens.

I am fully aware of the complacency with which this activity of the Russian Soviet in conducting propaganda against our institutions is viewed in some circles. The great volumes of testimony on this subject which have been developed in the investigation by Congress have not apparently aroused the country to the real dangers which Russian propaganda in the Western Hemisphere portends.

There was a disposition among the apparently well-informed to scoff at Secretary Kellogg's testimony before the Senate Committee on Foreign Affairs as to the activities of the Russian Soviet agents in Mexico and in Nicaragua. Premier Alexis Raykoff followed the disclosures of Secretary Kellogg by denying communistic activities in Nicaragua and Mexico. He said, 'I will dismiss any government functionary who attempts to break this rule.' There were other denials from the officials of the Soviet government at Moscow. But all this was discredited and Secretary Kellogg was sustained by an Associated Press dispatch from Moscow under date of January 30, 1927.

In its manifesto, addressed to 'The workers and peasants of the nations of the world,' the Third International 'invites all anti-imperialistic forces to support the people of Nicaragua in their struggle against the base design of American imperialism.' The manifesto declares: 'Since its foundation the Third International has proclaimed the necessity of war against the mighty and insolent capitalist régime and the imperialism of the United States.'

I am familiar with the subterfuge that the Soviet government is not responsible for the propaganda of the Third International. It is true that the Soviet government is not responsible for the policy of the Third International. But the creator of the Soviet government is responsible for the Third International.

Russian affairs are very confusing to an American who is accustomed to straight thinking. They are intended to be so by the communistic dictatorship. This is carefully planned so that it is difficult to locate the responsibility or the responsible parties for the worldwide propaganda toward communistic revolution.

In 1917 the Russian communist party overthrew

Gay times at the White House in 1861. Scene on the balcony during Prince Napoleon's visit to President Lincoln.

TAD LINCOLN'S SNOWSTORM

By JULIA TAFT BAYNE

ON A Saturday morning in December, 1861, four boys were studying their Sunday school lesson in the small library at 448 L Street, Washington, D. C.

Two of these were the younger sons of the President, Willie and Tad Lincoln, and two were 'Bud' and Hally Taft, my brothers. The four were inseparable companions and playmates.

There were no schools in Washington in 1861. Mrs. Lincoln procured a tutor and invited my two brothers to share his instruction. My father insisted on paying half the tutor's salary, and the four boys daily 'did' their lessons in the state dining room.

Willie and Tad refused to go to the Sunday school of the New York Avenue Presbyterian Church, where the President and Mrs. Lincoln attended, unless Bud and Hally went there too, and as this was impracticable, they enrolled themselves in the Sunday school of the Fourth Presbyterian, which was our church, and attended quite regularly.

Saturday morning, at our house, was devoted to a study of the Sunday school lesson. Willie and Tad appeared early, as they always did when Bud and Hally did not appear early at the White House. Mrs. Lincoln had expressed to our mother her pleasure that her boys were learning their Sunday school lessons, and hoped we 'would encourage them to keep on.'

To sister Julia, two or three years older, was intrusted the not altogether pleasant duty of inculcating a reasonable working knowledge of two pages of the blue question book, while she embroidered three gold stars on a ruby velvet watchcase, which was to be Bud's Christmas present to his idolized General McClellan.

It was cold, and Willie and Tad had been talking of winters in Illinois, of sliding and sledding and snowballing. My Washington-bred brothers listened with round eyes. They possessed no mittens, no sled, no skates. They had never known the delights of a real snowstorm. Perhaps Washington was farther south 'before the War'; because from 1850 to 1870 there were very few occasions when enough snow was on the ground to justify the appearance for an hour of the nondescript creations known at the Capital as sleighs.

Tad dashed at the Sabbath questions with the cheerful audacity characteristic of him. Willie sighed as he said that there were 'more hard words than ever in it.' He and Bud debated whether Mr. Jordan would require them 'to have it perfect' or would 'let them off easy on the names.'

The very youngest son of the family, Willie Taft, being what Tad called a 'Sunday school infant' and not required to study the lesson, sat curled up on the window seat, where, by craning his neck, he could see a bit of Franklin Square, the barracks of the 27th New York Volunteers, and the end of the guardhouse with Sentry No. 1 appearing

The author at seventeen and in 1926.

Inside the White House when Lincoln was President.

and disappearing in clockwork regularity.

The older boys studied with set, determined looks. There were several bits of catechism deftly interpolated; and in the Fourth Presbyterian Sunday school these must be recited verbatim. Tad and Hally wriggled and fidgeted, repeating the lines in a loud whisper, each gradually departing from the text, and copying the other's mistakes until they had to begin all over again.

The infant scholar in the window also diverted attention by proclaiming at intervals, 'There's a dwunk man walking the beat with a log,' or 'Here comes the officer of the day; they're turning out the guard,' or 'I fink there's a hundred army wagon mules on 12th Street, fighting right smart.'

Tad paused in the murmur of 'the moral law,' 'the moral law,' 'the moral law,' to ask, 'Julie, what is a mud sill?'

'Never mind, Tad, go on. "The moral law is summarily comprehended."'

'But, what is it?'

'Why a Yankee, Tad.'

'Well, a boy in Lafayette Square said we were 'em and we am not.'

'Of course not,' said Willie Lincoln. 'Everybody knows they come from Connecticut.'

'Bud and Willie wouldn't let me punch him 'cause they said it would be put in the paper, but I will if he says it again.'

It was still cold and wet and blustering. Only an occasional officer rode past, his great cape over his head, followed by a dejected orderly. The boys watched the gusts of rain anxiously. They had been promised a 'ride with the staff' if it was not too stormy. General McClellan was very indulgent; his aides held the boys' bridles and sometimes even held the younger boys in their saddles.

Our cousin, a tall young captain from 'Camp Desolation' came and leaned against the doorway, and sympathetically confessed that he had himself to learn the Creed and the Commandments before the morrow's noon.

'What for?' demanded the boys, astonished that the shoulder-strapped six-footer should still be in thralldom to the blue question book.

'Because we have a Sunday school in the defenses, and mind you, the colonel is superintendent. I never saw anything in the *Army Regulations*,' the captain complained, 'about having to drill the men in the Bible as well as in the manual of arms.'

'Snow! Snow!' shouted Tad, as some light flakes flew by the window. 'That's what I like better'n anything. I hope it'll be over the fences.'

Tad's wish was futile. To his great disappointment, the snowflakes grew more and more infrequent, and at last the sun shone out. The boys went off, hopeful of a ride at least.

About dinner time a relative arrived unexpectedly. As he was to go to his command very soon and wished to see the children, I was sent to find the boys and bring them home.

I went at once to the White House and looked outside first: the grounds, the stable, the conservatory; the kitchen, where I learned that the boys had an early lunch and had not been seen since. The Madam had gone for a drive but did not take the boys. And General McClellan was indisposed and did not ride with his staff.

I then ran up to the sitting room and nearly collided with the tall form of the President, who was crossing the room on his way to his office. He had some papers in one hand; with the other he stopped my flight, saying, 'Here, here, flibbertigibbit, where are you going in such a hurry?'

'I am looking for the boys and I cannot find them anywhere. Cousin Sam Andrus is at our house with a colonel. I forget his name but he is awfully nice.'

'Awfully nice, is he?' said Lincoln, with the quizzical smile I remember so well.

'Yes, sir, and they want to see the boys, ours, and the President's, Willie and Tad, you know.'

'Yes, I know,' he said. 'Have you looked in the attic, Julie?'

'I'm going there now,' I said, and left him standing there watching my headlong

Knowledge That Comes From Within

THE world seems running over with knowledge, and yet when you take it all and reduce it to its essence, which is Wisdom, you discover that there is a great deal of refuse. As tons of roses produce but little attar, so oceans of fact and centuries of experience seem to produce only a few simple principles. To be born with power to see these principles, or to achieve a sight for them, is to become wise.

The world is much wiser than it knows, for although it is keenly alive to its lack of knowledge in many things, it does possess certain principles by which every kind of fact it may discover can be interpreted. How much of the essence of principle is distilled from experience, and how much of the essence of principle we innately possess to enable us to distill at all, forms an interesting subject for speculation. But it is always forced upon us that we are not quite new beginners where we seem visibly to begin, nor do we end where all trace of us seems to be lost. The chain of principle which binds us fast to Reality seems to span with one link the period of human experience, and stretch either way into distances that no one has measured.

At the end of a recent biography the subject tried to sum up what he had learned from life, and he was able to say it all in a half-dozen simple sentences. There was nothing startling in it. Nothing that would evoke a thrill. But anyone who knows the experience of knowing a simple truth, and seeing how the apparently simple thing runs pregnantly through all the planes of life—anyone having this experience will know how thrillingly real such knowledge can be. It is not that the intellectual conception is new, but that the realization is new and vivid. It is like old familiar things seen under a light that penetrates and glorifies them.

> *THE wisdom of the world can be distilled into a few simple principles—and these principles are everlasting. They are fundamental, the fruits of the experiences of all the generations that have ever lived. To be born with the power to recognize them, or to achieve that power, is to become wise. This power of understanding—of 'seeing'—is one of the great forces in the world. With a nation it is vital. Progress comes in proportion to the number of minds that 'see.' The tremendous support which is won for great projects comes not so much because the people are convinced by laborious arguments but because with swift and accurate insight they are given understanding.*

The purpose of life seems to be the accumulation of experience, and the greatest experience of all is to get vividly and realistically inside a principle.

Perhaps this explains why people, as a rule, are impatient of the things they are merely told. It may explain the half-contempt of the boy for his father's counsel. It is happening in the world every day that full-grown men are suddenly exclaiming: 'My father used to tell me that! By George, the old man was right!'

But the discovery is not made until the grown son has entered the serviceable temple of truth through the homely door of experience. And he will try in turn to tell his son, but his son may be stubborn, too, and have to learn in the same belated way.

Of course, some people do learn by merely being told. The instant they hear the principle proclaimed, they have no need of proof or any kind of confirmation; they just instantly know it is true. It is as if they had known it before, but had forgotten, and the spoken word called to life again an element that was already there.

This experience, too, has led men on many quests. How did we learn to know that was true which we only heard once with the ears? Whence came that inner recognition and full-fledged understanding on the instant of the message? Why were we able to 'see' at once what others see with difficulty, and some seem never to see at all? Where did we originally learn that which we now suddenly recall? Such questions cannot be avoided. And once these are admitted, others thrust themselves up. Can a man receive the results of experience as a gift? Does the natively gifted mind realize without intermediary experience what the other mind must receive through the sweat and grime of a lifetime of experience? Or have we a prenatal past?

However these problems may be regarded, it is certain that the world goes forward in proportion to the number of minds that 'see.' There is a constant urge that the people 'think.' Thinking becomes a grind unless there are facts to grind upon, or unless there is this background of principle through the medium of which all the elements of a problem can be related. 'Thinking' may become a most desperate labor without the materials upon which thought can work. To 'think' strenuously and never be able to 'see' is but a process that wears down the resiliency of the mind. Until thought gets the wings of vision, it does treadmill work. Progress, especially that kind of progress which depends on the agreement of the people on some forward-looking idea, does not come by the efforts of men but by the unfolding of that which seems to be dormant in the public mind.

In dealing with great masses of people, the logical framework of an idea of public advance is often very slight—just enough to satisfy the faculties that no fallacy is being introduced. But the tremendous support which is won for justice or progress comes, not because the people are laboriously convinced by argument, but because with swift and accurate insight they 'see.'

EDITORIALS

OF THE DEARBORN INDEPENDENT

Aviation Advances

NOTHING illustrates better the firm base on which aviation rests in this country than insurance statistics. Here are some compiled by Drs. Lawrence G. Sykes and William B. Smith:

Fifty of the nation's leading life insurance companies, covering policyholders to the extent of $73,276,680,279, *place no restriction* against participation in aviation.

Fatalities on the transcontinental air-mail route, on which planes operate in all kinds of weather, decreased from three deaths in every 300,000 miles of flying in 1919 to two deaths in each 2,250,000 miles in 1926.

Leading accident insurance companies within the past six months have included clauses in their contracts covering losses caused 'by any hazard of aviation.' The condition is made, in line with the recommendations of aviation authorities, that responsibility is assumed only when 'the insured is riding as a passenger in a licensed airplane, operated by a licensed pilot, upon a regular passenger route between established airports.'

Aviation has developed, chiefly under the impetus of private capital, to a point where it now serves millions of people in this country, Drs. Sykes and Smith declare. The mail airways alone, on September 1, of this year, were serving 65,677,209 people.

Evidence of the tremendous progress made by aviation is found in the establishment of new airports. By the end of this year approximately one thousand airports and intermediate fields will be in existence in all parts of the United States. More than fifty airports have been recently completed while twice that number of cities have set aside funds or have begun plans for modern terminals.

Indian Summer

SUNSET. The sky glows orange-red on the land's rim. Down the long valley the corn shocks in the farmer's fields resemble tepees, their fluttering leaves discernible in a haze that hangs in the low places. Hawks fly silent and low over the meadows in search of field mice. Crows, with heavy, slow flight, come from the hills and return in the evening, expressing with their raucous voices a grim philosophy. The climate of the country has reached perfection, with clear skies, air spirited like old wine with a sharpness of frost in morning and evening. The breeze carries a faint odor of tanned leaves and grass.

The woods are almost silent, many of the birds having left for the south. The sudden sharp drumming of a red-headed woodpecker on a dead cedar rings like a gong. Squirrels rustle the dead oak leaves for winter food. There are very few nuts this fall and squirrels will have a hard winter. The few birds remaining are silent as though thinking seriously of the long flight southward. The time of babbling is past. In the spring everything that exists must make mention of the fact—sing it, shout it, laugh it. But now it is autumn and winter is just around the corner.

Fat, yellow pumpkins gleam between the corn shocks, and the low sun, seemingly ten times its usual size, resembles an incandescent pumpkin-lantern as it sinks heavily below the treetops at the west end of the pasture. Dusk and silence close down. A pale white moon floats in the great bowl of the sky. Star-twinkle in the east. In the west the crimson dregs of light ebb out in receding pulsations like the fog of the Northern Lights. Far to the north a great dark cloud stretches clear across the horizon like the eyebrow of Winter. A brisk north wind stirs the rustling shocks of corn. A sudden arctic chill pervades the night. There may be snow in the morning.

He Fought a Good Fight

CARL C. MAGEE has retired as editor of the New Mexico *State Tribune*. His leaving is a sharp loss to the state where, for seven years, he fought a good and often a heartbreaking fight against corruption and political intrigue.

The story of Carl Magee is outstanding in the nation's newspaper annals. He has been threatened, he has been assaulted, he has been in jail, he has been on trial for murder. He has lost a comfortable fortune. His life has been in danger, not once, but many times. He has felt the sting of social ostracism.

It would be difficult to imagine worse conditions than those which gripped New Mexico when Carl Magee went there seven years ago for his wife's health. A successful lawyer, he was at first welcomed by the ruling powers of the state. His announced intention of running a newspaper was received with equanimity. But Magee developed the irritating habit of asking questions. The sudden affluence of Albert B. Fall interested him. Visits of Harry F. Sinclair to Fall's ranch interested him. Leases of Government Oil Lands interested him. Magee asked more questions.

After a while other people began asking questions. Senator Walsh of Montana started queries of his own. The result is well known. It is an interesting coincidence that Magee announced his resignation as *State Tribune* editor while the trial of Albert Fall for conspiracy was still in progress. Magee goes on to Oklahoma City as editor of a larger newspaper. His days of service are by no means over. But in Albuquerque he will be missed. He fought a good fight. And won.

JURY or JUDGE

By C. C. DANIELS

THE law is 'a rule of action, commending what is right and prohibiting what is conceded to be wrong.'

Comes now a seemingly well-directed campaign to substitute for law the personal opinions of an arbitrator.

The word *arbitration* sounds well. The law is stated 'on a new basis' and the 'well-established rules' are eliminated.

People have become disgusted with the delay, the injustice and the favoritism that have characterized many of our courts—particularly those in the larger cities. They have seen judgeships thrown by political bosses to hungry politicians as bones to a dog—often without regard to the fitness of the one upon whom the judicial robe descended.

It is well known that judgeships are often used to 'kick upstairs' political undesirables. It may be said to the credit of some of these men kicked upstairs that they have made efficient and acceptable judges and have reflected credit on the offices into which they were kicked. The public cannot be expected to recognize that fact until their learning, their integrity and their fairness have been actually demonstrated. Some judges seem to permit shyster lawyers to insult and browbeat decent citizens required to give evidence. One prominent and observant minister stated from his pulpit that the reason self-respecting citizens take so little interest in aiding enforcement of the law is that a witness often meets with every discourtesy, while the wrongdoer is treated as if he were the injured party.

PEOPLE have seen the power of the court to punish for contempt turned over to clever lawyers and used to frighten impecunious debtors into the payment of alleged debts—some just and some unjust. Such prostitution of the punitive power of the court is enough to make most men liable to punishment for contempt of such courts; some, however, may be like the lawyer who, on starting to leave the court room, was asked by the judge whether he meant to show his contempt for the court. He replied that he was 'leaving to keep from showing it.'

Receiverships and allowances for attorneys are facetiously referred to as 'judicial plums.' These plums are sometimes used as bait with which to secure and hold the support of the beneficiaries or to inspire fear and thereby suppress criticism. Those who have observed the courts closely have been shocked at favoritism shown lawyers who were backed by certain influential racial organizations or other groups.

They have seen court hangers-on guiding unsophisticated ones who had been caught in the meshes of the law into the rapacious clutches of shyster lawyers and professional bondsmen, to be stripped and abandoned when power to raise money was exhausted.

They have seen the ambulance chasers, like 'buzzards waiting for a carcass,' hanging around some hospital waiting for the word from their co-workers in the institution to secure a contract for half of whatever damages the pain-wracked sufferer might be entitled to.

They have seen the clever special agent of corporations slip inside the same hospital to secure for a few dollars a release from the sufferer.

They have seen courageous and conscientious judges (by far the most of those who preside over our courts come under this designation) fighting manfully to correct these evils and to make the courts in fact 'temples of justice'—the refuge of the oppressed.

They have seen honest jurors—and most jurors are honest and render verdicts in keeping with the law and the facts—earnestly and intelligently battling in the jury room with the prejudiced and group-controlled jurors.

They have seen the honest, conscientious verdict of jurors overturned and litigants against strong and powerful corporations forced by the court to accept in settlement such amount as the judge was willing for them to have, when there was not a scintilla of evidence justifying such reduction.

The failure of the court at times to function in accordance with the well-established rules of law, and the injustice growing out of such failure, cause thoughtful people to look elsewhere for a remedy. Many are ready for any change promising better conditions.

It is when people are disgusted and discontented that they are in danger of 'swapping the devil for a witch.'

If the fundamental basis upon which this republic rests is to be changed, the law must first be undermined. If another system is to be substituted for the English-American system of jurisprudence, there must be a change in the mental attitude of the American people.

The people, to accept this change, must be made to lose faith in the courts and to become accustomed to looking elsewhere for protection of their rights and redress of their wrongs. They must be wooed away from respect for 'rules of action' and induced to accept instead the shifting opinion of a temporary occupant of the bench or the findings of courts of arbitration.

The idea of trial by personal opinion (or arbitration) and that of trial by courts of justice are based on diametrically opposite principles.

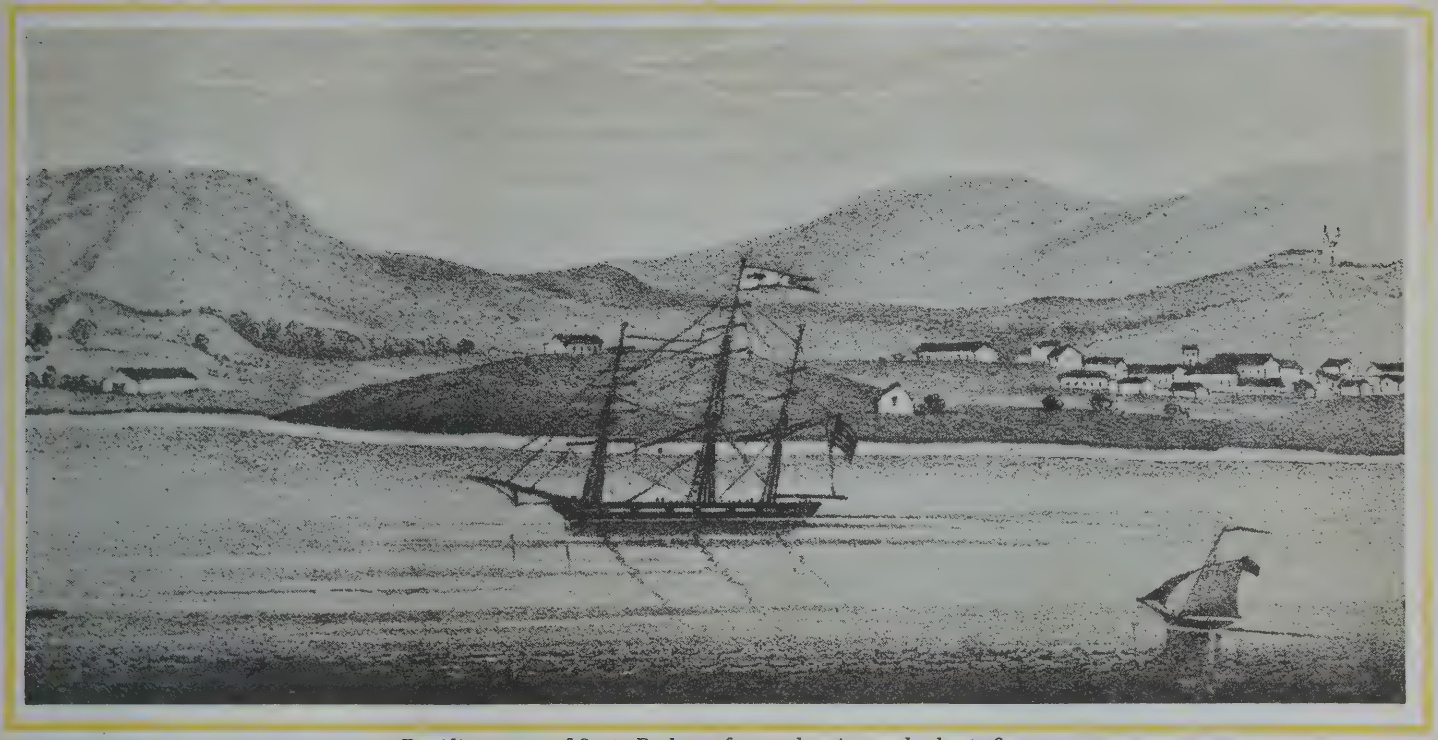
Those who advocate doing away with court trial, trial by jury, and application of *rules* of law and procedure must necessarily realize that the Oriental, or Eastern, system of jurisprudence is directly opposite to the English-American system and irreconcilable with it.

The English-American system recognizes no favorites—all are equal before the law—and the humblest has the same right to appeal to the courts for justice as has the richest and most powerful.

WHEN the courts do not recognize and respond to this principle, it is because those composing the court are either corrupt or too ignorant to appreciate the basis of the law they have sworn to respect and enforce.

If a change is made—however slowly or adroitly—the result will be the same and the United States may prepare to bow to it. The advice of my Western friend to 'let law go to pot and study judges' will find congenial reception in the East. Most Americans believe in the English-American system of government, and years of experience have increased their faith in jury trial and lessened their confidence in single men as finders of fact. The right of appeal to a 'jury of peers' is a right that is one of the few remaining refuges of the average man. When this right is taken from the people and when they realize the fact, those who run the engine of government may look for an explosion—just as when the safety valve of an engine is fastened down. The pent-up steam of injustice will find a means of escape, even though wreck and ruin follow.

In this nation of free Americans men may surrender some of their rights—all civilized peoples must—but this people yields by virtue of desire—'Millions for defense but not one cent for tribute.' They will not surrender their right to appeal to the court or to have a 'jury of their peers' determine their rights according to defined and fixed rules of evidence and procedure.



Presidio or town of Santa Barbara, from a drawing made about 1837.

The DAYS of the DONS

By FRANCES HOLBROOK PFEIFFER

Copyright by C. M. Neuner.

THE threefold occupancy of California included the military, the civil and the religious. The two former were supplied by the presidio and the pueblo—garrison and town. The first three presidios were founded simultaneously with the missions—San Diego, Monterey and San Francisco.

The Presidio of Santa Barbara, which eventually had jurisdiction over the other three, was founded four years before its mission, in 1782. The Presidio of Monterey, because of its central location, became the residence of the provincial governors, and remained, almost continuously, the capital of California until the American state government replaced the military in 1846.

In the first decade of the 19th Century the Mexican congress issued an order making Los Angeles the capital of 'California Province,' but those early *Angelenos* were so devoid of public spirit that they refused to provide the necessary buildings! Los Angeles did, however, become the capital shortly before the United States military occupation, after which it was again returned to Monterey.

The first pueblo or town was founded in November, 1776, and named *El Pueblo de San Jose Guadalupe* (San Jose); the second in 1781, which had been named by Portola twelve years before, *El Pueblo de Nuestra Senora La Reina de Los Angeles*, which, for all practical purposes, is now called just plain 'L.A.'

Another pueblo was proposed near the presidio which overlooked the Golden Gate, but investigators reported it to be the worst location in all California—'nothing but sand, brambles and raging wind!'

The Pueblo Villa Branciforte was founded in Santa Cruz, across the bay from Monterey, which was named for the viceroy and became his special interest. But it, like the other two, being a penal colony of Mexico, became worse than either San Jose or Los Angeles, and came to an untimely end.

The experimental pueblo of San Jose revealed the need of the right kind of settlers. So orders were sent to Captain Rivera to secure twenty-four agricultural men with families to form the new town of Los Angeles, and also to encourage unattached members of the gentler sex to come along and eventually marry the bachelor soldiers already in California.

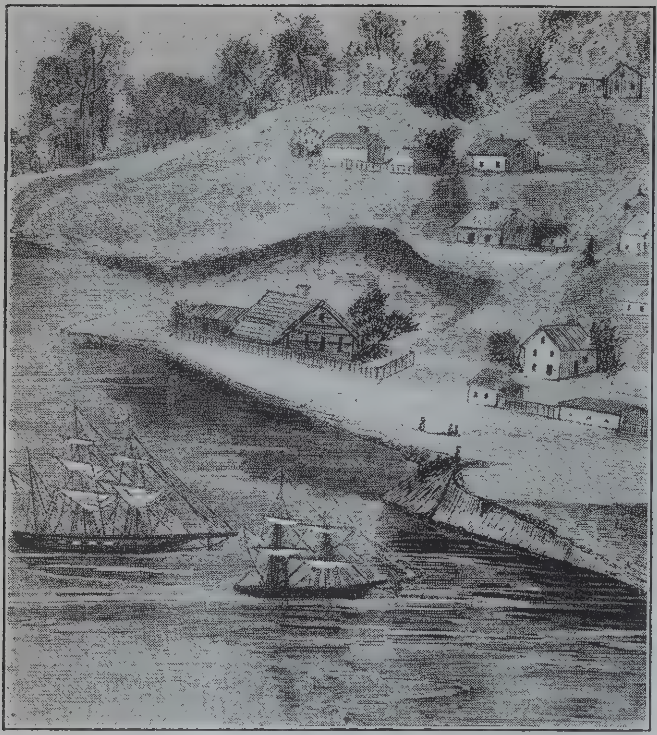
Liberal inducements in the way of land, animals, implements, and even money, were held out to prospective colonists. Moreover, Captain Rivera had served the country for eight years and was enthusiastic about California. However, after a year's effort he was able to interest only twelve families, and those fell far below the ideal, being for the most part Indians and mulattoes, with records far from desirable.

Three of the families were soon banished, and no descendants are known to remain of the others, with the exception of Juan Jose Domingues, a Spaniard. Domingues was not an original settler of Los Angeles, but came a few years later, having received a great land grant known today as the 'Domingues Rancho' near Los Angeles.

The Spanish land-grant system came into effect about the time of the founding of Los Angeles. The first tracts taken up in the vicinity of that city bring the familiar names of Figueroa, Garcia, Reyes, Domingues, Pico, Verduga, Sepulveda, and so on.

In spite of the protests of the missions, these grants spread over the southern half of the province covering many thousands of acres ruled over by their owners like monarchs of old feudal days. It was the life on these great ranchos that gave the beauty, color and romance to the 'Days of the Dons.'

Many miles lay between the haciendas but there were plenty of horses; these made it easy to visit back and forth, and resulted in a gay, care-free sociability. The annual rodeo was the most exciting social event where 'knights of the saddle,' in rich velvets, lace, gold and silver, displayed some of the finest horsemanship in the world, upon splendid animals richly accoutered



Town and port of Yerba Buena, now San Francisco, in 1843.

in jeweled saddles and bright blankets.

After the rodeo came feasting and the popular fandango where beautiful women, dressed in finest taste and richness in silks, velvets, lace, jewels and gay sashes, draped the *reboza* with that poetic grace possible only to ladies of Spanish blood.

There were horse-racing, bullfighting, and—wash days! The latter were made festive by a gathering of neighbors and a trip to forest stream or spring, where the innumerable Indian servants beat the garments against the rocks, while the white people gossiped, strolled and played games.

Those early Californians were a generous, hospitable people, who delighted in entertaining travelers in their roomy adobe houses without money and without price. In fact a pile of uncounted 'guest money,' covered with a napkin, was placed in the spare room for fear the warfarer might be in need—as we prepare crackers and milk for a midnight lunch for our guests.

According to our standards today those early Spaniards may not have been educated, but they were people of character, fine sensibilities and innate good manners.

First Spain and then Mexico limited California's trade to hides and tallow, not allowing her to compete with them in olive oil and wines. Foreign trade in the province was contraband, the penalty being severe punishment to the colonist and death to the foreigner.

The first American ship to anchor in a California port was the *Otter* of Boston, Captain Dorr, in 1796. We have no record that she came to trade, although, against the expressed wishes of the governor, she forcibly landed twelve convicts and a woman from Botany Bay, who had used the ship as a means of escape.

In 1805, with the usual Yankee daring, the *Eliza Bird*, Captain Salhor, which had 'stood off' the coast in her trips to and from the Sandwich Islands, sailed into San Pedro—the first American trading ship in California waters. Captain Salhor loaded his ship with hogs and sheep for which he paid in manufactured articles.

During the Mexican revolt and under the more lax laws of Mexico, open commerce was established with New England, first for skins of the now almost extinct otter, and later for hides and tallow from both mission and rancho.

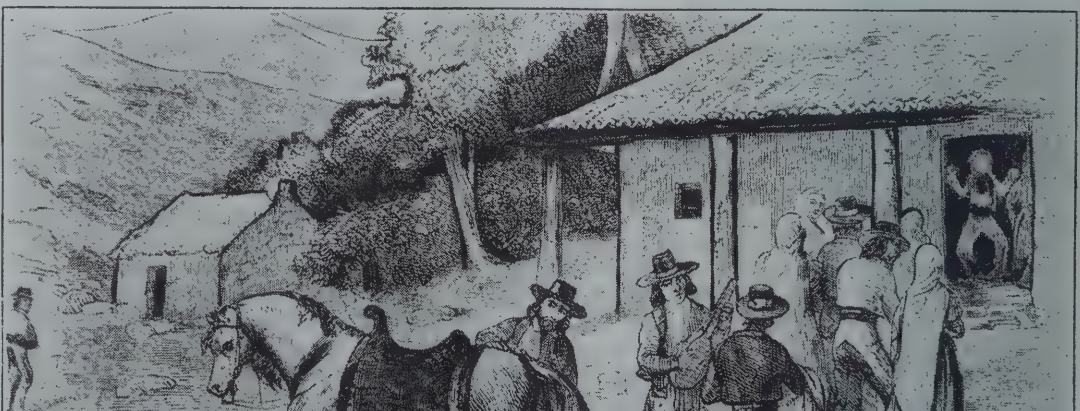
Arrival of a ship was a great adventure in the lives of those pastoral people, and not without romance. *La Patrona*, with her young ladies, would sometimes board a foreign ship and select from the cargo the new and interesting articles that caught her fancy—not unlike going over a Yankee peddler's pack on his occasional and welcome visits in a New England village—and we can imagine that the beautiful *senoritas* and the ship's officers found a common language of glance and smile in which to express themselves! And *El Patron* would order his ten or fifteen oxcarts, loaded with hides and tallow, to be driven, creaking and lumbering, down to the water.

Or, if the roads were too muddy for carts, a long file of Indians made their way to the port, each carrying a load on his head—returning at close of day weighted down by ranch implements, sugar and food, furniture, clothes and ornaments.

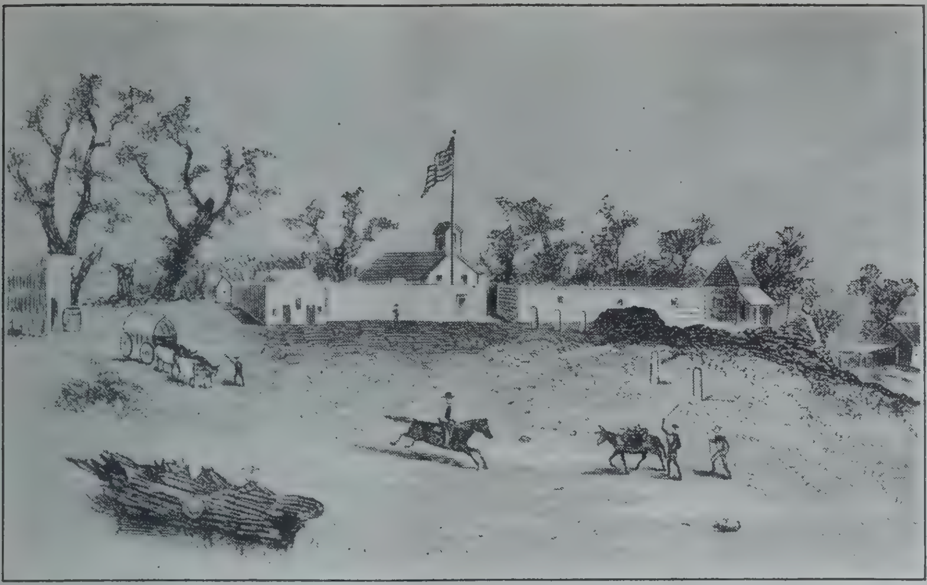
THE influence of the Napoleonic Wars was felt even in far-off California. When Joseph Bonaparte found it expedient to step down from the Spanish throne and the rightful monarch was restored to his throne, Spain had lost her hold upon her possessions in the New World.

California created very little attention in the first decade of the 19th Century—was scarcely remembered at all by Spain. She had sympathized with the Mother Country in the Mexican revolt, since most of her leading men and padres were Spanish; but aside from perfunctory praying, she took no part in Spain's defense—in fact, she could not.

The only sign of the revolution that rippled the quiet of California life was an attack by pirates under Bouchard from Buenos Aires. He bombarded Monterey, landed, plundered and burned the town; sacked the Ortego Rancho near Santa Barbara, and attacked the Capistrano Mission, where he captured wine and brandy! Really, he probably did more good than harm to California, because it was from this pirate ship that Joseph Chapman



A glimpse at a bit of early California social life—going to a fandango.



Stars and Stripes over Sutter's Fort during the days of the 'gold rush.'

made his escape, either because he disliked bad company, or, as the more romantic will have it, because he caught a glimpse of the lovely *senorita*, Ortego's daughter, whom he afterward married.

The country's condition was deplorable. The presidios' pay was far in arrears. Spanish vessels did not visit the coast for years. There was no money, and clothing was depleted. A Los Angeles man who owned one thousand horses begged the padres of San Gabriel Mission for enough cloth to make a shirt!

When in the spring of 1822 official notice was received by Governor Pablo de Sola of Mexico's victory, he called a meeting of California officials, who were willing to take the oath of allegiance, severing their connection with Spain when promises were given that the ten years' back pay would be forthcoming.

California under Spain guarded her shores as closely as ever did China or Japan. John Gilroy, a very young Englishman, broke through this 'coast guard,' landed from a trading vessel in 1814, became a citizen in 1820, married into a California family and has left his name in the town of Gilroy.

In 1816 a captain and five sailors from a schooner storm-driven into Santa Barbara became citizens. In that same year Captain Otto von Kotzebue in a Russian ship entered San Francisco Bay. The presidio was so hard up that the *commandante* was obliged to borrow powder from the Russians to fire a salute to them!

Von Kotzebue was a true prophet. He wrote of California:

> 'Towns and cities will flourish where all is now desert . . . The waters will reflect the flags of all nations; and a happy and prosperous people . . . will dispense her treasures over every part of the world.'

Prior to 1826 several American and English men, entranced by the melting eyes of *senoritas*—and their papas' vast grants of land!—had married into California families and become citizens.

The foreigner coming from the sea was tolerated, but when he crept in over the mountains from that vast, unexplored 'no man's land,' he was looked upon as an enemy. So, when Jebediah S. Smith, the first white man to come overland, with his fifteen trappers, came down the Colorado River and on to Los Angeles in 1826, he was ordered out of the country. His men remained but he went, finally, although from time to time he kept bobbing up along the coast as if reluctant to leave. At least he took his own time.

In 1805 the czar sent a young officer of his court, Count Rezanof, to inspect Russian trading posts in Alaska. Finding the people suffering for want of food he sailed for the nearest port, San Francisco, for relief. There he was received hospitably, but not until he had became betrothed to the lovely young daughter of the *commandante* was he allowed to trade his cargo for supplies.

Their romance was short. He sailed away promising to return. Beautiful Concepción de Arguello waited by the sea for a sight of her lover's ship, which did not return.

She remained unmarried and forty years afterward, at a banquet in Monterey, she heard from an English officer that her prince had died on his way home. Letters, recently found, reveal the fact that Count Rezanof fully intended to return for his little sweetheart in California.

Through Rezanof's letters to the czar, Russian-American trading posts were started in 1812 on Bodega Bay, on the Russian River and at Fort Ross. The Russian occupation lasted until 1841, when trade having declined they sold out Fort Ross to John Sutter, Swiss immigrant, and departed.

Sutter had obtained for colonizing a large tract of land where Sacramento now stands. Here he erected the famous Fort Sutter, arming it with cannon and muskets brought from Fort Ross. The muskets were said to have been dropped by Bonaparte's army in its retreat from Moscow in 1812.

Despite this unpromising nucleus the town was founded with military and ecclesiastic pomp and ceremony near the present plaza. Not for many years did it show any promise of improvement or growth.

Chapman, or 'Jose el Ingles,' as he was called by those early Californians, was a Yankee who had escaped from a pirate ship in Monterey Bay during the Mexican Revolution, 1819. He had been rescued and befriended by Don Maria Lugo, who brought him to Los Angeles.

His ingenuity and the example he set for thrift, industry, and morality had no small influence on the little Mexican pueblo—in fact upon the whole southern portion of the province.

Chapman built, at San Gabriel for the mission fathers, the first seagoing craft constructed in Southern California and hauled it to San Pedro where it was assembled and launched and used in the rapidly growing otter trade.

'Jose el Ingles' married a daughter of Ortego, an old family whose rancho, just north of Santa Barbara, is still occupied by descendants of Lieutenant Ortego, the real discoverer of San Francisco Bay.

(This is the second of a series of articles by Frances Holbrook Pfeiffer on this subject. The next, 'California in Pioneer Days,' will follow in an early issue.)

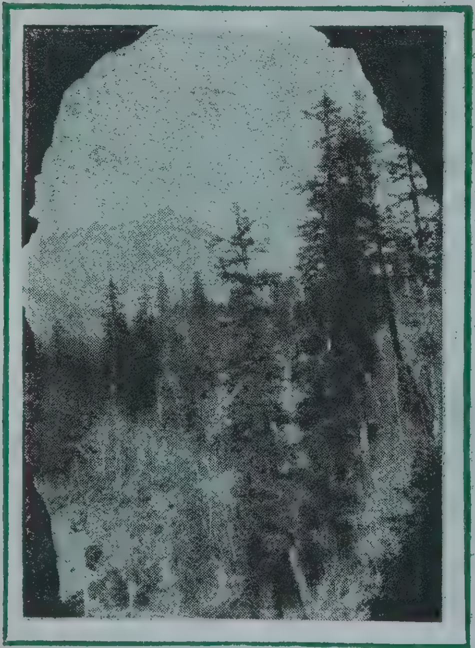
Prehistoric olla found in a cave in Coachella Valley, California. In it was sealed a rabbit net fifty-four feet long, made of yucca fiber.

SKEENA RIVER TRAILS

By JAMES CLYDE GILBERT

BRITISH COLUMBIA lakes are beautiful. Khtada Lake in northern British Columbia is incomparable. Suspended between two high mountain ranges, itself thousands of feet above sea level, it reflects in its mirrored surface the beauties that rise above it. Khtada Lake is a long lake. Its distances are deceptive. This we found to be true when we explored it.

We had portaged our boat over the divide between lower and upper Khtada, following the trail cut out from the forest by the river. We had heard of big rainbow trout in Khtada and we were after them. Dave Stuart and Stan Parker, both of Prince Rupert, were accompanied by their sons Charlie Stuart and Bob Parker. Jim, my thirteen-year-old son, and myself, completed the party. All three boys were about thirteen years of age and were seemingly indued with tireless energy. The day before, we had packed in from the mouth of the Khtada River to its source, the lower Khtada. Each of the boys had carried a twenty-pound pack without a whimper. Now they were swarming around the newly launched boat eager to try the fishing, which was said to be the best in the Coast Range mountains of British Columbia.



A charming vista as viewed from the mouth of a cave above the lake.

We made our way up the lake, toward the south. Did you ever try to keep three small boys still all at one time? It can't be done. So many new things to see! So many stories of adventure to tell! One boy from the East learning things Western!

We found it great sport battling the fighting rainbow trout of Khtada with light tackle.

Yes, the dark-blue bird is a western blue jay. No, the ice never melts on the high glacier to the right. You are correct, the big bird alighting on the shore is a bald eagle. Yes, the feathers on his legs do resemble trousers. His many feathers keep him warm so that he can soar in the rarefied heights on the lookout for wild lambs and tender kids. How does he catch them? He usually swoops down and dashes them over a high cliff; then he devours the remains at leisure; and so on, all day long.

The mountains rise steeply from the shore of Khtada, all details of tree-fringed slopes and rocky precipices lost in one stroke of a gigantic brush which has swept

led water, flowing to the foot of y mountains. Soaring high into the azure sky, its summit hidden by a cap of mist, now disclosing, now its crown, rose an unnamed moun- So cold and aloof, it gazes for all across its lesser brethren skirting keena, surrounded by a coronet of ng white peaks. We rested on our enraptured with the beauty of the In hushed tones I asked Dave er there were other valleys such as the vicinity.

he hills are full of them,' he said. you had time I'd take you to Kitsumgallum Lake, up the river about sixty miles. Or we might run down Vancouver way and slide up into some of the coast canals inland. The mountains come down to the salt chuck there. You'd get lots of pictures of grizzlies. Never been surveyed and the Indians are as wild as the deer away from the coast. The Bella Coola country is a great game country. There you'll find everything native to this coast. And fish! There are waters in that country that have never felt the flick of an artificial fly.'

'What's beyond this lake?' I asked.

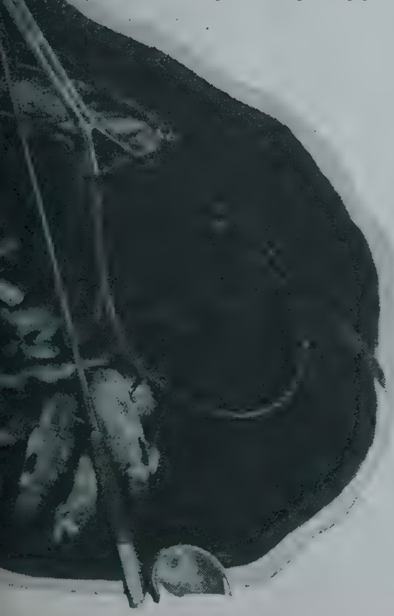
'I've heard there's another lake in beyond. After you get over the break the waters drain into Douglas Channel. We never go over there,' he replied.

The water beneath the boat was deep. We were fishing for rainbow and it was necessary that the troll work far below the surface. We hooked on light sinkers and rowed slowly along. Soon we would feel a violent jerk. Then the reel would sing like a lath mill and the pole would bend nearly double. I feared for our tackle, as the fish were unusually large. In Michigan we consider a three- or four-pound rainbow trout a good fish. Here they range from four pounds up to twenty-five, I was told. We caught several in this lake that weighed ten pounds and over.

Jim and I were trying something new. We abandoned our fly rods and used short bass casting rods. I was afraid to use a high-grade fly rod on those violent rainbow. As Jimmie and I planned on fishing Arctic grayling in the Yukon valley of Alaska, we did not want to break our tackle on British Columbia trout. We cast with our short rods, using spoons and bucktails of the eastern variety. When we hooked a fish we could handle him more quickly with the shorter rod. We did not play them so long nor perhaps have so much fun as we did with the fly rods, but we felt safer.

Jim lost one line when a big fellow caught his lure and started in the general direction of the Skeena River. Jim thumbed the line. The line burned his thumb and he lifted that member. The fish kept going. The click and drag became released on the reel. It spun like a circular saw, backlashed, and snapped just as the biggest rainbow of all leaped high in the air and disturbed the calm surface of Khtada. We had all we could do to keep Jim in the boat. Nor could I reconcile him for some time. It was not until we got into the lower river that he recovered. Youth soon forgets and time heals all wounds. Particularly if the rainbow are jumping and taking the flies avidly.

One day we had to stop fishing until we had consumed our catch. For in this section one wastes nothing. Later, on the Yukon, we caught hundreds of grayling and trout, but we never had a fish spoil on our hands. Holes in the perpetually frozen hillside were natural refrigerators. They were easy to dig, and the glaciers were only a short distance above us. The soil was not frozen at Khtada, but we had glacier ice at any time we needed it.



The virgin waters of Khtada swarmed with trout that knew not the danger of the artificial fly.

The glacier's white ramparts gleamed above our shake-shingled cabin on the lower lake.

Fishing was so good we had time to wander the game trails around the lake and enjoy the beauties of the lower coast forest between the lakes. Down the river, at a lower altitude, the timber was heavier. The beds of needles were just damp enough to deaden our footfalls. Our boot soles were hobbed to prevent slipping.

On our first halt we looked out over the tops of trees in the valley, and in places caught glimpses of the rushing river far below. It is surprising how quickly one climbs above trees that looked so tall when we stood at their feet. Gurgling streams hastened across our path, hurrying down to the roaring Khtada. An age-old forest is the finest filter on earth. It has no crowded grubbiness of lush meadows, no slashings or new saplings. Growth is slow, decay gentle, the one operation balancing the other. There are no hordes or plagues of vermin in its shades; its clean-lived creatures do not overrun their natural confines.

Once Jim and I wandered high in the mountains and nightfall found us many miles from camp. We built a fire against a high bare rock, made a hasty lean-to facing it, and lay down to sleep. Aromatic spruce needles formed our mattress and the high heavens were our blankets. It grew cold toward morning, but we suffered no ill effects.

If it has never been your privilege to walk the timber-line trails in British Columbia, if you have never made camp under shadowing spruces, by white water streams roaring into deep canyons, you have something to enjoy in the future. You will behold the sun-touched clouds of late evening tinting the tips of the far-distant mountains. Below you in the deep canyons the shadows will blot out rocks and trees and later you will sit by a friendly camp fire which will be welcome at timber line, where even in summer the chill comes with the falling of the sun in the west.

We remained at Khtada a week. We saw herds of snow-white mountain goats high on the Alpine slopes of Khtada's mountains. Birds of all kinds native to the country flew about the camp. Beavers plied their art of dam making at our very threshold. Coyotes howled on the trail of ptarmigan, which were turning snow white in August.

The Khtada country is easy of access. From Prince Rupert you go by river or train some thirty miles upstream. The Canadian National Railroad follows the Skeena for hundreds of miles as it winds through scenery that thrusts itself upon you. There are nooks and crannies, forest alcoves, high waterfalls and rippling streams, all of which contain fish in plenty.

Thirty miles up the Skeena lies the mouth of the Khtada. A trail follows along the river for a distance of six miles. This is a clear, well-defined trail, but steep. By the time you have packed back to the headwaters you will have a glorious mountain appetite and can relish the rainbow that you catch for dinner.

About Khtada, Nature has thrown up the Coast Range mountains on so vast a scale that one can with difficulty grasp their greatness. All along the mighty Skeena, snowy peaks rear above the water, their glaciers, rugged cliffs, and foaming torrents reflecting in the quieter surfaces. Charming spots in the forest, carpeted with moss and ferns head high, and roofed over with canopies of living tree, provide pleasure for the wanderer on the forest trails, where the peace of the all-embracing woods presides.

The only sounds that break the stillness are the cushioned rasp of boots in the thick velvet of the woodland trail, the rumble of a distant grouse, the sharp tap-tap-tap of a woodpecker digging his breakfast out of a tall dead tree. We spend many hours walking the beaver meadows and the muskeg flats, high above timber line. Or we sit for hours watching the wood duck sitting on the slough, calling down her young ones from the nest hole high up in the tree by the water.

The ways of the wild folk are revealed to us, and our studious watchfulness is well repaid. Above the blue of the lower ranges, against the blue of the sky, the glaciers gleam; white ramparts lift; the peaks of the Coast Range throw their pinnacles into the heavens.

Villegaignon and Antarctic France

(*Continued from page 5*)

dwell in the house of the Lord all the days of my life . . . ' Léry was most distressed by having no wine or fresh water, only the 'water out of a cistern or rather a grave,' as there was no running water on the Island of Coligny. Léry mentions that both Villegaignon and the Dr. Jean Contat of the Sorbonne publicly abjured the pope, but thereafter both 'had more love to argue than desire to learn' Calvinism.

The limitation of the daily sermon to one half-hour 'even though the days were then longest' was one of the first hardships imposed by Villegaignon. Léry makes a point of the fact that Villegaignon wrote 'in red Brazilian ink' to Calvin that Calvin's words would go into the colony laws.

Léry devotes himself to an enthusiastic description of Rio de Janeiro, and to the plants and animals of the region. His accounts of these and of the Indian customs agree in the main with Thevet's. The treatment of captives and the process of preparing them for being eaten are described in minute detail, with illustration, by both Thevet and Léry. The latter mentions that the cannibal wives were given to the prisoners to wait upon them and that they wept over their husbands before eating, as does the crocodile.

Léry and his companions started home but before they reached land a number perished and all suffered the pangs of starvation. Leather jerkins and shoes were exhausted for the nourishment which they contained. For fifteen days they were becalmed in the Saragossa Sea. On reaching France, however, they were fortunate in touching a friendly region.

Villegaignon soon returned to France and became a somewhat energetic pamphleteer against the doctrines of Calvin. The few Frenchmen who were left at Fort Coligny were dispersed in 1560 by a Portuguese fleet and nothing remained of the colony except the name of Villegaignon attached to an island in the bay.

Thus disappeared the first Protestant colony of the New World. France had here in Brazil the opportunity to establish herself in the New World, but the religious quarrels wasted her energies at home and these, extending to the infant colony, condemned it to annihilation.

Dancin' Out *de* Swimp

By JOHN SLOAN

THERE are two dances common and popular in the great marsh of Louisiana. One is the social pastime; the other is a matter of labor, in which men only participate. This is 'dancin' out de swimp,' and is known from one end of Louisiana to the other. The shrimp, or prawn, is the standard of value, success, prosperity and even livelihood, throughout the great marsh.

So much is it the staff of life that the common reply to a friendly hail of 'How are you?' is 'No so good; de swimp he no come in'; or if conditions are improved, 'Ver' fine, m'sieu; de blessed swimp he come in abundan'.'

The shrimp, being caught in hand nets, seines or trawls, are packed on ice in the holds of large motor boats or luggars, and sent at top speed to the market in one of the larger cities of Louisiana, or sold to the drying platforms in the marsh, or, thirdly, to the shrimp canneries on the Mississippi coast, at Biloxi or Gulfport.

The people of the marsh, however, are more concerned with the shrimp dryers than with any other plant for the preparation of these large prawns.

There are several drying platforms in the marsh, some of them operated by Chinese, for China is the largest consumer of dried shrimp, but the main platform is at Manila Village.

AS THE shrimp are brought to these platforms, they are thrown by shovelfuls into huge caldrons of boiling water. When they are thoroughly cooked, they are spread out on platforms, often as large as two hundred feet square, built of heavy planking laid closely on piles some ten or fifteen feet above the level of the water.

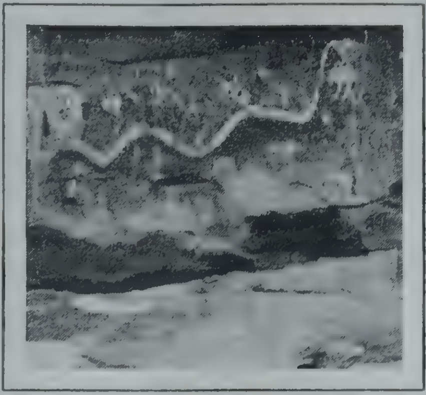
These drying plants have to be on the shore of comparatively deep water so that the motor boats—only methods of travel in the great marsh—may bring their loads of shrimp to them. When the boiled shrimp have dried thoroughly in the sun, their shells, skins, or 'hulls,' are dry and brittle, not unlike glazed paper. Then gangs of twenty to forty men or more remove their foot covering and 'dance out de swimp' in their bare feet.

This dance is a sort of shuffle, in which, to avert fatigue as long as possible, the men keep a sort of rude time. This removes the hulls from the dried bodies of the shrimp without breaking the latter, and, oddly enough, no machine has been invented which will do this work so well as the constantly moving bare feet of a gang of men.

When the shrimp have been danced out, the whole mass, shrimp and shells, is put through fanning mills, separating the bodies from the hulls, the former being packed in cartons for shipment, or sold in bulk, and the latter being gathered up to form the basis for fertilizer compounds. Some few dried shrimp are sold in the United States, and a larger quantity in Continental Europe, but the greater part is barreled and sent to the Orient, where the demand is always ahead of the supply.

West of the Lone Star

(Continued from page 2)



Some mutilated Indian writings on rocks in western Texas.

waters are strongly alkaline, good for neither man nor beast. Mosquitoes make life intolerable for any one camping near. Once, driven by them from my camp, I made for 'Howard's Well,' in a Pecos tributary called Howard's Draw. This well is like a pleasant dream. It is a ten-foot hole, rock-sided, tree-shaded, cool. Many a fight between frontiersman and Indian has taken place in its vicinity. That I knew well enough from tradition, but I did not expect to find what I found. For, poking about among the bushes at the foot of the steep hill, I came upon some arrowheads. A little farther on there lay a sad relic. It was the tires and other ironwork, all that remained of a wagon train on the old overland mail route that had been attacked by Indians and burned in the 1880's. Sixteen wagons had composed the train and no man nor animal was left alive.

The adventurous voyager will do well to follow the old overland trail to San Antonio. The route between that city and El Paso, its terminal, ran through Fredericksburg, Fort Mason, Menard, Fort McKavett, Fort Concho, Fort Stockton and by way of Quitman Canyon to Ysleta and El Paso. One hundred dollars was the cost of passage for the trip, which today costs less than a fourth of that amount, by railroad. The last stage was run in 1880, in which year two of the mail-coach drivers were killed by Indians. But that notable body of law keepers, the Texas Rangers, did hero's work not only against the redskins but also against Mexican marauders. And when Indian and Mexican were tamed, there were train-robber gangs and outlaws of the Sam Bass, Jim Berry, Black Jack, Berry Ketcham, Arkansas Johnson type to deal with. And well the rangers played their part, and are still playing their part for that matter, as Captain Hickman's capture of the Yancey Storey gang only a few weeks ago proves. In the cemetery at old Round Rock you may see the tombstone over the grave of that most famous of outlaws, Sam Bass. Because of defacements it is not easy to read the legend: 'A Brave Man reposes in Death here. Why was he not True?'

While you have not seen Texas, by any means, for weeks would not suffice for that, you have learned something of the range country of the Lone Star State. It would scarcely be possible to tour the state without some intercourse with native Texans, for, like all people in places where life flows abundantly, they are hospitable. And accepting hospitality you will probably hear much that is true, much that is in the nature of folklore. You may learn something of the immense extent of some of the old ranches—about how the King ranch is nearly a million acres in extent and runs a hundred thousand cattle, and how tractors may be seen plowing one of its fifty-thousand-acre fields.

Then there are lies, very interesting ones, which are told, and sometimes believed. For instance, you may hear about the 'Mountain Boomer' or 'Glade Devil,' which, according to popular tradition, haunts the Western plains. This creature is a lizard some sixteen inches long, green-gray in color with a white-spotted back. If a rider gets close to its haunts it will immediately fly out, enraged, and woe to the man bitten by it, for it is poisonous. It can outrun the swiftest horse and will pursue a luckless intruder for a whole day. It can sting with its tail, as a scorpion does, and it barks so loudly while running that the noise can be heard for five miles. Tradition says that the United States Government has offered a large reward for a specimen captured alive —some say a million dollars.

Or you might hear some Negro cook in happy humor singing one of the hundreds of Texas Negro folk songs. For example:

'I know moon-rise. I know star-rise.
(I lay this body down).
I walk in the moonlight; I walk in the starlight,
To lay this body down.
I walk through the graveyard, I walk in the graveyard
To lay this body down:
I lie in th' grave an' stretch out my arms,
I lay this body down.
I go to the judgment in th' evenin' of th' day
When I lay this body down,
An' my soul an' your soul will meet in th' day
When I lay this body down.'

Or you may learn some of the queer superstitions and sayings, working maxims for the conduct of daily life, seldom coarse, always characteristic; for as people, so the proverbs. Thus: 'I got as much use for them politicians as a hog has for Sunday.' 'The doctor gets fat when ornery folks overeat.' 'If you have rheumatics, carry a potato in your pocket and the sickness will leave you when the potato shrivels up.' 'There's such a thing as bein' a man that'll say five's an even number when the boss says so.' 'Any man can know by his own pot how other people's pots boil.' 'A good saddle never yet sold a poor horse.'

But if you would know Texas and its legends and history, sit by a camp fire at night with an old freighter. There are still a few of them in the range country, and they are stuffed full of tales. You will hear the stories of men who have fought their good fight and are set among the heroes: of William Barret Travis and the siege of the Alamo when all except a half-dozen Texans died fighting and Santa Anna ordered the survivors to be shot; of Sam Houston who fought in the midst of discouraging circumstances; of Colonel Bowie, the man without ulterior motives; of Stephen F. Austin who advised his fellow Texans to avoid national politics and confine themselves to setting their own house in order; of the journalist Brann and his famous duel.

Taken by and large, the men of the plains hang close to the ideals of Washington and Jefferson. They have not learned the silly modern trick of belittling their heroes. Nor in them is there any of that sickly sentimentalism that would ignore the faults in a man. They know that there are infirmities of the flesh, for they live close to nature. So their heroes are men all through, men without timidity, men who aimed at fullness of life, who grasped experience firmly, who nurtured zest and hope. But they are never impossible creatures of perfection, whitewashed out of all semblance to humanity or any other race.

Looking toward Mt. Franklin, near El Paso, showing the Rio Grande.

The NEWS *That's* Fit *to* PRINT

By RUSSELL GARDINER

NEWSPAPER inaccuracies are of three kinds: those due to lack of training, unintentional misstatements, and deliberate misrepresentation.

Unintentional misstatements will appear in the most carefully prepared daily publications. Staff men cannot be at the scene of every event reported. No two persons observing the same incident will give identical accounts. Therefore the reporter must sift the conflicting versions for the story that appears the most logical and truthful. His narrative may not be correct, but his mistakes are unavoidable.

In contrast is the deliberate deception for headline purposes in the sensational press. A complete news item may give a definite impression. A statement taken from it may appear to mean the opposite.

Then there is the matter of 'coloring' news. A youthful reporter is assigned to 'cover' the address of Dr. Germs, a chemist, before the Rotary Club. The young man talks to the scientist over the telephone because he has so many other events to report that attendance at the luncheon, or an interview, is impossible, or perhaps wearisome to his youth. Failing to understand or to find interest in the chemist's outline of his speech, the reporter finally asks whether the doctor regards kisses more deadly than bullets because of the possibility of communicating disease. The question is answered as a matter of courtesy. That's all the reporter wants. He writes his story on the basis of the reply. In his address the chemist does not mention the kisses. The hearers discredit the paper when they read the account of the meeting and fellow chemists wonder whether Dr. Germs is losing his mind to talk such tommyrot.

Most so-called yellow journals, however, are careful not to carry their deception to the point where the danger of libel appears. Generally speaking, small-town papers are more conservative than the metropolitan dailies. Neighbors who call the editor by his first name and who wish to know why he printed such and such an item are responsible for this condition.

In many newspaper offices editors and reporters will tell you that suicides and murders come in series of three. In other words, one act of physical violence suggests a similar act to another person. The person who advises full publicity of crime as a preventive overlooks an important human element—a sort of personal optimism. With that spirit, soldiers are brave in battle as comrades fall about them. Each soldier thinks, 'Well, they're gettin' lots of 'em, but they'll not get me.' The person who is planning a crime is buoyed by that same hope. The prospective criminal reads the details of the deeds and capture of others. He sees the mistakes that led to exposure. Mentally he makes note of their errors and resolves to be so shrewd that his guilt cannot be detected.

Some years ago prominent persons were invited to write for the press when they had something worth while to give the public. Today the surest way of breaking into some of the big dailies with a signed story is to kill a sweetheart, another woman's husband, or a whole family.

A mail train bandit, arrested recently, said he had read of the rich hauls made almost daily and had envied the robbers their easy money. He was thrown out of work. The family was pressed for funds. Then came temptation. Others had done it, why could not he?

A timely example of how newspaper stories may react on weak minds developed in connection with a prediction of the end of the world. Terror-stricken by the prophecy, a Michigan farmer shot and seriously wounded his wife and then killed himself. The press story placed no credence in the authenticity of the forecast. It regarded the preparations for doomsday as the aberrations of fanatics. Yet few editors took precaution to print the story in such a manner as to allay the fears of persons like the unfortunate farmer.

Crime is a part of life. The newspaper is a mirror of mankind's struggles. Therefore it must print crime news. The press, however, can serve its public by telling the bare, cold truth in such a matter-of-fact manner as to rob crime of its glamour and heroics.

Tad Lincoln's Snowstorm

(*Continued from page 9*)

progress toward the attic, with that same smile on his face.

In the attic was a large bin full of visiting cards, which apparently had been lately disturbed, as there was a nest hollowed out in the center and the cards were scattered all around. But the boys were not there; so I went home and reported.

After dinner, as the men were enjoying their cigars on the veranda, the four boys appeared, dragging a remarkable object, which consisted mainly of an old chair on barrel staves and the cover of a *Congressional Record* nailed to the broken seat. This, they proudly informed us, was a snow sled.

Hally hung back as they were severally presented to the colonel, and Tad triumphantly explained that 'Hally burned an awful hole in his pants with powder out of a cartridge given him by a soldier who said it wouldn't go off.'

BOTH Tad and Hally were very uneasy and continually rubbed against the veranda railing. When questioned by our mother, Tad said, 'I 'spose it's the snowballs we've got down our backs.'

'Snowballs,' said mama, surprised. 'Where could you have found any snow?'

'Up in our attic,' said Tad. 'Handfuls and handfuls and handfuls and bushels.'

But Willie said, 'Why, Mama Taft, Tad's snow is cards. There are bushels in our attic in a big bin and we throw them up and play it is snowing. There are all the cards all the Presidents have had left on 'em since General Washington.'

'General Washington never lived in your house,' said Bud; 'the tutor said he didn't.'

'Well, there's enough to make a snowstorm without his,' said Willie, 'and Tad and Hally stuffed them down each other's backs just like real snow; but I guess they're sharp-cornered and sticky.'

'Yes,' said Tad, 'they stick to you and they stick into you.'

Declaring they couldn't stand it another minute, Hally and Tad went upstairs, Tad calling back that, 'next time they would pour the snow on the attic stairs and slide down on their snow sled.'

The next morning sister Julia, going into the boys' room, saw in the middle of the card-strewn floor, the name of Jennie Lind, the great singer, of whom she had heard from her father and mother.

So she picked up the card, and then another, and another, as they interested her, leaving many to be swept up by the maid.

And here are some snowflakes from Tad Lincoln's 'snowstorm':

The RED FLAG of QUARANTINE

By CHARLES H. LERRIGO

HAS your household ever been placed under quarantine? Did you cheerfully accept the restrictions, for the good of your neighbors, or did you moan and complain as many have done upon whom the ban of quarantine has descended, for thousands of years past.

I am safe in saying *thousands of years,* for the policy of quarantine is old enough to have a place in the early books of the Bible, where appears the pathetic Levitical decree: 'He shall dwell alone; without the camp shall his habitation be.'

Samuel Pepys wrote in his diary under date of June 8, 1665 (the first year of the great plague of London), 'Saw two or three houses marked with a red cross upon the doors and "Lord have mercy upon us" writ there. It put me into an ill conception of myself and my smell, so that I was forced to buy some roll-tobacco to smell and to chaw, which took away the apprehension.'

The first quarantine law recorded in this country is that of Massachusetts in 1699, although Connecticut was not far behind, having had a statute enacted in 1722 entitled 'An Act to prevent the small-pox being spread in this colony by peddlers, hawkers and petty chapmen.'

Every state now has its quarantine laws, which are not merely regulations of the board of health but are in most cases covered by statutory enactment. Each state makes its own laws for quarantine, usually through the agency of the State Board of Health. But in addition to state laws a city or a county may, and often does, multiply quarantine laws and regulations for the government of its particular district.

IT IS not the purpose of health authorities to increase the distress of a household when illness prevails, but it is unfortunately true that underlings in the capacity of sanitary clerks and officers, and occasionally even physicians, do sometimes administer health regulations in such a way as to give the impression that contagion is a crime rather than a misfortune. They have one valid excuse—so many people are constantly trying to dodge the restrictions of quarantine that it makes them bitterly suspicious.

Progress in medical science has the tendency of lightening the rigors of quarantine because it shows that some of the old ideas about the spread of certain diseases are wrong. For example, recent investigations and observations warrant our discarding the theory that the infection of scarlet fever is derived from the peeling skin. It has been demonstrated that the contagium comes from the nose, the throat, or the ears.

The modern doctor is inclined to be sceptical of the ancient tradition that scarlet fever or diphtheria may be transmitted by a child's being given the playthings of one who had the disease twenty years ago; and he is still more sceptical of the idea that the father who enters a house in which his sick child lies thereby becomes enveloped in a thick cloud of mysterious germs which he will scatter broadcast as he mingles among men. These ideas have gone into the discard.

Our views about the spread of contagion were bound to change, for they were not in harmony with facts. Consider, for instance, the handling of money. I quote from an article in the *Journal of the American Medical Association:*

'Theoretically, dirty money, especially paper currency, handled by all kinds of people and by people suffering from or in close contact with contagious diseases, should transmit disease; but it has not been found to do so. Bank men and treasury department men who handle large amounts of gold and dirty money do not contract disease.'

THESE advanced ideas, taking away much of the dread of contagion, help us mightily in our warfare against it. In the old days, a house with a single case of scarlet fever or diphtheria was considered infected from top to bottom. There was therefore little need of confining the disease to a single patient. 'I suppose they'll all have to get it,' was the cry of the discouraged mother, virtually throwing up her hands.

Quite the contrary is the new view. If the spread of the disease is only by contact, we have a good chance of protecting the other children. We rigidly exclude them from the sick room, if possible, though if circumstances compel the use of the same room we may still hope to keep them well by confining them to a part of the room beyond the patient's touch. The attendant of the sick will be especially careful about thorough cleansing when leaving the patient for other duties.

We keep our patient strictly in bed in a bright, cheerful room. We remove articles that might promote the spread of contagion, but we no longer feel it necessary to turn the sick room into a prison house by taking out every scrap of furniture, nor do we tolerate the old absurdity of hanging before the door a ghostly, ghastly sheet, wet with antiseptic solution. We prefer to bend our energies to swatting adventurous flies and excluding too friendly cats. When our little patient understands that the cat may be a carrier of infection, he will not murmur at the denial of his pet. In at least one state, all cats and other domestic pets found in an infected house are condemned to death.

Playthings that can be boiled or scrubbed with an antiseptic are used with safety, and all linen is boiled as soon as removed. A greater dependence is placed on the boiling of linen, the scrubbing of paint and woodwork with hot antiseptic solutions, and the free admission of air and sunlight at the close of the case, than on any fumigating gas.

The important thing is early recognition. Let the least suspicion of contagious disease be the signal for separate bed, separate dishes, separate towel without delay—and contagion need never spread through a household. And the new knowledge as to the spread of contagion is already having its effect upon our methods of quarantine. Very soon absolute quarantine will be among the bugaboos of the past.

Many states have already modified their quarantine of scarlet fever, diphtheria, measles, and other diseases, to the extent of allowing the breadwinner to go about his work, reasoning that, the disease being spread only by contact, an intelligent man who keeps away from the patient is not a dangerous factor in contagion.

With this liberty for the breadwinner the hardship of household quarantine disappears, for the mere exclusion of children from school cannot be considered a hardship. Do not grumble because your child must stay away from school for a few weeks after an illness. It is almost certainly a benefit to the child, and it is the real key to the suppression of contagious disease. The probability is that many new cases arise because children, apparently recovered, return to school while some infective element still lingers. They feel well but still act as 'carriers.'

CHILDREN should be excluded from school a sufficient length of time to fully insure complete recovery; primarily this is for their own good. There is little doubt that many of the heart and kidney troubles of adult life have their origin in some disease of childhood, the convalescent period of which was too early terminated, with resumption of the strain of play and work before full recovery. Do not make a bugbear of school. Do not be too greatly concerned about your child's making his grade. *The important thing is a healthy body for a bright mind.*

Granted the modified quarantine which allows the breadwinner to come and go, you can well afford to withdraw the children from circulation as long as seems best—in fact you can afford to do nothing else. For that matter, there is only one wise thing to do with quarantine measures, enlightened or the reverse. That is, to observe them. Their violation is no light matter, for there is always a penalty. In Texas it may be a fine as high as a thousand dollars; in Wyoming a jail sentence of one year.

Even if a violated quarantine brings no official penalty, it is sure to create ill will and distrust on the part of neighbors, who feel that your quarantine is their safeguard. On the contrary, a strict observance wins their respect, even as Samuel Pepys' quaint record shows in the days of the great plague of London.

'I saw poor Dr. Burnett's door shut; but he hath, I hear, gained great good-will among his neighbors; for he discovered it himself first and caused himself to be shut up of his own accord: which was very handsome.'

An OLD SCOTTISH Newspaper

By VICTOR MITCHELL

ROBERT BURNS during his tour in the North of Scotland stopped at Aberdeen, where he spent a congenial hour or two in the company of Chalmers, editor and proprietor of the *Aberdeen Journal.* With them was Bishop Skinner, son of the Reverend John Skinner, the Nonjuring clergyman who wrote 'Tullochgorum' and 'The Ewie wi' the Crookit Horn,' two homely songs in Scottish dialect that had aroused the enthusiasm of the Ayrshire poet.

The Nonjurors were adherents of the Scottish Episcopal Church, and were Jacobites, refusing to take the oath of allegiance to King George.

Chalmers was the successor of a man who in those far-off days of stagecoaches, highwaymen, and Highland rievers, had the enterprise to start a newspaper in order to chronicle the events of the Jacobite rising of 1745, when Bonnie Prince Charlie took the hearts of the Scottish people by storm, and pursued with fluctuating success his attempt to recover the kingdom of his fathers, an effort which ended on the dark field of Culloden.

An account of the battle of Culloden actually appeared in this Aberdeen 'broadsheet.' It was the pioneer of Scottish newspapers, and one of the earliest publications of the world's press.

After the suppression of the Jacobite rising the *Journal* was suspended for a few years, but it was revived in the early seventies of the same century and has continued uninterruptedly ever since. First issued as a weekly, the paper later became a daily, wielding a marked influence over the whole country north of the Grampians, not to mention a considerable area much nearer the English border. The family of Chalmers continued to edit and control the paper for many years after its foundation, and members of the same family still retain an interest in the publishing company by whom it is now issued.

When 'Robbie' arrived at the gray old city between the rivers Dee and Don, on his way to the Highlands, he lost no time in looking up Editor Chalmers, who introduced him to the son of 'Tullochgorum' Skinner, and after a look round the ancient town the trio adjourned for lunch—dinner it was called in those days—where, over the wine of the country, they held a sort of literary symposium, the record of which is preserved in the archives of the old newspaper.

The song of 'Tullochgorum,' or that about 'The Ewie wi' the Crookit Horn,' may not be familiar to many at the present day, but they belong to a period and a people which gave Burns to the world and kindled his poetic fire. The verses of John Skinner, like those of Burns, contain words and phrases which may be obscure to the general reader, but under their surface lie the marvelous fertility and richness of a dialect, which, according to Ruskin, is richer and more musical than any other.

There is a gladsome swing about 'Tullochgorum' which may be the secret of Burns' liking for it, for it is true to the vein in which he himself delighted. Take this verse:

> For blythe and cheerie we'll be a',
> As lang as we hae breath to draw,
> And dance till we be like to fa',
>   The Reel of Tullochgorum.

Burns considered 'The Ewie wi' the Crookit Horn' the finest song in the Scottish tongue in his day. Years afterward it formed the inspiration for Landseer's famous picture of the 'Lost Sheep':

> Yet, last ouk, for a' my keeping,
> (Wha can speak it without greeting?)
> A villain cam' when I was sleeping,
>   Sta' my Ewie, horn and a'.
>
> I sought her sair upo' the morn,
> And, doon aneath a buss of thorn,
> I got my Ewie's crookit horn,
>   But my Ewie was awa'.

WHEN poet, prelate and newspaper proprietor had passed a pleasant hour in the old university town, Burns resumed his journey to the north, where he found fresh inspiration for such verses as 'My Heart's in the Highlands,' and 'Of a' the Airts the Wind Can Blaw.' It was during his visit to the Duke of Gordon, at Gordon Castle in Morayshire, that Burns heard the melody which inspired him to write the words of this beautiful lyric. The composer was Marshall, factotum to the Duke, and a musician of some note. The name of the air was 'Miss Admiral Gordon's Strathspey.' Marshall played it over on the violin, and so charmed was Burns that he wrote to it the finest tribute that he ever paid to his bonnie Jean.

The *Journal* is proud of its traditions. On the occasion of the coronation of King Edward VII, it issued a special souvenir number containing contemporary reports of four previous coronations of British sovereigns: those of George III, George IV, William IV, and Victoria. These accounts were reproduced in facsimile by special process from the files of the newspaper, and printed on handmade paper of the period. They give an excellent idea of the conscientious manner in which newspapermen of those good old times fulfilled their assignments.

Some forty years ago a disastrous fire in the offices of the *Journal* caused the destruction of some of the older files, but an almost complete set is preserved in the library of Aberdeen University. Queen Victoria, during her periodical visits to Balmoral Castle, among the Deeside hills about forty miles from the city, was a regular subscriber to the *Journal.* Her successors have followed her example. The *Journal* had the distinction of having the *Court Circular* sent direct for publication in its columns each day. About two years ago the *Journal* was amalgamated with the *Aberdeen Free Press,* and is now published under the name of the *Press and Journal;* but the *Journal* it will remain for all time to come.

One of the editors of the *Free Press* was the gifted writer, Dr. William Alexander, creator of that graphic picture of homely Scottish life, 'Johnny Gibb of Gushetneuk.' Two of Dr. Alexander's nephews are now on the directorate of the combined papers. The *Press and Journal,* the outcome of the humble news sheet in the stormy times of the Forty-Five, takes rank with the other Scottish national dailies—the *Glasgow Herald,* the *Scotsman,* and the *Dundee Advertiser*—with the added distinction of being the oldest of them all. In its offices have been trained some of Britain's most brilliant newspapermen, among those who are still in harness being Sir Robert Bruce, editor in chief of the *Glasgow Herald,* and William Will, managing director of the *Graphic* publications, London. Dr. Malcolm Bulloch, the editor of the *Graphic,* went to London from the *Free Press.*

Aberdeen, celebrated for the hard-headedness of its inhabitants and the beauty of its granite, took the lead in Scotland as a printing and publishing center long before Edinburgh had risen to fame as the home of the *Waverley Novels.* About two years ago a great gathering of the printing fraternity celebrated the tercentenary of Raban, the compiler and printer of the *Aberdeen Almanack,* and attended in a body the unveiling of a bronze mural tablet to his memory in the old parish church of St. Nicholas.

The *Aberdeen Almanac,* first issued by Raban, the pioneer typographer of the early Seventeenth Century, was at the period of *Redgauntlet* the standard authority on tides, phases of the moon, and other useful information, and is still, after the lapse of more than three hundred years, annually produced at the offices of the old *Aberdeen Journal.*

The *Journal* of today in its modern dress, with its electrically driven plant, its special wire direct from its London office in Fleet Street, and all the paraphernalia of an up-to-date newspaper, steers a steady course under the guidance of an editor whose home town is in the 'Burns country'; and there is no incident in its history to which it looks back with greater pride than the visit of the plowman poet and the social hour which its former editor spent in his company.

LIKE those of Burns, the opinions of the editor of this old-time Scottish newspaper were not always popular, for in the exciting days of the Forty-Five he supported the cause of the Hanoverian monarch. There is a story told that on one occasion Chalmers unexpectedly found himself in a nest of Jacobites in a lonely inn on the banks of the Don. Fortunately the followers of Prince Charlie did not know the editor by sight, but he heard them swearing on their dirks to have the blood of the scribe who dared to uphold the cause of the 'foreign usurper,' and was constrained to take cover beneath a piece of furniture in order to avoid the risk of having a skein-dhu thrust into his vitals. But in Aberdeen, as in other parts of the world, this is no longer a recognized method of settling differences of opinion.

Story of 'Home, Sweet Home'

(*Continued from page 3*)

The greater portion of his childhood was spent, however, at the old Payne homestead in East Hampton, Long Island, and it was here that his young heart drank its first inspirations from the beautiful nature that surrounded him. Here it was that the 'lowly cottage and the birds singing gayly' that 'came at his call' made the lasting impression which led him to write the song that will live forever.

'Howard,' for so he was always called by his friends and relatives, received part of his early education in Boston. In 1804, when only thirteen years of age, he organized a little military group which attracted so much attention that it made his name in the city a household word. His father, William Payne, was a lawyer. Young Payne benefited greatly by his father's teachings in elocution, to which he devoted several years of study. He always took a leading part in school theatricals, showing superior merit in elocution and in acting.

The fame of Master Betty, the youthful Roscius of England, had reached this country at that time. The accounts of his success took a firm hold on Payne's mind, absorbed his entire attention, and created in him an ambition to become the Betty of America. He talked and thought of nothing else and sought every opportunity to assist and perform at private theatricals. A member of the Boston Theater was so greatly impressed with the young man's personal beauty and remarkable dramatic talents that he interviewed Howard's father and offered to take the boy under his charge for one-half of the remuneration that might be derived from a two years' engagement. This was emphatically refused by the affrighted parent, who was a strict member of the church, and never imagined that his son was aspiring to the stage.

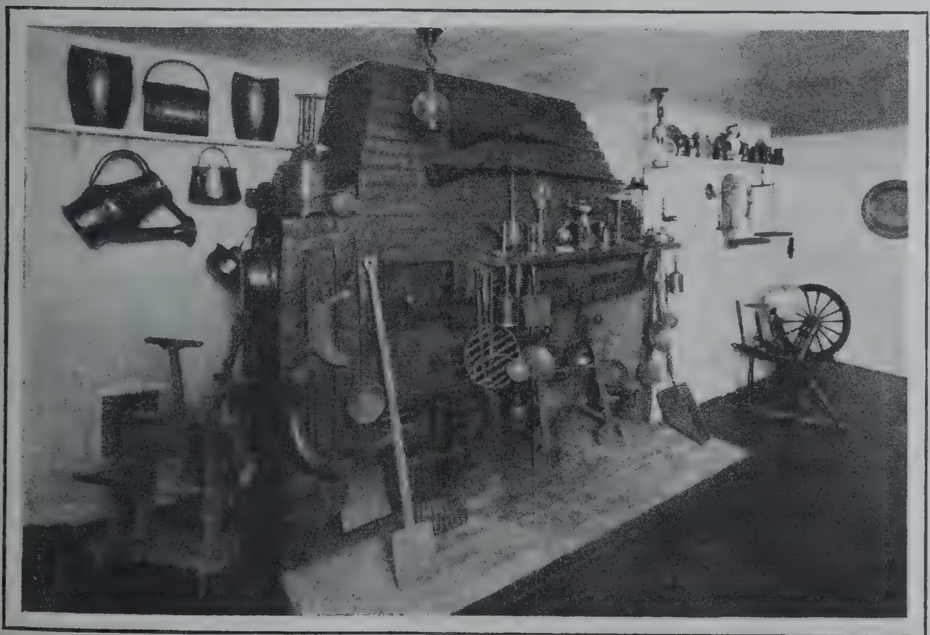
—*Brown Brothers Photos.*

Some of the rooms in the old Payne homestead: above, the living room, in oval, the kitchen.

Every means was brought to bear to discourage Howard; every entrance and exit was watched. Shakespeare was tucked away from sight, Beaumont and Fletcher were hidden among the cobwebs, and an engraving of the great English actor Kemble as Hamlet, which adorned the walls of his room, mysteriously disappeared. All these preparations availed nothing, however. It was in his blood to become an actor.

About that time (1804) Howard's brother William, a merchant in New York City, died, leaving his business to his partner's care. It was thought advisable by Howard's parents to remove the young man from his associates and those pursuits which had riveted his attention on the stage, and to place him in the way to succeed his brother. He was sent, therefore, to New York to assume the position of clerk, with a strict understanding that his propensity for theatricals was to be watched and crushed. This was attempted by ways and means unsuited to his temper, which drove him to a clandestine editorship of a little paper called the *Thespian Mirror*, eight pages in size, issued every Saturday evening. It contained well-written memoirs of Cooper, Hodgkinson, and other actors of the day, with criticisms of their performances and plays, besides various interesting dramatic and literary news items from London, Boston, and Philadelphia periodicals. It ran for fourteen numbers. In the last issue, March 22, 1806, the name of John Howard Payne, its editor, appeared for the first time.

Boylike, young Payne undertook the work without the remotest view to consequences, for his only object was to engage in his favorite pursuit as a relief from those to which he went with a heavy heart. With much alarm, therefore, he read one day in the New York *Evening Post* a notice from the editor promising a contribution



Close-up of the fireplace and utensils in the kitchen.

from the 'Criticus' of the *Thespian Mirror* in his next issue. He was so frightened that he wrote to the editor to protest against any remarks which might involve exposure.

Coleman, the editor, wrote in the *Evening Post* of January 24, 1806, 'I perused the note a second time and was incredulous as to the story of the writer's youth. It was difficult to believe that a boy of fourteen could possibly possess such strength and maturity of mind. I wrote him a note to call in the evening. He did so, but at so late an hour, on account of being detained at his office, that I did not see him. He called again in the morning, however, and I had several hours' conversation with him. His answers to my questions were such as to dispel all doubts as to any imposition, and I found that it required an effort on my part to keep up the conversation in as choice a style as his own. I saw him many times afterward. He was introduced to some of the best circles in the city and there he was looked upon as a prodigy.'

Editor Coleman shortly afterward made Howard's adventure public and through the nobility of his heart formed and carried out a plan to send him to Union College in Schenectady. His father consented to the plan and the boy left the counting house forever.

As to the young man's life in college we learn very little except that, on account of his sweet-tempered, easy-going disposition, he became very popular with all with whom he came in contact.

In 1807 a storm broke in the life of John Howard Payne, and for the first time he realized the gloom of deep sorrow. On June 18 his mother died.

OLD Mr. Payne had been severely tried by the death of his older son and now the second blow distressed the poor man to such an extent that he neglected his business and was finally compelled to abandon all to his creditors. Howard, looking upon the shipwreck with philosophy and calmness, at once thought of his dramatic talent and wrung from his father a reluctant consent to his going upon the stage.

Payne made his first début on the public stage as Young Norval in *Douglas* at the old Park Theater on Duane Street in New York City on February 24, 1809. His appearance was a great success and his effort a surprise to the audience, who were not of the kind that patronize the vaudeville and the cheap comedy plays of today. His engagement ran for six nights. He then went to Boston to act the parts of Douglas, Zaphna, Selim, and Octavian. The critics of that day, more exacting, perhaps, than many of our time, considered his acting superior to Master Betty's and said that in force and genius he had no equal. From New York he went to Providence, Philadelphia, and Baltimore, and on the way south again acted at the Park Theater with greater success than before.

Returning to New York, he found his father reëstablished in his law practice. He yielded to his wishes to give up the stage. Like many other geniuses before and since his time, Payne was not successful as a business man, and his venture to establish an institution of public learning proved a dismal financial failure.

Again John Howard Payne turned to the stage, acting in Shakespearean drama in Boston and elsewhere. Finally, on January 18, 1813, accompanied by his brother, he sailed for London, landing in that city on February 11 of that year. Here he met several of his old New York friends, among whom was Washington Irving. England was at war, however, with the United States at that time and Payne was arrested as a spy and thrown into prison, where he was confined for fourteen days. Discouraged and despondent as he was, his thoughts turned to home, and he composed the words of that immortal song, which in after years were to be embodied in an opera called *Clari, the Maid of Milan:*

'Mid pleasures and palaces though we may roam,
Be it ever so humble, there's no place like home;
A charm from the skies seems to hallow us there,
Which sought through the world is ne'er met with elsewhere.

An exile from home, splendor dazzles in vain,
Oh give me my lowly thatched cottage again;
The birds singing gayly that came at my call,
Give me them, and that peace of mind dearer than all!

Home, Home, sweet, sweet Home!
There's no place like Home! there's no place like Home!

Released from prison, Howard was introduced to Sir John Kemble, the great English actor whom he had admired when a mere boy and who in turn introduced him to a Mr. Whitehead, chairman of the board of managers of Drury Lane Theater. Here he made his first appearance before an English audience in *Douglas* on June 14, 1813, his performance meeting with the same applause as before the people of America. He also acted as Romeo and Young Norval in Liverpool, Stourbridge, and Bath. While in Europe he performed for one hundred and six nights, taking the part of twenty-six characters.

EARLY in 1814 the new manager of the Drury Lane Theater sent Payne to Paris to write English translations of French plays, and then it was that his career as a dramatic author commenced. The first play that he wrote was *Accusation*, a melodrama in three acts. This was successfully produced and had a run of many consecutive nights. The theater was in financial difficulties, however, and Payne was not paid one cent for his trouble, being out some $2,000 instead. He then arranged with Covent Garden in London to write and act in *Adelgirtha*, at Bath. Shortly afterward he wrote *Brutus* for Edmund Kean, a popular English actor, who was declining in public favor. Although this play was a remarkable success and ran for fifty-three nights, the house receiving thousands of pounds and Mr. Kean drawing fifty pounds extra a week, Howard was lured into a bad bargain and obtained but two hundred pounds for his play. Another play he wrote at the time was *Therese, the Orphan of Geneva*, which was proclaimed the best dramatic piece of art ever written for an English stage since Shakespeare's time; but its author's lack of business acumen hindered his benefiting from it financially.

Once more Payne was sent to Paris by his old love, the Drury Lane Theater Company, under the management of Charles Kemble, and it was then that he wrote *Clari, the Maid of Milan*, an opera in which was sung 'Home, Sweet Home' for the first time. The sweet rendering of the song by Miss Tree at Covent Garden won for her a rich husband and renowned fame as an opera singer.

'Home, Sweet Home' has had more universal circulation than any other song ever written. More than one hundred thousand copies were issued by its publishers in London, within less than a year from its conception, yielding a profit of $500,000. It became so popular that it was heard everywhere in the English capital and the great cities of Europe.

STILL, with all its success, Payne was the least benefited of any concerned. The publishers did not place his name on the title-page nor compliment him with a copy of his immortal song. It was composed and founded on an old Sicilian air and set to music by Henry R. Bishop, composer and director of music to the Theater Royal.

Payne as a dramatic writer showed a superior knowledge of human passions. He knew how to color and present them to his audiences without the wild bombast of words so frequently used in dramatic productions. The pathos of his pieces came from the heart and often moved the listener or the reader to tears. His subject was always 'the home'; for he knew that educated and uneducated alike are captivated by the memories of home.

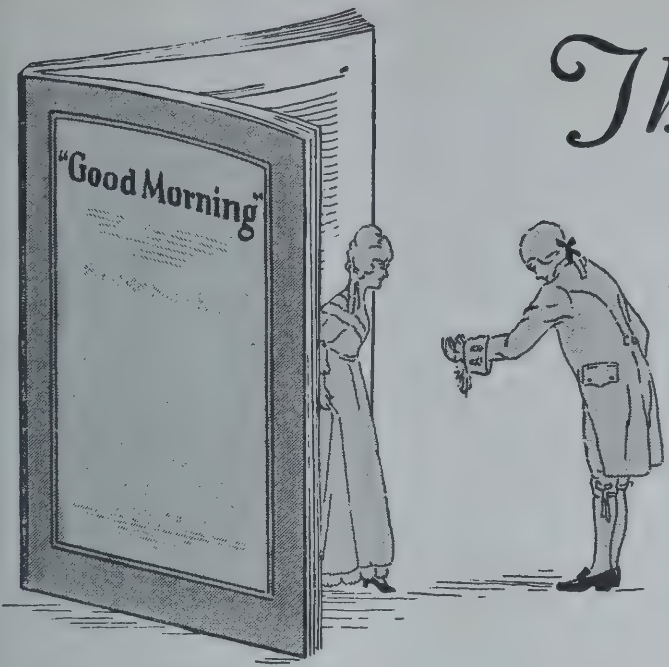
Among other works that Payne brought forth were *Richelieu*, revived about 1881 in New York City when Edwin Booth appeared in public for the last time; the opera of *The White Lady;* and *The Comedy of Charles Second.* All these plays were successfully produced in the Haymarket Theater in London.

On July 25, 1832, the author and actor returned to his native land, where a festival was held in his honor in New York and another in Boston. Shortly after his arrival he went to Washington and was delegated to visit the Cherokee Indians, with whom the Government was then at war, to obtain material for a book he afterward wrote. He was so successful in bringing about a reconciliation between the Indian agent and the Indians themselves that he attracted the attention of Congress and of the President. Through the efforts of Daniel Webster and other friends in Washington he was appointed consul to Tunis, at which city he arrived on May 13, 1843.

On April 9, 1852, having been ill of pneumonia for but a short period, John Howard Payne died at the age of sixty-three. In 1883 his remains were removed to Washington.

I remember a visit I paid to the capital city when a small boy. My mother took me one day to a little obscure cemetery in Georgetown, an old suburb of Washington, to show me the grave of John Howard Payne. There on a plain shaft topped with a bust of the immortal poet, actor, playwright, and journalist were inscribed these simple words:

'Sure, when thy gentle spirit fled,
Far beyond this earthly dome,
With outstretched arms God's Angels said—
"Welcome to Heaven's Home, Sweet Home." '



The RETURN *of the* DANCE

Everyone enjoys the old-time dances. They are easy to learn. They are being taken up enthusiastically by schools, clubs and community groups.

Piano Music for twenty popular old American dances is available. Price 50c the set.

Orchestrations of 13 parts each, including saxophone, for 20 dances. Specially priced $2 the complete set.
Single Orchestrations 15c each.

Edison, Columbia *and* Victor have recorded Old American Dance Music as played by the Henry Ford Orchestra. Your local music dealer handles these records.

THE methods of the world-famed Ford School of Dancing at Dearborn are now made available to everyone in the specially prepared manual entitled

'GOOD MORNING'

Compiled by Mr. and Mrs. Henry Ford

This 169-page manual contains complete information with instructions on each of the dances. Calls, music and pictures visualizing the various steps are given. There is also detailed information on how to arrange and conduct a successful dance.

The origin and etiquette of dancing, style and deportment are also fully described. This feature makes *Good Morning* a valuable reference book, especially in connection with the training of children.

Send for this book today. 50c a copy, postpaid.

The Dearborn Publishing Co.,
Dearborn, Mich.

Please send me the items checked below for which I enclose remittance of
$...............

Table of Contents
'GOOD MORNING'

- The Return of the Dance
- Style in Dancing
- Deportment in Dancing
- Arranging for a Party
- Positions of the Feet in Dancing
- Dictionary of Dance Terms
- Floor Manager
- Prompting
- Quadrilles
- The Lancers
- Novelty Quadrilles
- Contra Dances
- Minuet
- Exercising the Knee Joints
- The Waltz and Other Round Dances

Recognize *the* Soviet?

'Yes,' *Says* Davis

(*Continued from page 6*)

and Lenine personally held it up for six weeks. Even after its enactment the bolsheviki gave repeated assurance that they were willing to settle their debts. On eight separate occasions prior to 1919 the bolsheviki made peace offers to the Allies. After that date, the bolsheviki continued their efforts toward friendship.

On January 12, 1919, Chicherin said in an official note: 'We are ready to eliminate everything which may be an obstacle to such relationship.' On March 12, 1919, a note handed to the special American representative, Bullitt, offered recognition by the Soviet government of the debts of the former Russian Empire. On October 2, 1919, Chicherin, the foreign minister, reiterated the offer to assume all the debts, in a broadcast radio announcement. On December 5, 1919, the seventh All-Russian Congress of Soviets, after reiterating ten distinct proposals which they had made for international settlement, passed another resolution proposing peace to the Allies. If these offers are insincere, why not meet with Russia and prove their hypocrisy?

Repeatedly since that time the Russian government has offered to assume its foreign obligations both private and public, and that in many cases it has actually done so can be proved by a study of the treaties with Poland, Latvia, Esthonia, Lithuania, and the proposed treaty with England.

ANOTHER argument which has been used with telling effect by distinguished Americans is that of the avowed aim of the bolsheviki to create a world union of soviet republics. According to the Soviet constitution, the world is divided 'into two camps—that of capitalism and that of socialism.' The communists hope that some day there will be a world revolution. This is an alarming statement to those who have theoretical-phrase minds. The rest of us must remember that every country with a new form of government wants to see others like unto itself. If one reads American revolutionary history he finds that our most distinguished forefathers desired to see all Europe revolutionized, kings dethroned, and democracy introduced. In the 20th Century it is natural for the bolsheviki to write into their constitution a similar dream-wish.

Much more serious is the charge that recognition will give a chance for the bolsheviki to carry on actual propaganda in America. It is easy to understand why the American Federation of Labor should oppose bolshevism on this count. Probably they would find in practice, as the British labor party has, that there would be much less propaganda after recognition than before. More workers would then oppose bolshevism than do now.

Candor compels us to admit also that there has been hostile action on both sides. Recall the history of intervention. There was the attack against Russia from the north with American and Allied soldiers; from the east with American, Japanese, and Czecho-Slovak soldiers; from the south by Denikin with Allied aid; from the south by Wrangel with Allied aid; from the west by Udenich with Allied aid; and again from Poland with French bayonets. Then after the Armistice there was the blockade of Russia. Moreover, Americans have not entirely refrained from propaganda against bolshevism even within Russia. During the war the American Government helped to distribute a million copies of President Wilson's speech in Russian among the soldiers and peasants. Certain distinguished American representatives have actually talked and written against the bolsheviki while they were in Moscow and Petrograd.

A scientific study shows that the extent of bolshevik propaganda in America has been very slight. In 1919, when the bolsheviki believed very much more in the imminence of a world revolution than they do now, a subcommittee of the United States Senate conducted an extended investigation into bolshevik propaganda, taking testimony which filled over a thousand pages. It never found a cent of money expended in America for propaganda purposes. When Mr. Martens, the Russian Soviet representative, was deported, his expenditures, activities and utterances were subjected to the most minute examination; yet nothing could be found and he was finally deported on the alleged aims of his home government.

Today the bolsheviki realize that it is not propaganda they need, but production. For instance, President Kalinin said at the Congress of the Union of Soviet Republics at Tiflis in March of this year: 'Until the time when we outstrip America in production, the Soviet union will never come completely to power.' Industrial America will hardly fear that challenge.

Even if the bolsheviki would like to carry on expensive propaganda in this country, what of it? There is hardly a single scientific student of our society who really fears a bolshevik revolution in America. If propaganda could circulate freely in every state in the Union, there is no more danger of our country adopting bolshevism than of our accepting a German kaiser or a Japanese emperor. Propaganda can only have success when it can play on actual injustice. Even a report of the *Communist Internationale* for 1925 says that in lands where there is liberty and justice their work is useless.

The cooler scientific judgment of the world now recognizes that the cause of the violent social explosion in Russia was the terrible maladjustments within the Czar's empire. Conditions had been economically and sociologically unsanitary and dangerous for a long age span. Ever since the warning stimuli of the 1905 revolution, the world has been apprised of the situation. The bolsheviki are the products of a Czar's tyranny, but the curious fact is that we recognized the Czar and withhold all communication from the bolsheviki. Is it not also true that there is an element of inconsistency in our present position?

THE fact is that a genuine moral policy would help the world overcome the spirit of fear, of misunderstanding and of hate; but this can only be done by setting the example ourselves of having contact, communication and coöperation with every other nation, even our enemies. America needs to give the world an example not of fear but of trust, not of isolation but of mutuality. We need to demonstrate our faith in freedom for each country to experiment in its own way. We need to prove that contrasting ideas, even revolutionary ones, can live peaceably side by side. Above all, we need a greater loyalty to the ideal of tolerance.

The bolsheviki clearly recognize that their communistic plans are in much greater danger after than before recognition. Time and time again they have reiterated such statements as the following, which is quoted from a speech given for the foreign minister Chicherin by Rakovsky and printed in the *Izvestia* of January 27, 1925:

> Recognition has dangers for us. It increases the descending oppression of the capitalistic powers upon us. It is one thing when they conduct their campaign indirectly or through the press and quite another thing when we have normal relationships with capitalistic governments and begin to *value the relationship, value the trade;* it is another thing when there will be forty to fifty diplomats in Moscow representing the governments of every continent . . . It is easy to meet an open attack by blockade or intervention, but a systematic interpenetration along political and economic lines is difficult.

In spite of these dangers, the bolsheviki welcome recognition because it means trade. It is precisely at this point, in the matter of trade, that as Americans we want to help Russia. But as Rakovsky says, once

—Keystone View.

Part of a big collection of valuables which escaped confiscation by the Russian Soviet until found in a secret wall compartment in the Moscow home of Prince Youssoupoff.

establish normal trade relations and violent communism is gone. Keep the Russians in a sort of solitary confinement by a policy of nonrecognition and you strengthen the extreme elements which we oppose.

Finally, there is an American reason for recognizing Russia which is perhaps more powerful than all the others: namely, it is the only policy which is true to our best American tradition, to the highest ideals of international friendship. Our most distinguished authority on international affairs, John Bassett Moore, a judge of the World Court, defines recognition as 'the assurance given to a new state that it will be permitted to hold its place and rank, in the character of an independent political organization in the society of nations.'

The Russian government has maintained its place for nine years and is today as strong politically as almost any power in Europe. Go back over our political history from the time when the cabinet of George Washington unanimously voted to extend recognition to the revolutionary government of France down to the present time, and you will find reiterated statements by our distinguished presidents such as this: that it is 'an obligation of duty of the highest order to recognize as independent states, nations which, after deliberately asserting their right to that character, have maintained and established it against all resistance which could be brought to oppose it.' President Pierce said in 1856: 'We do not go behind the fact of a foreign government exercising actual power to investigate questions of legitimacy; we do not inquire into the causes which led to a change of government.'

WHEN our first missionaries went to Japan, it was death to be a Christian and foreigners could not own property; but we recognized Japan. In all our history we have never refused to recognize a great national power which has maintained itself against all odds for over seven years.

President Harding offered to send a commission to Russia. The bolsheviks accepted the proposal on the condition that they could send a similar commission to the United States, a proposal which any fair-minded American must recognize as entirely just. Yet it enabled those who opposed recognition in this country to defeat the entire project. President Coolidge, speaking in the Senate in 1923, urged the need of contact with Russia, saying:

> Whenever there appears any disposition to compensate our citizens who were despoiled and to recognize that debt contracted with our government, not by the Czar but by the newly formed Republic of Russia; whenever the active spirit of enmity to our institutions is abated; whenever there appear works meet for repentance, our country ought to be the first to go to the economic and moral rescue of Russia.

No government could have replied in a more friendly way than did Russia, stating that 'it has repeatedly announced its readiness to enter into negotiations with the American government and to remove *all* misunderstandings and differences between the two governments.' In spite of this the enemies of recognition in America were able to block action.

Is it not time to turn back to the policy of Washington, Jefferson, and Lincoln, a policy of contact, coöperation and friendship with the Russian government?

Recognize *the* Soviet?

'No,' *Says* Moses

(*Continued from page 7*)

the provisional government of Kerensky and established the Soviet government. As its initial activity the Soviet government conducted propaganda for a world revolution. It will be recalled how a subcommittee of the Senate Committee on Foreign Affairs conducted an investigation of the activities of Ludwig C. A. K. Martens, the so-called representative in this country of the Soviet régime. After extended hearings the subcommittee expressed its conclusions as follows:

'Martens' propaganda in this country for the overthrow of governments is established by his own testimony, as shown in the body of the report, that he has publicly associated and sympathized with those advocating such a course. He admitted to the committee his persistent revolutionary character, his desire to see the establishment of the "dictatorship of the proletariat" in all lands, and his opinion that it would be better for this country if the Soviet government were established here. It was also proved that he continued to employ in the staff of his embassy persons who have publicly and in his presence advocated the bringing of bolshevism to America, and he admitted to the committee that "any means which would produce this condition would be justified."

—Press Photo, Berlin.
President Stalin.

'All this leads the committee to the conclusion that Martens' activities here have been of a nature to render him more suitable for investigation and action by the Department of Justice than by the committee of the Senate.'

Evidently this investigation and other developments impressed the Soviet dictatorship with the idea that the world-revolution propaganda should not be conducted through a government which they expected to have recognized by other powers. Accordingly, the Russian communist party, in 1919, brought into existence the Third International. This was to take over the propaganda against the social order in Europe and the New World. To the Soviet government was assigned the task of conducting the domestic affairs of Russia and the negotiations for the recognition of their régime through regular diplomatic channels. Thus the Third International becomes the left hand of the Russian communist party, and the Soviet government becomes the right hand.

This is confirmed in a report of Comrade Radek at the ninth Congress of the Russian Communist Party. He said:

'The Third International is the child of the Russian communist party. It was founded here in the Kremlin, upon the initiative of the communist party of Russia. In our hands is the executive committee of the Third International and therefore, until the political frontiers which prevent our comrades from conversing with us are eliminated, the congress of the communist party is the place at which it is proper to sum up the results of the work of the Third International.'

This report was made on March 29, 1920; but we have a more recent and more authoritative outline of the plans of the Russian communist party. This is from Joseph Stalin, now recognized as one of the most powerful figures in the Russian Soviet party. Under date of December 20, 1925, Comrade Stalin, in addressing the fourteenth Congress of the Russian Communist party said:

'I turn to the question of the tasks of our party in connection with the foreign situation.

'What are these tasks?

'I think that the tasks of the party must be traced, in the sense of its work, in two spheres: In the sphere of the international revolutionary movement and afterward in the sphere of the foreign policy of the Soviet Union.

'What are the tasks in the sphere of the international revolutionary movement?

'The tasks consist of the following: First, to conduct the work along the line of strengthening the communist parties in the west, along the line of their conquest of the majority of the working masses. Secondly, to conduct the work along the line of strengthening the struggle of the workers of the west for trade-union unity, of strengthening the friendship between the proletariat of our union and the proletariat of capitalist countries. Here is included also that run of pilgrimage about which I spoke and the meaning of which I described above. Thirdly, to conduct the work along the line of strengthening contact between the proletariat of our country and the emancipation movements in oppressed countries, for they are our allies in the struggle with world capitalism. And, fourthly, to conduct the work along the line of strengthening the socialist elements of our country, along the line of the victory of these elements over capitalistic elements, a victory which has a decisive significance in the work of revolutionizing the workers of all countries.

'Comrades, in speaking of the tasks of our party in the sphere of international revolution, usually confine themselves to the first three tasks and forget the fourth; they forget that the struggle in our country, the struggle for the victory of socialistic elements over capitalistic elements, our constructive struggle, is also international in its significance; for our country is the base for world revolution, our country is the lever for the development of the international revolutionary movement and if our work here goes with the necessary speed, it means that we are doing it along all channels exactly as the party demands it of us.

'Such are the tasks of the party in the sphere of international revolution.'

Recognition of the Russian Soviet government not only involves acquiescence in a policy, if not approval of it, by which the Russian communist party can conduct a campaign against our most cherished institutions, but establishes a precedent under which a complete cancellation of our entire foreign debt could be made. If the sources from which comes the demand for the recognition of Russia are examined closely, it will be found that they are identical with those that are interested in proposing the cancellation of our foreign debt.

In evidence let me again quote from Comrade Stalin, who is here discussing his negotiations with Great Britain for the recognition of the Soviet government:

'The foundation of these negotiations was the idea of the actual annulment of the war debts. Afterward it appeared that precisely for this reason the treaty with MacDonald was torn up. By whom? They say by America. Although America did not take part in the negotiations between Rakovsky and MacDonald, although Mac Donald and Rakovsky reached a definite draft agreement, although this draft agreement presented an exit to one side and to the other and the interests of both sides were more or less satisfied by this draft, nevertheless, as this draft originated in the idea of the annulment of the war debts, and America did not wish to create such a precedent, for she would then lose billions which she has in Europe, she 'advised'—and nothing remained of the treaty. Nevertheless we even now stand on the ground of the draft referred to.'

Be it always remembered that we were the first to recognize the Kerensky government. The American people were electrified by the instant success of Kerensky's revolt. Out of it, they thought there had emerged another republic; and they thought that out of the war the Russian people would come free with a republican form of government. Thus, we hastened to support the Kerensky régime with loans out of our Liberty bond proceeds. But what did the Soviet authorities do as soon as they had overthrown Kerensky? In their decree of January 21, 1918, they made the simple statement: 'Unconditionally and without any exception all foreign loans are annulled.'

The United States has not been a harsh creditor. The sum total of the loan to Kerensky is not a large debt for the Russian government to assume even if we should insist on its payment in full. It is the principle of national integrity for which our government is contending, in dealing not only with Russia but with other European debtors. The Russian communist party which, of course, is the real power in its own country, has expended more than the Kerensky loan in propaganda against the United States and our institutions. Russian sovietism is not concerned with the amount of any debt settlement which we may make.

Those in this country who are advocating the immediate recognition of the Soviet government should realize that they are attempting to open the way for the cancellation of all debts owed to us by foreign nations. There is a disposition in some quarters to regard cancellation as something that affects the Government as apart from the people. I doubt very seriously whether there is a full realization of the fact that every dollar of our foreign debt that is canceled must be collected from the taxpayers of our own country. This is but another way of saying that our foreign debt is the amount of money which other nations owe to the taxpayers of the United States. In approaching the question of the recognition of the Russian Soviet government under its present policy, Congress and all advocates of such a policy should recognize that they are proposing to take money from the pockets of the American people.

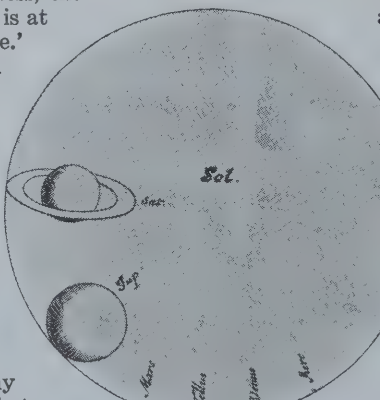
'*The* Celestial Worlds Discover'd'

By J. V. NASH

IN 1698 a curious book was published in London under the title *The Celestial Worlds Discover'd, Or, Conjectures Concerning the Inhabitants, Plants and Productions of the Worlds in the Planets.* The author was Christiaan Huygens, an ingenious Dutchman who was born in 1629 and died in 1695, a noted mathematician, physician, and astronomer of his day.

With quaint seriousness he cautions his readers that he has no positive proof of the existence of planetary beings:

'I must acknowledge that what I here intend to treat of is not of that nature, as to admit of certain knowledge; I can't pretend to assert any thing as positively true (for that would be madness) but only to advance a probable guess, the truth of which every one is at his own liberty to examine.'



Conception of the solar system in 1698.

The reader is treated to a lengthy description of the solar system as known to the 17th Century. The planets Uranus and Neptune were still undiscovered. Having shown how the earth is governed by the same laws as are the other planets, our author proceeds, naïvely:

'Now since in so many things they thus agree, what can be more probable than that in others they agree too; and that the other Planets are as beautiful and as well stok'd with Inhabitants as the Earth? or what shadow of Reason can there be why they should not?'

He goes on:

'And, First, 'tis more than probable that the Bodies of the Planets are solid like that of our Earth, and that they don't lack what we call Gravity,—that Virtue, which like a Loadstone attracts whatsoever is near the Body to its Center.'

He considers the cosmic animals:

''Tis much the same in Animals as 'tis in Plants, as to their manner of Nourishment, and Propagation of their kind. For since all the living Creatures of this Earth, whether Beasts, Birds, Fishes, Worms, or insects, universally and inviolably follow the same constant and fixt Institution of Nature; all feed on Herbs, or Fruits, or the Flesh of other Animals that Fed on them: Why may not the same rule be observ'd in the Planetary Worlds?'

Concerning the rational inhabitants of the planets, our author indulges in a wealth of imagination. He begins:

'But still the main and most diverting Point of the Enquiry is behind, which is the placing some Spectators in these new Discoveries, to enjoy these Creatures we have planted them with, and to admire their Beauty and Variety. And among all, that have meddled with these matters, I don't find any that have scrupled to allow them their Inhabitants: not Men perhaps like ours, but some Creatures or other endued with Reason. For all this Furniture and Beauty the Planets are stock'd with seem to have been made in vain, without any design or end, unless there were some in them that might at the same time enjoy the Fruits.'

Written in Latin by
CHRISTIANUS HUYGENS,
And inſcrib'd to his Brother
CONSTANTINE HUYGENS,
Late Secretary to his Majeſty K. *William.*

LONDON,
Printed for TIMOTHY CHILDE at the
White Hart at the Weſt-end of St.
Paul's Church-yard. MDCXCVIII.

Rare book of 1698 filled with odd fancies concerning life on heavenly bodies.

Our author is quite liberal in allowing these planetarians to possess various articles of convenience and comfort. They know how to read and write, and they use a variety of instruments. But he hesitates to admit that they wear spectacles! He grants that there is no logical reason why the planetarians' bodies should differ from those of human beings, and yet he avows that it would be a shock to think of them in this way.

'I cannot without horror and impatience,' he says, 'suffer any other figure for the habitation of a reasonable soul.'

CHATS WITH OFFICE CALLERS

Here in Washington most of the newspapermen measure the importance of affairs,' said the ***Correspondent,*** 'by the space given to such news as goes out through the metropolitan press—the New York, Philadelphia, Chicago, Detroit, St. Louis, Boston, Cleveland, Baltimore, Pittsburgh newspapers.

'When occasionally the correspondent's eye happens to fall upon a weekly newspaper published in some little out-of-the-way place, he may get a distinct shock to find that Teapot Dome is scarcely mentioned in the news or the editorial columns, and that some matter that he (the correspondent) considered of little public interest receives very earnest attention.

'All of which proves how important it is to get the other fellow's viewpoint, even in selecting news.'

* * *

Only about ten million children actually attend the public schools of the United States from day to day, and it is estimated that from fifteen to twenty million people daily attend the motion picture theaters,' said the ***Theater Proprietor.*** Of these, it is estimated that 75 per cent are under twenty-four years of age. Leading authorities insist that the influence of the movie on the development of character and conduct in our children is greater than that of the school.

'Thomas Edison is quoted as saying that the motion picture is 100 per cent perfect for teaching anything, and that we get 80 to 90 per cent of our knowledge through the eye. He showed that young people are apt to imitate anything they see in a motion picture and that they learn without suspecting that they are being taught. In Mr. Edison's opinion, the motion picture is the most powerful avenue at the present time for the influencing of public opinion and thought, and this power will increase from year to year. It can be made to improve the morals of the people, or it can do the opposite.

'United States Commissioner of Education, Dr. John J. Tigert, who was for twelve years a professor of psychology, testified that, by actual test and examination, pupils have shown a higher degree of knowledge of the subjects under consideration when presented to them by means of a motion picture than when presented through lectures.

'Eighty-five to ninety per cent of our ideas, information, and knowledge come through the eye, which is the overwhelming channel of information,' says Dr. Tigert. 'For the purpose of moulding and influencing public opinion and thought, and the habits, the customs, and the dress of the people, the motion picture in its present state is the most powerful instrument now known and, as its use increases and its field of operation develops, its power to influence the public will increase.

'The proofs are sufficient to convince almost anyone that influence upon thought, sentiment, and opinion in America—education in this broad sense—is very much greater and more effective through these pictures than it is through our schools.'

* * *

'The word *government* as a noun,' said the ***Politician,*** 'was capable of four major interpretations by that wizard of words, Mr. N. Webster. His unabridged dictionary calls government an "act," a "mode," a "person or persons," or a "body politic."

'If Mr. Webster had to interpret the word over again, not merely to have a place in his dictionary but to make clear understanding in the public mind of just what government actually is in America, he would need to use his four major interpretations, plus a few extras on "what it is not" with some dissertations on "graft and grafting"—which means more than "an art in horticulture"—used in the political practices of certain factions in this land of ours.

'He would probably discover that the nearness of the words *graft* and *government* in the dictionary is nothing compared with the fellowship enjoyed by these two words in so-called practical politics. They stick closer than a brother and run together in the blood stream of our body politic. And "graft" as the white corpuscle of our constitution (whether in municipal, state or federal government) threatens the strength and virility of a new system which is supposed to function "of the people, by the people and for the people."

'Just when Christian leadership will prove itself capable of organizing its forces to apply religious precepts to practical politics, I cannot tell. All large communities in our great American Republic have to decide sooner or later whether professional crooks or law-abiding citizens shall control in this fight. At present there is improvement and hope, and time will determine which side obtains and maintains the victory.'

* * *

'What is the nature of present-day immigration, and what its purpose?' asked the ***Government Agent.*** 'Is it a fact that aliens are pouring into this country, despite the quota law, faster than they can be assimilated and faster than education and propaganda can instill into them the real spirit of Americanism? Have we been able to keep up with the inflow in teaching an appreciation of American traditions and ideals, the things which together constitute the real America?

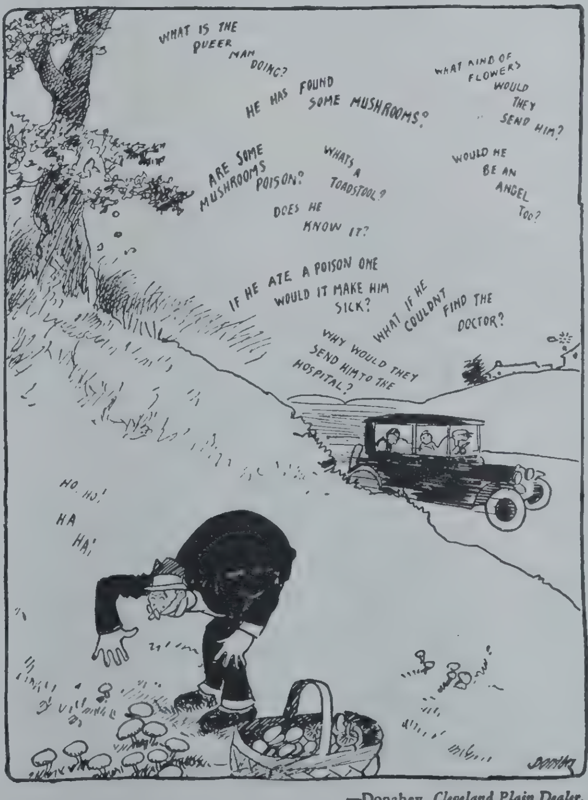
'In the answering of such questions a formidable array of statistics is an effective argument. Yet it is manifestly impossible to classify, in terms of definite numbers, the types of immigrants describable as good, bad, indifferent, and actually dangerous.

'Few people realize the extent of the propaganda for immigration among the laboring and the peasant classes of the Continent. Some of it is very subtle. It works often through relatives and friends on this side, who are induced to outline to those at home prospects far more rosy than what the facts justify. It is a propaganda, too, in which engage innumerable agents of steamship companies, whose very existence, in several cases, depends upon their third-class traffic. Hopes of material advantage, fairly dazzling to the poor European, are held out; and, far more dangerous, there is pictured a degree of liberty in speech and conduct which, compared with the conditions of life in Europe, seems almost too beautiful to be true.

'All these people know nothing whatever of America, and few of them have tried or desired to learn. What we think of as Americanism is something quite beyond their grasp. It can be taught only here; and even then it is not a quick process. So that immigrants, for the most part, entertain two ideas, and two only.

'First, America is the land of opportunity. It is interpreted as meaning a land where the unskilled, who constitute a large portion of present-day immigration, can at once earn a livelihood generous beyond the wildest dreams of a European peasant or laborer. Second, America is the land of liberty—a word that, with three out of every four Continental immigrants, means license, the privilege of saying and doing whatever he likes at any time and in any place he pleases.

'For the European to come to America to "better himself" is a laudable ambition. To that no one can take exception, *if* that ambition contemplates a sincere and genuine desire to become American in entirety, to learn what America really stands for, and to have a share in those things.'



WHAT IS THE QUEER MAN DOING?
HE HAS FOUND SOME MUSHROOMS?
WHAT KIND OF FLOWERS WOULD THEY SEND HIM?
ARE SOME MUSHROOMS POISON?
WHAT'S A TOADSTOOL?
WOULD HE BE AN ANGEL TOO?
DOES HE KNOW IT?
IF HE ATE A POISON ONE WOULD IT MAKE HIM SICK?
WHAT IF HE COULDN'T FIND THE DOCTOR?
WHY WOULD THEY SEND HIM TO THE HOSPITAL?
HO HO! HA HA!
Donahey

—Donahey, *Cleveland Plain Dealer.*

SUNDAY MORNING'S SERMON.

CAN YOU TELL ME?

Question. In what denominations are the bills of our currency made? Which are legal tender and how are they redeemable?

Answer. The various notes and certificates are issued in the following denominations: Gold certificates: $10, $20, $50, $100, $500, $1,000, $5,000, $10,000; made legal tender by act of December 24, 1919; receivable for all public dues; redeemable in gold coin at the Treasury. Silver certificates: $1, $2, $5, $10, $20, $50, $100; not a legal tender; receivable for all public dues; redeemable in silver dollars at the Treasury. United States notes: $1, $2, $5, $10, $20, $50, $100, $500, $1,000; legal tender for all debts, public and private, except customs and interest on the public debt; receivable for all public dues; redeemable in gold at the Treasury. Treasury notes of 1890: $1, $2, $5, $10, $20, $50, $100, $500, $1,000; no further issues, volume steadily diminishing by redemption in silver dollars; legal tender, unlimited, unless otherwise contracted; receivable for all public dues; redeemable in gold or silver dollars at the Treasury. National Bank notes: $5, $10, $20, $50, and $100; notes of denominations of $1, $2, $500, and $1,000 authorized, but few issued and none available for issue; not a legal tender; receivable for all public dues except customs; redeemable in 'lawful money' at the Treasury or at bank of issue. Federal Reserve Bank notes: $1, $2, $5, $10, $20, $50, $100, $500, $1,000; not a legal tender; receivable for all public dues except customs; redeemable in 'lawful money' at the Treasury or at bank of issue; only a small amount is outstanding. Federal Reserve notes: $5, $10, $20, $50, $100, $500, $1,000, $5,000, $10,000; not a legal tender; receivable for all public dues; redeemable in gold at the Treasury, and in gold or 'lawful money' at any Federal Reserve Bank.

* * *

Q. How does the Gold Reserve back of the Gold certificates compare with that back of the Federal Reserve notes?

A. In the order of issue, the authorized forms of currency in the United States are as follows: 1. Treasury notes: Payable on demand. Only 60 millions of these were issued and about 6 millions are still outstanding. 2. United States notes or greenbacks: about 350 million outstanding. To assure redemption of these the Treasury must maintain a redemption fund of 150 millions of gold and borrow gold if that fund falls below 100 millions. The law requires the reissue of these notes when redeemed thus making a cycle of redemption. 3. National Bank notes based on Government bonds deposited with the Treasury. 4. Gold certificates representing full value in gold coin and gold bullion. 5. Silver certificates, representing silver dollars on deposit. 6. Federal Reserve notes which may be issued on a forty-per-cent reserve commercial security approved by Federal Reserve officials. 7. Federal Reserve Bank notes of which few have been issued. These notes are intended, probably, to replace National Bank notes soon to be retired because of the maturity of the underlying bonds. All of this paper currency is maintained at gold par by the credit of the country pledged to that end.

* * *

Q. Please give the known proofs of the earth's rotundity. Who first taught that the earth was round?

A. The spherical form of the earth is undoubtedly a discovery of Pythagoras and was taught by the Pythagoreans and by the Eleatic Parmenides. The expositor of greatest moment was Aristotle. His arguments are those which we employ today: The ship gradually disappearing from hull to mast as it recedes from the harbor to the horizon; the circular shadow cast by the earth on the moon during an eclipse; and the alteration in the appearance of the heavens as one passes from point to point on the earth's surface. He records attempts made to determine the circumference; but the first scientific investigation in this direction was made 150 years later by Eratosthenes. Sir Isaac Newton deduced from the mechanical consideration of the figure of equilibrium of a mass of rotating fluid, the form of an oblate spheroid, the ellipticity of a meridian section being 1/231, and the axes in the ratio of 230:231. The Newtonian figure was proved to be correct through the measurement of meridional arcs in Peru and Lapland by the expeditions organized by the French Academy of Sciences. More recent work points to an elliptical equatorial section, which would make the earth pear-shaped.

* * *

Q. Which division in the famous Argonne drive, opening the morning of September 26, 1918, made the greatest gain in kilometers the first day of the drive? What was the war record of the Ninety-First, or Wild West, Division?

A. An examination of available maps reveals the fact that the mean divisional advance of the Fourth, Eightieth, and Ninety-First divisions on September 26, 1918, was approximately seven kilometers. The Ninety-First Division arrived in France the latter part of July, 1918, at Le Havre (Seine-Inferieure) and at Cherbourg (Manche). The division, less artillery, was sent to the Eighth Training Area for training, and headquarters were established at Montigny-le-Roi (Haute-Marne). The artillery was sent to Camp de Souge (Gironde) and Clermont-Ferrand (Puy de Dome) for training and did not rejoin the division nor participate in any operation. Commencing September 6, the division moved to the vicinity of Gondrecourt, with headquarters at that place. It was assigned to the reserve of the First Army during the St. Mihiel operation, and headquarters were established at Sorcy-sur-Meuse, September 11. On the night of September 13-14 the Ninety-First Division moved to the vicinity of Vavincourt (Meuse) and on the night of September 16-17 to the vicinity of Autrecourt (Meuse), where it was assigned to the American V Army Corps. The division moved from here to the Foret de Hesse, northeast of Neuville, and on September 26 attacked on a front extending from Vauquois to a point southwest of Avocourt. Passing through the Bois de Cheppy, patrols of the division entered the town of Epionville on the afternoon of September 26, and high ground northeast of Very, extending toward Montfaucon, was organized for defense and held during the night of September 26-27. On September 28, Epionville, Eclisfontaine and Exmorieux Farm were captured, and on the twenty-ninth Gesnes was entered; but, both flanks being exposed, the troops were withdrawn to a line along the northern edge of the Bois Communal de Cierges and Bois Communal Baulny. The remainder of the ground gained was held, against strong counterattacks. Commencing on October 3, the Ninety-First Division was relieved by the Thirty-Second Division and moved to the Dombasle-en-Argonne area. On October 9, the One Hundred Eighty-First Infantry Brigade again went into action, attached to the First Division and later to the Thirty-Second Division. This brigade rejoined the division on October 12. On October 16, 1918, the Ninety-First Division was transferred to the French Army in Belgium. It reached the area of the Ypres-Lys operation, October 29, 1918, and took over a sector in the front lines of the French VII Army Corps. The division was actively engaged in this operation until it was withdrawn to Corps Reserve on November 3, 1918. On November 8 the division again entered the line, this time under the French XXX Army Corps, and was actively engaged until the Armistice, November 11, 1918. The division returned to the United States in April, 1919.

STAND BACK! HERE COMES WILLIE.

The Caterpillar Club, composed of aviators who have made parachute jumps to save their lives, has forty-nine living members.

'Jingoes' was the nickname given in England to the supporters and enthusiasts of Lord Beaconsfield, who sent a fleet to Turkish waters to oppose Russia's advance on Constantinople in 1878. Originally a jocular oath, 'By Jingo,' came into popular vogue when used in a famous music hall song.

According to some authorities, the story of 'The Babes in the Wood' was founded on the deed of King Richard III of England, who made his two young nephews prisoners in the Tower of London, from which they disappeared. It was believed that they were murdered by his orders. Perhaps the best-known version of the tale is the one in which the lost babes are covered with leaves by the robins in the woods.

There is a grapevine in a garden of Oberlustadt, near Speyer, Germany, that is believed to have been planted about 1500. The stem is forty-seven inches in circumference and the roots reach down 250 feet.

In addition to paying more than one hundred dollars for a driver's license in Germany, the applicant must pass an extremely rigid mental and physical examination.

Taking a firm stand against importation of luxuries and consequent expenditures of money outside Russia, Soviet officials have raised customs duties so high that Russians must pay $100 retail for a bottle of imported eau de Cologne, $50 for five ounces of ordinary perfume, $10 each for lipsticks and $25 for a box of face powder.

Idaho is reported to be adopting a plan for making its 1928 automobile license plates in the shape of a potato, symbolizing the state's baking-potato industry. Similarly, Utah's wool-raising industry is seeking recognition, having adopted a resolution requesting that the 1928 automobile markers of that state represent a sheep.

Owing to the enormous amount of water pouring out of the mouths of the Amazon River, fresh water can be dipped from the Atlantic Ocean for a distance of fifty miles off the coast of Brazil.

In the woods near Berlin are a large number of 'vacation recreation grounds' set aside by the city for the benefit of its children. For the sum of thirty-six cents a week youngsters are transported daily to and from these parks and are given three light meals while there.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S Page this week discusses knowing things instinctively.

* * *

Probably no more fearsome creature haunts the southwestern plains than the 'Mountain Boomer,' or 'Glade Devil.' It can outrun a horse, sting with its tail as does the scorpion, and bark so loudly that the noise can be heard for five miles. A reward of one million dollars has been offered for its capture. (p. 1)

* * *

The 'Glade Devil' is only one of the delightful fantasies Charles J. Finger found in western Texas. And in the Pecos country he came upon the broken relics of a wagon train that had been destroyed by Indians in the 1880's. At old Round Rock he read the legend on the tombstone over the grave of a famous outlaw, 'A Brave Man reposes in Death here. Why was he not True?' (p. 1)

* * *

When 'Home, Sweet Home' was sung for the first time as a part of the opera *Clari, the Maid of Milan,* it won for the singer, Miss Tree, a rich husband and wide fame as an opera singer. The publishers in London made half a million dollars in less than a year, printing more than one hundred thousand copies. (p. 3)

* * *

John Howard Payne, the author, received practically no benefit from his famous ballad. His name did not appear on the title-page of the published work, nor did he even receive a complimentary copy. Today his grave is in an obscure cemetery near Washington, D. C. (p. 3)

* * *

The first Protestant colony in the New World was launched in 1555 by Huguenots at Fort Coligny near Rio de Janeiro. The leader was Villegaignon, vice-admiral of Brittany, and a true soldier of fortune. After five years of bickerings, the Frenchmen were dispersed by a Portuguese fleet and French influence was driven from Brazil. (p. 4)

* * *

Louis C. Karpinski tells of an interesting Frenchman, Andrew Thevet, who had been a member of the original Huguenot colony but had returned to France in 1555. Thevet's next task was to bring out a book telling of the 'new found world or Antarctike.' So great did his fame become that he was made historian and cosmographer to the king. (p. 4)

* * *

Yes, says Professor Jerome Davis, of Yale University, the United States should recognize the Soviet government, because it is the only policy that would be true to our best American tradition and to the highest ideals of international friendship. (p. 6)

* * *

No, says United States Senator George H. Moses, we should not recognize the Soviets, until they recognize the sanctity of international obligations. We were first to recognize Kerensky and to loan money to the Russian revolution, but the Soviet authorities now refuse to honor the debt. (p. 7)

* * *

Saturday afternoon of a December day, 1861. In the White House attic, four lively boys were having a snowstorm of their own. The 'snow' was represented by a bin full of calling cards that had been 'left on the Presidents.' (p. 8)

* * *

Julie Taft (now Mrs. Julia Taft Bayne) went to get her brothers, who had been making 'snow' with Willie and Tad Lincoln. Next morning in her brothers' room, she found some of the 'snowflakes.' One was the card of 'Mrs. J. Davis.' (p. 8)

* * *

The advice of a westerner 'to let the law go to pot and study the judges' may prove useful, if present agitation to do away with trial by jury is successful. C. C. Daniels, in declaring that such advice might find a congenial reception in the East, upholds the ancient right of trial by a jury of peers. (p. 12)

* * *

The second of a series of articles by Mrs. Frances Holbrook Pfeiffer on interesting episodes in California's history tells of the days of the Spanish dons. It was in 1826 that Jebediah S. Smith, accompanied by fifteen trappers, came down the Colorado River and on to Los Angeles, the first white man to reach California overland. Needless to add, he was ordered out of the country by the residents, who did not desire any encroachments. (p. 13)

* * *

Thirty miles up the mighty Skeena River lies Khtada. The lake, a sapphire gem, is suspended between two mountain ranges which encircle it and are reflected in its bosom. James Clyde Gilbert, writing of the incomparable British Columbia scenery, tells of the lure of the rainbow trout in those virgin waters. (p. 16)

* * *

'Do not grumble because your child must stay away from school for a few weeks after an illness. It is most certainly a benefit to the child . . . There is little doubt that many heart and kidney diseases have their origin in some childhood disease.' (p. 21)

* * *

An interesting history has the *Aberdeen Journal,* in north Scotland, one of the world's oldest newspapers. Its one-time editor had the honor of entertaining Robbie Burns and spending an hour or two with the congenial bard. So old is the *Journal* that an account of the Battle of Culloden was published in its columns. (p. 22)

REMARKS BY OUR READERS

Hope, New Mexico.

I read with pleasure the editorial 'Ruddy Autumn' in your issue of October 15; also the selection from Ralph Waldo Emerson anent the glories of autumn in the same issue. 'These are the days to wander forth upon the high roads and the low roads,' and 'the day, immeasurably long, sleeps over the broad hills and warm wide fields.'

R. H. H. BURNETT.

Juneau, Alaska.

Ten years have passed since the Government aided Alaska in 1916-1917 in the building of its railroad. They have proved Alaska's resources and its soundness. There is now a tremendous summer tourist traffic from all parts of the United States. The boats are in port for several hours and we chat with many of them. They see that Alaska is populated with white folk, and especially do they see that Alaska is populated with just 'folk.' I chatted this summer with one such from Detroit, and his face just beamed gratification at meeting 'folk' in Alaska.

But what the tourist does not see so well is that the scenic and wonderful Inside Passage, with salt water canals, hundreds of miles long, water ways threading the mountainous offshore archipelago, with here and there a sound-crossing of a couple of hours' run, with just enough rolls from the pulse of the Pacific to please the inland tourist—what he does not see is that this scenic passage is a bottle neck to Alaska.

The population of Alaska has not increased since the war. I think it has decreased, and certain lawmakers have been struggling for the reason. The answer lies in the absence of connection with the outside world, except by steamship down this Inside Passage. There is a railroad ninety miles away, but every effort to link it up with Alaska is always opposed.

RICHARD WARREN.

Los Angeles, California.

I want to voice my appreciation of the remarkable editorial work you are doing. The spiritual insight shown, for example, in Mr. Ford's Page for October 15, reaches such a high level that I can account for it only as an instance of that divine resonance commonly called 'inspiration.' It has not merely intelligence, which is of the head; but wisdom, which is of the heart. I am grateful to you for your splendid work.

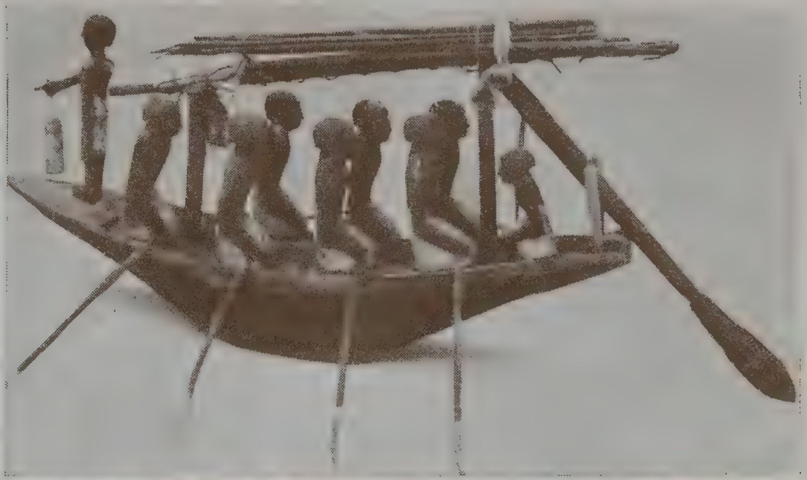
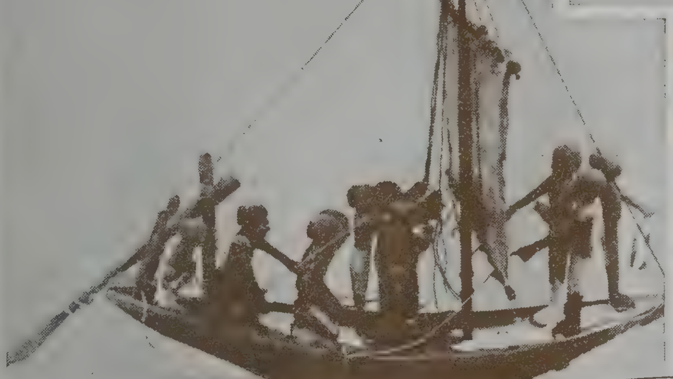
Curious Water Craft *From* Remote Corners

In Such Crude Devices Man Ventures *on the* Deep

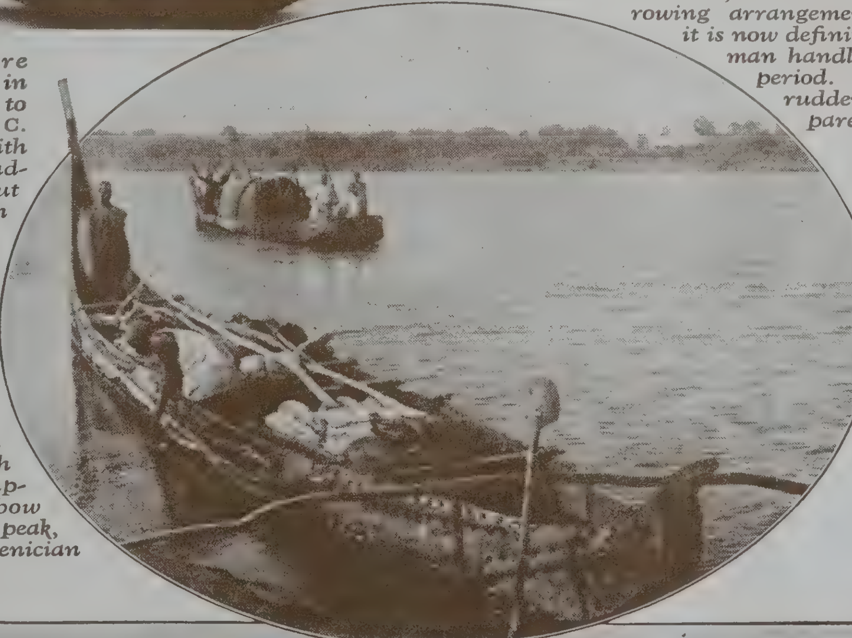




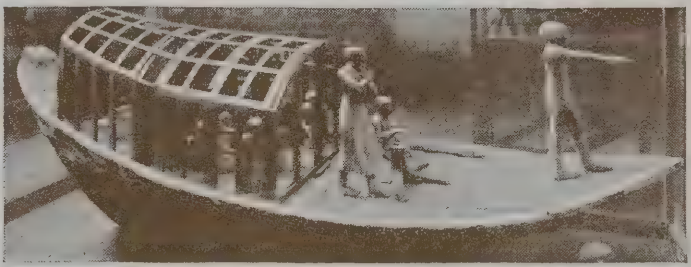
At top—

An excavated Egyptian model now in Carlsberg Museum, Copenhagen, dating from about 2000 B. C. This model shows the rowers, and recent research shows this rowing arrangement to be accurate, since it is now definitely established that each man handled only one oar at this period. Again we find the oar rudder, and overhead is apparently the sail, rolled up.

Egyptian ships are among the earliest in history, dating back to 3000 or 6000 B. C. This crude ship, with sail, and oarlike rudder, dates to about 2100 B. C., and is in the Carlsberg Museum, Copenhagen, Denmark.



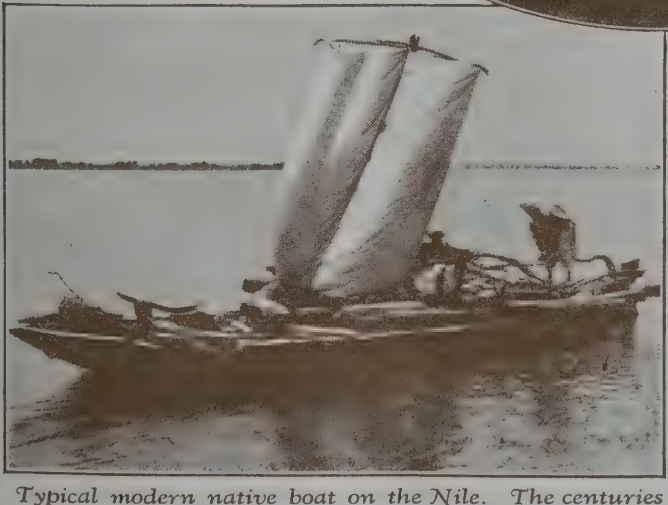
This cargo boat, on the Chaii River in the Cameroons, while crude, is carefully constructed and stout. The high stem and the stern upraised, and the bow finished off into a peak, resemble ancient Phoenician ships.



Below—

Another Egyptian ship, a funeral baroque, from the first Thebean epoch, at Cairo. These boats were gayly decked to convey the mummies across the Nile when necessary.

[*William Thompson* Photos.]



Typical modern native boat on the Nile. The centuries have brought few refinements in this craft.

Fishermen raising their nets in Kousseri, Cameroons. This indicates the primitiveness of craft as well as methods.

FEW people live in their own times. They live in some imagined past which was just as common and matter-of-fact as the present is, or in some imagined millennial future. Their attitude toward their own times is either one of indifference or discontent. Yet today is the past brought up to date; today is the threshold of the future. If you can interpret today you have a finer view into tomorrow than the visionary who cannot see today for tomorrow's castles in the air.

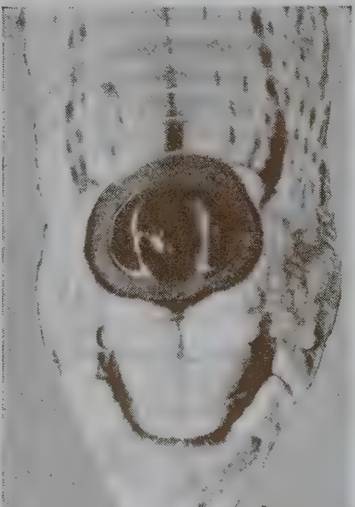
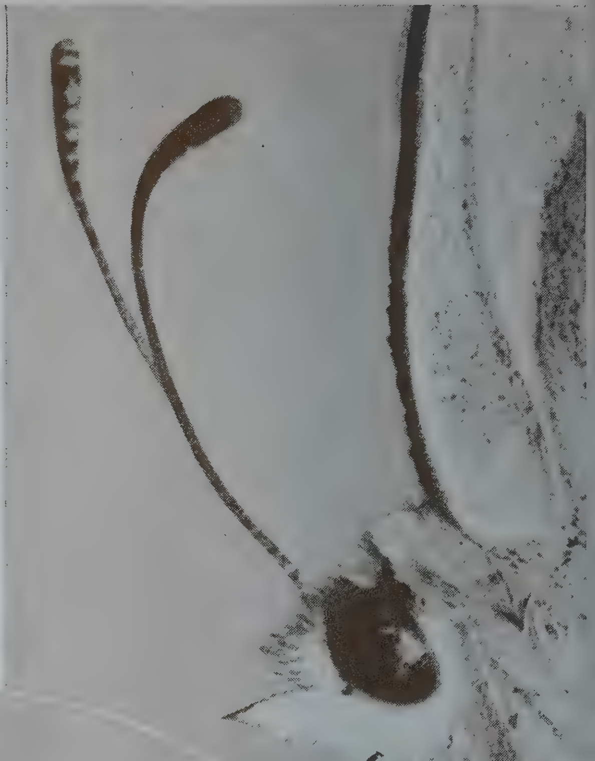
Close-Ups of LOW-DOWNS *In the* Animal Kingdom

Microscope *Throws* New Light *on* Pet Aversions

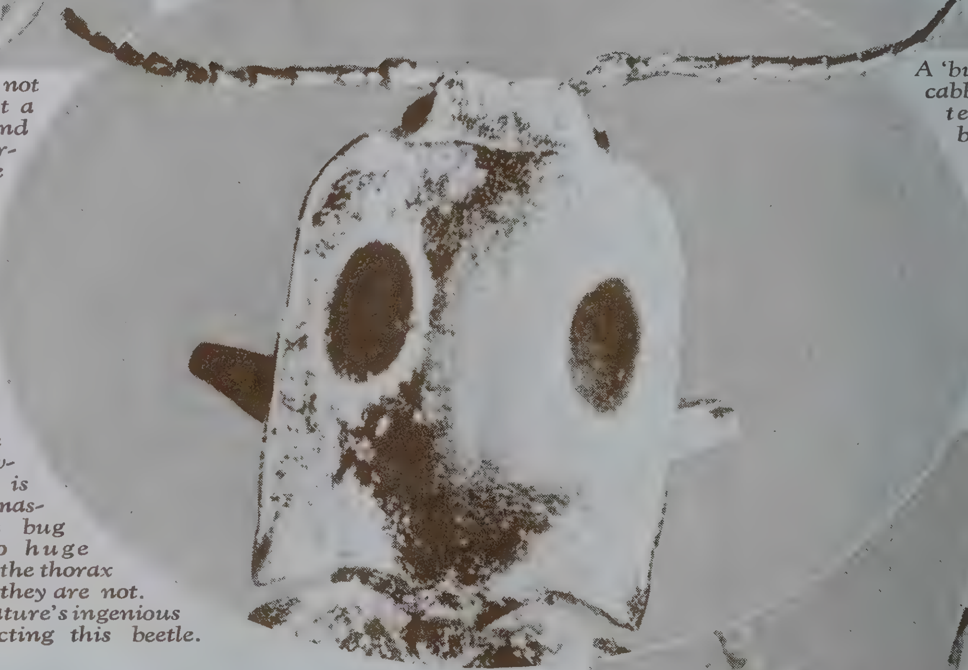
[Herbert Photos.]



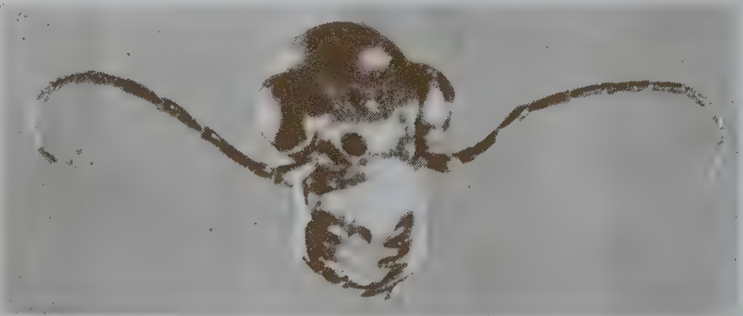
This 'evil eye' is not an eye at all, but a bump on the tail end of a sphinx caterpillar, effective in frightening numerous enemies, among them, birds and men. The mouthlike line below the 'eye' helps the effect.



A 'bugdom beauty' this cabbage butterfly flutters through her brief life wholly ignorant of her previous incarnation as a vandal of the cabbage patch. She has a beautiful head, large, lustrous eyes, plumy antennae and a black-tipped tongue case just beneath the eyes.



The 'click beetle' might aptly be called the 'Halloween bug,' for he is in very truth a masquerader of the bug realm. The two huge spots on the top of the thorax look like eyes, but they are not. They are one of Nature's ingenious devices for protecting this beetle.



This terrifying insect, the tiger beetle, appears to register acute hunger. He is not unlike a fairy tale monster, with his protruding eyes, villainous mustache and deadly, steam-shovel jaws. He is that brilliantly green, nervous little bug often seen on hot and dusty paths or sidewalks.

Right—

One of our pet aversions, the yellow jacket, or devil hornet, seems to be sticking out his tongue and curtsying at the same time, like an impudent schoolgirl. Many who know his stinger would not recognize him face to face. This is magnified twenty times.

FOLK *of the* VALLEY

By CHARLES J. FINGER

On the Ohio River, near Ripley.

A MAN and his dog—and leisure. Golden prospects and sunny mornings. An awakening of the sleeping sense of delight. A place and a time in which to satisfy the thirst for beauty. An untroubled life. These I get as a composite picture of Ohio.

To be whimsical, put the matter I have in mind in this way. If New York is the great doorway of this household of states; if Michigan is the workshop and office; if Washington, D. C., is called the reception hall; then Ohio, more particularly southern Ohio, may be looked upon as the comfortable den in which a man may be genial among his friends, taking his ease in great content. I have in mind southern Ohio, because the northern part of it is quite as businesslike as Michigan or as Pennsylvania, with all those iron and steel works, those rubber and glass and machine-making factories. Southern Ohio and southern Indiana, too, seem to have got away from complexities.

So if you would know anything of the leisure of the land, would know its rich enjoyment, would know the real character of the place as you know the real character of New Mexico by its desert land, and know the real Texas by its range country, you cannot rush across the valley land. You must cruise; you must wander and loaf and invite your soul.

Perhaps, as Judson Harmon used to say, Ohio has always been a place of peace for human beings. By that he meant that not Ohio alone but other corners of the world are favorable to certain moods exactly as certain soils are favorable to certain flowers. You think, for instance, of Rome as the place of stern and sometimes noisy, but always hard and businesslike, temperaments: Anthonys and Caesars and Rienzis and Mussolinis have flourished there. But that sort never came from the lake country of north England which has always been favorable to poets and to men who love to speculate upon the largeness and mystery of life. Again, seaport towns attract your hustlers and adventurers and men of derring do, but your dwellers in riverside towns are of more leisured mood.

If there is anything in that theory, it would seem that, where time and geological change have not very materially altered things, records of the past should show ancient peoples of certain human activities not so different from those of our own time, living in the same place.

Tail of the great Serpent Mound.

I think that in the case of Ohio the record does tend to show that the valley country has always been the abiding place of leisurely and comfortable folk. I remember that a scholar-poet named Baird showed me geological proof that the great ice cap at the time of the ice age ended about where Columbus, Ohio, now stands. Fugitives driven south by the cold possibly found the valley land a place of comfort, much as in old Europe they found a comfortable abiding place on the shores of the Mediterranean. Or turn the pages of history to later times when primitive folk on this continent were volcanic in passion, were given to a luxury of energy, disposing of their neighbors in competent fashion with stone axes. Then those who occupied what we now call southern Ohio evidently courted simpler pleasures.

If, after you have enjoyed the aristocratic ease of Cincinnati, you would prove the truth of that for yourself, head your car east to Adams County and see a wonder which amply proves that in the so-called stone age there were men and women extremely sensitive to nature, to art, perhaps to music of a kind. That wonder is called the 'Serpent Mound' and is situated on the bank of Brush Creek which is a small tributary of the Ohio. It begins with an oval mound which is a hundred and sixty feet long and five feet high. Guessing at things, some see the oval as an egg which the serpent is about to swallow.

SOME, guessing more wildly, say that a pile of stones in the middle of the mound is the remains of an altar; which is nonsense, because for hundreds of years both oval and serpent had been plowed and replowed, for they had formed part of a cornfield and the monuments had been almost destroyed. Then some one traced the design and Ohio archeologists reconstructed the figure. Anyway, there is the serpent to be plainly seen—the serpent's jaws about to close on the so-called egg. The body of the serpent, shown in regular undulations, measures seven hundred feet from tip of jaws to triple-coiled tail, in a straight line; or a thousand feet if twists and turns are taken into account. The average height of the mound is five feet, the width across its base sixty feet. So, as you may see, the builders of the monument had the energy of enthusiasts.

As for the reason of the building, one guess is as good as another. As might be expected, the majority of theorists hold to a religious significance, and, as also might be expected, another party of guessers, almost as numerous, clamor for a military origin, maintaining that the mound must have been a fortification and an earthwork; though what there could have been to guard they do not say.

Nor do the theorists make it very clear or convincing how a five-foot heap of earth could keep out an active invader, any more than they explain

Cross-section of Central Mound in the Seip group.

how the wall that runs from Solway Firth across England could keep out the energetic and athletic Picts and Scots. So why not be sensible and take t for granted that the mind of the Ohio primitive man was in many respects like the mind of the man of today? That being so, we would see n the Serpent Mound, made by a people that enjoyed the making of monuments, something very much like the work now being done on Stone Mountain. Reasoning the other way, we may assume that, in the year 35000, men may theorize to the effect that we of today made the stupendous Stone Mountain monument to frighten away enemies.

THERE are other monuments of similar kind in Ohio, which may be seen in the course of a few hours' motor run. At Greenville there is an lligator mound which is two hundred and fifty feet long, with legs thirty-six feet in length and a body breadth of forty feet. Then there is Fort Ancient, n artificial work which some day will be photographed from an airplane, to everyone's gain. The measurements show it as an inclosed place with wenty thousand feet of wall, five miles of terrace, and a perfect square ontaining sixteen acres. Each side of the square has its wall eight hundred and fifty feet long, with a gateway hirty feet wide in the middle.

The mode of life of the people who ccupied such inclosures as those in Ross County and in Highland County may be roughly and fairly surmised rom the contents of the graves. Among he specimens have been found pipe bowls ornamented with representations of animals and birds; ornaments onsisting of necklaces, pendants, stone beads, shells, bracelets, and other beads made of bone or teeth. More arely, pottery has been found. Now, uch things tell of the arts of peace rather than of war.

So there seems to be something to say in favor of the idea that Ohio in the past was the abiding place of a quiet people not given to sloth or idleness. For what idle folk would have made for themselves such a protection as you may see in the Scioto valley near Newark? You may still trace there an eight-sided inclosure containing fifty acres; a square containing twenty acres; a circle containing twenty acres and another circle containing thirty acres. Again, at Circleville you may see a square and a circle in juxtaposition, the last a thousand feet in diameter, and the square, which had eight doorways, having a perimeter of thirty-six hundred feet.

That grace and seemliness which would appear to have marked ancient Ohio marks the Ohio valley today. Having finished your archeological tour, you would do well to make for the river anywhere. Before long you will find yourself in a place of rich tradition. Say that you head for the riverside town of Ripley, tucked away in a warm fold of the hills in Brown County. You

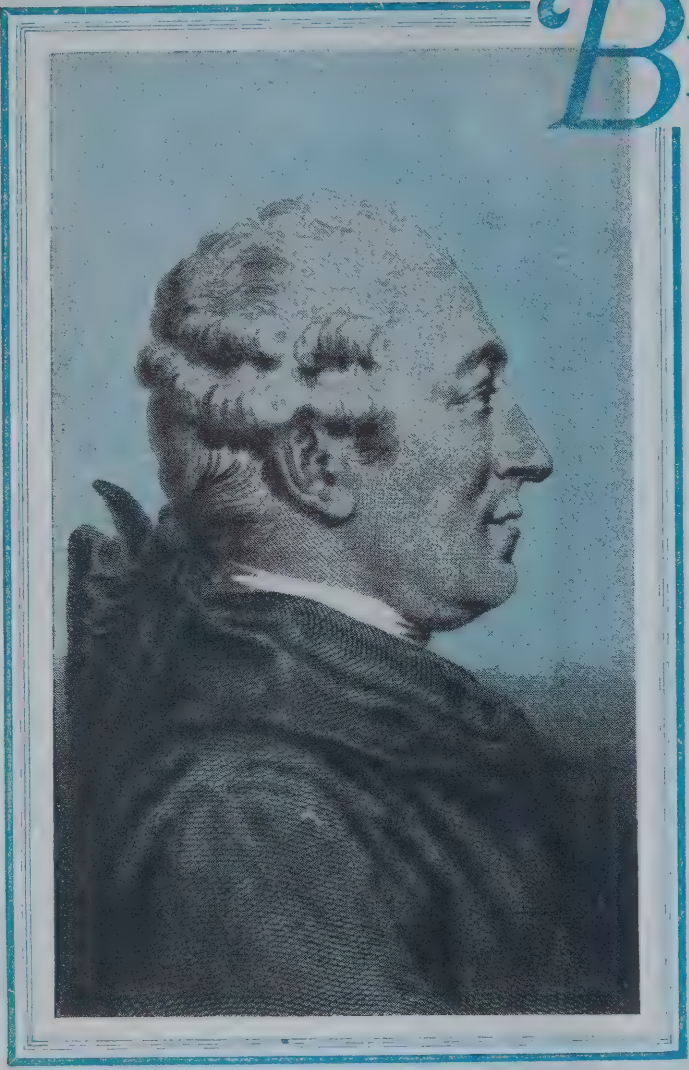
BEAUMARCHAIS,

FRIEND of AMERICA



By LOUIS C. KARPINSKI

Copyright by LOUIS C. KARPINSKI.

THE minor events of a man's life frequently mirror the great ones. Those qualities which make for success in small things are essential for success in larger fields. Your life and your character are reflected in a hundred events of your life. A great zoölogist can identify an animal from a fragment of bone. We, too, reveal ourselves every day in the small things we do and in the way we do them.

The son of an intelligent but modest watchmaker became one of the outstanding figures of the American Revolution. In a dozen incidents of an historic and romantic life, Pierre Augustin Caron reflected and presaged the form of his fine participation in the American cause, considered by competent authorities a powerful factor in the American victory.

Concerning the education and the training of young Caron, who adopted when about thirty the name of 'Beaumarchais,' little is known. There were five sisters to spoil this gifted only son who had a taste for music and poetry, evidently cultivated in the home. Apparently his formal schooling terminated at the age of thirteen, but his education continued while he was an apprentice to his father, the watchmaker.

At the age of twenty Caron invented a watch escapement which enabled the manufacture of small and thin watches. Upon his communicating this to a celebrated watchmaker, the young man's confidence was betrayed and his invention appropriated. Significant of his whole life and his later contests is the fact that Caron publicly protested, demanding and securing a judgment by the Royal Academy of Sciences.

The publicity and the contest were not unwelcome to the young man, who demonstrated the success of his invention and the justice of the favorable verdict of the academy by making a watch in a ring for Madame de Pompadour. By this means Caron became personally acquainted with Louis XV and with the members of his family.

A more than friendly interest in the gay and charming young watchmaker was taken by Madame Franquet, whose infirm husband was occupying a position as controller, or clerk, in the household of the King. In consideration of an annuity guaranteed by Caron's father, Franquet gave up his post to the young watchmaker. Two months later a stroke of apoplexy disposed of the annuitant and about a year later young Caron again took Franquet's place, marrying the widow, whose interest in him had not languished.

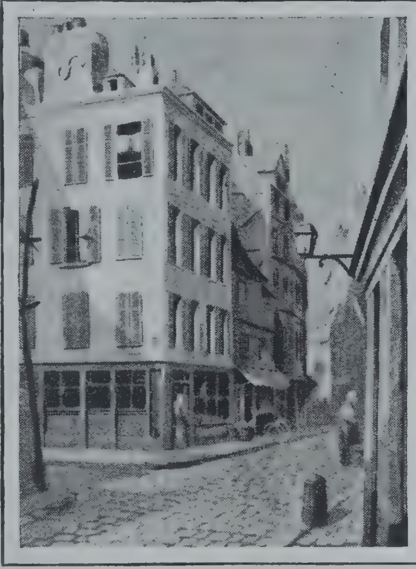
A controller served the royal family at table and occupied himself with other intimate details of the royal ménage. There were four charming and innocent young princesses, as well as the Dauphin, all of whom found Caron an interesting attendant. On account of his musical ability the controller was drafted to give to the princesses lessons on the harp, and to arrange informal musical parties not subject to the tedious etiquette of the court. The young prince testified to the place of Caron in the royal home when he stated, 'He is the only man who speaks the truth to me.'

For seven years Caron served as an attendant and even confidant in the royal household. The fortune of Caron was made indirectly by his position in the King's family. A celebrated financier, Paris Duverney, had become interested in the École Militaire, and wished to secure the support of the King. Caron persuaded the princesses to visit the school, and they in turn persuaded their father. Duverney from this time became the active patron of Caron, who was soon enabled to purchase a title to nobility as king's secretary, and later as lieutenant general in charge of a small court. About this time he assumed the name 'De Beaumarchais.' When twitted in one of his numerous lawsuits about his humble origin Beaumarchais replied that he was surely noble, adding, 'I have the receipt.'

In consequence of an affair touching the family honor, Beaumarchais in 1764 went to Madrid. Here he not only accomplished the purpose of his mission but became an active participant in the gay life of the highest Spanish circles, mingling on most intimate terms with the diplomatic corps in Madrid. At the same time a dozen business enterprises were set under way by him, involving, among other things, shipments of corn from New England, a beginning in the shipping activity which was later of such great service to America. Here Beaumarchais began his literary activity, the successful efforts of which were finally found in Spanish themes.

'I laugh on my pillow,' wrote

Beaumarchais to his father, 'when I think how strangely the affairs of this world are linked together, by what numerous and always out-of-the-way roads fortune is attained, and how, above all, the mind which is superior to circumstances can always find pleasure for itself in the midst of these whirlpools of business, affairs, pleasures, conflicting interests, sorrows, and hopes, which meet, clash, and fall powerless before it.'



By Aldrich, in *Harper's.*

The house of Beaumarchais at Le Havre.

Another love affair, which began after the death of his wife, is worthy of mention, as it again reveals the strange mixture of romance and finance which seemed to pursue the gay careers of Beaumarchais. A young creole beauty, Pauline, engaged his heart and fancy for many years. Had her wealthy uncle provided the 'dot,' or dowry, which seemed to Beaumarchais essential for their happiness, the young couple would have been married.

Before these negotiations, Beaumarchais had advanced quite considerable sums to attempt to reëstablish the pretty Pauline's estates in Santo Domingo. During the delays of the Spanish adventures and the other delays due to the uncle's hesitation about the dot, the young Pauline's affections were sought and won by another. Beaumarchais sent him a bill for the moneys advanced in Pauline's Santo Domingo affairs, but it finally appears among Beaumarchais' papers after his death with numerous other and somewhat similar unpaid accounts.

In 1771 another lawsuit began with the principal heir to the Duverney estate. At one period the hearings in this suit were held before the Councilor Goezman of the so-called Maupeou Parliament. It was communicated to Beaumarchais that a favorable hearing would be facilitated by a gift of two hundred *louis*, about one thousand dollars, to the wife of the judge. This gift having been made, fifteen additional *louis* were requested for the secretary.

An unjust and unfavorable judgment was pronounced against Beaumarchais, who received his first gift back, but not the additional fifteen. Upon this ensued a long series of memorials, in which the wit and the genius of Beaumarchais were displayed for the first time to their best advantage. In this contest the public evinced a lively interest.

Awakened by the genius of a Voltaire and a Rousseau to the rights of man as opposed to those of an institution, conscious of the frequent injustice of the law, popular sentiment in favor of Beaumarchais attained such proportions that the judges and the parliament recognized a new force—public opinion.

The attention of the best minds of Europe was engaged by the memorials, and the interest was reflected in the public press. Beaumarchais became within a few months a national figure and, in some measure, the idol of the populace. Early in 1774 the judge was dismissed, and his wife and Beaumarchais, as participants in bribery, were sentenced to 'blame,' which involved loss of the rights of citizenship. The 'blame' of the parliament was offset to Beaumarchais by enthusiastic popular testimonials in which the great personages of France joined.

While yet suffering the loss of his civic rights, Beaumarchais was intrusted in rapid succession with several delicate missions on behalf of the King. The suppression of the *Memoirs* of Madame du Barry could hardly be regarded as a political mission, but it seemed necessary; and Beaumarchais justified the confidence reposed in him in the matter by the King. The death of Louis XV delayed recognition of the intimate services of the playwright.

ON THE accession of Louis XVI, a slanderous attack upon Queen Marie Antoinette seemed to require again the services of Beaumarchais. In this adventure Beaumarchais pursued the villain from England across Europe, and even to Vienna. Here a long interview with Queen Maria Theresa was followed by his being imprisoned, 'bled, purged, and drugged.' The tremendous ardor worthy of a more serious cause impressed Maria Theresa as insanity and not as the natural enthusiasm of the comic opera artist concerning politics.

Upon his return to France Beaumarchais was again sent to England in connection with the affair of the Chevalier d'Éon. That famous personage, a captain of the dragoons, had achieved some fame in a literary way but much more notoriety because of the question concerning whether the chevalier was

NE-NAW-BO-ZHOO—Mighty Man

By IVAN SWIFT

OUR Ojibway neighbors have been imaginative children of nature, weaving fabrics of pretty legend and religious myth. They, too, have striven to answer the eternal question of who we are, whence we come and whither we are bound and who and where is God.

Not knowing even the little that science has taught nor being read in oriental visions and prophecies, they have woven quaint fancies and consistent allegory. They have their maker and doer of all things good and bad and of all things not otherwise explained. The heart of their mythology, their mighty man on earth, about whom most of their legend gathers, was *Ne-naw-bo-zhoo.*

The story is that the great and invincible deity *Gitche-Manitou* would have a son to rule the earth for his people. A virgin lovely and faithful, the sunshine and angel of the tribe, abode with her grandmother. To her the great spirit came and she was delivered of two children, the first *Ne-naw-bo-zhoo*, the wonder-child, the wizard; the other his brother, the stone-boy, an inhuman monster whose birth cost the life of his mother, *Spring-wind.*

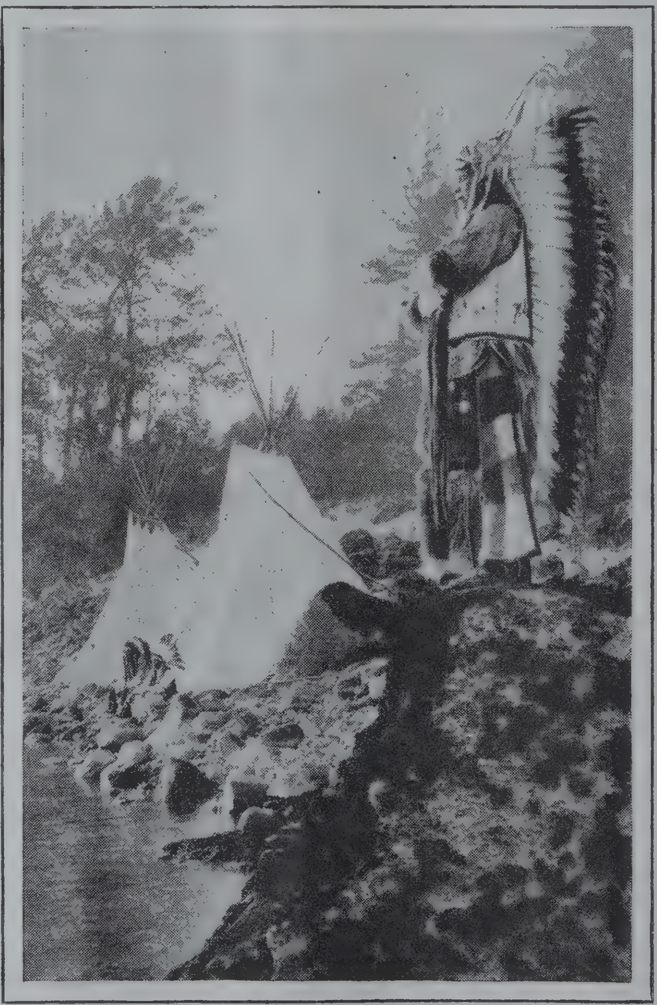
The stone-child fled to the woods and became a wanderer on the face of the earth. When *Ne-naw-bo-zhoo* had grown to manhood and heard the story, he vowed to pursue and destroy the stone-man and thus avenge the death of his mother. Through ages of hardship and perseverance *Ne-naw-bo-zhoo* prosecuted his task, often approaching so near to his stone-brother as to strike pieces of flint from the unnatural body, thus causing a flash of lightning and a roll of thunder. In this way the flint-stone was scattered over the face of the earth and proved a blessing to the early arrow makers and fire builders.

At last the stone-man was overtaken and laid low on the lakeshore near Grand Traverse Bay, and the body lies stretched there, a mass of flint known as Stony Point, forever a monument to the valor of *Ne-naw-bo-zhoo.*

Wabanossa, son of the chief councilor of the Garden River Reservation, and himself the greatest *Pau-pau-kee-wis* of the 'Hiawatha' drama, thus tells the story:

'When I was small boy I hear story from my grandfather. He was old man, die long time ago. I wish I can remember all them story. He tell me about *Ne-naw-bo-zhoo.*

'*Ne-naw-bo-zhoo* was great spirit, very big, very little. He do everything good, everything bad. He make the sun come up. He make the rain. He freeze over the river. He can change to beaver or bear or mouse in a minute. He is everywhere all time. He chase his brother all round world. He make the willow red for boxes and baskets. He make the *wa-quit* to grow on the rock for food in winter. He whip the maple tree to turn sirup to water so his people have to work for it. He split the birch bark and make the pitch in the pine tree to use for canoe and water-bucket. He make the rabbit, *wa-boose,* to sleep with his eye open, and the blue jay to cry out some danger in the woods.



'He is always hungry. One time he invite all the duck to dance in his lodge. Then he tell them to shut their eye and dance hard to keep warm. After while they get dizzy and *Ne-naw-bo-zhoo* grab up and ring their necks. Bimeby one duck open his eye little bit and see that. He scream, "*Ne-naw-bo-zhoo* is killing us. Everybody fly away!" *Ne-naw-bo-zhoo* kick at him and break his back down so he can only dive but can't fly. So he is great diver after that. His name is called *Sin-ge-bish,* hell diver.

'One time *Ne-naw-bo-zhoo* he say to his wife, "We got no food. We go call on Mr. Woodpecker." They go. Mrs. Woodpecker clean out big kettle. Mr. Woodpecker put two bone in his nose and red feather on his head. Then he climb up tree and peck with them bone. Bimeby nice fat coon fall out that tree. They have good dinner. Gone away again. *Ne-naw-bo-zhoo* he forget his glove on purpose. He call back to send boy with his glove tomorrow.

'Tomorrow come. Mr. Woodpecker think there is some trick. He tell his boy be careful. Don't go in *Ne-naw-bo-zhoo* tepee. Go nearby, throw glove, run away. Bimeby boy come to *Ne-naw-bo-zhoo* tepee. Boy will throw glove. "No, no," *Ne-naw-bo-zhoo* say, "Don't throw glove. Get wet in snow. Come here with glove." Boy go near. *Ne-naw-bo-zhoo* say, "Your father good to give dinner. Tell your folks come to my tepee to dinner tomorrow. We got lots to eat." Boy go away. Next day Woodpecker family come to *Ne-naw-bo-zhoo* to dinner. Mrs. *Ne-naw-bo-zhoo* clean big kettle. *Ne-naw-bo-zhoo* put red leaf in his hair and two deer bone in his nose. Then he climb tree and peck hard in tree like Woodpecker. Bones go through his head. Everybody laugh. Woodpecker say, "What you do? Kill yourself? Let me show you how do that." Then Woodpecker take bones, climb up tree, peck lot holes in tree.

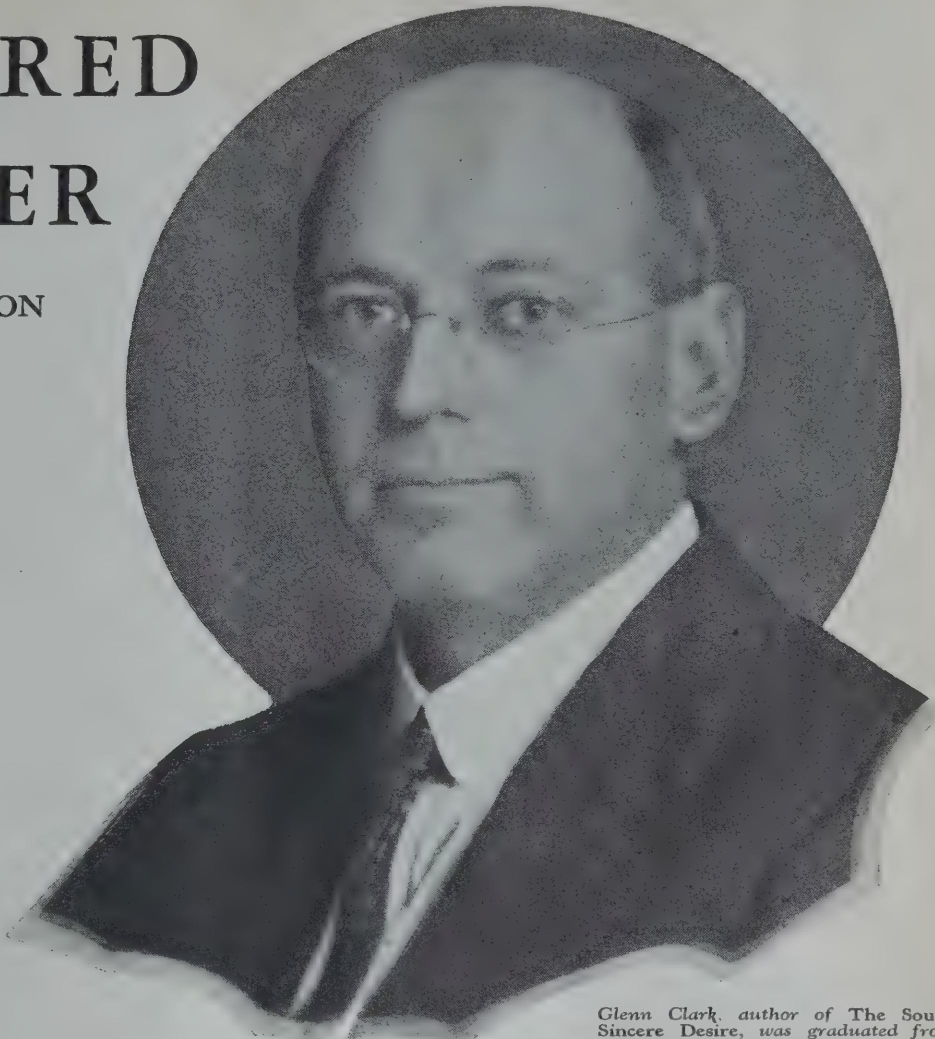
ANSWERED PRAYER

By CHARLES D. CAMERON



Glenn Clark, author of The Soul's Sincere Desire, was graduated from Grinnell College in 1905, and took his Master's Degree from Harvard in 1908.

FOUR years of 'an almost continuous stream of answered prayer' has been the experience of Glenn Clark, layman, professor of English at Macalester College in St. Paul, formerly also an athletic coach in this and other schools.

Professor Clark's published testimony to his extraordinary experience makes an impressive spiritual phenomenon in an age so tritely accused of materialism.

After three years of effective petition Professor Clark told a simple story of his manner of prayer, in an article in *The Atlantic Monthly*. This unpretentious recital made a greater stir than many a carefully planned magazine sensation. Later several articles were assembled in a book under the caption of *The Soul's Sincere Desire*, which is at once a title and a key.

Since that time, Professor Clark's own 'stream of answered prayer' has not failed, and has been accompanied by many related streams in the lives of others: students, associates, friends, correspondents, total strangers—known and unknown readers of his modest but impressive writings.

These results in the lives of others are no surprise to Professor Clark. Results are what he expects, and what he promises. He says that if a reader will give to certain exercises of the soul about fifteen minutes a day, the time exacted for the physical exercises of the 'daily dozen,' he will find himself at the end of two months in a new world:

> You will find yourself in a friendly universe, where religion will no longer be a thing to be believed or disbelieved, a thing to be worn or cast off, but where religion will be a part of life as blood is a part of the body. You will find yourself in a new world where your God no longer dwells in churches and meeting-places and forms and days, but where He governs every minute of every day of every year. You will find yourself in a new world where immortality will no longer be sought as something far away, to be found at some far distant time, for you will know that you are immortal now, and that the entire universe with all its good and with all its beauty belongs to you now and forever.

The comparison between the spiritual exercise of prayer and the physical drill of the 'daily dozen' is Professor Clark's own comparison. Throughout his writings he uses similitudes drawn from the track, the field, and the golf links, as consistently as St. Paul uses metaphors derived from the arena games of the Roman world.

Professor Clark's writings on prayer appear different from the vast literature of past ages on this theme, and different from the abundant contemporary books which in the main preserve the best thought of the older authors. Professor Clark's work is markedly different in approach and method, and yet in moral harmony with any ancient or modern book in which right intentions and active faith are urged.

He does not pause, like many writers, to expound a philosophy of how finite petitions can be answered by the Infinite—does not deal with prayer as a 'problem.' While his book is Biblical in spirit it is not Biblical in phrase or excessive in direct quotation. He takes the individual, praying or prayerless, and tells him to pray and to expect response—just as a coach tells his team to exercise and expect suppleness and strength.

Professor Clark's similitude of the daily exercise of prayer as a spiritual 'daily dozen' has a special interest.

He remarks that the first principle of the late Walter Camp's 'daily dozen' in physical exercise was the stretching of the muscles, particularly the muscles in concealment under the ribs. So the first aim of the spiritual exercise of prayer should be the stretching of the mind, a reaching out not only of the outer faculties but of the inner subjective mind.

This is the beginning of prayer, and it is itself presented by Professor Clark in what some would call a series of sentence prayers.

Elsewhere Professor Clark compares a true prayer to a perfect circular golf stroke, beginning above and ending above. One turns to God first and realizes: 'Where there is God, there is Love; where there is Love, there is Joy; where there is Joy, there is Power; where there is Power, God is glorified; where God is glorified, there is Love.' Thus he rounds the circle from God to God.

The next principle of Walter Camp's 'daily dozen' to be allegorized is what Professor Clark calls 'the deep breathing of the soul.' Just as the athlete learns to breathe with all his lungs, to drive out waste gases and inhale pure air, 'we should pray out the bad and pray in the good; dismiss from our mind the trouble which seems imminent and restate emphatically the great promises of God; forgive the sinner and accept forgiveness for the sin.'

The PURITAN and ART

By LEWIS WORTHINGTON SMITH

PURITANISM was a movement toward art. The Puritans themselves were cheerfully unconscious of this fact. Their enemies from that day to this have had no realization of it. They have assumed Puritanism to be opposed to that delight found in beauty, insensitive to the thrill of the esthetic.

The Puritan has been understood solely as a religious being. It has apparently escaped observation that Puritanism as a form of religion was not the whole of the Puritan as a man. In the beginning, the Puritan was born into a religious world. It was almost impossible for him not to be a sectarian. He was compelled to choose between the faith of the Inquisition and that of the Long Parliament.

The warfare between the doctrine that virtue is the ultimate good, and the conviction that beauty is more to be sought than goodness, is a long one. It goes back to the cell of the monk, to the old manuscripts that he read out slowly, dying in his isolation and at the same time living afresh in what he thus drew through the written page out of other lives.

For the individual, the struggle was an undying one. He was tossed forever between an external *thou shalt not* and an internal impulse driving him on.

Puritanism was a movement toward art because it was a movement toward the freeing of these inner impulses of man. It could not escape from the fetters of religious discipline. It could exist only by substituting an individual and passionate religious motive for an external and imposed one demanding obedience. When it had dethroned the saints and the madonnas, it had for a time no heroes and no heroines to paint. And heroes and heroines must be. Even so great a promise as that of the new Jerusalem could not continue to be enough for men of the sturdy stuff of the Puritans. They could not be dumbly passive to the show of things. They must remould life itself, before it could furnish them with a substance of dream.

That was a consequence of the historical accident that the Puritans were ahead of their time. Langley of the Smithsonian Institution is not to be charged with having been fond of the mode of locomotion of the turtle because his early attempts at aerial progress, developing the principles finally successful in our day, landed his machine in the mud. That the Puritan also tumbled, in his aspirations toward the heavenly career of the skylark, is no more to his discredit.

One of the grounds of ridicule of the Puritan was his close-cropped hair. In a day of redundant locks, real or artificial, it made him a 'Roundhead' on the lips of his opponents. It seemed a bit absurd in the presence of the slashed doublets, the ruffed collars, the great shoes, the feathered hats, of the Cavaliers. None the less it was a symbol of one of the things in the temper of the Puritans by which we were borne onward toward the spirit of modern art. The Puritan hated extravagance and excess. It was fundamentally a matter of taste; and after some three hundred years, except for an occasional importation from the less cultivated sections of Europe, we are all 'Roundheads' in America.

Romantic realism is the dominant note of art at present. Possibly it is the final note of art for as long time as we are to have art at all. When we swing on into a more positive realism we become scientists rather than artists. When we turn back into romance and lose the realist's touch we cease to be convincing.

The hat that the Puritan drew down over his round head has no doubt a very commonplace appearance at first glance. It needs but a second look, however, for it to reveal itself as having a remarkable likeness to the hat that furnishes part of the romantic lure in *The Virginian* and *North of 36*. It is the hat of the pioneer. Under it rides adventure, and perhaps it rode as bravely and as high-heartedly at Naseby with Cromwell as at any time on our western plains.

Contemporaneously with the triumph of the Puritans in England, Rembrandt, the great painter of Protestant Holland, was painting 'The Night Watch' and 'The Syndics of the Cloth Hall.' His wonderful figures look out at us from under hats like those of the Puritans. They are realistically romantic paintings. They mark with peculiar fidelity that turn in the movement of art that was implicit in Puritanism. In 'The Night Watch' man is man freed from the imposition of any sacerdotal or other trappings. There are no impossible halos hovering over the heads of any members of the group. There are no nymphs or cherubs or angels surrounding them and smiling upon them with benign inanity. There is discoverable in their faces no suppression of their individual vitalities, no reduction of their human attributes to a uniformity.

While Rembrandt was transforming the monotonous insipidities of medieval painting into the romantic realities of men and women having flesh and blood and bones, Milton, the great English Puritan, was doing much the same thing for literature. Milton, as a Puritan writer, was concerned with the inner vitalities of men, not with the vagaries of a system of chivalry or of a mad crusading venture sheltering itself under the dual wings of knight-errantry and religion.

It may be conceded that the ceremonial adds something of grace and dignity and beauty to life. Ceremony demands always the subordination of the individual man to a routine. It ceases to be ceremony with every break in the certitude of the carrying through of that routine. It is beautiful only as it has the precision that excites wonder.

The subjection of a group of wills to a common purpose, the achievement of that subjection by a seemingly simultaneous movement of different and yet harmonious impulses, plays upon the imagination. It touches a feeling not far removed from awe. As such, it has its place; but the Puritan, in his earthly relations, found the self-denyings of ceremony too injurious to his own nature. It became for him an extravagance and excess which he eschewed and which art since then—whether of painting or of literature—has also rejected.

The World Grows Harder—and Sounder

AMONG the many failings in common thought is the tendency to believe that because things are different they are necessarily worse. The hardest experience to which we must become accustomed is the experience of change, except that change which goes on imperceptibly in ourselves.

One of the commonest complaints is that the world is drawing the lines tighter, is harder and colder than before. There is less neighborliness in our cities; there is a decrease in understanding sympathy between man and man; there is not the readiness to help one another which we fancy there formerly was; people seem to take their emotional and friendly life through plays and novels; and sometimes it seems that the only common acquaintances tens of thousands of people in the big cities have are the characters on the comic page of the evening paper.

> *IN A sense the world is growing harder, because it is growing sounder and more mature. Hardness need not mean harshness. The lines are being drawn tighter, but only upon the old weaknesses, the old flabbiness which used to make such constant call upon the virtue of sympathy and helpfulness. People stand upon their own feet more than formerly and have less need to ask aid; therefore the old precepts which made this form of helpfulness the chief virtue are passing away. We are not wise to conclude that because things are different they are worse. It is our duty not to protest change but to interpret it.*

Thus the complaint runs. It is intensified whenever a visit to the country shows us remnants of the life that used to be, when neighborliness was an economic necessity, when people had to help one another if anybody was to get along at all. It is rather strange that lighted windows across half a mile of snowy fields should suggest more neighborliness than miles of city boulevard lined with lighted apartment houses. But so it is. Scarcity of people makes for acquaintance, where multitudes of people remain strangers.

It is within the memory of all yet in middle age that even in our cities a more compact community life was lived a few years ago than is possible now. There was not such a large moving population. We are in a period when all classes and all cities are being mingled; a new sort of pioneer period when families move hither and thither with a freedom unknown twenty-five years ago. Travel is no longer a novelty. It is always so when new combinations of life are about to be made. But it does make for an individualism which, while more self-reliant, is yet less warm—outwardly, at least—than the old neighborly stay-at-home sort of life. But the change is on; its urge is from a source beyond our conscious will; and it is a phenomenon to observe and interpret rather than fruitlessly to protest.

Moreover, there is the change in the character of help that can be given. For that is what it comes to at last—the help that man may receive from man. One is struck when in the country with the fact that all that anyone needed could easily be contributed by neighbors, for all possessed the common necessaries of all. Exchange in commerce or in charity was 'in kind.' Help was easy to give, easy to get. It is true in the country today, though help 'in kind' is a rare need now. But when we come to the millions in our cities the whole complexion of human need changes. About the only way left to help a man is with money. Everything is bought and sold. Except with money, or influence to get employment, there is practically no way to help a family in distress, if that family lives in the city. It is not a question of sending in food—it is a question of rent bills, and fuel bills, and light bills, and other bills, and all the expenses which were quite unknown in the country, or even in the city three or four decades ago. And when you reduce neighborliness to dollars, the self-protective instinct arises, and families are more careful than ever they were with bread or blankets.

These are some of the factors which enter into people's complaint that the world grows harder, that lines are being more tightly drawn. But the facts are not all on one side. There has been too much emphasis in the past on the possibility of relying on others and too little on the necessity of relying on oneself. This is said in spite of all the philosophy of self-reliance, for while the higher teaching pointed toward independence, a great deal of the common teaching had the effect of leading people to expect some form of charity.

This apparent hardening of the world seems to mean that more people than ever before are standing on their own feet, asking for nothing, and that they are therefore more inquiring toward those whose tendency is to be asking for something. There is, for example, a great decrease in borrowing; people don't have to borrow as they formerly did; and they look askance at borrowers as they never did before, not out of hardness of heart, but out of inquiry as to what caused the necessity to borrow.

One may be hardened without being hard or harsh. A certain amount of hardness is necessary to soundness. Mushy characters, like mushy apples, are not admired and are of little use. Perhaps another change will come, in that, having settled our material independence, we shall go back again to the true element in the old neighborliness which we have lost.

Lessons for Children

WITH schools closed in Lexington, Kentucky, because of an epidemic of infantile paralysis, lessons are carried into the children's homes each night by the city newspapers. The practice is bringing excellent results, and it is expected that the school shutdown will not materially affect the pupils' progress. So far so good. The press of Lexington is performing a notable service for its citizens, and the example will no doubt be copied in the future by other cities affected similarly. But the fact that the newspapers of one city are carrying good lessons into children's homes brings this question: *What kind of lessons do most newspapers carry into the home?*

Much has been said about the service rendered the nation by its newspapers. Praise has been plentiful. But so too has censure. It probably is necessary for newspapers to record acts of crime. But is it necessary to stress that crime far beyond news of constructive nature? Is the story of a revolting murder so much more important than the news of a momentous scientific discovery, as is indicated by its 'play' in the press? Not alone in Lexington are the newspapers teaching 'lessons' to children. Every newspaper in every city and town and hamlet in the country is carrying some sort of lesson into children's minds. What kind of lesson is it?

The Edge of Winter

DUSK sifts softly down. Dark billowing clouds roll in from the north. Across the sky a flock of belated birds take flight, their last twitterings mingling with the breeze that stirs a pile of fallen leaves into sudden life. The last altar fires of the dying year have burned to the blackened hearts of the leaf piles. Home-comers in the early evening will no longer sniff the pleasant scent of bonfires. Instead they breath the sharp, brisk air of winter. The high winds whip the last and most reluctant of the lawn trees bare of their withered ornaments. Their frigid outlines are silhouetted against a white bank of cloud lighted by the dying day. A garden fence, a segment of an inclosure about a tiny back yard, is visible now. All summer it has been luxuriantly upholstered in satin leaves laid thickly upon each other, leaves of a particularly vigorous vine. The lawn has been raked clean of leaves and shows a faint green, but this is only a remnant of its former glory under warm rains and warmer sunshine. A tall elm tree, naked in the twilight, enfolds the roof of a cottage with a gentle tap-tap as though to remind the tenants that it still stands guard though deprived of its armor. November is not considered an outdoor month for the multitudes. Still it has its offering of delights. The harvest has been completed. The basements are stocked with canned fruits, nuts, apples, and all manner of good things beloved by our pioneering ancestors. Visions arise of roast chicken, turkey, goose and duck. Thanksgiving is not far distant. Brown may be considered a dull color, but the rich brown of roasting pig or a pumpkin pie is quite another thing. Frost may whiten the windows later on; cold winds may howl about the home, but happiness reigns within.

An Important Conference

THE Pan-American Congress, which opens in Havana on January 16, looms as one of the most important events on this country's foreign relations calendar. The significance attached to it by President Coolidge is evidenced, not only by his own intention of addressing the opening session, but by the character of men he has appointed to represent this nation at the conference table: Charles Evans Hughes, former Secretary of State and former Justice of the United States Supreme Court; Oscar W. Underwood, former senator and delegate to the Washington Naval Armaments Conference; Henry P. Fletcher, ambassador to Italy, widely experienced in Latin-American diplomacy; Dwight W. Morrow, ambassador to Mexico and close personal friend and adviser of the President; James Brown Scott, authority on international law; Morgan J. O'Brien, former New York judge; Dr. Ray Lyman Wilbur, president of Leland Stanford University; and Dr. Leo S. Rowe, director-general of the Pan-American Union. Such a delegation would not be named merely for the exchange of empty amenities. Matters of deep importance are plainly scheduled for discussion, if not for immediate action.

The time is indeed ripe for a move leading toward closer friendship between the United States and her southern neighbors. Relations have not been particularly happy of late. The Nicaraguan episode, no matter what justification may be advanced for this country's intervention, rankles deeply in the breasts of many Latin Americans. It has been made the basis for vigorous charges of 'Yankee imperialism,' and has served as fuel for those who wish to stir up discord and suspicion. The unfortunate outcome of our attempted mediation in the Tacna-Arica dispute between Peru and Chile has not added to American prestige. And repeated difficulties with Mexico have not been conducive to mutual understanding.

The doctrine of Pan-Americanism is an excellent one. Close association among all American countries not only politically but economically is a goal worth striving for. A league of American nations, bound not by ties of force but by ties of friendship, is easily conceivable.

CALIFORNIA *in* Pioneer Days

By FRANCES HOLBROOK PFEIFFER

Copyright, C. M. Neuner

MEXICO ceded California, together with other southwestern territory, to the United States in 1848. Then the Californians looked to Congress to grant them a form of government, but they looked in vain. Congress was concerned with the slavery problem, and upon California depended whether the balance of states would tip in favor of slavery or against it. If California entered the Union as a free state, the South must secede; if she entered a slave state, slavery would continue.

While this debate was going on California was practically without law—although the military governor was obeyed from courtesy. She could not fall back upon Mexican laws because, for all practical purposes, there had been none.

The lawlessness of the times made it necessary to form a vigilance committee. To quote from R. G. Cleland: 'It should be borne in mind that this committee, even though self-constituted, was not a mob, but a carefully organized body of respectable men who openly avowed responsibility for what they did, and acted only after careful investigation of each case.'

As conditions grew better the activities of the committee lapsed, until, in 1856, it was necessary again for a new committee to organize. Their oath of allegiance follows and contains, also, the reasons for their organization:

> 'We do bind ourselves to perform every just and lawful act for the maintenance of law and order, and to sustain the laws when faithfully and properly administered, but we are determined no thief, burglar, assassin, ballot-stuffer, or other disturber of peace, shall escape punishment either by quibbles of the law, the carelessness or the corruption of the police, or a laxity of those who pretend to administer justice.'

A convention was called by the military governor Riley, in Monterey, September 3, 1849, with a membership most interesting and unusual. While the United States' delegates were in the majority, there were seven Hispano-Californians, and one native each of Spain, France, Switzerland and Ireland—all dignified and intellectual men, who fully realized the difficulties and importance of their work.

The present boundary line was adopted, cutting off Arizona, Nevada, Utah and parts of Wyoming, New Mexico and Colorado, which had been included in California.

As these earnest men began to sign the state constitution—California never having been a territory—a salute boomed from the fort, and in the harbor the captain of an English ship showed a splendid spirit in honoring the occasion by hoisting the American flag above the colors of every other nation.

At the end of a turbulent session of Congress in which Webster delivered one of his greatest speeches for admission, and Calhoun made the last effort of his life against it, California was admitted to the Union.

Meanwhile the Californians waited long and impatiently to hear the fate of their constitution. They were about to take matters into their own hands again, when, one morning in October, 1850, came the joyful news from Telegraph Hill that the *Oregon* was entering the Golden Gate—'And all her flags are flying!'

Women wept and even men shed tears of joy. All night long, bonfires burned and gayety reigned, while the great news was dispatched. After four years California had joined her family!

The old stagecoach, harnessed to six span of horses, dashing over the rough mountain roads; the hazardous rocking, the cracking whip, the interesting occupants, the friendships and flirtations, the holdups, the great old drivers with their long, courageous years on the box, the danger, the romance, the color of those early days will be interwoven, always, with the history and literature of California.

When today we see the old stagecoach reproduced on the screen, we do not realize the important part it played in Americanizing California. Among the many newcomers it brought over the mountains there grew a natural desire to get letters from home without so many weeks of delay. From this desire developed the famous Pony Express to carry letter mail only.

Just as the airplane mail does today, there was a simultaneous 'hop-off'—or 'hop-on'—east and west. The first rider started on his sturdy little Indian pony from St. Joseph, Missouri, and on the same day and hour the western rider started on his thousand-mile ride eastward. The ponies, ridden at full run, were changed every twenty-five miles, and the average distance of the rider was seventy-five miles a day. Buffalo Bill, replacing a messenger who had been

The American Pony Express running through dangerous Indian territory on the route between St. Joseph, Missouri, and San Francisco, California.

killed by Indians, made 'the long trip of three hundred and eighty-five miles, stopping only for meals and a change of horses.' The rider, always alone, traveled day and night through storm and heat, Indians and wild beasts, beset by constant danger.

It was the Pony Express that brought the great news of Lincoln's election, and later, riding one thousand nine hundred and fifty miles, in one hundred and eighty-five hours, Lincoln's inaugural address.

THE demand for news also hastened the completion of the telegraph line into San Francisco; and although the Government had, as early as 1853, surveyed three routes for a transcontinental railroad, the slavery question overshadowed every other issue, and nothing was done toward building.

John C. Fremont had laid out one of these routes to which objections were raised on the plea that 'only scientific men could determine the best ways and easiest passes.'

To this Senator Benton, his father-in-law, made a poetic reply:

> 'There is a class of scientific engineers older than the schools . . . they are the wild animals which traverse the forests, not by compass but by instinct which leads them always the right way to the lowest mountain passes . . . and the shortest route between two distant points. The hunter follows the same trail, after that it becomes the wagon-road of the immigrant, and lastly the railroad of the scientific man.'

Through the determined and courageous effort of Theodore D. Judah, a young engineer of San Francisco, Congress was made to realize that a railroad *could* be built over those long miles of rough mountains, and was made also to see the great need of binding the East and the West. Finally Congress made provision to build the road. In 1862 the bill passed both houses and was signed by Lincoln.

The Central Pacific Railroad was organized by four men and work began in Sacramento in 1863 to build east to meet the Union Pacific, which was then building west from Omaha.

The 'Big Four' were Leland Stanford, a young lawyer and grocer; Mark Hopkins and Colis P. Huntington, hardware merchants; and Charles Crocker, dry goods merchant. They were young men of small means and their undertaking was hazardous. But they had the vision of a great state and its needs—and, undoubtedly, their own future—and overcame obstacle after obstacle. Judah died shortly after the work began.

The 'Crocker Battalion'—Chinese Crocker had imported and formed into companies—under their able director, did the construction work. Rivalry between the two roads became intense as the distance decreased. Crocker established the record for railroad building when one April day, between daylight and dark, he laid ten miles and one hundred and eighty-five feet of track!

The historic rails were joined in Promontory, Nevada, on May 10, 1869, when, at each blow of the sledge hammer upon the last spike, reported by telegraph, corresponding blows were struck on the bell of the city hall in San Francisco.

The completion of the first transcontinental railroad was celebrated in every large city in the country. The rector of Trinity Church, Boston, called a midday service 'to thank God for the completion of the greatest work ever undertaken by men.'

Precursors of the modern hostelries of California grew from the influx of immigration when Spanish hospitality gave place to Yankee enterprise. The old Bella Union, on North Main Street, Los Angeles, was popular during the fifties. The roof caved in from heavy rains and in '59 it was improved and enlarged. The old 'dinner bell' was replaced by a shrill whistle on the roof, whose shriek always started a stampede along the street! Here, Seward, Lincoln's Secretary of State, was entertained in 1869 on his return from Alaska.

Opposite the plaza was the famous Pico House, elaborately furnished with 'bath and gas,' and was for years the most important hotel, entertaining many distinguished guests.

The first hotel in San Francisco, the City Hotel, was built in 1846. It was the great gambling headquarters 'where thousands of dollars were staked on a single card, and scenes such as never were before and never will again be witnessed, were exhibited in forty-nine and fifty.'

The St. Francis was erected in 1849 and was the fashionable house of the day where the élite boarded or congregated. It was the 'theater of many rare and amusing scenes.'

The Cliff House, built in 1863 at the entrance to the Golden Gate, was California's most famous hotel.

THE old Palace was the first large hotel. The Arlington in Santa Barbara, in 1875, was the social center of the state. The Raymond, in '80, took its imposing position in Pasadena, followed by the distinguished Hotel Coronado near San Diego, and the Del Monte near Monterey, set in its great and beautiful forest.

The first white man to look upon Tahoe, that wonderful 'Lake of the Skies,' was John C. Fremont, in February, 1844. His record reads:

> 'Accompanied by Mr. Preuss I ascended today the highest peak to the right from which we had a beautiful view of a mountain lake at our feet, about fifteen miles in length and so nearly surrounded by mountains that we could not discover an outlet.'

Fremont named his discovery Lake Bonpland for a noted French botanist in his expedition. In 1863 this name was changed to Lake Bigler for a California governor of no distinction. William Henry Knight gave this lake its real name.

Mr. Knight was preparing a map for the Bancroft Publishing Company. He asked the editors of several important newspapers to a 'renaming meeting.' Tahoe, the Indian name, meaning 'water in a high place,' was the name decided upon, written into the map and supported by these papers.

—Brown Brothers.

Along the shore of Lake Tahoe, on the California side.

The members of the Mariposa Battalion, formed to put down Indian uprisings, were the first white people to enter the Yosemite Valley, March 25, 1851. This unsurpassably beautiful valley was the stronghold of the Yosemites, the last Indians brave enough to hold out against the Americans. They spoke of it as a 'Valley of Demons.'

To Dr. Bunnell, one of the company who, years before, had been impressed by the mysterious cliffs of great old El Capitan at a distance, it 'seemed a fit abode for the Angels of Light.' So deeply moved was he by the majestic beauty that, although he had suffered heavy losses by the Indians, his feelings of hostility against them ceased and he writes, 'The natural right of the Indians to their inheritance forced itself upon my mind.'

So uplifted was he that the rude jests of the men jarred upon him in so sacred a spot. We may easily imagine that his exaltation was impressed upon his hearers as they sat around the camp fire that night discussing a name for the valley. 'Yosemite' (meaning Grizzly Bear), named for the tribe which occupied it, was the inspirational choice of Dr. Bunnell.

The Big Trees, *Sequoia gigantea*, in the moist days of gigantic vegetation and animals, must have covered a large portion of the earth. Those in California escaped the ice age and so remain 'the oldest living things in the world'—old when Egypt was at the height of her glory.

The Giants of the Calaveras Grove were discovered in 1853 by A. T. Doud, a hunter, who was following a wounded bear. His story of their great size was so unbelievable that he was obliged to resort to subterfuge to lure his companions to see the trees for themselves.

The old Spanish dons, with all their picturesque life on the great ranchos—men of education, after a fashion—allowed their children one long, untutored holiday. In 1794 a governor from Spain, Diego de Borica, was so astonished at the ignorance of the people that he ordered the opening of schools. The first one was started in a granary in San Jose in 1794 with a retired army sergeant for the teacher.

The first American school began in Santa Clara in charge of a woman teacher, followed by another in San Francisco in 1848. During that famous first legislative convention in 1849, certain revenues were provided for a state university, which was granted a charter in 1868, and established in Berkeley.

THE first free kindergartens were started in San Francisco on 'Tar-Flats' to teach those lowly children a better way of living, the results of which made a wonderful improvement among them. The teacher was a young and pretty woman adored by all, known in later years for her delightful books and splendid womanhood—Kate Douglas Wiggin.

The tremendous grain and fruit industry of California, like many of the developments of this wonderful state, had small beginnings. On the *Don Carlos* in 1769, came the first seed wheat which was carefully planted, but the first crops were lost owing to both droughts and floods. The padres brought with them corn, the orange, lemon, citron, grapes, olives, figs.

Nearly all the missions had orchards and gardens, the largest being at San Gabriel near Los Angeles. The padres preserved fruits, made raisins, wine and brandy. In 1815 the missions raised enough grain to supply the whole population. After they were secularized, agriculture declined, so that when the gold rush brought unexpected thousands into the country, there was not grain and flour enough to meet the demand.

Many of the gold seekers had been farmers, and many who had been unsuccessful in the mines, and those who heard the call of the land, turned to grain, the orange and the lemon, and were amazed at the fertility of the soil.

When the Americans took up the pursuit of agriculture and fruit-raising, California laid the foundations of its permanent and substantial development. The greatest one factor in the great stride ahead was due, in all probability, to the Washington navel orange.

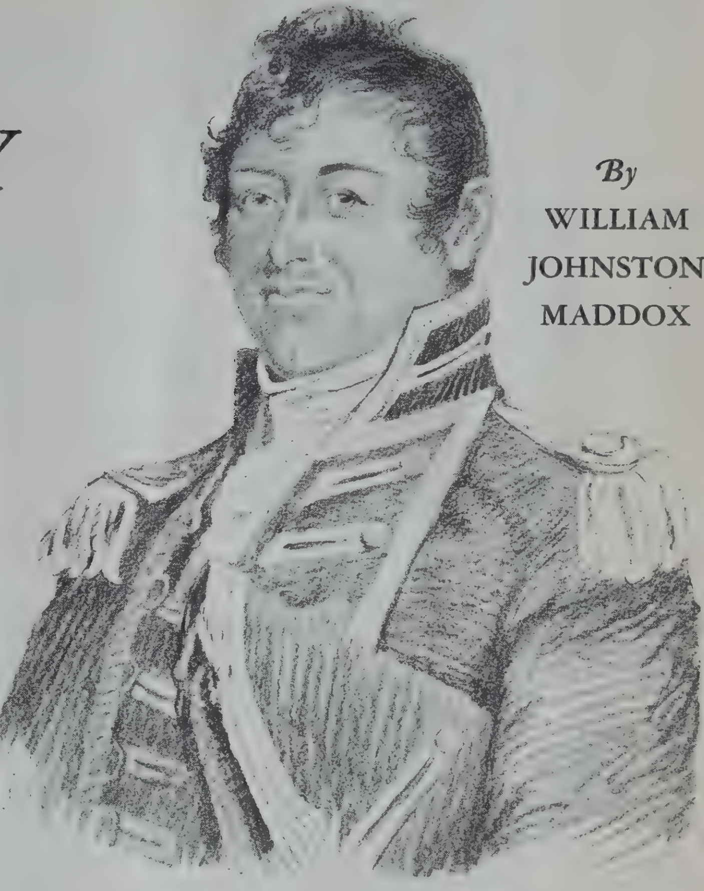
A FAMOUS THREE-DAY CHASE

By
WILLIAM
JOHNSTON
MADDOX



Captain Isaac Hull of the U. S. Frigate Constitution.

CONSTITUTION luck.' It used to be a byword in the old Navy. Maybe there's something in it after all. The stanch old frigate is still above water, kicking her heels in a dock especially reserved for her at Charleston Navy Yard, and sniffing the salt wind that strays into Boston Harbor. Haughty dreadnoughts and lean, eager destroyers of our new Navy come and go. They bob respectfully. She is still the grand old ship of the American Navy, one of its cherished traditions.

Once, when she had outlived her usefulness, they were about to scrap her. But her luck held good. A poem that raised a storm of protest throughout the country saved her for a pampered old age. 'Ay, tear her tattered ensign down'—every schoolboy knows about Oliver Wendell Holmes and *Old Ironsides.*

In her youth she was a marked ship. Many a British officer put to sea dreaming of sailing her into Halifax or Liverpool as a prize. But none ever did, although one came very near doing it. He had a prize crew all picked, reserving the honor of commanding it himself. All he got was the chagrin of being worsted in a sea chase that has become famous in naval history. For three days and three nights, in what was practically a dead calm, seven British men-of-war taxed their resourcefulness to overhaul a lone American frigate, which in turn by brilliant seamanship sought to escape. We are so apt to picture these men as stilted old dignities, for such their portraits often make them out to be, but '*Constitution* luck' was possible in having on her quarter deck such a skilful seaman as Isaac Hull, then hardly turned thirty-six.

From the moment she was launched—October 21, 1797—at Edmund Hartt's shipyard, Boston, the *Constitution* was a subject of keen interest here and abroad. She was a wide departure from the types of frigate built in Europe. The British heaped ridicule upon her. She was too light in construction and too heavily armed. But before long they began building their frigates along the same lines. Her designer, Joshua Humphreys, the Philadelphia Quaker who was read out of meeting for having a hand in such devil's work, had a vision of our modern battle cruiser. No less a person than Paul Revere made her bolts and spikes, drawn from malleable copper by a process then new. Mrs. Ross of Philadelphia made her ensigns, consisting of fifteen stars and fifteen stripes, her jacks, pennants, and signals. Her sails were so large that there was only one loft in Boston large enough for their manufacture, the old Granary Building, where Park Street Church now stands.

Early in his career, Hull had displayed exceptional ability in seamanship. In 1799, Hull was serving as a lieutenant under Commodore Silas Talbot aboard the *Constitution*, cruising in the French West Indies. The captain of a British frigate fresh from Madeira challenged Talbot to a race for a cask of wine. Talbot accepted and turned the handling of the ship over to Hull, a youngster of twenty-three. The race started at sunrise. By sundown, only the masts and sails of the Englishman were visible above the horizon, and the British captain cheerfully sent aboard the cask of Madeira.

Hull had just returned from a mission to Europe with the *Constitution* in 1812 when the United States declared war on England, June 18. Putting into the Chesapeake, he shipped a new crew hastily at Annapolis and put to sea, passing through the capes July 12. Morris, his first lieutenant, only joined the ship a fortnight before she sailed, and the last draft of a hundred men just came aboard the night of the eleventh.

Hull stood to the northward, and the seventeenth found her under easy canvas just out of sight of land off Egg Harbor, New Jersey. There was a light breeze from the northeast. At two in the afternoon four sail were sighted to the northward. Hull thought they were part of Commodore Rodgers' squadron, which had recently put out of New York. He made sail, however, cautiously. At four a fifth sail was discovered to the northward and eastward.

The wind by now had become very light, but it was favorable for the fifth ship to close with the *Constitution.* When she had come to within a league, however, what little wind there was died away altogether, leaving the sails of both ships limp. Before long it returned light, but from the southward this time, giving the American ship the advantage of being to windward.

Hull now brought his ship round with her head to the eastward and cleared for action, intending to speak the stranger, which was now easily distinguished as a man-of-war.

Night settled on the water with the ships closing slowly. At ten o'clock Hull shortened sail and showed the private signal of the day on a chance that she was an American. Getting no answer, however, he shrewdly concluded that she was British and made sail again. All through the night he watched the strangers flashing signals back and forth among themselves. Just as the morning watch was called on the *Constitution*, the nearest ship threw up a rocket and fired two guns.

DAYBREAK showed Hull the predicament he was in. On his lee quarter were two frigates, astern were a ship of the line, two more frigates, a brig, and a schooner. At their peaks fluttered the English colors. It was the squadron of Commodore Sir Philip Vere Broke, consisting of the *Africa*, a ship of the line rated at sixty-four guns; the *Shannon* thirty-eight guns; the *Guerriere* thirty-eight guns; the *Belvidera* thirty-six guns; and the *Aeolus* thirty-two guns. The brig was the *Nautilus*, the famous old American ship that they had captured and was now doing duty with the British Navy. The schooner was a prize.

They had been gradually closing in, and had come to just out of gunshot.

The very light wind that had continued through the night from the southward and westward now died out entirely. With all her sails set the *Constitution* hardly had steerageway. Hull ordered out the boats to pull the ship's head around and by towing keep her out of reach of the British guns.

At the same time, he whipped up one of the gun-deck guns to the spar deck and ran it out aft as a stern chaser. A long eighteen from the forecastle was brought for the same purpose. Having chopped away some of the timbers about the cabin windows he mounted two stern guns there.

By six o'clock the ship's head had been brought around to the southward, and all light sails that would draw were set to catch the whiffs of air that came mostly from the westward.

The English were quick to pick up Hull's expedient and hoisted over their boats. The advantages in this method were somewhat divided. In some ways Hull had the better of it. His boats were farther from the enemy and protected by the hull of the *Constitution*. The British rowers were exposed and would be the first to come within gun range.

On the other hand, the British were able to concentrate the efforts of several crews on one ship in towing. And this was what they did. The *Shannon*, Broke's flagship, was closing in slowly. She tried a shot or two with her bow guns, but found she was still beyond range.

Hull, however, had to find some new means.

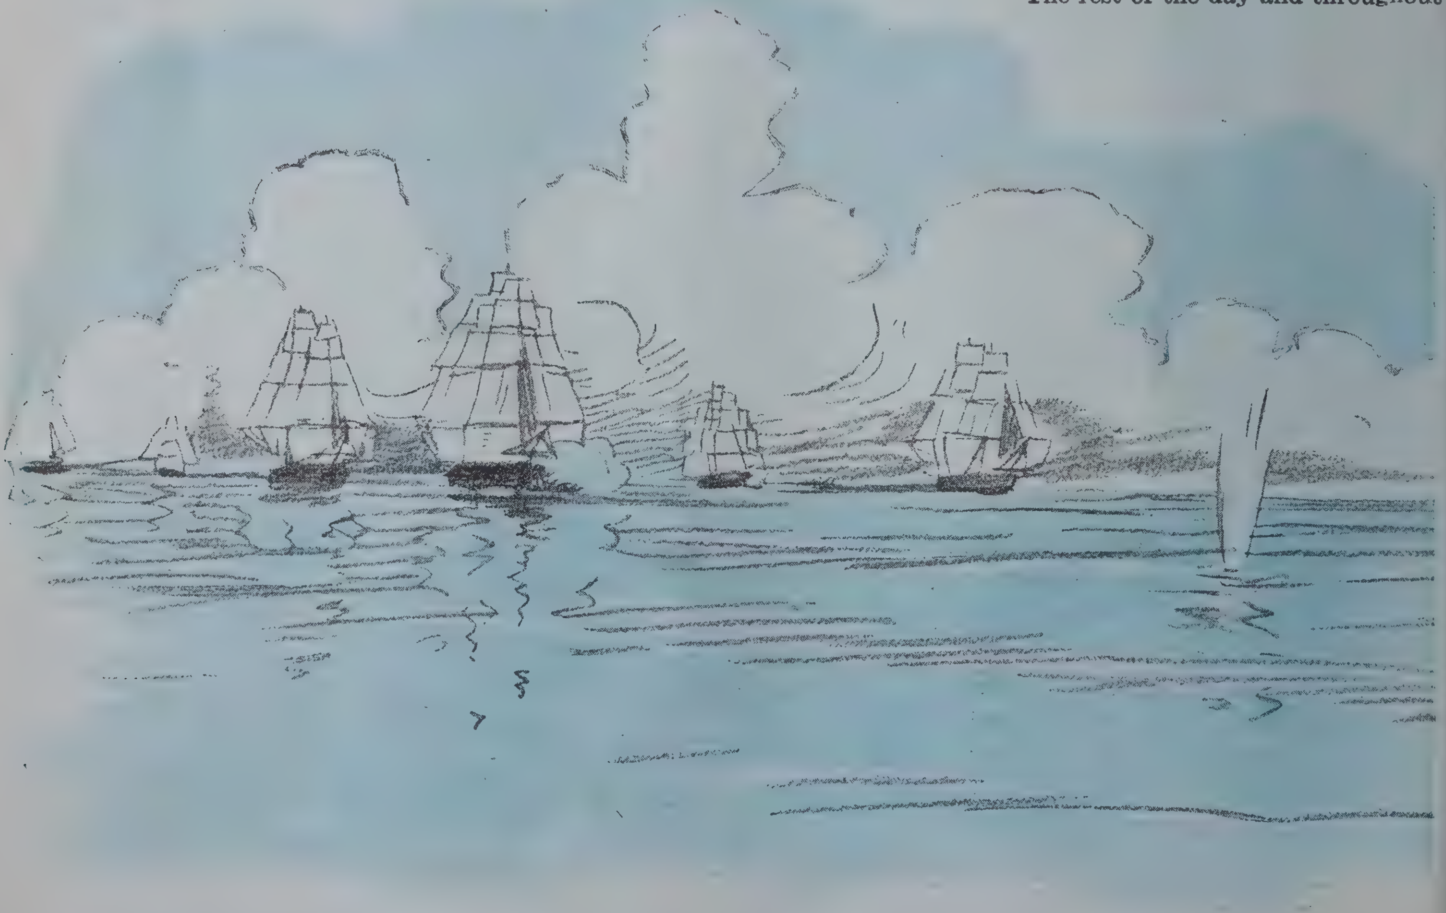
It had been an old custom in the American Navy to warp its ships through tight channels by means of light anchors, or kedges, carried to some distance ahead of a vessel and dropped. Then instead of pulling in the anchor the ship was pulled up to it. As high as three knots an hour could be made in this way.

Hull gives credit for the suggestion to his first lieutenant, Morris. All spare hawsers and ropes were gathered up and the crew soon had a mile of it spliced. Soundings showed twenty-six fathoms. A kedge was soon over the side and a boat speeding ahead as the mile of rope was payed out. Soon another kedge was put into use. As soon as one was tripped the other was ready to be hauled upon. At the same time a light breeze sprang up. The *Constitution* began to walk away from her pursuers. Hull now for the first time hoisted his colors and fired a gun at the *Shannon*, the nearest of the enemy.

BEFORE long the British discovered the secret and speedily fell to kedging also. Soon it was calm again, and more towing and kedging were necessary. The *Shannon*, however, hung on doggedly and was gaining quite rapidly. The *Guerriere* was almost as near on the other quarter. It was one of the most critical moments of the chase. It looked as though Hull would have to fight within an hour.

Suddenly, a few minutes after nine o'clock, a light breeze came to his rescue, bringing the *Constitution* to windward. The able way Hull improved this advantage brought forth the admiration of his pursuers. The towers were picked up on the run. An hour later the wind died, however. Hull sent overboard about twenty-four hundred gallons of water to lighten the ship.

The rest of the day and throughout



the night the chase continued with short respites for the people of the *Constitution* who remained at their quarters. Now and then a little breeze would spring up and the men in the boats would swing aboard and throw themselves down on the deck for a nap. Some even flopped across the guns and went to sleep. All cheerfully responded for duty, nevertheless, when called. Hull in his official reports praised their fine spirit and readiness.

Hull himself displayed his exceptional seamanship throughout this trying time in the manner in which he was quick to see his opportunities and take advantage of them. He squeezed the last drop of force out of every breeze that came along.

Morning found three of the enemy's frigates within long gunshot on the lee quarter, and the other about the same distance away on the lee beam. The *Africa*, the slow, heavy ship of the line, and the prizes were much farther to leeward.

A mild wind that hardly ruffled the water had come up. Kedging and towing had been dispensed with, and the boats taken in, either aboard ship or swung from the davits. All five frigates were on the same tack, clouds of snowy canvas from their trucks to the water. With half a chance, the *Constitution* would have got away. The foremost ship had dropped to about two and a half miles in her wake, when at noon the wind fell. Here Hull showed his remarkable seamanship in handling the ship on little wind, for by four o'clock he had added another mile and a half to his lead on the *Belvidera*, the nearest ship. But this was far from effectually shaking off the pursuers.

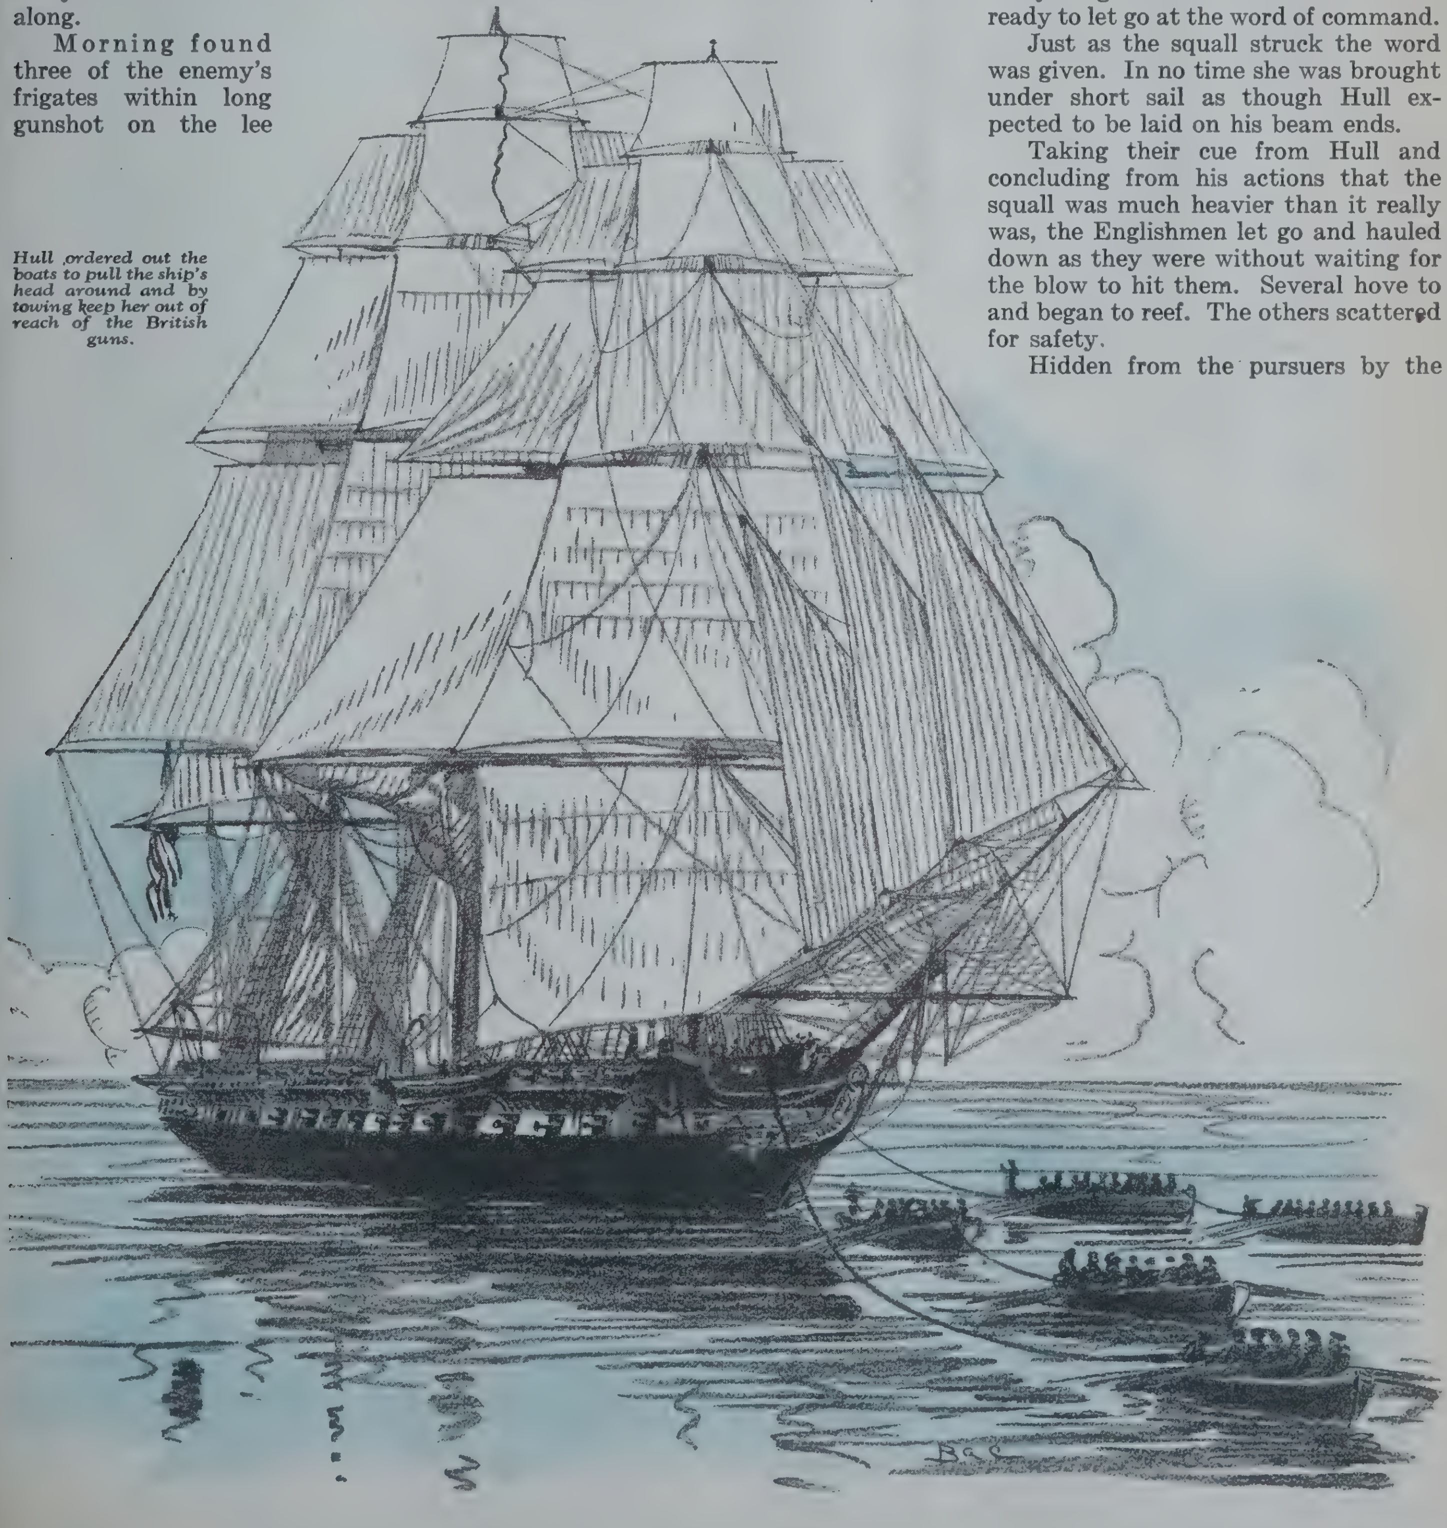
It remained for Hull to make good his escape only by a masterful piece of strategy.

About sunset, dark, ominous clouds came up to windward and rapidly advanced upon the *Constitution* with all the appearance of a heavy squall. Hull made out a heavy rain—and his plan was quickly formed. The crew were hurried to their stations, the top men springing aloft. The *Constitution* pounded ahead under full sail but everything was loosened and held ready to let go at the word of command.

Just as the squall struck the word was given. In no time she was brought under short sail as though Hull expected to be laid on his beam ends.

Taking their cue from Hull and concluding from his actions that the squall was much heavier than it really was, the Englishmen let go and hauled down as they were without waiting for the blow to hit them. Several hove to and began to reef. The others scattered for safety.

Hidden from the pursuers by the



Hull ordered out the boats to pull the ship's head around and by towing keep her out of reach of the British guns.

rain, Hull quickly sheeted home, hoisted his fore and main topgallant sails, and with the water dashing high about him thundered along at a gait of eleven knots.

For nearly an hour the wind held strong, and then disappeared to leeward. All eyes were fixed eagerly astern as the squall retreated, and a great cheer broke from the officers and men as the Englishmen at last became visible. The *Africa* was barely to be seen. In a few more moments only the sails of the frigates were visible above the horizon.

But the English held to the chase through the night. Daybreak showed them farther astern. Shortly after eight o'clock they acknowledged defeat and hauled to the northward and eastward. But the *Constitution* continued on under full sail.

An American officer, prisoner aboard one of the British ships, watched the chase and later told of the high admiration expressed by the English officers. They looked for Hull to resort to the usual methods of lightening his ship by throwing overboard guns and anchors and such. All that went was the quantity of fresh water. This really only brought him even with the English who were some time out of port, while Hull had been out only a short time. As a matter of fact some of the English ships had abandoned their boats and had to recover them after the chase.

THE escape was a keen disappointment to the English. Broke had picked the crew to sail the prize into Halifax, reserving for himself the honor of commanding it. In the *Shannon's* log for July 18 is this entry:

'At dawn an American frigate within four miles of the squadron. Had a most fatiguing and anxious chase; both towing and kedging, as opportunity offered. American exchanged a few shots with *Belvidera*—carried near enemy by partial breeze. Cut our boats adrift, but all in vain; the *Constitution* sailed well and escaped.'

The following Sunday Hull put into Boston for a fresh supply of water. He was given an ovation that led him to insert the following card on the books of the Exchange Coffee House:

'Captain Hull, finding that his friends in Boston are correctly informed of his situation when chased by the British squadron off New York, and that they are good enough to give him more credit for having escaped it than he ought to claim, takes this opportunity of requesting them to transfer their good wishes to Lieutenant Morris and the other brave officers, and the crew under his command, for their very great exertions and prompt attention to his orders while the enemy were in chase. Captain Hull has great pleasure in saying that, notwithstanding the length of the chase, and the officers and crew being deprived of sleep, and allowed but little refreshment during the time, not a murmur was heard to escape them.'

Before long Hull was to encounter one of the ships—the *Guerriere*—under more favorable circumstances and give her such a drubbing as to cause a furor in England. The first real action of the war!

Folk of the Valley

(*Continued from page 3*)

go down richly wooded valleys which wind among hills of pleasant outline. You catch glimpses of country homes with flower gardens of extraordinary richness of hue. There are orchards thickly hung with ripening fruit. There are vineyards. There are places of homely comfort, trees thick with bloom, birds that dart and poise, poultry yards alive and noisy, sheep, cattle, horses, tobacco fields. There are quaint covered bridges as well kept as when they were first built before the Civil War. Suddenly, at a turn of the road you catch a sight of Ripley nestled among magnificent trees.

I remember it as a place where I became the guest of a dozen friendly men who were members of the strangest society I had ever known—an organization without officers, without rules or regulations, without purpose other than to be friendly. They met once a month and discussed anything and everything with wonderful zest, thinking aloud; and they struck me as being a fine, generous, noble-minded set of men. Some of their memories stretched far back, for the town is one of the oldest in the state and was at one time the second-largest meat-producing and -shipping river port in the country.

I heard the men tell of the town's associations—how U. S. Grant lived there when a boy, attending school—how William Henry Harrison made it an important point during his whirlwind campaign—how Rutherford B. Hayes rusticated there after some state activity—how James A. Garfield's friends, the Bairds and the Liggetts and the Stivers, entertained him—how William McKinley landed there from a river steamer and met with the former members of the club I have written of—how General John Morgan, the daring Confederate raider, was interested in it—how Harriet Beecher Stowe made it the scene of Eliza's crossing of the ice.

Old Captain Kirker was full of interest concerning river matters, and naturally so, for he had been a Mississippi pilot, the companion of Horace Bixby and of Mark Twain. To him, slighting the river and its scenes was equal to traveling Ohio with bandaged eyes. 'Talk about characteristic Ohio,' he said to me. 'Come and see the river first.' So he led the way down town, and pointed out, as we went, a dark streak on the houses. It was the mark of an April flood, and it was easy to see that where the streets were low people could have stepped out of their upper windows into boats.

As we arrived at the river bank this is what we saw. First, like a gray plume, beyond the point, a smoke cloud. Then rounding the point came a gallant end-wheel steamer swimming with placid dignity. As it sighted the town there came from it a deep bellow; at the noise townspeople came, not hurrying, but leisurely, in a way that showed the meeting of the packet to be part of their ordinary life.

So I, mistaken, said something about there being a large crowd about to travel. 'There's only one passenger,' said the captain, hearing which I was disappointed, thinking that so lordly a ship would never put in for one solitary human being, and he only bound for Maysville, ten miles away. But I had not taken account of the old-time leisureliness of the riverside folk, for a river packet will stop for one as readily as for a hundred. And sure enough, there was the *River Queen* heading in, a glory of paint and bell-ringing and mighty snorting and gleaming brass and foaming waters, her gangway suspended like some ancient drawbridge. So I saw everything I had hoped to see—the Negro deckhands, the stacked cotton bales, the profane stevedore and his men, the Southern gentlemen who I had thought were fiction, the steward's boy showing off, the men of the wharf boat during their only busy hour throughout a day.

Later there were other sights, one most rare, a real show boat with stage and auditorium and steam calliope and brass band parade—also the promise of wonders hinted at by a gentleman in top hat and knee boots, who seemed to take a positive pleasure in his profession.

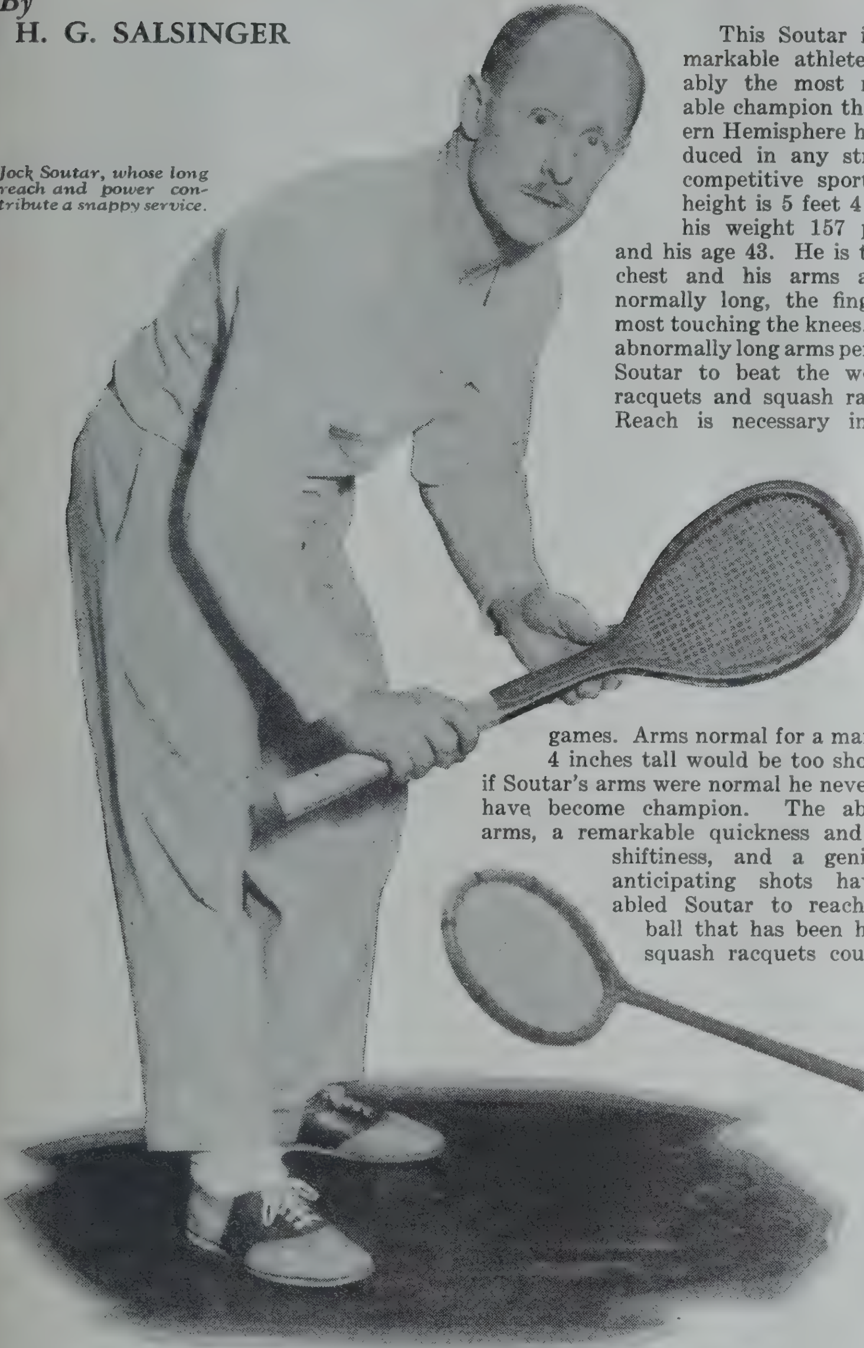
We paid out two bits apiece and witnessed the dramatic performance of *Mildred of Milan, or The Maiden Martyr*. And what though the scenery of Milan bore a resemblance to the outside of a small town drug store while an anachronistic advertisement informed us throughout the evening that the local bank was safe and sound and had a capital of $30,000! What though the orchestra had no more than four tunes in its repertoire! Mildred, who chewed gum, suffered unheard-of trials and temptations; and her only friend on earth was a funny man with a high sense of honor. While it was abundantly clear to everyone except those on the boards that Mildred's veins held aristocratic blood, yet because the Count, who had villain writ large on him, had during Mildred's infancy intercepted a letter containing a marriage certificate, things were going badly for the girl; yet at any time a word spoken by a dull-witted grandfather would have cleared up the wholesale misunderstanding.

However, in the end, when Mildred was fast bound to a log on its way to the sawmill that stands in Milan's environs and is run by an honest New Englander, and as the villain Count in his utter fiendishness waved the missing document before the girl's eyes to make her last moment gall-bitter, the funny man, in an ecstasy of unexpected recklessness and with a violence that can hardly be imagined, broke through a wall, dragging a 16th Century halberdier with him, and so tore Truth from the scaffold. For the halberdier, who seemed to be endowed with unusual powers of life and death, condemned the Count to death. Then a white-haired preacher happened to appear who was evidently bent on buying lumber; so Mildred and the funny man were then and there united in the bonds of holy matrimony with the Milanese New Englander for witness. Then we all went ashore to the tune of 'Dixie' played on the steam calliope by a musician whose knowledge of both the tune and his instrument was rudimentary.

After supper the good people of the little town sat on the river bank, under the trees, on benches and on stone seats. And the breeze was cool that came through the gates of the evening. It was pleasant, and I was glad and grateful to be there. The peace of the place was like a cup of cool water to a thirsty man.

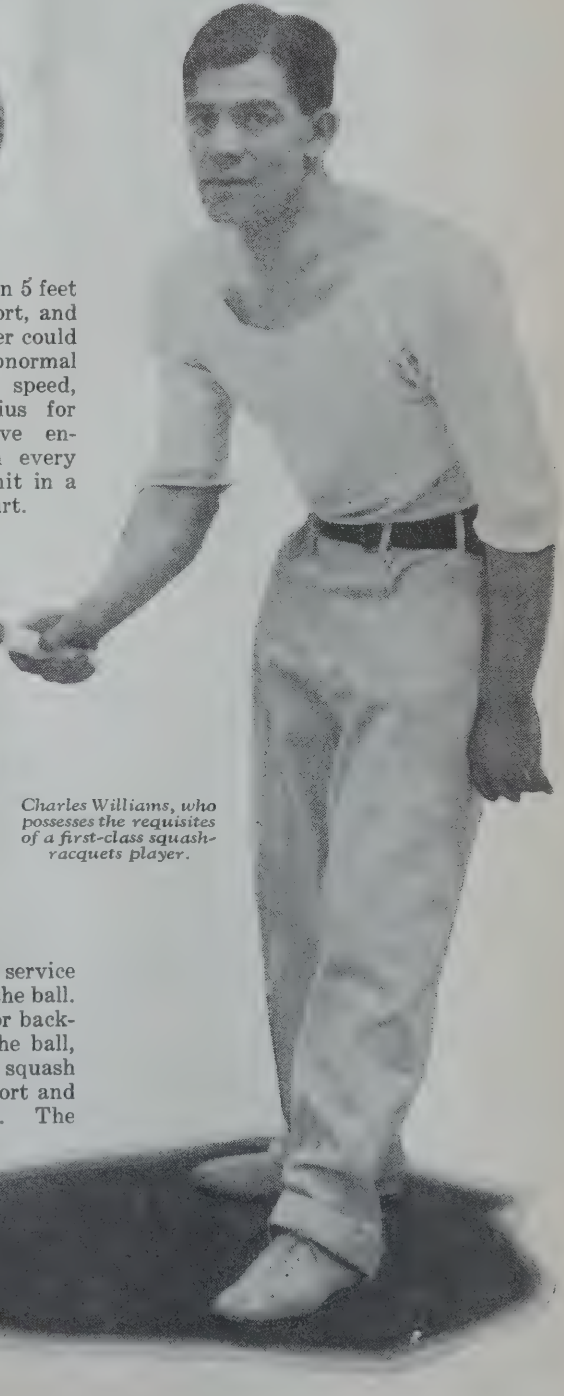
The Long Road to the Top

By
H. G. SALSINGER



Jock Soutar, whose long reach and power contribute a snappy service.

This Soutar is a remarkable athlete, probably the most remarkable champion the Western Hemisphere has produced in any strenuous competitive sport. His height is 5 feet 4 inches, his weight 157 pounds, and his age 43. He is thick of chest and his arms are abnormally long, the fingers almost touching the knees. These abnormally long arms permitted Soutar to beat the world at racquets and squash racquets. Reach is necessary in these games. Arms normal for a man 5 feet 4 inches tall would be too short, and if Soutar's arms were normal he never could have become champion. The abnormal arms, a remarkable quickness and speed, shiftiness, and a genius for anticipating shots have enabled Soutar to reach every ball that has been hit in a squash racquets court.



Charles Williams, who possesses the requisites of a first-class squash-racquets player.

IN TENNIS, polo, racquets and squash racquets they tell you that the wallop has its place but should never predominate. They explain to you in a plausible way how a man who depends chiefly upon the wallop can never enter the championship ranks. Jock Soutar is the exception that proves the rule.

Soutar has been champion of champions at racquets and squash racquets, pounding his way to the heights over amateurs and professionals. At court tennis, a game that he also plays, in which pounding can in no way give the player an advantage, he has held only the professional title. Jay Gould, a master of form, successfully defended the title in a number of matches with Soutar.

In racquets Soutar has a dazzling service because of the power he gets behind the ball. When he is driving either forehand or backhand he manages to get a cut on the ball, something that cannot be done in squash racquets because the court is too short and the ball is not driven far enough. The length of the racquets court makes the service of great importance. In squash racquets the service lacks this importance.

Soutar is the hardest smasher that the indoor racquets sports have developed. But, Soutar also has a soft style. He makes the smashing game count by changing his pace, by mixing his shots. Soutar can tap as well as smash, he can caress a ball as well as pound it. His 'roundhouse' game is beautiful to watch, as dazzling and spectacular as it is skilful.

Soutar has perfected every shot in squash racquets. There is nothing that can be done at this game that he cannot do and nothing that he does not do. His opponents cannot overcome his smashing tactics with soft returns, for Soutar is too fast and quick. He has perfect deception and court generalship. He has an uncanny anticipation of shots. This he seems to accomplish by instinct as much as by sight. He is never too far away from the ball to hit it and he nearly always drives low, smashing the ball a few inches above the telltale. His game is rounded and finished. He is equally effective, forehand and backhand. His reach is astonishing. He seems to throw his bat at the ball. He apparently does nothing more than flick the ball on most of his shots, but he always has direction. The bat rarely travels more than a few inches before meeting the ball, but he has the same judgment of distance and timing that marks William T. Tilden's cannon ball service. Soutar, like Tilden, mastered the trick of getting his full weight behind the ball at the exact instant when the face of the bat meets the ball, using a perfect follow through.

There are two types of racquet players. Peter Latham, considered to have been the best of the champions before Soutar gained the title, represented one type and Soutar another. Ten years ago, when Latham ruled the field, the style called for science and form. Latham had perfection of form.

Soutar is strictly the smashing type. He has science and good form, but he counts mostly on speed. Latham could never cut a ball the way Soutar does, because Latham lacked Soutar's speed. Latham did not keep the ball low to the tin in the way Soutar does, for a higher drive was the custom.

Undoubtedly Soutar could beat Latham if they met today, Soutar in his present form and Latham as good as he was at his best. A faster ball, a faster court, and tighter-strung racquets are used now; and Soutar's style fits perfectly into the present conditions. Soutar's speed would dazzle Latham and Soutar's low-driving would kill Latham's high-hitting style.

It has been the custom in racquets to give the title to the runner-up in the last championship match in the event of a champion's retiring. Peter Latham still held the world championship when he retired. The title was handed to Gilbert Brown, the last challenger for Latham's crown. Meet Jamsetjee, the brilliant Indian from Bombay, challenged Brown and defeated him. Williams challenged Jamsetjee and won the title from him, and then Soutar challenged Williams and beat him. Immediately after becoming the holder of the world title Soutar began coaching Williams so Williams could win it back.

Despite Soutar's record in racquets and squash racquets, he has never been able to obtain complete mastery over court tennis. Jay Gould has remained in his way. Mr. Gould has perfect form, and form is the most important thing in court tennis. No man, amateur or professional, can approach him in this respect. The game is not strenuous and Mr. Gould, weighing 202 pounds when in top condition, manages it extraordinarily well.

To succeed at either racquets or squash racquets one must perfect strokes and to perfect these strokes requires endless and monotonous toil. Soutar practised five hours a day for days and weeks and months, trying to perfect a single stroke. He continued practising each stroke until he mastered it. He practised and played for more than twenty years before he was considered of championship caliber. Today he has no rival at squash racquets and only one at racquets. It was a long and weary road to the top, but all the roads that lead to championships are long and weary.

The Coöperative Wholesale Society

An English Institution

By W. P. CROZIER

IN THE United Kingdom is a body called the Coöperative Union, which includes virtually all the coöperative societies of the country. Most of its member societies are distributive organizations whose main object is to obtain and distribute to their members the principal articles of consumption at the lowest possible price, eliminating the profits which, in the normal process from producer to consumer, add so largely to the cost of the article consumed. Its sales as far back as 1918 amounted to almost $1,000,000,000.

A purely distributive society cannot eliminate all the profits which go into private pockets between producer and consumer. It cannot eliminate the producer's or the manufacturer's profits, nor can it avoid those of the wholesaler, especially if various distributive societies come into the market competing against one another. The first step is for the retail distributive societies to unite for wholesale purchases, in order to buy in the cheapest and best markets; the second step is for them to undertake the work themselves of producing and manufacturing what they want. This is the origin and the double function of the Coöperative Wholesale Society. It is the individual coöperative consumer buying wholesale and producing for himself.

THE Coöperative Wholesale Society makes a profit which goes back, not to individuals, but to the societies which form the union and hold shares in it according to their own numerical membership. These societies in turn may use the dividend from the Coöperative Wholesale Society either to lower the price of the goods which they sell or to increase the 'divvy' which they themselves pay to their members.

It must not be supposed that the retail societies make it their careful object to sell everything cheaper across the counter to their members than the private trader does. The coöperative member does get his goods cheaper, but it is mainly through the divvy, which is a varying number of pence on every pound sterling of goods purchased, a careful tally of all purchases being kept by means of metal checks or in other ways.

The consumer is much attached to this method of the divvy, by which he seems to be receiving something more tangible than he would if he were only to get his goods a little cheaper. Hence the pleasant story of the township on the borders of Lancashire and Yorkshire where the inhabitants are said to sleep in their clogs (metal-pointed shoes) in order to wear out the sheets and so, through fresh purchases, to 'keep up the divvy' at the local 'coöp' store.

Though it was in 1864 that the Coöperative Wholesale Society was founded, the coöperative movement in England had been gathering force since the early thirties. In those early days the principal motive power came from Rochdale, a town of racy, characterful people on the southern slopes of the Pennine Chain. The flannel weavers of Rochdale founded a society in 1830 to supply flannels to distributive societies. In 1832 they formally advocated 'the establishment of a Coöperative Woollen Manufactory; as the Huddersfield cloth, Halifax and Bradford stuff, Leicester and Loughborough stockings, and Rochdale flannels required in several respects similar machinery and processes of manufacture, they thought that Societies in these towns might unite together and manufacture with advantages not obtainable by separate establishments.'

IN 1844, the famous—at least in the coöperative movement and in England—Twenty-Eight Equitable Pioneers founded the Toad Lane Store in Rochdale, the first of its kind and the germ of a gigantic organization. The original finances of this store consisted in the subscriptions of its members, which amounted to twopence a week for each member, although in Holyoake's statement of accounts for 1844 appears the statement 'Members 28, Funds $140,' which suggests either that some of the Pioneers supplemented their twopence or that (more probably) new members speedily joined the store. As an historical curiosity I append the following particulars of the first six years of the Pioneer store:

Year	*Members*	*Funds*	*Business*	*Profits*
1844	28	$ 140	$	$ ....
1845	74	905	3,550	110
1846	80	1,260	5,730	400
1847	110	1,430	9,620	360
1848	149	1,985	11,380	585
1849	390	5,965	33,055	2,805

It was in Rochdale also that the idea of the Coöperative Wholesale Society originated. I have already mentioned that the Rochdale weavers had suggested a coöperative manufactory as far back as 1832. The idea was always simmering in men's minds, but probably owing to the difficulty of finding the initial capital, it came to nothing for over thirty years. There were brisk meetings to discuss the wholesale idea at this time at a place called Jumbo Farm, near Oldham. These meetings were called by the farmer, a keen coöperator, who 'had observed in the Shudehill Market, Manchester, that it was great stupidity for five or six buyers of coöperative stores to meet there and buy against each other and put up prices,' and had 'invited a number of them and others to meet at Jumbo Farm on Sundays and discuss the Wholesale idea.'

At last in the early sixties Abraham Greenwood of Rochdale propounded a practicable plan by which the Coöperative Wholesale Society sprang into being on the basis of a subscription for expenses of one farthing from each member—the 'Farthing Federation,' as it has been called.

Capital for the organization was supplied by the retail societies' taking up $25 shares, in the proportion of one for every ten of their members, afterward altered to a $5 share for every member. Scotland followed the example of England, founding a similar society with headquarters in Glasgow. Both have grown largely since then.

THREE OLD COLLEGES

By PAUL BOWERMAN

AMONG the many higher institutions of learning in New England are three old colleges that have clung to their original purpose, resisting the not infrequent efforts which have been made to induce them to conform to the university idea. Williams and Amherst have long been linked in popular association as representing the ideal of the small college. Similar in spirit and aim, almost identical in size, rivals in athletics, the two schools resemble each other in almost every particular. Farther north, in New Hampshire, Dartmouth is a singularly successful experiment in education.

Although Dartmouth has increased in size beyond the ordinary conception of the small college, its peculiar isolation and its solidarity of spirit combine to effect the cohesion and unity which is the advantage of a smaller institution. The three colleges are curiously connected at points in their early history when a Dartmouth graduate left his position as professor of languages to become the first president of Williams, only to resign two years later to become the first president of Amherst.

In an atmosphere of intimacy and unity, the freshman enters upon a very critical period of his life as one among a few hundreds, not as one among many thousands. The singleness of aim becomes immediately apparent to him; he feels that a high but attainable standard is set as his goal. At once he is imbued with the ambition to approach the ideal of the 'Williams man' or the 'Dartmouth man' or the 'Amherst man.' This ideal implies, in the last analysis, simply an observance of the fundamental virtues of good fellowship, honesty, loyalty, service, and coöperation.

The success of the honor system in vogue since 1896 at Williams is a striking example of the advantages of a closely knit and interlocked group working for the best interests of the college. Upon completing his examination each student makes a statement that he has neither given nor received aid during the writing of his paper; he is free to leave the examination hall at any time and to return when he wishes; in the warm days of late spring he may write his paper under the great elms on the campus if he so desires. There has never been a single violation of the privilege, and a Williams man would rather cut off his hand than cheat at an examination, even if he knew his graduation depended upon it.

Front of Dartmouth Hall.

Williams and Amherst, and Dartmouth to a lesser degree, have been accused of exclusiveness and snobbishness and of catering to the sons of wealthy parents. I believe the charge to be unfounded, although it is true that there is more wealth represented at Williams, in proportion to its numbers, than at any other college in the country. Yet the ample resources of the college enable it to offer a large number of scholarships to desirable students of limited means. In recent years Dartmouth has taken very active steps toward securing an undergraduate body that is well-proportioned in every way through a selective process of admission that takes into account the advantage of having its students drawn from families of every degree of affluence. Amherst lies, perhaps, midway between the two.

Dartmouth takes very decided measures for the stamping out of the tendency at the outset. The undergraduate most likely to develop into a snob is not the senior but the freshman, because he is younger, more inexperienced, and less able to evaluate intelligently the various elements of student life. Dartmouth insists that every freshman live in a dormitory where he will not be tempted to limit his friendships to a particular clique or group, and that all freshmen eat together in a large hall, with the result that at the end of the year the freshman class has been welded into a unit that assumes an importance second only to the college itself.

The activities of fraternities are restricted by rulings which forbid more than sixteen members to live at a house, the others finding quarters in the dormitories; they also forbid meals to be served in the houses, forcing the members of one fraternity to come into continual social contact with those of other fraternities and with the non-fraternity group. The college first, the class second, the fraternity third, is the traditional order of allegiance demanded of Dartmouth men.

In some large state universities today there is not a single dormitory for men. This deplorable result of a too rapid growth and expansion leaves but two alternatives for the student. Either he must find the close friendships and social intercourse which are so important a part of college life within a fraternity, which presupposes certain social graces or standing and a certain financial independence and which tends to cut him off from other equally desirable associations; or he must do without. The rooming-house is certainly wholly inadequate to encourage friendships and acquaintances of the best sort.

It seems a curious paradox that the small privately endowed college, founded upon a principle not wholly democratic, is essentially so in spirit.

Lower left—*The verdant, quiet setting of the library and dormitories of Amherst College.*

—*Ewing Galloway Photos.*

I wish to add a paragraph found in the closing pages of Leverett Wilson Spring's *History of Williams College.*

'That somewhat is gained by isolation—by standing apart from the university—may be confidently affirmed. The university aims to make scholars, pursues knowledge as an end, and endeavors to enlarge its boundaries; while the small college finds its mission in the field of general mental development, and proceeds upon the theory that as a consequence of this development students will secure not only a larger, richer intellectual life, but also ampler capacity for practical service. Differences in purpose and mission involve differences in type and method of teaching. Professors, qualified to undertake the specialization and research of university work, are often useless in undergraduate classrooms where breadth, magnetism, imagination, gifts of exposition and interpretation are of the first importance.'

We are beginning to realize just how much we need of the things of the mind and spirit, as well as of the material things of life. The tremendous strides we have made in commercial and financial growth and expansion have not been complemented in like degree by an advance in our grasp of the opportunities for better living and of the obligations attendant upon those opportunities. We have fed our pocketbooks and starved the qualities of mind and soul without which our wealth is useless.

In furthering these intangible and elusive qualities, I believe the small college to be preëminently qualified. Some have been steadfast in their devotion and loyalty to their original aim and purpose.

Cannot a small college and a great university work side by side in perfect harmony, each producing its indispensable quota, to the end of making our intellectual and moral development as well-balanced as is humanly possible? No less perfect realization is worthy of our position.

PEACE by ARBITRATION

By J. P. A. SMITH

THE problem of securing world peace is a problem of securing agreement in the settling of international difficulties without going to war about them. Success in that is success in establishing satisfactory modes and methods of arbitration. We have not yet reached our goal in that direction, but the road has been at least blocked out.

During the century and more since the establishment of our independence, there have been many occasions for disagreement between the two greater branches of the English-speaking peoples, consequent upon the extensive trade relations between the United States and the lands of the British Empire, upon the long boundary line between Canada and the United States, and upon the common engagement of the two countries in many problems of world progress. With no other country have the relations of the United States been so intimate. With no other country has there been so much occasion for friction. None the less, the two nations have gone forward together to the general ideal of international arbitration. They have kept together in the forefront of the movement to settle disputes between nations without war.

According to John Bassett Moore, down to 1914 the United States had had sixty-eight arbitrations of its difficulties with other countries and of these, twenty-two had been with Great Britain. Within that period no other country had had an equal number of arbitrations, except Great Britain, whose arbitral settlement of difficulties apparently totaled about the same. Approximately one-third of the British arbitrations were, therefore, with the United States. This is strong testimony to the desire of both countries and the patient effort of both countries to secure accommodation of conflicting interests without resorting to the arbitrament of battle. It is also strong testimony to the possibility of doing that even in what have been very serious situations.

Some of these arbitrations have settled controversies of very great moment in the history, not only of the two peoples themselves, but also of the world, and the circumstances surrounding them add something of further interest. As early as 1798 a mixed commission of three persons determined that the river called the St. Croix and marking the boundary line between the United States as set out in the peace terms of the treaty that ended the Revolution was the Schoodiac or Schoodic. This was one of three arbitrations provided for by the Jay Treaty of November 19, 1795. A second arbitral commission appointed to settle the claims of the British for losses sustained in the course of the Revolution failed to come to a decision, but the third commission arranged for the payment to American claimants, by the British Government, of the sum of $11,650,000. John Trumbull, as quoted by John Bassett Moore in *Principles of American Diplomacy*, who was a member of this commission, says:

> 'The whole of this sum was promptly and punctually paid to each claimant, or his assignee, . . . in the form of an order to pay, and payable at the treasury of Great Britain; nor do I recollect even to have heard of a single complaint, of the delay of an hour, in any instance of an award presented for payment.'

Shortly after the close of the War of 1812, the Emperor of Russia acted as arbitrator in a dispute regarding obligations undertaken by Great Britain under the terms of the Treaty of Ghent, rendering a decision that favored the United States. The difficulties involved in the arbitration referred to Czar Alexander were only those of the interpretation, grammatical and literal, of one of the provisions of the Treaty of Ghent, but it was so far important that the Czar's decision resulted ultimately in the payment of approximately twelve hundred thousand dollars to American claimants.

THE elimination of very vexatious matters of disagreement between the two countries by means of peaceful negotiations in which the negotiators on both sides have been ready to make substantial sacrifices in the interest of peace has been as significant and instructive as their resort to arbitration. The location of the St. Croix River by the commission that sat in 1798 left part of the northeast boundary line still undetermined, and this uncertainty was an increasing cause of irritation between the State of Maine and the Province of New Brunswick. August 9, 1842, Daniel Webster and Alexander Baring (Lord Ashburton) signed a treaty, that was later ratified by both governments, under which the boundary line was finally determined. This negotiation was conducted in so great a spirit of good will on both sides that it contributed materially to the strengthening of feelings of cordiality between the two countries. 'The forbearance of Webster in this matter was typical of the general tone of the correspondence and of the whole negotiation,' says William Archibald Dunning in *The British Empire and the United States*. 'A spirit of friendliness and courtesy was manifested at every stage, and an almost ostentatious avoidance of ideas or expressions that could irritate. Whatever of soothing effect was produced by the mission of Lord Ashburton was probably due as much to this characteristic of the negotiations as to the treaty itself.'

In the course of the Webster-Ashburton conference matters other than those of the boundary line came up for discussion. The question of the suppression of the slave trade was agitating the two countries. Slavery had been extinguished in the English colonies, and the iniquities of the slave traffic had deeply aroused English feeling. In the United States there was a large measure of sympathy with this attitude of mind.

> 'Both countries,' says the English writer, Edward Smith, in *England and America After Independence*, 'were desirous of seeing the slave trade put an end to. There could be little doubt of their sincerity. The entire Anglo-Saxon world was ashamed of the business. Coöperation with Spain and Portugal, and even with France, was difficult, and could only be accomplished by strong pressure. But the people of England and of the United States were bent on its abolition.'

The English Government was ready to use its navy for the suppression of the traffic, and it desired the coöperation of the United States. One obstacle stood in the way of that coöperation, the necessity of exercising the right of search to determine whether any particular vessel was carrying Negroes from the African coast. It was the contention of the English Government that a merchant ship engaged in the slave trade was virtually a pirate and should be treated as such. On the other hand, if a slaver displayed the American flag, it was held in America that the colors should protect it from search. Obviously, if this principle were maintained, any vessel could preserve itself from search through a judicious employment of flags of different nations. Efforts to check the slave trade would so become practically futile.

LORD Ashburton raised the question of Anglo-American coöperation in this matter, and Webster made it an occasion for review of the American position on the subject of impressment and search. No decision regarding that was reached, but Lord Ashburton's mode of reply suggested his feeling that impressment as a practice of the British navy had become a thing of the past. Putting aside the question of the right of impressment and search as a legal principle, the two governments succeeded in making arrangements to maintain respectively a naval force on the African coast for the suppression of the traffic in slaves.

Not many years after the ratification of the Ashburton Treaty, another ground of disagreement presented itself in Central America. Before this there had been a great deal of bluster and a little talk of war over the northwest boundary line, determining the possession of the territory known loosely as Oregon, but that question came to issue in 1846.

The two governments easily agreed upon the forty-ninth parallel as the line of division between British and American territory. In Venezuela, Honduras, Nicaragua, and Guatemala there were a number of difficult problems, but they were set at rest by the Clayton-Bulwer Treaty of 1850, some of whose provisions were amended by the Hay-Pauncefote Treaty of 1901.

THAT the United States and Great Britain should have a great many conflicting interests was inevitable from the several circumstances that, in great measure, they did the carrying trade of the world; that they were together in the forefront of the world's industrial development; that Britain, in her widespread empire, had a great body of diverse interests she must protect, and that both peoples were very much under the influence of their native Anglo-Saxon expansive and colonizing tendencies.

Probably the most notable employment of arbitration in the settlement of questions in dispute between England and America was that in the case of the *Alabama* claims. During our Civil War English sentiment was divided. Doubtless there were Tories in England who would have been glad to see the experiment of republican democracy in America fail. The general trend of political thinking on the other side of the Atlantic had been in the direction of a belief in the ultimate breakdown of the system of government existing in the United States.

De Tocqueville, in his great work on *Democracy in America*, had long before declared that in his opinion the bonds that held the states in union might easily be broken.

> 'It appears to me unquestionable, that if any portion of the Union seriously desired to separate itself from the other states, they would not be able, nor indeed would they attempt to prevent it; and that the present Union will last only as long as the states which compose it choose to continue members of the federation.'

The time when this was to be decided had come, and even among the friends of America in England there were grave doubts as to the perpetuity of our institutions. It is an interesting circumstance that on the principle of the self-determination of peoples, which we have been emphasizing in our settlement of world affairs, the South had a case. A study of the tables of contents of the fuller histories of the period makes it clear that the attitude of England was a thing of great moment in the minds of Americans, and that Continental opinion —French, German, Spanish, Russian— created hardly a ripple on this side of the Atlantic. There was no excitement here because the Emperor of the French was ready to recognize the Confederacy.

Two or three things stand out sharply in the initial situation as the war opened. England was bitterly opposed to slavery. English industry was very much dependent upon cotton from America for her mills. England had become a free-trade country and felt herself somewhat embarrassed by our protective policy. The English aristocracy was a landowning aristocracy and, feeling itself the pressure of the rising aristocracy of trade at home, had a tendency to sympathize with the landowning aristocracy of the South. The clash between the two sections here in America was largely grounded upon that distinction in the activities upon which life in the North and life in the South rested. Slavery was a thing of the plantation. It did not and it could not flourish in the mill towns of Massachusetts.

Lord Palmerston, who was prime minister of England when the war broke out, is quoted as saying to August Belmont: 'We do not like slavery, but we want cotton, and we dislike very much your Morrill tariff.' A stanza from *Punch* gives a touch of humor to a similar irony of conflicting motives:

> 'Though with the North we sympathize,
> It must not be forgotten
> That with the South we've stronger ties
> Which are composed of cotton,
> Whereof our imports mount unto
> A sum of many figures;
> And where would be our calico
> Without the toil of niggers?'

In a domestic quarrel, the family friends cannot all be expected to take the part of the head of the house. Sympathy with the South was at least sympathy with a very large body of Americans, and their descendants are today as thoroughly American as the children of the North. We find Gladstone, Dickens, and Carlyle among those who believed in the cause of the Southern States. There were great names, however, in the list of the Northern sympathizers: Richard Cobden and John Bright in Parliament; the great advocates of free trade, John Stuart Mill, Charles Darwin, Thomas Hughes, the Duke of Argyle, Alfred Tennyson. May 31, 1861, Charles Francis Adams, our very capable minister in London, wrote: 'The feeling towards the United States is improving in the higher circles here. It was never other than favorable among the people at large.'

Seward was very indiscreetly using a tone of defiance toward as much of the world as might dare to seem belligerent, and the Duke of Argyle wrote in anxious friendship and good will to Sumner.

> 'I earnestly entreat that you will use your influence and official authority to induce your government, and especially Mr. Seward, to act in a more liberal and less reckless spirit than he is supposed here to indicate towards foreign governments, and especially towards ourselves. I find much uneasiness prevailing here lest things should be done which would arouse a hostile spirit . . . I believe there is no desire here stronger than that of maintaining friendly relations with America.'

Darwin, writing to Asa Gray early in the summer of the first year of the war, said, 'I have not seen or heard of a soul who is not with the North.' This is a somewhat remarkable statement, since there certainly were many Southern sympathizers in England, although not so many in the scientific, professional, and literary circles as among the hereditary aristocracy. But for the existence of this sympathy there would have been no occasion for such words of earnest protest as these from John Stuart Mill in an article on 'The Contest in America,' published originally in *Fraser's Magazine* for February, 1862.

> 'I am not frightened at the word "rebellion." I do not scruple to say that I have sympathized more or less ardently with most of the rebellions, successful and unsuccessful, which have taken place in my time. But I certainly never conceived that there was a sufficient title to any sympathy in the mere fact of being a rebel . . . if there ever was an object, which, by its bare announcement, stamped rebels against a particular community as enemies of mankind, it is the one professed by the South. Their right to separate is the right which Cartouche or Turpin would have had to secede from their respective countries, because the laws of those countries would not permit them to rob and murder on the highway.'

Through the storm of conflicting opinion, the English Government pursued a course of careful official neutrality, but they did not sufficiently guard the great shipyards from being used for nonneutral purposes. Cruisers were built there, sent to sea as merchantmen, fitted out on the ocean, and then, commissioned as privateers by the Confederate government, they scoured the seas, preying upon the commerce of the earth.

THE damage done to American commerce by the *Alabama* and other privateers sent out from England was made the basis for a claim by the American Government. For some years the question continued to be a subject of rather tortuous diplomatic discussion, but at length Great Britain permitted the case to be decided by arbitration under principles of international law not fairly to be considered operative at the time when the *Alabama* left port. Already she had expressed regret for the escape, under whatever circumstances, of the *Alabama* and other vessels from British ports, and for the depredations committed by those vessels. By the terms of the arbitration to which she submitted, it was practically certain that the decision would favor the United States, as it did to the amount of $15,500,000. It seems not too much to say that this arbitration by the two great branches of the English-speaking race was an epochal event. It marked closer relations of friendship between the nations in whose keeping the destiny of the world rests more largely than in that of any others. It helped tremendously toward the extension of the principle of arbitration in general and so toward the strengthening of universal peace.

Ne-naw-bo-zhoo—Mighty Man

(Continued from page 6)

Make nice music in woods. Bimeby coon fall out like before. That's what *Ne-naw-bo-zhoo* want. He gets good dinner again.

* * *

'First place *Ne-naw-bo-zhoo* had big black dog called "Thunder." One time dog go down to lake to drink water. He didn't come back. Sea god suck him in, I guess. *Ne-naw-bo-zhoo* was pretty mad. He take sharp spear, get in boat, go out on lake. He cry out, "Sea god, I defy you! I defy you! You steal my Thunder dog. I defy you, *Miche-la-ne-gwe!*"

'After while big fish come up—smash them boat all sliver. He swallow *Ne-naw-bo-zhoo* all whole. *Ne-naw-bo-zhoo* hang on his spear. When he's inside he stick spear in whale guts. Whale go crazy, swim round, make big waves. (Now when lake make big waves Indian say *Miche-la-ne gwe*—he's mad.) Bimeby big fish run up on shore—*Ne-naw-bo-zhoo* come out—run away.

'After while, all sea animal want come up on sand to get sun, but sea god he's 'fraid *Ne-naw-bo-zhoo.* He send sea serpent out to look for *Ne-naw-bo-zhoo.* Bimeby sea serpent come back say, "I see only black stump on beach. I don't see *Ne-naw-bo-zhoo.*" Sea god say, "You go wind round stump—squeeze tight. Maybe *Ne-naw-bo-zhoo.*"

'Sea serpent go out—wind round stump—squeeze tight. *Ne-naw-bo-zhoo* pretty near squeal—but he don't squeal. Sea serpent go back say, "He don't squeal."

'Then sea god send sea tiger to stump. Sea tiger go, scratch hard in stump. *Ne-naw-bo-zhoo* pretty near cry this time, but he don't cry. Tiger go back say, "I find only stump on beach. I don't find *Ne-naw-bo-zhoo.*"

'Then all sea animal go out on beach to get sun. They have nice picnic. Bimeby sharp arrow come from stump, hit big polar bear in side. Then they know that's *Ne-naw-bo-zhoo* turned into stump. He have to run away.

'Bimeby he meet Mr. Frog on road—look like doctor—eyeglass, medicine case, thermometer, I 'spose. *Ne-naw-bo-zhoo* he say, "Nice morning. Where you go today?" Dr. Frog say, "Polar bear get hurt. I go doctor polar bear."

'*Ne-naw-bo-zhoo* don't like this very much. So he kill frog, take off his skin, put on himself, go doctor polar bear. When he get there he say, "I have to pull out arrow little bit every day. Then you live." But this medicine man he push in arrow little bit every day. Polar bear die. *Ne-naw-bo-zhoo* take bear skin, run away.

'Then sea god know he's got quack doctor. He's pretty mad. He make big waves run over all the land to drown *Ne-naw-bo-zhoo,* so he don't make some more trouble. Bimeby *Ne-naw-bo-zhoo* meet Mud Hen. He tell Mud Hen to drink up waves so he can get away. Mud Hen try to drink up waves. Bimeby she's too full—she bust.

'Then waves go on again. *Ne-naw-bo-zhoo* he run fast, he's pretty tired. He see Badger dig hole, fill up hole behind him with dirt. *Ne-naw-bo-zhoo* tell Badger take him in hole till wave go over. Badger take him in all right. When he come out he's glad he don't drown. He throw polar bear skin on Mr. Badger. (After that badger always have white stripe all round.)

'Bimeby water is all over world. *Ne-naw-bo-zhoo* he's got no land to be king. He build big boat—take in all animals, birds, everything he's got. Long time he float round on big water. Bimeby he call Beaver. He say, "You best diver in world. You go down get some dirt, I have to build 'nother world." Beaver he bite on that nice words. He dive down. Bimeby he come up, all puff. He's dead.

'Few day more *Ne-naw-bo-zhoo* call Muskrat to go down get dirt. Muskrat go down long time. Bimeby he come up dead, but *Ne-naw-bo-zhoo* see she's got one little paw close tight. He open little paw—he find some dirt hold tight in little paw!

'That's way he make 'nother world. Land god and sea god don't fight much any more.'

Left—Mendoza and Humphries in 1790.

By ZETA ROTHSCHILD

JAMES FIGG, swordsman and pugilist, opened in London in the year 1719 an academy where, he announced, 'gentleman could receive instruction in the manly art of self defence, which included boxing.' For the further enlightenment of his pupils and the benefit of his purse, he staged boxing bouts in the amphitheater of his academy, to witness which an aristocratic audience paid a shilling a seat.

Fifteen years later boxing began to acquire rules and regulations. Jack Broughton, who shares honors with James Figg as one of the forefathers of boxing, introduced slipping and barring blows, then the strategy of butting and getting away, and, most interesting, the custom of wearing boxing gloves, then known as 'muffles.' Boxing in the vocabulary of the ring was referred to as the 'fistic science.'

About this time, also, successive champions began to be introduced with explanatory titles. There was Peter Barb, 'the Bristol Boy'; Martin, 'the Bath Butcher'; Harry Holt, 'the Literary Boxer'; Humphries, 'the Gentleman Boxer,' and Daniel Mendoza.

The accompanying illustration shows Mendoza and Humphries in one of the several battles they waged for the championship. The ring was an unrailed square, twenty-four feet by forty-eight, and to get to it the fighters had to mount a ladder eight steps. A contemporary account of this fight says, 'It was attended by his Royal Highness, the P__ of W__, who held the purse of gold in view of the fighters.'

It was the patronage of royalty and aristocracy that made boxing a success in the 18th Century. Every champion was accepted as the instructor de luxe of his day, and noble patrons were eager to be enrolled as his pupils.

Probably this double life was responsible for their few years in the ring. On their enforced retirement from the championship and their subsequent abandonment of their academies, it was another instance of 'The king is dead, long live the king.'

The second etching illustrates a much later period in English boxing history. Here the boxers wear gloves and are fighting in a railed square. The spectators seem content to stand.

Answered Prayer

(Continued from page 7)

Professor Clark explains that we stretch the mind toward God when we repeat the first verse of the Twenty-third Psalm: 'The Lord is my Shepherd'; or when we say, 'Our Father which art in Heaven.'

We breathe out the bad when we say, 'I will fear no evil,' or 'I shall not want.'

We breathe in the good when we say in the psalm, 'He restoreth my soul,' or in the prayer, 'Give us this day our daily bread.' The prayer includes outbreathings: 'Lead us not into temptation, but deliver us from evil.'

But both psalm and prayer contain more breathings-in of good. In fact, Professor Clark says that the human race in prayer is climbing a mountain, and in the climb must make denials as well as affirmations—denying evil and affirming good, but when the top of the mountain is reached, he believes 'our prayers may become a simple and direct reaching out for the good, instead of a puttering and fretting over things that are bad.' Jesus, he declares, uttered only two denials in His life, and these for the help of others.

Even at the beginning, Professor Clark urges anyone who prays to 'think of God and Heaven, not of the bad thing you are tossing off into the air.' He urges that in this deep breathing, this intaking of God's gifts, one should 'pray for the joy of it, not for results,' and that he should 'not pray to bring things to pass, but to see things that are already in the Kingdom.' Therefore we should not limit the ways by which we may be answered, or feel responsible for the answer to come.

By frequent and repeated reaching toward God, and deep spiritual breathing at intervals in our day, we come eventually to 'pray without ceasing,' as the man practising the 'daily dozen' stretches his muscles frequently, and breathes more deeply even at his daily work.

THIS deep breathing or outreaching of the soul is the heart of Professor Clark's prayer method. He pictures the praying man seeking better health, and breathing in a realization that there is no sickness in Heaven, and affirming, or breathing in the assurance of God's love, God's guidance, God's spirit, God's power, and God's peace, according to the 'sentence prayer' method described above. Other exercises for breathing in these realizations of God are outlined 'for happiness,' 'against worry,' 'for friends,' 'against criticism and misunderstanding,' 'for money troubles.'

The application of the plan of prayer to money troubles may aptly illuminate the whole method. Some pietists have decried or forbidden prayer for material need. On the other hand, the great masters of prayer from Abraham and Isaac to Spurgeon and George Müller have looked to God in all things, temporal and eternal. Professor Clark, in his turn, would have anyone distressed by money troubles look beyond the 'fact,' the 'thing made,' which is need, or poverty. He would have us look to the reality behind the fact, the reality of God's bounty, God's abundance, God's providence.

An application of the principle was made when Professor Clark was asked to help in prayer for an endowment fund for a college. The Professor informed the college representative that he could not pray for money, as there is no money in heaven. But he believed that prayer for the ideas which the college wished to further: ideas of culture, beauty, freedom, wisdom, truth, could be offered, as one realizes that God abounds in such gifts as these, and the answer to the petition would come in such a way as to bring about the results desired. The love of God, coming down from Heaven, Professor Clark beautifully and elaborately explains, is transformed into means, into dollars, perhaps, as the sun's rays come down through the cold blackness of the ether and are changed into light and heat when they strike the earth's atmosphere.

HERE is the unique phase of Professor Clark's whole method. He does not, like other masters of prayer, Spurgeon and George Müller, for example, pray directly for money when money is needed. He prays for the spiritual good which is to be served. He declares, however, that if one prays for a spiritual good, and really desires money for its own sake, his prayer will not be answered. On the other hand, a man may pray for money directly, and be really seeking the spiritual good, and his prayer will gain bountiful response.

In language such as any of the prayer prophets might have used, Professor Clark declares: 'Greater than the prayer is the spirit in which it is uttered.' We need to pray, he thinks, 'not so much in another language as in another spirit.'

When we offer prayer, he would have us follow the allegory of a golfer beginning his game. The ball is his purpose. The heap of sand, on which the ball rests, is trouble, for Professor Clark believes that every life of prayer begins on 'a little mound of trouble.' He describes the stroke, which should not be drawn up to oneself, as a self-centered prayer; should not be a downward stroke burying the ball of purpose in the sand of trouble; should not send the ball to one side into the high grass of worry (which Professor Clark calls 'doubting God') or among the high trees of anger (which he calls 'hating God'). If one is praying, and begins with fear, and fear goes, he has succeeded. If fear remains, more prayer is needed, purer prayer.

The stroke of prayer is like a clean stroke of golf, beginning and ending above. There must be love in it, and there must be joy in it; then there is success. As the physical inheritance of an athlete goes into his golf game, the spiritual heritage of the race enters the prayer of a modern man. And the professor, who as an athletic coach sees how golfers, basketball players, and others know the moment they have made a masterly stroke, so 'when a blaze of joy comes to the one who prays it is a sign that the spiritual coördination has been accomplished, of unity with God in the first place, and unity with man, through love, in the second place—that makes the answer to prayer inevitable.' All through Professor Clark's writing runs the thought of prayer as an act of divine origin, coming from God and going to God, beginning with the inspiration of the spirit and ending in thanksgiving.

These are some general facts about a simple method of prayer by a modest layman. He credits the light in his torch to other 'Olympian light gatherers,' 'modern-day prophets.' Some of them are friends bearing gifts, some of them eager questioners, and others are of 'the silent band of praying men and women of many churches and creeds.' The torch thus lighted, however, has set on fire many other illuminations in individual lives and group gatherings. So now out of a mere practice of prayer by a religious man has grown a method, and out of the method an essay, out of the essay a book, and out of the book a 'sound of a going in the tops of the mulberry trees,' a movement of new life in the most ancient of human acts of worship.

Beaumarchais

(Continued from page 5)

man or woman. As secret agent of the King residing in England, D'Éon had acquired papers whose publication would have threatened the peace between England and France. These papers Beaumarchais succeeded in restoring to Vergennes, the French prime minister, without making any extortionate payment to D'Éon.

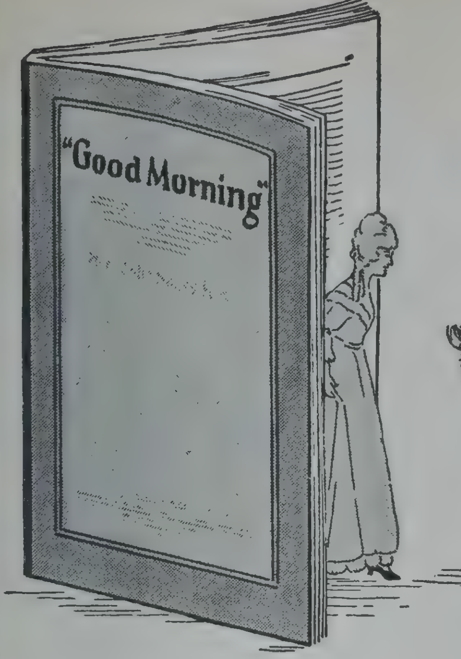
The activity of Beaumarchais in behalf of America began while he was in England engaged upon the D'Éon mission. The success with Vergennes and with Louis XVI hinged in large measure upon the favorable approach made possible by his absolute success in previous delicate enterprises. The renown which he had acquired contributed to his success, even as the nature of his activities impelled him to continue in some worthy enterprise of international significance.

THE whole life of Beaumarchais prepared him, spiritually and intellectually, for service to the cause of humanity, which to him was reflected in the American struggle for liberty. His devotion to Voltaire, whose works in 162 volumes (two editions) Beaumarchais published at tremendous expense after 1783, is indicative of his intense interest in liberal ideas.

The Barber of Seville, originally produced by Beaumarchais as a comic opera, and the *Marriage of Figaro,* both bear witness to an enlightened point of view with regard to the court life of the period.

This brief account of the life of Beaumarchais up to 1776 indicates his preparation for participating in the American conflict. The same enthusiasm, courage, and devotion which marked his services to the King characterized his efforts for the Revolutionists. In 1775, on the trip to London, Beaumarchais first displayed active interest in America. Even then began his famous letters on this subject to Vergennes and to the King. The immense and unqualified success of these efforts makes him one of our great heroes.

(A second article on Beaumarchais by Mr. Karpinski will appear in an early issue.)



The RETURN *of the* DANCE

Everyone enjoys the old-time dances. They are easy to learn. They are being taken up enthusiastically by schools, clubs and community groups.

Piano Music for twenty popular old American dances is available. Price 50c the set.

Orchestrations of 13 parts each, including saxophone, for 20 dances. Specially priced $2 the complete set.
Single Orchestrations 15c each.

Edison, Columbia *and* Victor have recorded Old American Dance Music as played by the Henry Ford Orchestra. Your local music dealer handles these records.

THE methods of the world-famed Ford School of Dancing at Dearborn are now made available to everyone in the specially prepared manual entitled

'GOOD MORNING'

Compiled by Mr. and Mrs. Henry Ford

This 169-page manual contains complete information with instructions on each of the dances. Calls, music and pictures visualizing the various steps are given. There is also detailed information on how to arrange and conduct a successful dance.

The origin and etiquette of dancing, style and deportment are also fully described. This feature makes *Good Morning* a valuable reference book, especially in connection with the training of children.

Send for this book today. 50c a copy, postpaid.

The Dearborn Publishing Co.,
Dearborn, Mich.

Please send me the items checked below for which I enclose remittance of
$...............

...............copies of *Good Morning* @ 50c a copy ....

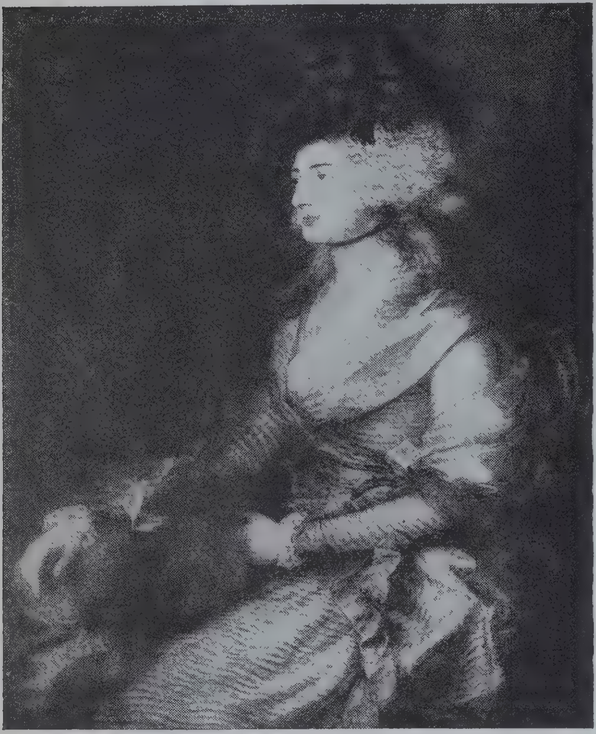
Table of Contents
'GOOD MORNING'

- The Return of the Dance
- Style in Dancing
- Deportment in Dancing
- Arranging for a Party
- Positions of the Feet in Dancing
- Dictionary of Dance Terms
- Floor Manager
- Prompting
- Quadrilles
- The Lancers
- Novelty Quadrilles
- Contra Dances
- Minuet
- Exercising the Knee Joints
- The Waltz and Other Round Dances

The Puritan and Art

(*Continued from page 9*)



—*Copyright, The Detroit Publishing Company.*

Mrs. Siddons, by Gainsborough, in the Art Institute of Chicago.

in its fuller development, was antedated by the rise of Puritanism. When Hogarth and Reynolds and Gainsborough did their work the Puritan movement had made real men and women more important than saints.

This movement was fundamentally the evolution by which representative art became more genuine and sincere, more esthetic and realistic. It was in the process of this evolution that Reynolds and Gainsborough, Romney and Lawrence painted the beautiful canvases that are thoroughly satisfying to our taste today after two hundred years. The portrait of Sarah Siddons is a living thing, not because it exhibits the dress of the period, but because it reveals the real woman rather than an idealization of mother love on the otherwise empty face of an Italian peasant girl. Perhaps the 'Blue Boy' is an idealization, but, if so, it is an idealization of the possibilities of boyhood, not of a choir of heralding angels.

It is interesting to remember that it was Benjamin West who forced a further regard for reality upon workers in his art. He was born a Quaker, and the Quakers were Puritans with the religious absorption of Puritanism carried to a much greater excess. In the journal of the Quaker John Woolman, there is a striking discussion of the Christian propriety of wearing dyed garments. The writer was very much concerned lest it should not be in agreement with God's will for man to change the color or character of the wool as provided by nature for his use. When the boy Benjamin West (as the story goes) robbed the cat of its fur for the making of his brushes, he had escaped from such scruples as those that troubled Woolman.

The instinct for naturalness expressed in the belief that the wool of sheep should not have another color imposed upon it by man seems to have persisted as an art tendency.

In 'The Death of General Wolfe' West ventured to represent the figures in the costumes of British soldiers as they were, discarding classical robes of antiquity. The innovation met with opposition from contemporary artists, especially from Reynolds. Reynolds could paint Lady Camden in the dress in which presumably she liked to be seen by her friends.

An historical painting was different. In it the figures must be conventionalized, Reynolds maintained, in agreement with the dignity of the subject. In brief, in a great situation a man must carry himself as if going through a ceremony. The event itself must wrap him about and cover the particularities of his being. His own individuality as a man must not be understood as dominating the crisis through which he passes. He must be, not himself, but a creature of the outer fact, betraying in his dress rather the momentous nature of the event than his own specific relation to it.

The contention about 'The Death of General Wolfe' set this question at rest. Benjamin West triumphed. The realism involved in the presentation of interesting truth rather than conventionalized formalism was thereafter increasingly the method of art.

The emphasis upon the individual, the Puritan contribution to the movement in art, was now reinforced by the emphasis science was placing upon attention to detail. The generalization that had swept the itemized into a uniform mould was no longer reality. The particular, the individually significant, was taking its place. The Hester Prynnes, the Evan Harringtons, the Silas Laphams of fiction, exist enduringly because, while they share our common humanity, they meet the human issues of their lives in their own distinctive ways.

Although art ceases to be art so soon as it becomes at one with life, it cannot ignore the tendencies that are shaping and reshaping life, it cannot exist apart from life. The great characteristic of our modern world is the expansion of being into an innumerable variety of manifestations.

By common consent it was in New England that the Puritan spirit came to its fullest development. In its original form, it was no doubt oppressively religious, but it had in it the urge toward individual self-realization and self-expression. It was inventive and resourceful. It steadily put its yesterdays behind it to walk adventurously the untrodden pathways of tomorrow. If it was somewhat passionately tied to a sacred book, it was no less passionately tied to the purpose of penetrating beneath pretentions of all sorts, of getting at the roots of things, of finding a substantial reality. Harvard University and Yale University are the great monuments of that purpose. It would be difficult to name any other instrumentalities for the liberation of the human mind set going near the time of their founding which are equally important.

In the middle of the 19th Century Boston probably contained a population in which the general mean of intelligence, culture, and nicety of manners was higher than in any other equal population anywhere else in the world. It was made so by the people who lived there. It did not happen.

Lovers of beauty are of two sorts—creative and appropriative. The distinction is one that has been too much ignored. Which is the finer and the higher sort of being should not take any one long to determine. The difference is the simple one between the producer and the parasite. From the nature of his being, the Puritan was essentially a creative energy. Some of his critics have come clearly from the ranks of the other class. Inevitably, the producer and the parasite are opposed. They cannot agree theoretically or practically, because their thinking is grounded in antagonistic desires.

The Puritan care for seemliness, his aristocrat's feeling for the restraint that distinguishes the patrician from the plebeian, took him out of subjection to theology and along the road to beauty and joy. He might have had some inner conflicts along the way, but he was not a man to loiter. It is only in recognition of that quality in him that we can account for the fact that American poetry came to its first full flower in New England, that the members of our first great group of painters, John Singleton Copley, John Trumbull, Gilbert Stuart, were all New Englanders, that perhaps our work in sculpture begins with 'The Greek Slave' of Hiram Powers, also of New England, and that a great school of music was founded in Boston.

Out of New England came the gayety, the escape from other worldliness, the social warmth and color that we associate with the memory of Nathaniel Parker Willis, and from New England came also our early humorists, John Godfrey Saxe and Artemus Ward.

The world's greatest entertainer up to his day was of New England, a one-time proposed Prohibition candidate for the presidency of the United States, P. T. Barnum. At his summons, along with elephants and tigers and other wonders of the remoter world, there came to America the Siamese Twins and—Jenny Lind.

There is no art outside the life of the spirit. The life of the flesh is but nature. She is no more than the raw material for man in his esthetic moods to take over and transform.

While for a time the Puritan deceived himself into thinking that he was preserving the spirit of the eternal, it became apparent at length that what was really in his guardianship was the spirit of man. So it was that, rejecting ecclesiasticism with a violence not in itself beautiful, the Puritan opened the doors to the corridors of art.

Possibly they were somewhat long corridors and no doubt they were lighted at first with tallow dips. Now both figuratively and literally he has replaced that illumination with the incandescent bulb. His way is clearer and only the foolish can still think that he is walking in darkness.

CHATS WITH OFFICE CALLERS

'Providing refuges for wild birds and animals has become as important in its way as legislating against hunting them,' said the ***Outdoor Man.*** 'Jack Miner led the way with his wild-fowl sanctuary. A man in Nebraska by building bird houses keeps the countryside free of vermin; he has on a single plot of five acres practically every species of song and insectivorous bird native to that region. The Canadian Government has set aside a vast tract of land along the Thelon River, west of Hudson Bay, as a sanctuary for the much-harassed musk ox, now nearly extinct. The Michigan State Conservation Commission has forbidden fishing in the Otter River in the Upper Peninsula, the only habitat of the Michigan grayling, a fish nearing extinction.

'That these efforts will prove of value may be judged from the remarkable return of the bison which were almost extinct some twenty years ago. Now all herds are on the increase and the overflow presents a problem. The urbanization of many wild regions has brought about the destruction of lakes, rivers, swamps and forests where birds formerly bred and lived. The great Kankakee River valley of Indiana was once the breeding ground of countless wild fowl. Now onion beds dot the surface of the river bottoms, and much of the higher ground which formerly grew good corn lies sterile and dry as a desert since the water has been withdrawn. The sweep of a forest fire, the drainage of a lake with the consequent loss of shelter for game, destroys more birds than the unethical hunter.

'The West has drained the Klamath Lake region until nothing remains but poison alkaline pools which kill the luckless, tired waterfowl that drops to its surface. The Wisconsin legislature has reversed the policy of the drainage people and has set aside an appropriation to take care of flooding the famous Horicon marsh country. Until then the migrating wild fowl must pass on to Manitoba and the Arctic to nest. Where alkaline pools have formed in the West and where drainage has been advocated to a greater extent than it was wise, the old sweet water must be artificially restored. Bringing back the natural conditions will encourage bird life.

'It is useless to talk of importing birds to restored areas. Their instincts will bring them to the shelters. The northbound geese and the ducks will drop onto Horicon waters and nest there again. Every intelligent resident of city outskirts and of the countryside knows how easily he can attract wild birds to his home by providing food, drink, and the simplest forms of housing. Keeping cats away, putting out suet and arranging flowing water are enough to insure the visitors comfort. Birds and animals realize the value of protection and will flock to the grounds of the man or the woman who provides for their comfort and safety. Fox squirrels that will keep hidden all day in the forest for fear of the hunter will run at ease and without fear on that hunter's home grounds in the city. Kindness and the will to protect is all they ask.'

* * *

'It seems never to have entered the mind of man,' said the ***Geologist,*** 'that this soil or earth upon which he lives is anything more than common clods and prime elements, out of which somehow he gets his subsistence. It seems never to have occurred to him that there may be other elements and processes, more subtle and powerful than any he is familiar with or can observe, at work here with these apparently disorganized elements.

'Who has ever thought of asking the soil for anything new in science, or who studies it with a view to locating a useful discovery? What astronomer could be induced to study the soil to find out what the sun is? Yet the soil is the greatest known exponent of that luminary. No one has ever asked the soil to divulge the great secret, What is electricity?

'Today this is a question of greatest interest to mankind, and its answer lies somewhere in the domain of physics.

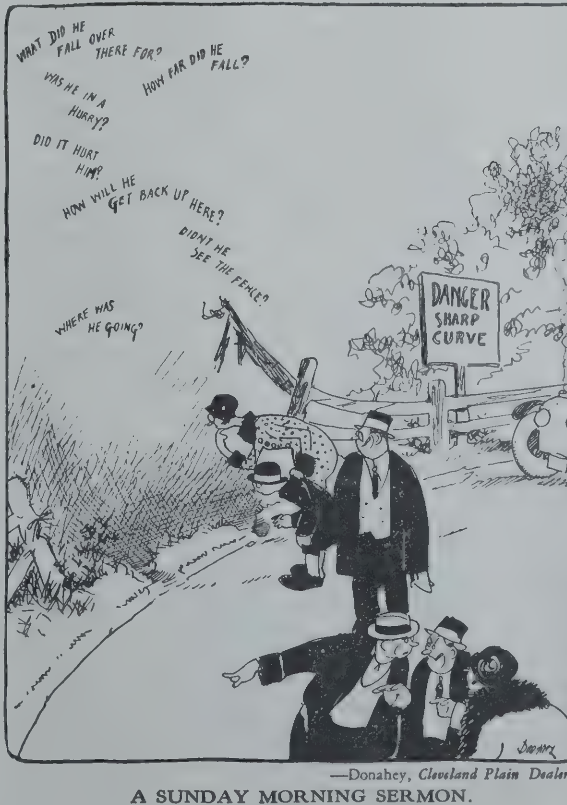
'Man understands the law which electricity obeys and he has made electricity his servant. But that is all. Then why not go to the soil, where the field is prolific for discovery and research?'

* * *

'It might seem as though no harm were done by watching at the wrong place for an approaching enemy,' said the ***Specialist.*** 'But if we can know beforehand just where the enemy will attack, we can concentrate our efforts there and resist the attack with much better success. For instance, so long as we were content to look for malarial infection in water and air, we were neglecting the true avenue of infection—the mosquito.

'So long as efforts were not directed against the malaria-bearing mosquito, man was helpless against the onset of this fever. It has been the same in the case of other diseases. For a long time it was supposed that sewer air and bad odors produced diphtheria and other maladies and it has even been believed that dirty rags and old clothes and similar junk might be a means of transmitting disease.

'The old "fomite" theory (*fomes*, plural *fom-i-tes*, anything capable of absorbing, carrying, and transmitting infection, as clothing, toys, and so forth) was at first accepted at face value without much question, and has influenced the ideas of disease transmission pretty much ever since. It is said, for instance, that at one time even iron rails were disinfected in order to prevent transmission of yellow fever!'



WHAT DID HE FALL OVER THERE FOR?
HOW FAR DID HE FALL?
WAS HE IN A HURRY?

—Donahey, *Cleveland Plain Dealer.*

A SUNDAY MORNING SERMON.

* * *

'Florida has a tortuous, twisting, winding, and curving coast line that covers 1,200 miles of ocean way,' said the ***Man From Tampa.*** 'Minute and scarcely perceptible inlets and bayous are legion along this extensive sea front. Thousands of bars, keys, and islands protect the isolated inlets from the full sweep of Neptune's violence when storms occur. Ideal rum-running coves and bootleggers' bases are numerous. Even from the air many of these hiding places are invisible. They provide perfect caches for contraband liquors and headquarters for launches, fishing smacks, and vessels of every kind that engage in the lawless rum-running traffic.

'To adequately patrol and police the entire coast of Florida would probably require the services of all the ships of the Navy, the Merchant Marine, the Shipping Board vessels, and a host of privately owned yachts and cruisers. Even then the job would doubtless be only half done. Florida rum-runners are aided immeasurably in their illegal enterprises by the contour and the topography of their state, her labyrinth of almost inaccessible rendezvous and her large areas of country that are only sparsely populated.

'An honor system similar to that in many of our American colleges, where the students practically govern themselves in matters of discipline and regulation, would accomplish more in eliminating and controlling the illegitimate Floridian liquor traffic than the measures of enforcement which are now pursued.

'There is no telling how many fishing smacks, schooners, launches, and other kinds of craft are engaged in the business of conveying liquor from zones outside the three-mile limit to caches along the Florida coast. One man who is in on the "know" maintains that at least 150 vessels are engaged exclusively in rum-running on the western coast of Florida. The chances are that the entire liquor fleet may be considerably larger.'

CAN YOU TELL ME?

Question. Were Abraham Lincoln's father and stepmother living at the time he was elected to the Presidency, and if so, did they ever visit the White House?

Answer. Thomas Lincoln, Abraham Lincoln's father, died January 17, 1851, ten years before Lincoln was elected to the Presidency. Shortly before Lincoln left Springfield for Washington, he made a journey to Coles County, where his stepmother was still living and bade her an affectionate farewell. This was the last time she saw him, although she survived him.

* * *

Q. What is the extent of alien investments in the United States as well as that of American capital abroad?

A. American citizens and domestic corporations in 1922, to the number of 36,205, reported income from sources in foreign countries to the amount of $117,686,111, on which they paid $11,421,856 income taxes abroad. In the same year, 5,930 aliens and foreign corporations reported income totaling $75,263,655 from sources within the United States and its possessions, on which they paid $5,834,139 Federal income taxes in this country.

* * *

Q. What are the overhead or general management expenses of the American Red Cross Society? How are they met?

A. For the fiscal year July 1, 1925, to June 30, 1926, the total expenditures of the national organization and the chapters amounted to $11,892,869.35. Of this $270,629.27 was spent for 'Supervision of Service Activities and General Management' of the national organization. In considering the expense of these offices it must be borne in mind that the central committee, the chairman, the treasurer, the secretary, one of the vice chairmen, and others falling within this group, are volunteers, so that the expense is correspondingly reduced. In an organization such as the Red Cross there is no hard-and-fast rule separating 'management' from 'service' or 'relief.' The classification here used is based on the best judgment of the officers of the organization as to the segregation of those expenses which represent primarily supervision as distinguished from those representing primarily service, although undoubtedly there are elements of 'service' in the management group and elements of 'management' in the service group. The expenses of national and branch staffs and offices (salaries, rentals, supplies, et cetera) which include the item of 'supervision' given above, for the various services and operations for the fiscal year ending June 30, 1926, amounted to $1,408,616.08. The figures do not include any estimate of the value of services rendered by volunteers. The expense of the normal program of the national organization of the Red Cross, such as its nursing, first aid, life saving, public health nursing, junior Red Cross, et cetera, and including its general administrative and executive staff, is met from the receipts of the annual roll call plus the interest on the endowment and invested funds. No part of the expense of the regular Red Cross program is paid from the contributions for such special purposes as the Florida hurricane relief or the Mississippi flood relief.

* * *

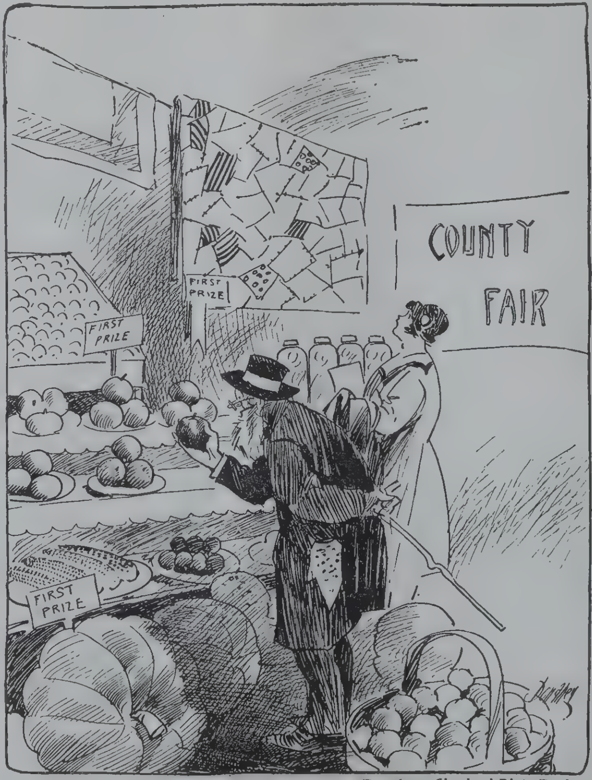
Q. I should like to get some information about the Mountain Meadows Massacre.

A. This was the massacre, by Indians, near Mountain Meadows in Utah on September 11, 1857, of a party of emigrants from Arkansas and Missouri who were on their way to southern California. They numbered, all told, about 140 men, women and children. On their way they were everywhere refused food until they reached the neighborhood of Mountain Meadows, a valley in Iron County, about 350 miles south of Salt Lake City. Here they stopped to rest their horses and on September 7, 1857, were fired upon by Indians and, it is alleged, by Mormons disguised. They withstood siege until September 11, when, on promise of protection by John D. Lee, Mormon bishop and Indian agent, they left the shelter of their wagons. All adults and children over seven years of age were killed, and seventeen younger children were distributed among Mormon families, but were afterward restored to relatives by the United States Government. The Mormons were accused of having instigated the massacre. Lee was executed for this crime in 1877, but a number of other indicted persons escaped conviction. In a confession made shortly before his execution Lee asserted that the massacre was committed by order of Brigham Young and others high in the Mormon Church. H. H. Bancroft, in his *History of Utah,* discredits the confession, however, and lays the blame upon Lee and other minor fanatics.

* * *

Q. Under the Federal Aid Road Act what amount is contributed by the Federal Government and what are the dependent conditions? Who has charge of this work?

A. The outstanding features of Federal aid as at present administered are as follows: Appropriations have been made for each fiscal year since 1916, and have been divided in three parts; one part being apportioned among the states in proportion to area, one in proportion to population, and the third in the ratio that the mileage of rural post roads in each state bears to the total mileage of such roads in the United States. Federal aid may be used by the states only for the purpose of constructing roads on the Federal Aid Highway System. The order in which the roads are taken up for improvement, the type of improvement, preparation of plans and specifications, letting of contracts and supervision of construction, all are under the control of the various state highway departments but subject to the approval of the Secretary of Agriculture who acts through the Bureau of Public Roads. The bureau is headed by the chief of bureau and the chief engineer under whom are divisions of design, construction and control in charge of the several phases of the work. Contact with the state highway departments is through eleven district engineers. In general Federal aid participation is limited to fifty per cent of the cost and for recent appropriations may not exceed $15,000 a mile, exclusive of bridges more than twenty feet in span, for which participation is limited only to one-half the cost. States must agree to maintain adequately all roads constructed with Federal aid. The Federal Highway Act, approved November 9, 1921, provided that all Federal money subsequently appropriated was to be applied only to a limited system of main interstate and intercounty roads which it directed the Secretary of Agriculture and the state highway departments to select in coöperation. The system must consist of not more than seven per cent of the total mileage of roads existing in each state on the date of the passage of the act. Except with the joint consent of the Secretary of Agriculture and the state highway departments not more than three-sevenths may be primary highways, the remainder being secondary roads or roads of intercounty importance. Taken together, however, both classes represent the main roads of the country and the system will serve directly nearly every city of five thousand population or greater.



—Donahey, *Cleveland Plain Dealer.*

HE KNOWS HIS PIPPINS!

BRIEFLY TOLD

APPROPRIATING AN UNUSED house in Coburg, Oregon, colonies of bees, working steadily for four years or more, have packed the walls of the building solidly with honey.

LONG AGO VIENNA BANISHED the loan shark by starting a city-operated pawnshop, known as the Dorotheum. Persons from all classes of society are said to visit 'Aunt Dorothy,' where they can obtain loans on anything from watches to automobiles at a low, uniform interest rate.

MAGNETS SEVEN FEET LONG are to be hung under state highway trucks in South Dakota in an effort to clear the roads of bits of metal that might puncture tires. In a test run of 20 miles such a magnet picked up 300 pounds of iron and steel scraps.

UNDER EARLY ENGLISH LAW football was held a crime. In 1314 Edward II forbade the game, and in 1389 Richard II passed a new act for its suppression, while Henry IV, Henry VIII and Queen Elizabeth, all tried to stem its rising popularity by increasing the penalties.

SINCE THE YEAR 1890, AT which time the Federal Government assumed control of immigration inspection at the Port of New York, a total of 17,724,671 aliens have entered this country through the New York gateway.

LUKAS TCHAFFEN OF ARLBERG, Germany, left 1,101 descendants at the time of his death—5 children, 87 grandchildren, 456 great-grandchildren and 553 great-great-grandchildren.

BECAUSE OF THE JACOBITES' custom of passing wine over their fingerbowls when a toast to the king was proposed, to signify that in their hearts they drank to the king across the water, finger bowls are never placed on the table at state banquets in England.

BEAUTY PATCHES MADE OF thin luminous fungus that shines at night are sometimes worn by the women of the Samoa Islands.

WHAT WAS SAID TO BE THE first motion picture was produced in October, 1894, with Alexander Black as author, scenario writer, director, camera man, and title writer. Only five stereopticon slides a second could be shown compared with the sixteen pictures now flashed on the screen each second.

The Lowell Offering, a monthly periodical published from 1842 to 1849 by girls employed in the mills of Lowell, Massachusetts, was said to be the first magazine in America conducted solely by women.

SCIENTISTS HAVE ESTIMATED that the eider duck, the goose, the raven, and the parrot may live to be 200 and 300 years old.

RUBBER PADS FIVE-EIGHTHS of an inch thick are being installed between the trucks and car bodies of San Francisco's street cars. Presence of these 'rubber heels' has been found to greatly reduce the noise and vibration of the cars.

MACARONI WAS ORIGINATED in Italy by the cook of a wealthy noble of Palermo. With the first taste of a new but unnamed dish, the master is said to have exclaimed, 'Ma Cari!' which, translated freely, means 'How perfectly delicious!' Upon the second taste his enthusiasm increased to the extent of 'Ma Caroni!' Delighted, the cook immediately adopted this endearing term for the name of his invention.

A CHARITY BREAD LINE for Bowery pussies meets promptly at one o'clock each afternoon on Centre Market Place, New York City. Two district reporters have taken upon themselves the responsibility of seeing that these old alley cats get their daily beef and milk if they are on hand at the appointed time.

CUBA IS UNCLE SAM'S BEST customer for chocolate candy, consuming yearly more than ten times as much as any other country.

THE FOLLOWING ADVERTISEMENT appears in a German newspaper: 'For sale. Historical bathtub with gas heater. Real copper. Inscribed, "His Majesty Emperor William II used by bath at his first visit as Kaiser to Duesseldorf, May 4, 1891." '

LONDON WAS THE FIRST CITY in the world to introduce gas lighting. Nine years later, in 1816, Baltimore, Maryland, authorized the Gas Light Company to light its 'streets, squares, lanes and alleys' with carbureted hydrogen gas provided it did not cost more than the oil lights then in use.

A BOSTON DOCTOR has stated that within the next fifty years people will become too civilized to kiss.

IT HAS BEEN ESTIMATED that 1,500,000 one-dollar bills are worn out each day.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S Page this week discusses changes that are taking place in the world.

* * *

Charles J. Finger, who looks upon meeting folk as an adventure, has brought back from southern Ohio a discovery of leisure. Speaking whimsically, he refers to New York as the doorway to the United States, Michigan as the office and workshop, Washington, D. C., the reception hall, and southern Ohio the comfortable den. (p. 1)

* * *

Mr. Finger finds that the Ohio Valley has always been the abode of comfortable, leisurely people. Here the fugitives driven south by the encroaching ice cap may have rested first. So he muses, as he describes the Serpent Mound of Adams County; Fort Ancient with its five miles of terraces; and the other relics of early man in this section. (p. 1)

* * *

The story of Beaumarchais, Friend of America, has been divided by Louis C. Karpinski into two parts, of which the first deals with the Frenchman's earlier life, preparatory to his support of the Colonies. As Professor Karpinski says, 'The minor events of a man's life frequently mirror the great ones. Those qualities which make for success in small things are essential for success in larger fields . . . We reveal ourselves every day in the small things we do and in the way we do them.' (p. 4)

* * *

Ne-naw-bo-zhoo was a very big, very little spirit. He did everything good, everything bad. He controlled both sun and rain. He was everywhere all the time. Among his most important qualities was the ability to change himself into a beaver, bear or mouse in an instant. (p. 6)

* * *

A unique idea is that of practising prayer as one might one's 'daily dozen.' Almost equally interesting is the comparison of a well-executed orison to a perfect golf-stroke. Glenn Clark, professor of English at Macalester College, has found this method successful. (p. 7)

* * *

Four years of an almost continuous stream of answered prayer is the experience of Professor Clark. He tells the individual to pray and to expect a response. Fifteen minutes of soul exercises daily will place one in a new world—with God very near. (p. 7)

* * *

Puritanism is usually regarded as violently opposed to art, and yet Milton was a Puritan and his poetry has been equaled by few if any. In its original form, no doubt the Puritan spirit was oppressively religious, but it had in it the urge toward individual realization and self-expression. (p. 8)

'The Puritan spirit steadily put its yesterdays behind it to walk adventurously the untrodden pathways of tomorrow.' It was for getting at the roots of things. So it was that, rejecting ecclesiasticism, with a violence not in itself beautiful, the Puritan opened the doors to the corridors of art. (p. 8)

* * *

In the third of her series of historical sketches on California, Mrs. Frances Holbrook Pfeiffer describes that interesting phenomenon of seventy-five years ago, the Pony Express. Those riders carried Lincoln's inaugural address over the one thousand nine hundred and fifty miles in one hundred and eighty-five hours. (p. 12)

* * *

Isaac Hull was barely thirty-six when he trod the quarter-deck of the U. S. S. *Constitution.* From the time he had passed twenty-one he had handled ships at sea. So when the enemy fleet bore down upon him in the year 1812, with a prize crew already selected to board the proud captive, Hull showed his heels and escaped from the entire fleet. Later he administered a real drubbing to the *Guerriere.* (p. 15)

* * *

H. G. Salsinger, popular writer on sports, has this to say concerning his article on 'The Long Road to the Top':

'I got this story from Soutar himself some time ago, but did not have a chance to write it for you until recently. He is a most interesting character. The secret of his success is that he practised for hours, week after week, on a single shot until he mastered it.' (p. 19)

* * *

It is a curious paradox that the small privately endowed college, founded upon a principle not wholly democratic, is essentially so in spirit. The large state university, founded on a principle essentially democratic, is actually more given to snobbishness than the smaller school. (p. 21)

* * *

Three small colleges, Amherst, Williams and Dartmouth are said by Paul Bowerman to have less snobbishness and exclusiveness than many larger educational institutions. 'The undergraduate most likely to develop into a snob is not the senior but the freshman, because he is younger, more inexperienced, and less able to evaluate intelligently the various elements of student life.' (p. 21)

* * *

Down to 1914, the United States had had sixty-eight arbitrations of its difficulties with other countries, of which twenty-two had been with Great Britain. The number of difficulties which Great Britain had to settle was about the same, and approximately one-third, it seems, were with this country. (p. 23)

REMARKS BY OUR READERS

Easton, Maryland.

I have had in mind for some while (but just why we 'put off' so many things is a mystery) writing to tell you how very much I enjoy the 'Independent.' Its articles—both literary and historical—are 'to my taste.' I really think you are doing a big thing in holding up to the young the value of our past history.

I find in its pages, among the editorials and elsewhere, the kind of matter that often is repeated in sermons and talks. This is just a word of appreciation —but it is sincere.

EDGAR T. READ.

Chino, California.

In your issue of September 3 you refer to the new creation being sent out from the Chino Valley, California, as the 'Union Dewberry.' The proper name is 'Youngberry,' named in honor of the man Young, who crossed the loganberry and dewberry and produced a berry with all the good qualities of both berries and many others besides. It is sweet, juicy, very large, dark-wine in color, strong grower, hardy and very productive. It marks an epoch in berry culture.

C. C. DELPHEY.

Cleveland, Ohio.

In the issue of October 8, 1927, there is a page devoted to 'A Fiction Hero of the Paperbacks.' However, I could find nothing in the reading matter telling anything about the author, Lu Senarens.

Perhaps you can also tell us something about the author who wrote a similar series at about the same time. This series featured Jack Wright, the boy inventor.

I was one of the boys that was thrilled by these 'paperbacks' at the age of twelve years. As I recall it now, I was delighted by the antics of 'Barney,' the Irishman, and 'Pomp,' the Negro; both faithful servants of Frank Reade, Jr. Jack Wright's servant was an old sailor who had a talkative parrot.

I believe that reading these stories caused my mind to turn to things mechanical and led me to my present vocation of mechanical engineer.

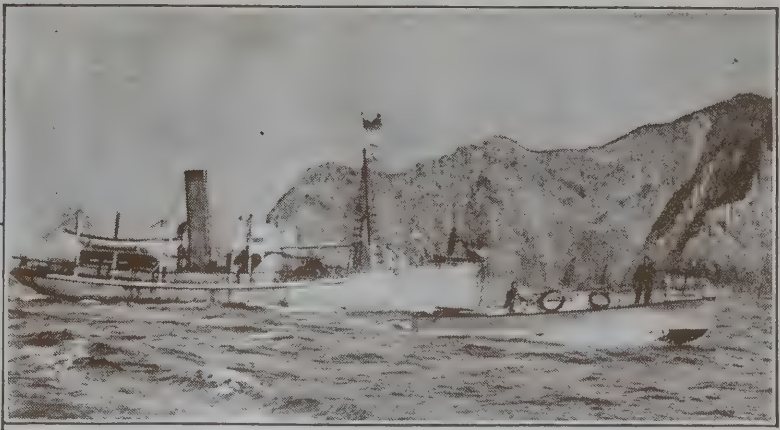
I wish to thank you for calling to mind one of the pleasures I had when a boy in years gone by.

R. R. JAMESON.

THRILLS *of* Deep-Sea FISHING

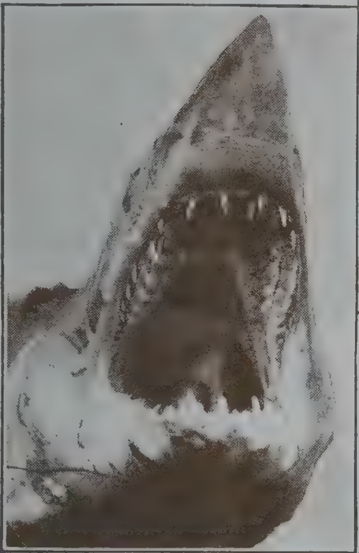
New Zealand's Lure *to* Sportsmen

[Herbert Photos]

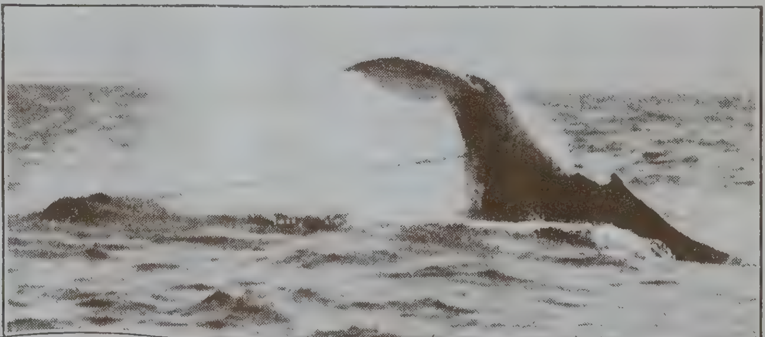


Whangamumu is the principal base of the whaling industry of New Zealand. Here the S. S. Mananui II and its speed launch are in full chase after a huge prize.

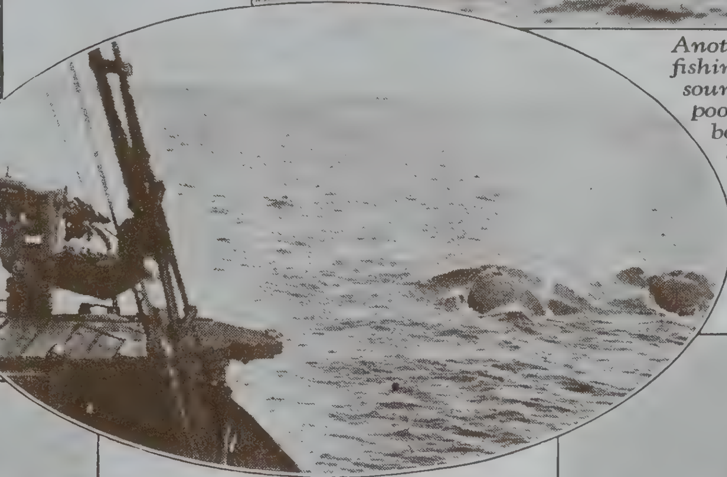
A thrill of deep-sea fishing, when the victim leaps in the battle to free himself.



Formidable jaws of the Mako shark, one of the world's gamest fighting fishes. Bold and handsome, he rivals swordfish in speed and fighting powers. Maoris formerly hunted him for his sharp and shapely teeth, used as currency and for neck ornaments.

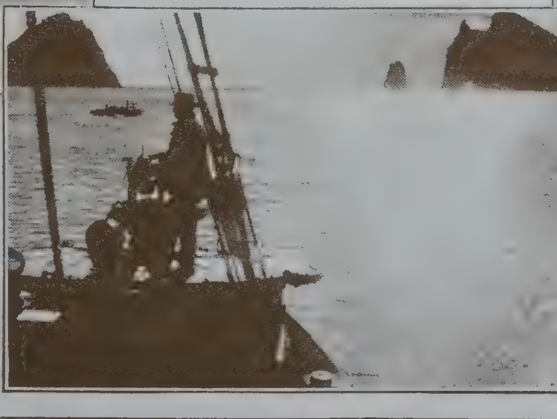


Another thrill of deep-sea fishing comes when the whale sounds, after being harpooned, as here shown. A bomb-laden harpoon, with line attached, is shot from a harpoon gun. The stricken quarry invariably puts up a stiff battle and tragedy lies in the offing unless the line is skilfully handled



Here one of the whaling vessels out of Whangamumu has surprised a pair of whales, which came to the surface to blow. They are just off the starboard bow of the ship and it is a comparatively simple matter to harpoon both of them. The harpoon gunner may be seen taking aim.

Below—
The whaler, back in his home port, Whangamumu, after a strenuous and successful hunt, enjoys watching the sun sink below the 'harbor's rim.'



Fishermen who seek the thrill of real battle make for New Zealand as the scene for their deep-sea fishing. It has become the mecca for this sport, and the Bay of Islands and Bay of Plenty are the favorite grounds. This fisherman is performing the last ritual of the catch: extracing the hook from the captured swordfish. As may be readily seen, this is a man's job.

The end of the road, for the whale. After the storm, the calm, and for the whale that means the cutting up of the carcass, of which almost nothing is lost. The whaling season is the antipodean winter, from June to August, and the summer season, November and December. Zane Grey, American novelist, holds the honor of having hooked the largest swordfish ever taken with rod and reel.

HAWTHORNE and Brook Farm

By JULIAN HAWTHORNE

AFTER writing *The Scarlet Letter* and *The House of the Seven Gables*, Hawthorne was not quite the same man. The obscure path he had been treading had emerged into sunlight. That had surprised him as well as his readers. His friends might say, 'We always knew he had it in him'; he might feel that his youthful hope was on its way to realization in maturity; but the change had been abrupt.

The Scarlet Letter had been a sort of accident. The writing of it had been forced upon him by the sudden need of meeting daily expenses which his removal from the customhouse had imposed upon him. The story had been in the back of his mind; he had seen it as another of those short tales to which he had already accustomed himself, and it was only after getting into the depths of it that he had perceived—not without misgivings—that the theme could not be handled within limits so restricted.

But he doubted his ability to sustain interest throughout so long a series of incidents; and also he feared that the story was too gloomy to warrant extension. Thus, having finished it, he shut it away in his desk as unavailable. Had it not been for the fortunate visit of his young friend Fields, the publisher, and for the faith in it of his wife, it might never have been drawn from that retirement.

Its immediate success was a surprise, somewhat of a bewilderment; but the concrete results altered his way of life, and his prospects. It took him out of Salem into the Berkshire Hills, and doubt as to his ability to enlarge the scope of his compositions had vanished. He felt that he had abundant material in reserve; his publishers were urging him to strike again while the iron was hot.

In the vigor of the new surroundings, physical and mental, he took hold of his new novel. It was not to be so tragic a theme as the other; there should be intervals of comedy, and sunlight at the end. He felt, as he said, that it was a more natural story for him (*Continued on page 20*)

The DISTRICT SCHOOL

By FLORENCE TAFT EATON

—*Ewing Galloway Photos.*

The little red schoolhouse is giving way to the central consolidated school with motor buses serving the countryside.

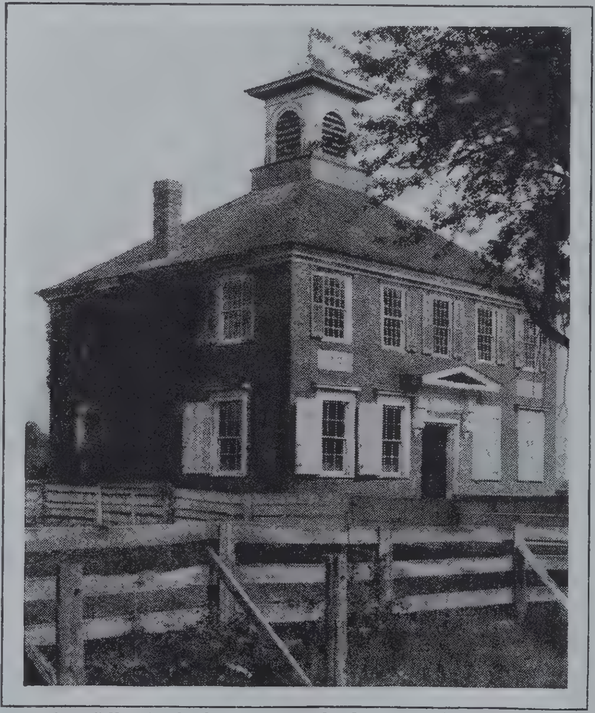
I HAVE attended the district school. I have taught and visited district schools. Their virtues and their faults, their high lights and their limitations are known to me, and memory often recurs, with amusement, to their *modus operandi*.

The district school was at its prime from the first years after the Revolution until about the middle of the last century. Before that, for a hundred years or more, school was held in meetinghouses, which, as they seldom boasted pulpit or pews but were equipped with backless benches, were easily convertible. In Colonial times the town or selectmen entirely managed the affairs of the single school; but when, for educational purposes, the growing towns were divided into districts, a 'prudential committeeman,' elected by his own district, took entire charge—supervised at regular intervals by an imposing delegation composed of the minister and the selectmen.

Such visits were, as may be imagined, solemn and impressive occasions. Later on, this extra supervision practically lapsed, and the district committeeman enjoyed full sway. Although 1850 is stated as the probable limit of the most picturesque period of the district school, it continued to flourish in the country towns until a much later period. I well remember the unique and amusing type of committeeman under whose dictatorship it was my fortune to teach.

The movement to finally abolish district schools, by the simple method of shutting them up and letting the town convey the children from the outlying districts to the graded schools at the 'center,' was started at Concord, Massachusetts—my own town. The experiment was made here with the greatest success. The attention of prominent educators all over the country was turned upon us, and a comprehensive pamphlet on the system, for distribution at the educational exhibit at the Chicago World's Fair, was written by William Lorenzo Eaton. As superintendent of the schools, he had evolved the new idea. Country towns far and wide rapidly followed our example. The district school became a thing of the past!

The committeemen of the old-time district school formed—as has been intimated—an amusing and amazing class, as a whole. They received no reward except honor, which usually proved a diminishing quantity as various differences of opinion between them and their electors cropped up. Consequently, the choice usually dwindled until the office devolved upon anyone willing to serve; and the resultant dictator was often incredibly rude and ignorant.



Bullet Hill school, Connecticut, built in 1778, one of the oldest still in use in this country.

A committeeman was supposed to visit his school two or three times a term—always on the 'last day,' for which great preparations were made. No matter how far below the older scholars he fell in education or refinement, he was regarded with awe as an arbiter of might and right, and his visits were esteemed great occasions. He could call for special classes or exhibits, he exercised all the prerogatives of a learned judge, and his final dictum, in a speech before his departure, was awaited with fear and trembling.

I well remember an oratorical effort of such a committeeman in the first school where I taught, in an outlying district of my own town. After floundering painfully in the quagmires of rhetorical figures, good advice, and some 'necessary' criticism, he brought the whole to a triumphant conclusion by assuring both the eighteen-year-old teacher and her pupils that they had 'done noble.' The speech was followed by a storm of applause, during which he mopped his heated brow with a red bandanna, retrieved his last-century 'stovepipe,' and departed.

The schoolhouses were usually built, after long and heated wranglings as to location, upon as nearly valueless land as possible, near enough the center of the district to be convenient. They boasted no great amount of architectural ornamentation, nor was landscape gardening considered. They were often left unpainted; but if there was any economical regard to their preservation, red paint was the favorite color—thus securing to posterity the sentimental appellation of 'the little red schoolhouse.'

It was not thought necessary to plant shade trees, but the site sometimes fortunately included one—much esteemed as a shelter at lunch time. Some sort of playground was provided.

Many schools were large, as old-time families were not of the fashionable modern size; but one teacher was supposed to be able to manage any number of children. The school where I taught and 'done noble' numbered sixty pupils, from four to seventeen years of age!

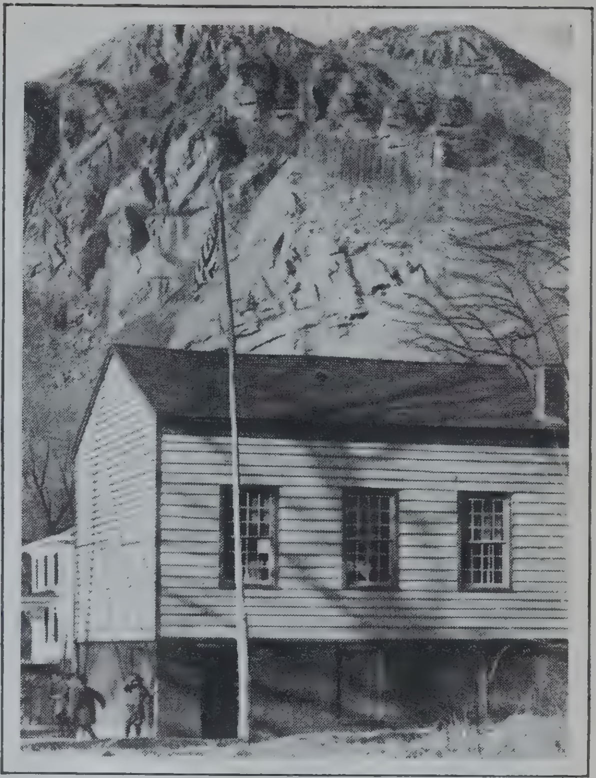
The buildings of that early time were plain, to say the least, within and without. Unnecessary space was frowned upon in their construction; sometimes a schoolroom thirty feet square accommodated a hundred children. A roaring fire in a fireplace was, of course, the earliest method of supplying heat. Later, a big wood-burner stove was installed in the middle of the room, with a long stovepipe to aid in heat distribution.

THE modern janitor was an unknown quantity: the older boys took turns in making and tending the fire. The wood was contributed and hauled by the parents—so much for each child; those who carelessly lapsed were fined four shillings. If that failed to produce results, the delinquent was prosecuted by the selectmen. Each boy was required to saw the wood contributed by his family.

The older girls took turns in staying after school to sweep and dust. This was esteemed quite a social occasion; and manual labor that would be just 'endured' at home was often 'embraced' after hours at school—a phenomenon of wide application which, I dare say, even present-day parents have frequently noticed. The big boys often gallantly loitered to help the girls; and who can say what budding romances may not have here had their beginnings?

Many of the winter teachers were young men working their way through college or professional school—sometimes frankly selected for their brawn rather than for their brain, as the big farmer boys were generally rampageous. Sometimes, in the early years of the district schools, a thrashing all round was necessary before the air was cleared sufficiently for successful mental cultivation. Occasionally pedagogical wanderers were employed, the renowned Ichabod Crane of Sleepy Hollow being an example. Girls were supposed to be adequate teachers for the summer schools, which comprised smaller children, as the big boys were now otherwise employed. The sum of ten or twelve dollars a month for the masters and of four to ten for the young mistresses was considered munificent. Earlier salaries were much smaller: I recently chanced upon a record of the sum of sixty-seven cents a week paid in a Connecticut town to a 'qualified' woman teacher. But the teacher had the pleasure and the profit of 'boarding round,' in addition to her cash salary!

One can imagine the delightful experience! Pig-killings were often planned in succession at different homes for the teacher's benefit; one wonders at the stalwart digestion necessary to support an exclusive and continuous pork diet. An old-time teacher's diary gives an amusing record of his successive daily attacks on a venerable gander, reserved in one home for the teacher's delectation. The account ended with: 'Found I had lost six pounds the last week, and told Mr. B. that I guessed that I had boarded out his share!' This custom of boarding out, as furnishing part of the teacher's salary, seems to have gradually lapsed. During the latter half of the 19th Century, new and more favorable conditions gradually developed.



—Ewing Galloway Photos.

Breakneck Mountain school, New York, had five pupils when this photo was made.

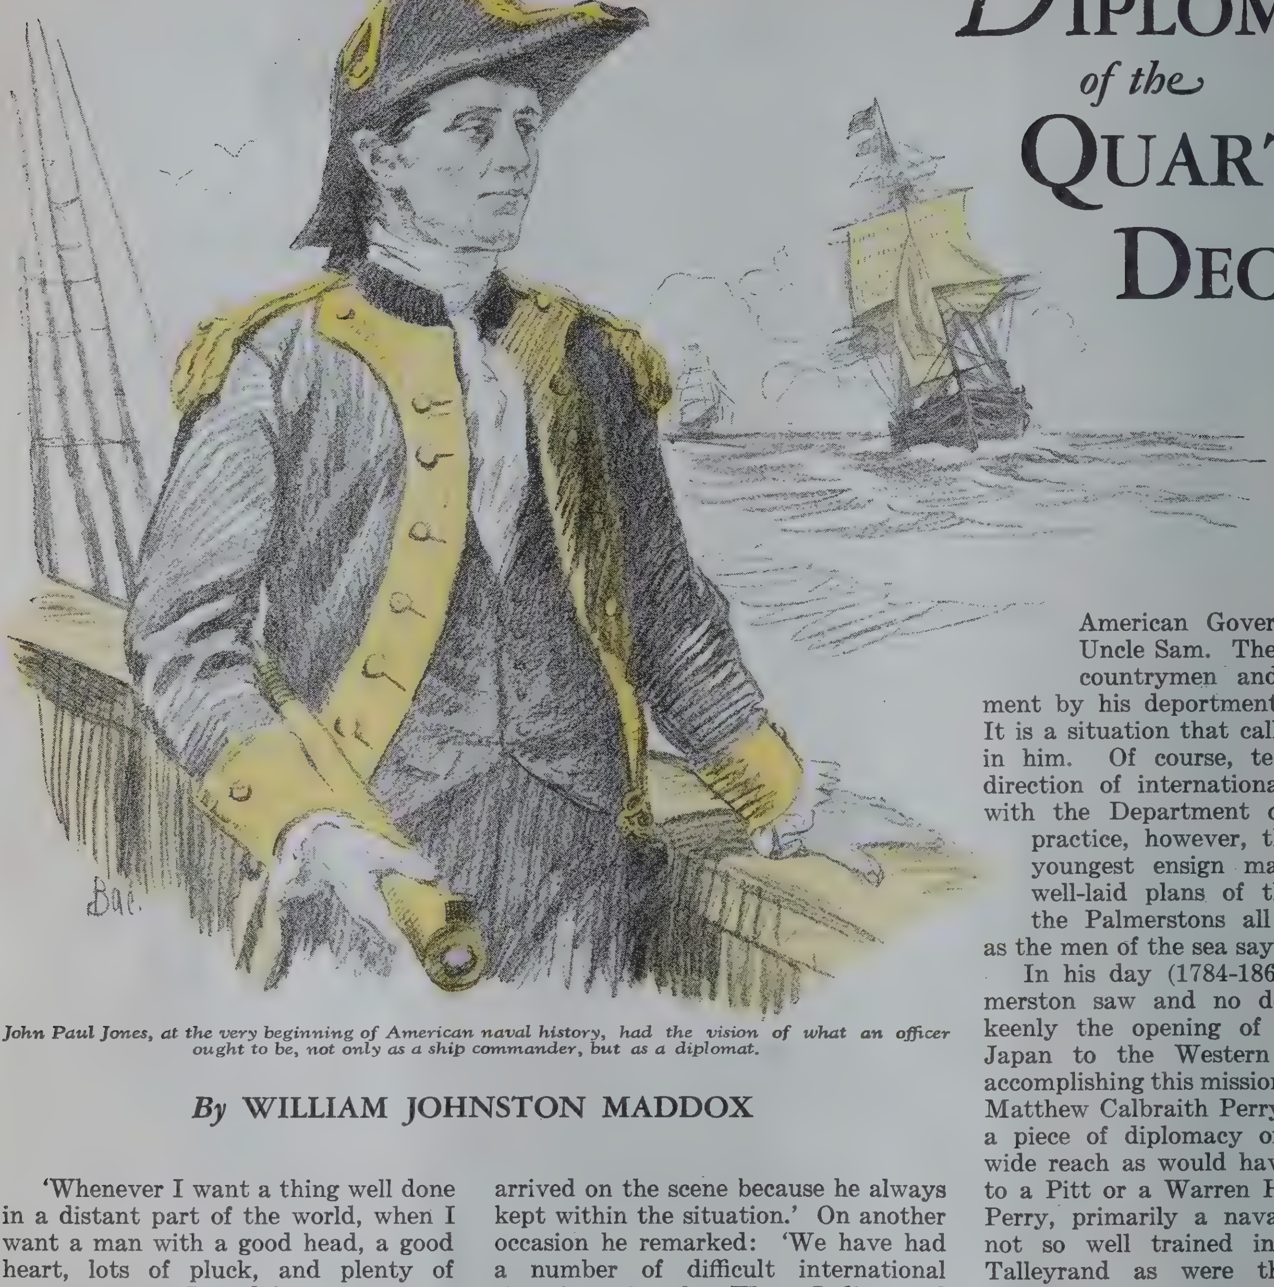
In the colder parts of the country, it was quite an operation in the winter to get the children to school. The roads had to be broken through with ox sleds after each heavy snowfall, and the children were often collected and transported schoolward in the same primitive conveyances, the big drifts being shoveled out as encountered. Arriving earlier than the rest, the big boy whose turn it was got the frigid schoolroom warm, at least to the point of endurance. Although a thermometer might register freezing temperature in the rear, the heat around the big fireplace or the hot-smelling sheet-iron stove was almost unbearable.

When the weather allowed, the children used to play outside until the last minute before school, keeping a sharp watch, however, for the teacher's advent. The shout of 'teacher's coming!' collected the stragglers. If 'teacher'

(Continued on page 28)

The old and the new in country schoolhouses in Florida.

DIPLOMATS *of the* QUARTER-DECK



John Paul Jones, at the very beginning of American naval history, had the vision of what an officer ought to be, not only as a ship commander, but as a diplomat.

By WILLIAM JOHNSTON MADDOX

'Whenever I want a thing well done in a distant part of the world, when I want a man with a good head, a good heart, lots of pluck, and plenty of common sense, I send for a captain in the Navy.'—Lord Palmerston.

OF THE naval officer, it may be said that he has diplomacy thrust upon him. There is no preparation for it, at least not such as the diplomat in mufti has, and the occasion many times comes like a bolt from the blue. He must be ready alike with words and with deeds when it does come. An apparently innocent tour of duty in an out-of-the-way part of the world may suddenly thrust into his hands a snarl of diplomatic thread that has ends in half a dozen capitals. And even today, with radio and cable, it is the man himself that counts, let the instructions from home be ever so explicit.

John Hay is quoted as saying, while Secretary of State, that he 'always felt relieved when the naval officer arrived on the scene because he always kept within the situation.' On another occasion he remarked: 'We have had a number of difficult international situations in the West Indies and Venezuela in the last two years and they have all been handled by naval officers very well. They have not made a single mistake.'

So much for the opinion of two eminent statesmen on opposite sides of the water. Each had ample experience on which to base appreciation of the ability of the naval officer in the rôle of diplomat. It has been said that the command of a big ship is good schooling in the qualities that make for diplomacy. Then, too, the naval officer is essentially a man of practical aims; and when all is said and done, practicality is the essence of statesmanship.

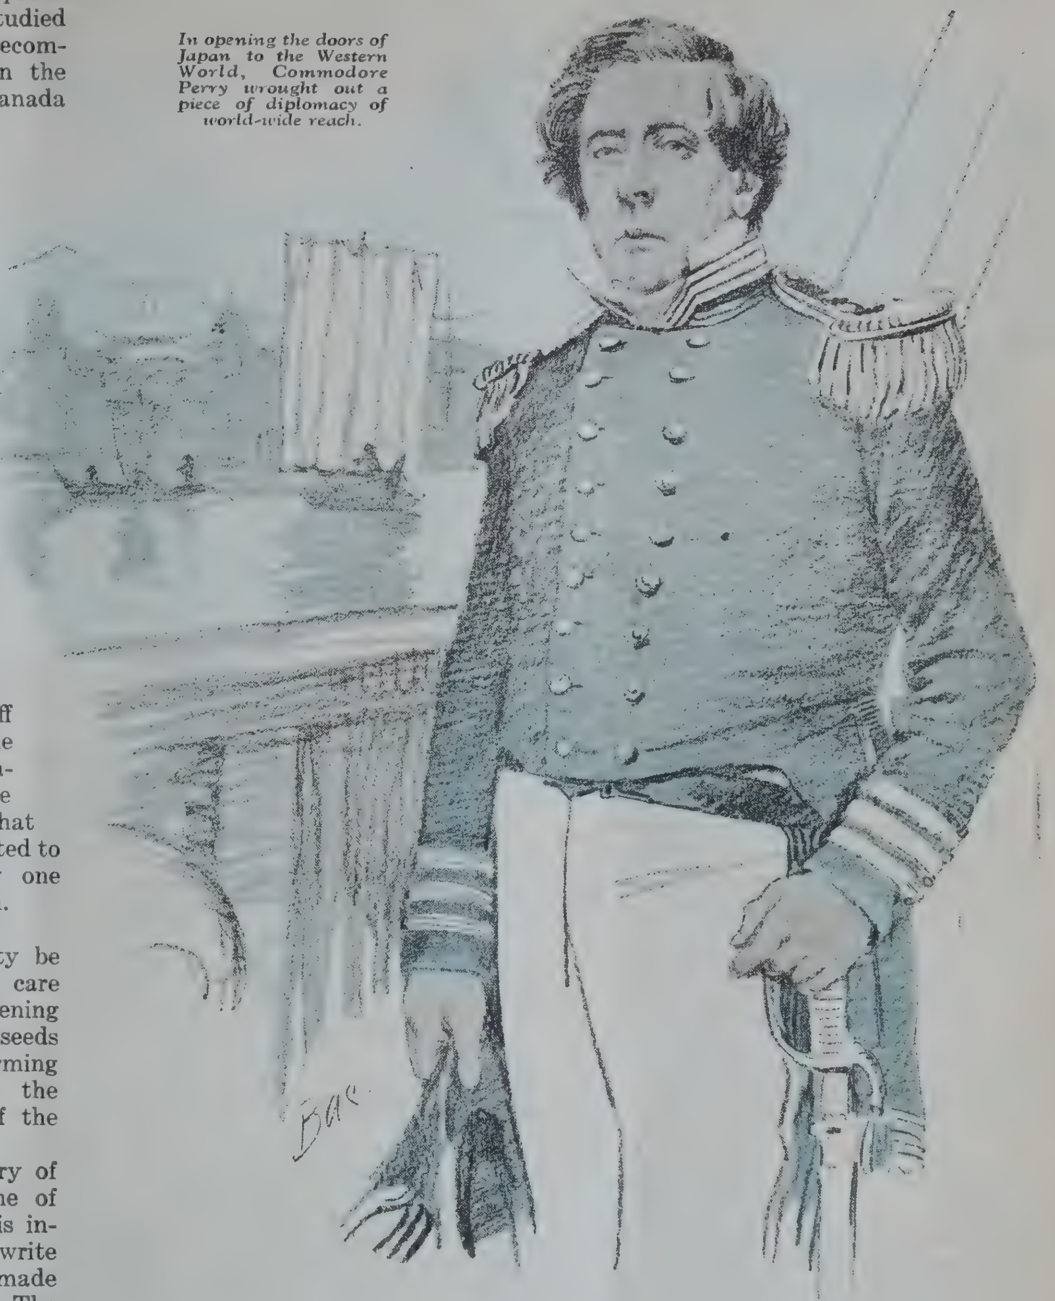
In many quiet ports of the world the natives see their first American in the uniform of the Navy. The naval officer is often called to places where no consul or other government official has gone, and to these people he is the American Government—he is Uncle Sam. They judge of his countrymen and his government by his deportment and dealing. It is a situation that calls for the best in him. Of course, technically, the direction of international policies lies with the Department of State. In practice, however, the act of the youngest ensign may knock the well-laid plans of the Hays and the Palmerstons all 'galley-west,' as the men of the sea say.

In his day (1784-1865), Lord Palmerston saw and no doubt watched keenly the opening of the doors of Japan to the Western World. In accomplishing this mission, Commodore Matthew Calbraith Perry wrought out a piece of diplomacy of such worldwide reach as would have done credit to a Pitt or a Warren Hastings. Yet Perry, primarily a naval officer, was not so well trained in the arts of Talleyrand as were the agents of Jefferson then in Europe. He is generally looked upon as the greatest diplomat the American Navy has developed.

Before embarking on his Japanese expedition, Perry was called upon to perform a delicate piece of diplomatic work resulting from the fierce clashes between American and British fishermen in Canadian waters. Visits to Halifax gave him an insight into the issue, and he ascertained that a basis for settlement could probably be found by an answer to the question, 'What are bays?' In a treaty made in 1818, the United States had renounced their right to fish within three miles of any of the coasts, bays, and harbors of Canada.

Perry realized that it was important to the United States Navy that these fishermen should be encouraged, for there were some 27,500 men who annually sailed from American ports in 2,500 vessels to Canadian waters.

In time of war these men would prove invaluable to the Navy. Perry studied the situation carefully, and his recommendations had great weight in the drawing up of a new treaty with Canada leading to a settlement.



In opening the doors of Japan to the Western World, Commodore Perry wrought out a piece of diplomacy of world-wide reach.

Perry must have had a vision of the vast possibilities growing out of the opening of Japan to the outside world, for it was owing to his persistence that the enterprise was kept alive through the régimes of three Secretaries of the Navy. When permission was finally given him to embark on the venture, he entered into it with characteristic thoroughness. He studied all available books on Japan and personally interviewed whalers of the New England coast who had worked in Japanese waters. One thing he found out was that seventeen million dollars of American capital was invested in the whaling industry off the coasts of Japan and China. The fact that many shipwrecked Japanese sailors were picked up on the American coast and cared for and that shipwrecked American sailors drifted to the shores of Japan gave Perry one of the pretexts for the expedition.

IT WAS desirable that a treaty be made providing for the mutual care of these men. As another opening wedge, he loaded his ships with seeds and mechanical appliances for farming that would open the eyes of the Orientals to the achievements of the Western World.

Daniel Webster, then Secretary of State, was too busy at the time of Perry's departure to write out his instructions. Perry was told to write them himself, and Webster made practically no change in them. The Secretary of the Navy was particularly liberal in writing his instructions, saying:

'In prosecuting the objects of your mission to Japan you are authorized to employ dispatch vessels, interpreters, Kroomen, or natives, and all other means which you may deem necessary to enable you to bring about the desired results.'

London soon got wind of the proposed venture. The *Times* remarked sarcastically in a leading article, 'It was to be doubted whether the Emperor of Japan would receive Commodore Perry with most indignation or contempt.'

How Perry succeeded in his mission is well known to every schoolboy. He construed his instructions strictly and brought to bear in his negotiations his wide reading, his fine knowledge of the Japanese people, and his insight into human nature. The Japanese, being an impressionable people, were greatly influenced by the show of power made by his men-of-war, anchored in the harbor of Yeddo. Knowing them to be lovers of mystery, Perry secluded himself in his cabin, showing his face only on the rarest occasions, when meetings had been arranged with the shogun or with the Emperor.

Of Perry's diplomatic stroke, Griffis in his biography of the Commodore very prettily estimates his achievement in these words:

'Perry went forth like the fair prince to open the barred castle of Thornrose. It was with a kiss, and not with a blow, that the sleeping maiden of the eastern sea was won. Perry could strike from the shoulder. His were the guns of Vera Cruz, and his Paixhans shells could have laid Yeddo in ashes in half a day; but he chose rather to out-Chesterfield these oriental Chesterfields in the minuteness, severity and suavity of his etiquette. With time, with patience, with firmness, with delicacy equal to that demanded in a first-class flirtation, with sublime attention to details, with a terrible earnestness that brooked no trifle, Perry succeeded. Thornrose awoke, her warders drew the bolts and opened the doors.'

A worthy follower of Perry was Admiral Dewey, whose conduct after his celebrated victory at Manila illustrates the attitude characteristic of the naval officer. He sailed into the bay on the morning of May first, but he took no step that would commit his government to any policy with reference to the Philippines. It was his duty as a naval officer, as he plainly put it, 'while we remained at war with Spain to strike at the power of Spain wherever possible.' In his dealings with Aguinaldo he was the genius of diplomacy, refraining from any action that might possibly offend the men fighting against Spain on the islands or that might involve his government in any entangling alliances with them.

'From my observation of Aguinaldo and his advisers,' Admiral Dewey writes in his autobiography, 'I have decided that it would be unwise to coöperate with him or his adherents in an official manner . . . In short my policy was to avoid any entangling alliances with the insurgents.'

DEWEY'S fine sense of diplomacy stood him in good stead many times during the period between the first of May, 1898, and March, 1899, when all the duties of the State, War, and Navy departments fell upon his shoulders. He permitted Aguinaldo to establish himself ashore and made him a gift of an old smooth-bore gun abandoned by the Spaniards. He drew the line, however, when the insurgent chieftain asked to have the gun mounted on a float and towed across the bay by American launches.

John Paul Jones, at the very beginning of our naval history, had the vision of what an officer ought to be, not only as a ship commander, but as a diplomat. He declared the following to be one of the prime qualifications of a naval officer:

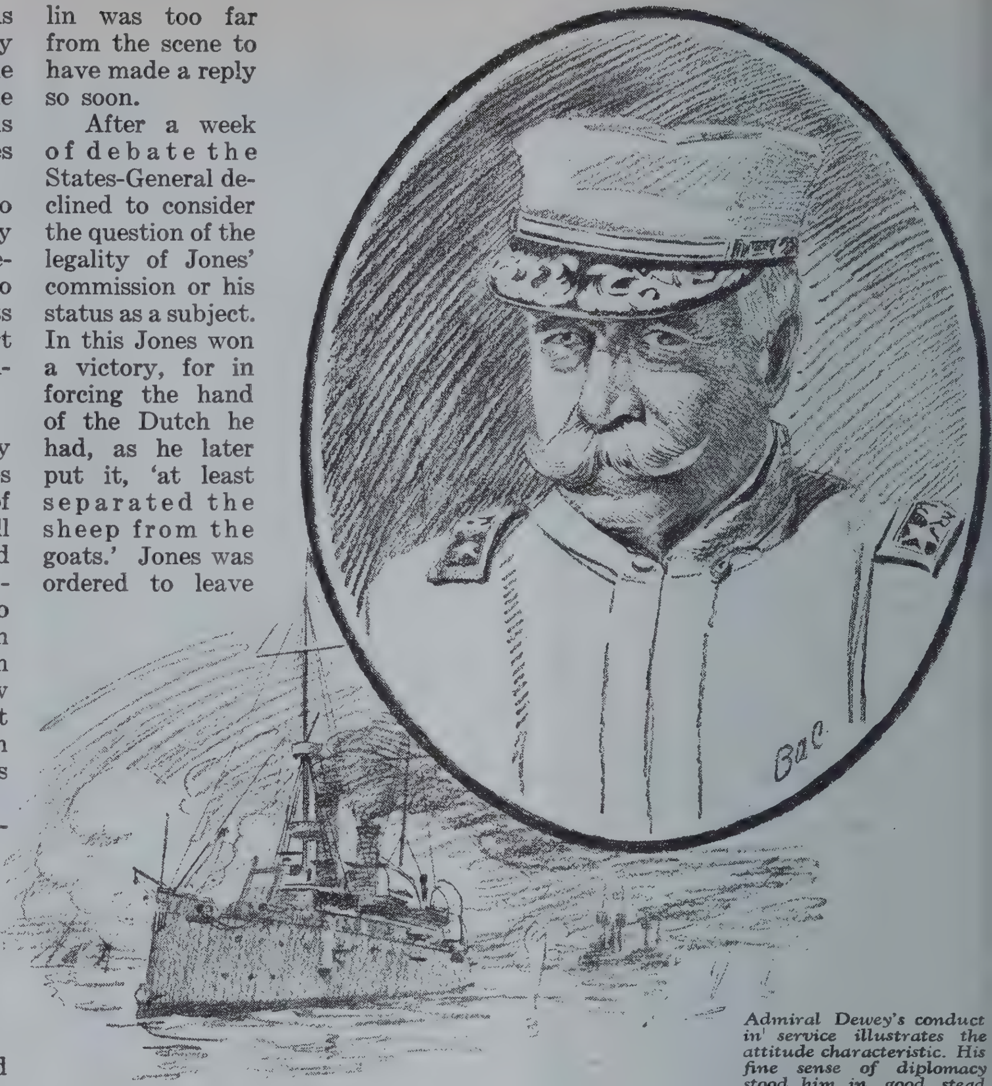
'He should be conversant with the usages of diplomacy, and capable, if called upon, of maintaining a dignified and judicial correspondence . . . involving the portentous issues of peace or war between great powers.'

Jones himself was a shining example of his own idea of a naval officer as a diplomat. He boldly carried the *Serapis* and the *Countess of Scarborough*, which he had captured from the British, into the Texel with the avowed purpose, as he explained it in his journal of 1787, of using the opportunities afforded by his situation to widen the breach between England and Holland, at the same time avoiding the appearance of giving offense to the Dutch.

Sir Joseph Yorke, the blunt and bluff old British ambassador at The Hague, protested to the States-General of Holland that Jones was a pirate and really a British subject. He insisted, therefore, that Holland should not recognize him as an American officer, but should seize and imprison him and turn over his two captured vessels to the British authorities.

Jones met the contention of Sir Joseph with a brilliant argument of his own, the letter in fact being such a fine piece of work that for a time it was believed that its author was none other than Dr. Franklin. This, however, was proved impossible, for Franklin was too far from the scene to have made a reply so soon.

After a week of debate the States-General declined to consider the question of the legality of Jones' commission or his status as a subject. In this Jones won a victory, for in forcing the hand of the Dutch he had, as he later put it, 'at least separated the sheep from the goats.' Jones was ordered to leave Dutch waters 'as soon as possible when the wind and weather shall be favorable.' Thus he was left largely to his own discretion.



Admiral Dewey's conduct in service illustrates the attitude characteristic. His fine sense of diplomacy stood him in good stead many times.

That famous dilettante and gossip of the time, Horry Walpole, thought so well of Jones' letter to the States-General that he had to write the Countess of Ossory about it under date of October 1, 1782. He asked:

'Have you seen in the papers the excellent letter of Paul Jones to Sir Joseph Yorke? *Elle nous dit bien des veritas.* I doubt Sir Joseph can answer them. Dr. Franklin himself, I should think, was the author. It is certainly written by a first-rate pen.'

To jump to our own day, the European War, particularly its aftermath, thrust many strange duties upon the men of the sea. At times they have been called upon to perform tasks far afield from those contemplated in the curriculum at Annapolis, and in some instances American naval officers have been fully accredited agents of the State Department, executing the functions of ministers and consuls. Two have held appointments as high commissioners with the rank of ambassador.

Riding at anchor off Constantinople has been the situation of the 'embassy' of a certain rear admiral, who has been American High Commissioner. Because it had not resumed diplomatic relations with Turkey, the United States had no ambassador there in the regular diplomatic sense. But Admiral Bristol had the rank of one with wide discretionary powers, although in the odd position of not having any accredited diplomatic status ashore.

As high commissioner, he has represented four of the biggest branches of the United States Government, the departments of Navy, State, War, and Commerce. Officials of all four divisions stationed in that territory have been under his charge. Like a real ambassador, he has had four diplomatic secretaries, regular embassy men, and the consuls scattered throughout the country have acted as delegates of the high commissioner.

But this was not all. Admiral Bristol represented also the United States Shipping Board at Constantinople and was chairman of the local chapter of the American Red Cross. As the friend of refugees, the Admiral probably stood alone, first for the Russians and later for the Greeks. His able work at the time of the Smyrna catastrophe

THANKSGIVING

By N. L. VAN WEGEN

'OUR harvest being gotten in, our Governour sent foure men on fowling, that so we might after a more speciall manner rejoyce together, after we had gathered the fruit of our labours; they foure in one day killed as much fowle, as with a little help beside, served the company almost a weeke, at which time amongst other recreations, we exercised our Armes, many of the Indians coming amongst us, and amongst the rest their greatest King Massasoyt, with some ninety men, whom for three days we entertained and feasted, and they went out and killed five Deere, which they brought to the Plantation and bestowed on our Governour, and upon the Captaine (Standish) and others. And although it be not always so plentifull, as it was at this time with us, yet by the goodness of God, we are so farre from want, that we often wish you partakers of our plentie.'

Thus wrote Edward Winslow, one of the Pilgrim Colony, in November, 1621, describing in a letter to English friends the first Thanksgiving of the little band of Pilgrims on the shores of New England.

Fifty-five Pilgrims had as guests ninety-one Indians on this first authentic harvest festival. The latter, accustomed to hold a feast of gratitude after gathering in their crops, entered as gladly into the spirit of the affair as did the Pilgrims, who were familiar with the autumn jollifications held overseas.

Captain Miles Standish marched and countermarched his army of fourteen before the assembled Indians, probably more as a measure to impress the *Wilden* (as the Pilgrims, from their long residence in Holland, called the Indians) than from any need of drill. Both musketeers and archers shot at a mark.

It was a course dinner that graced the boards at this Thanksgiving. Turkey and other fowl, stuffed with beechnuts and chestnuts and sauced with cranberries; venison, bear steak, fish freshly caught from brook and sea; wild celery soup, pumpkins; clams, lobsters, eels, oysters furnished by the Indians (and each was a foot long according to a contemporary historian); maple syrup, wild grapes, berries, plums; and Indian corn, or maize, prepared in a dozen ways, these all formed a meal that could easily be called satisfactory.

The Indians stayed three days, eating their fill of the savory dishes prepared by the wives and daughters of the Pilgrims and smoking their native tobacco. As the taste for the weed spread quickly from the Indians to the Pilgrims, undoubtedly the first 'smoker' was held at this time when, after the feast, both white man and red fraternized over their pipes.

The Pilgrims may be credited with yet another institution, that of the national wash day, inaugurated on Monday, November 13, 1620, shortly after the landing from the *Mayflower* at Cape Cod. The women gathered baskets of soiled clothes and hied them to a small pond where the well-worn garments were washed and beaten with wooden sticks.

However, while Thanksgiving in its present form is a distinctively American holiday, its origin may be traced in the dim past to the land of the Canaanites, from whom the Children of Israel copied many of their customs.

The book of *Judges* contains the following concerning the Canaanities:

> 'And they went out into the fields, and gathered their vineyards, and trode the grapes, and made merry, and went into the house of their god, and did eat and drink.'

Among the Hebrews, vintage or harvest celebrations appeared with the reaping of the barley (Passover) and the wheat (Pentecost), and the gathering of the fruits of the vine (Tabernacles). During the last-mentioned festival everyone lived in tents in memory of the years when the nation had no home.

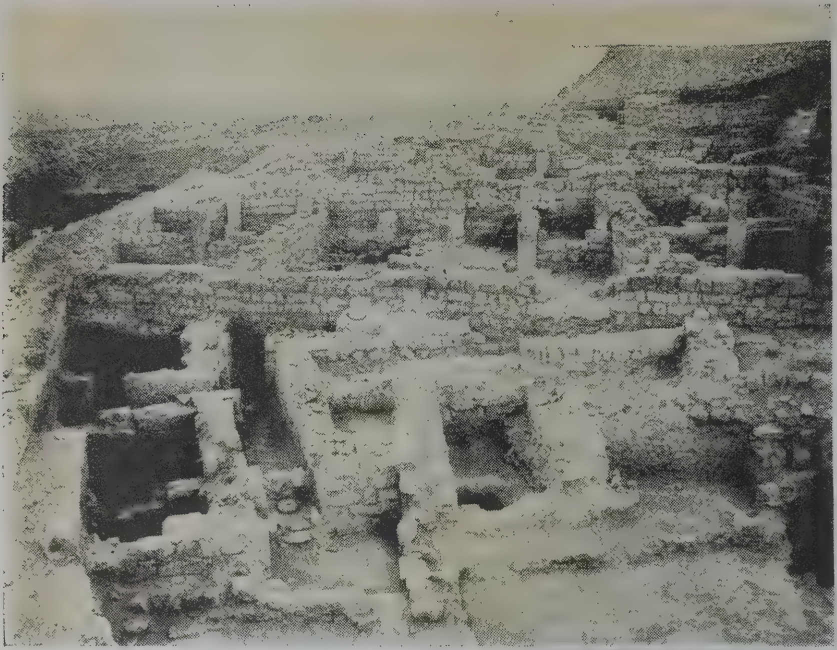
'Puritans Going to Church,' painted by George Henry Boughton.

City *of* BETH-SHAN

By WILLIAM A. McGARRY



Left—Ruins of the city erected by the Arabs in A. D. 632, on the mound of Beth-shan, where nine cities have been situated. Below—Arab workmen moving a large gravestone found in the ruins.

IT WAS in the city of Beisan, called Beth-shan in numerous references in the Bible, that Dr. Clarence Stanley Fisher, head of an expedition at work there, discovered the sarcophagus of the father of Herod the Great.

It was announced at that time that the ruins of Beth-shan had yielded the first sarcophagi ever found of the Philistines, with whom the tribes of Israel waged war for so many years. Likewise, the same expedition succeeded in reaching the ruins of six of the nine cities known to have been built on the high mound known as Beth-shan, the gateway between Mesopotamia and Egypt.

That Beth-shan was occupied for a longer continuous period than any other site of human habitation, by a series of civilizations beginning with the earliest makers of rude pottery and ending with the present-day Arabs who succeeded the Crusaders, its last conquerors, had long been believed.

Beth-shan has been the Verdun and the Waterloo of armies innumerable. It has been the most fought-over city in the world. Sargon I of Babylonia took it when he led his warriors swarming from the plains of Mesopotamia into Palestine. After him came Abraham, Chedorlaomer, Hammurabi, Sargon II, Sennacherib, Nebuchadnezzar, Thothmes, Rameses, Necho, Saul, David, Jeroboam, Jehu, Ahab, Horam, Josiah, Alexander, Pompey, Napoleon, and finally General Allenby at the head of the British flying column during the World War. And that list represents but a few of the world captains who made or lost their reputations there.

The city is so bound up with the events preceding the founding of Christianity that its name recurs again and again in the Testaments. It is within sight of the Mount of Transfiguration. Yet the knowledge of it in existing history is manifestly meager in comparison with the store of facts buried in its ruins. Historians know that the Amorites were among the first civilized settlers after the primitive inhabitants. In the Bible it is stated that the Hebrews under the leadership of Joshua went up against Beth-shan but could not take it because the people had iron chariots.

Here was one of the earliest-known forerunners of the tanks used to such good effect in the recent war. Apparently David took the city and Solomon held it, although the terms of his sovereignty are lost in antiquity. Under Jeroboam, the son of Nebat, it seceded, and was finally conquered by the Syrians from Damascus. In the more remote past it is known to have been held for varying periods by the Babylonians and the Egyptians. Beth-shan was one of the cities captured when the 'Assyrian came down like the wolf on the fold.' Later came Greek and Roman occupations.

No other site is so well situated for strategic military purposes. It might be called the Gibraltar of the land. It is watered by springs which form a large tributary to the Jordan, and in the hot, dry country it was a veritable oasis for armies approaching from south, north or east. The evidence shows that it was used as a point of recuperation almost continuously for thousands of years. Towering in the near distance is the Mount of Gilboa, where King Saul was defeated by the Philistines. The story of that historic fight is regarded as one of the world's masterpieces of war literature, as it is told in the thirty-first chapter of the first book of *Samuel.* There the ancient historian gives the entire tale in a dozen verses, using less than four hundred words. A modern war correspondent would write columns for anything relatively as important in modern war.

The citadel of Beth-shan is really an artificial hill—the result of the Oriental practice of

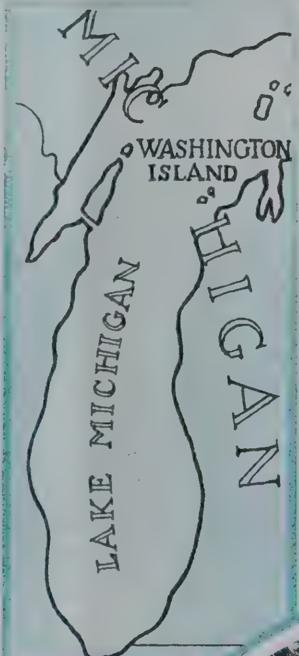
VIKINGS of LAKE MICHIGAN

By FRED L. HOLMES

NEARLY three-quarters of a century ago humble fisher folk, adventurous Icelanders and Norwegians, settled on a group of islands off the end of the Wisconsin Door County peninsula in Lake Michigan. As time passed, most of the islands were deserted by them because of bleakness and inaccessibility, and Washington, the largest, became their ultimate home.

Here for sixty years these people have lived and attained to modern circumstances; increased in population and developed a social spirit remarkable for its strong features of coöperation. Since their coming, Washington Island has become more than a dot on the map of Lake Michigan. Miles at sea from its nearest neighbors, its population of one thousand teems with such progress, upon a background of adventure so different, that its own singularity demonstrates its worthiness.



Death Door's Bluff, Washington Island. Left—Situation of the island.

Though named after the nation's first president, the island had been known to the traders as a center in the danger zone of navigation since the beginning of inland sea commerce. Off in the white-crested waves of Lake Michigan it lies, twenty-five miles from the mainland of northern Michigan and twelve miles from Door County peninsula.

One of the schools on the island.

Monument honoring the island's soldiers.

Around it the currents toss and flow, now smiling and quiet; now angry and turbulent. In summer the cool breezes come in from the restless waters, clean, fresh, and invigorating, but in mornings when the horizon is murky, the sun bolts out of the eastern sky, in a cloud as gray as dust, gliding swiftly like a charioted ball of fire over the zinc-colored surface. Even the fishermen, tugging at their nets, pause and gaze in the solemnity of such a moment.

Morning is day's gem with these fisher folk. They go about their tasks early, retiring to their homes in the afternoons for agricultural pursuits. Far away the world of affairs is noisy and busy but they do not invite its disturbance.

Washington Island is a governmental township about six miles square and with a shore line of twenty-six miles. Its northern sides are high and precipitous with castellated limestone caverns reaching to the water's edge, two hundred feet below its peaks. Fantastic figures, fashioned and sculptured by the winds and the storms of the ages, have been wrought in the stony surfaces. Over it all the clinging cedars have woven a drapery of green to hide its bald outlines. Detroit Harbor on the southern crest is its most important commercial port.

Inland, second-growth timber is now foresting the uncultivated places. On top of the high ridges and cliffs are heavy growths of hardwood, birch and maple; little oak and spruce and arbor vitae go down to the water's edge. Cords upon cords of flat pieces of limestone have been gathered by patient labor from the fields and utilized in the building of strong fences or walls. In some clearings, the open fields are rugged with great rock outcrops and in others the ground is deep and the earth tillable. Such has been the home and environment of these immigrant Nordics.

Those Vikings of Norway who landed on Iceland in the Ninth Century found it a barren and rock-strewn waste of desolation. Today it supports a population of more than 75,000 people with farming and stock raising; with extensive fishing and industries. The tenets of democracy flourish; education is general and the

Relative Values of Faultfinding, Analysis and Criticism

THE sea is wholesome because it is constantly in motion, and human society is saved from utter decay by the permanent principle of change. It will be agreed, when it is sufficiently considered, that the conditions most complained about today were at one time hailed as wonderful improvements. Range through the whole field of complaints and see how true this is. Everything that we are now agreed upon as being undesirable was at one time at the very height of desirability. It constituted such a notable advance on what had preceded it that its appearance was greeted as a triumph.

What has caused this change in attitude? It is attributed by some to the growing mental stature of the race. To others it is merely an illustration of the old saying that if you give human beings an inch of favor they will demand a yard. In any case, the fact remains that the best slowly loses its status until it comes to be regarded as very like the worst. We are complaining today about conditions which kings could not have commanded in the days of our great-grandfathers.

This, however, is not said here to introduce the preachment that men should be satisfied. It merely introduces a casual study of the phases in which men's dissatisfaction manifests itself. The mind action which accompanies social dissatisfaction or any discontent which is the harbinger of progress may be considered under three headings: first, faultfinding; second, analysis; third, criticism.

FOUR steps make up the ladder of progress. The first is faultfinding, capacity to react to the feeling of wrong. It is not infallible—the wrong may be in the finder rather than in what he deems the fault. Second comes analysis, power to take a situation apart and lay the facts bare. This is of higher order than the first, is less self-centered, less emotional. Then comes the power of criticism, which means the weighing of values, the valuing of all facts according to universal standards. Faultfinding is emotional; analysis is intellectual; criticism is moral. Fourth and last is creativeness, the full flower of human usefulness when connected with knowledge and suggestion.

Faultfinding is the most elementary reaction to the sense of wrong conditions. It may be wordless as an infant's cry in the night, or it may be the whimper of a pampered race whose dainties have become scarce or harder to get, the plaint of a soft people resentful of the need for hardihood. In any case, it is the first crude reaction to the pressure of conditions. It may be valuable as a symptom only: it is never a diagnosis.

It is amazing to observe how large a percentage of our intelligent classes desire to remain in the region of faultfinding simply because effort is required to rise into the region of analysis. Lazy-mindedness is a disease which drives the mind to lean on any convenient defect that may serve as an excuse in lieu of a reason. To express and nurse the grievance, instead of diagnosing it, is the first tendency of human nature with regard to unpleasant or baffling conditions.

Such a course discovers nothing, solves nothing, improves nothing. It is emotional rather than reasonable, whimpering rather than self-reliant; it encourages moral cowardice. And the habit of looking around for someone to take the blame is parent to the habit of looking around for someone to help us, instead of looking to ourselves. Both these habits arise from weakness, from the general human willingness to coddle ourselves, and to become prey of false leaders who promise to coddle us.

We need analysis more than faultfinding, for then we face conditions and not merely people who are caught in the very conditions which we charge them with creating. From analysis the way is made clear to go on to criticism. It is a sad light on our mental habits that the very word criticism has come to mean faultfinding. It has nothing to do with faults or excellences as such; it has only to do with values. When a situation is analyzed, all its elements are laid bare, as when the symptoms of a disease are tabulated and the history of the patient is taken, or as when a machine is taken apart to repair a defect. We have any amount of faultfinding, but little real analysis. The facts are not all laid bare.

In the work of criticism, a judgment is given on the various facts which analysis produces. The facts which are productive of disharmony, waste, injustice are so valued; the facts which favor use, efficiency, general service, and welfare are so valued. The critic distinguishes between the good and the bad, the wise and the selfish, the permanent and the temporary. Progress in social welfare is not a matter of one group's getting the better of another by any method such as getting laws passed or parties elected or programs accepted. The forcing of one set of facts into control of another set of facts does not mend a wrong condition so long as in the total facts there are those that make for wrongness. True criticism, which connotes fairness and detachment of mind, requires that from all the facts there be eliminated those which are productive of the qualities which hurt men and prevent social progress.

The analyst is not very popular, because he takes apart the interior mechanism of a condition, and, as neither side to a controversy possesses all the virtue nor all the vice, the analysis necessarily exposes the sins of each. And the true critic is even less popular, because by the same law he judges both.

And yet it is by these two, goaded into action it may be by the insistent murmurings of the faultfinders, that we get the material by which consciously to direct our economic courses toward justice. Millions of faultfinders, hundreds of analysts, tens of critics—this is the ratio which we ought to mend, becoming fact finders and value finders in ever-increasing numbers.

The Law and the Criminal

THE law sets up certain barriers for the protection of accused persons. There is the right of trial by jury, the presumption of innocence for all persons until proved guilty, the Constitutional guaranty against being placed twice in jeopardy for the same crime, the right to refuse to testify in one's own defense. These have all been sanctioned by custom and guarded by public opinion.

But there have grown up offshoots of these rights—rank weeds of court procedure and usage which threaten to choke out not only the genuine rights of the accused, but the inherent right of all citizens to protection against crime and lawlessness. These offshoots—'legal technicalities,' as they are known in court parlance—are rapidly supplanting the fundamental laws based on common sense. Cases are common wherein criminals have gone free through some quirk of court procedure, although jurors, judge, and lawyers, all have known they were guilty. Crime has reached unheard-of proportions in the United States because criminals know they have a fifty-to-one chance of going free. Agitators who advocate the overthrow of the law by force are treated as traitors; yet lawyers who undermine the laws by burrowing loopholes through the nation's judicial system are regarded as highly respectable citizens.

The natural reaction to this prostitution of justice and the resultant wave of crime which has been sweeping the country is the passing of new and harsh laws for dealing with criminals. New York started the movement with the Baumes Laws, which have struck terror into the heart of the underworld with their stiff prison terms for habitual offenders. But the Baumes Laws deal largely with the sentencing and paroling of convicted persons. Reform is likewise needed in the trial itself.

Caleb H. Baumes, chairman of the New York State Crime Commission and author of the famous laws bearing his name, is now directing his attention to this feature. 'It is ridiculous to exclude from a jury persons who read the newspapers,' he declares in a United Press interview. 'A citizen who doesn't read the newspapers is not an intelligent citizen and he probably is not fit to be on a jury. We need to place the selection of the jury more in the hands of the court and take it out of the hands of the lawyers. Lawyers ought not to be permitted to throw off a jury all intelligent persons, which is what they do most of the time now.

'First, we ought to place more power in the hands of jury commissions so that they could make up the panels with a higher type of citizen than we have now. There should be fewer exemptions. There ought to be nobody on a jury panel who is not a highly intelligent citizen. Then the juries would have to be composed of good men because the bad ones, the professional jurors, would have been weeded out in advance. Second, the actual selection should be concentrated more in the hands of the judge. He should question the jurors in open court and pick them. Then if counsel on either side know of any reason why a juror should not serve, let them state it to the judge and let him act.'

This sounds like good sense.

Washington's Move?

REMOVAL of the National Capital from Washington to some point in the Mississippi Valley is urged by a Western newspaper. It advances several arguments in favor of the proposal; they are in effect:

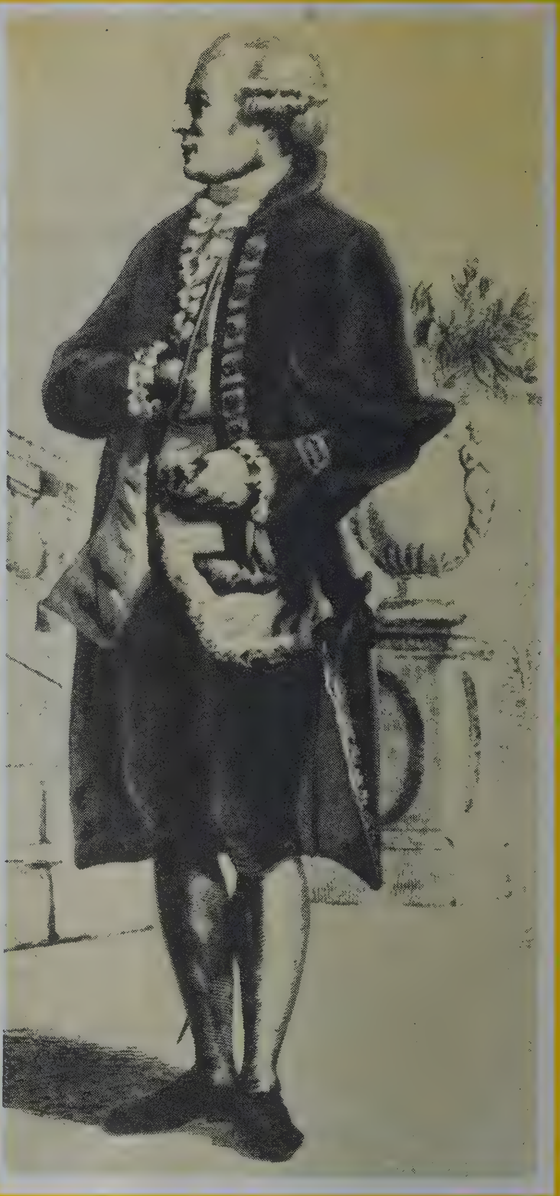
> Washington, when it was chosen, was near the center of population. With the acquisition of new territory and the expansion of the nation it has become a lopsided location.
>
> A nation's capital is always a focal point for attack in time of war. Situated on the Eastern seaboard, Washington is difficult to defend; in fact, it was once held by an enemy nation. An inland site would be advantageous from the standpoint of defense.
>
> The East has a tremendous advantage, and the West is badly handicapped, by the present location of the Capital. It is comparatively easy for the Atlantic States to marshal forces quickly in Washington to favor or oppose legislation, but it is difficult for the Western States to do so.

These arguments are at least interesting, if nothing more. Superlative difficulties stand in the way of transferring the National Capital (the Western newspaper recognizes this), but they could probably be overcome. Australia, facing the same problem, recently completed a new commonwealth in the midst of what had previously been wilderness. But the probabilities that the nation will move its headquarters westward are not great. Sentiment is a strong argument in America, and Washington is bound round with stanch ties of sentiment. Then, too, there are the expenditures that the Federal Government has made and is continuing to make in Washington. The nation has an investment of millions in its Capital City, in the Capitol, the White House, the Government buildings, the Navy Yard, the various public parks, the Army stations, the monuments. It will take long discussion to convince the country that these should be sacrificed and new ones constructed elsewhere. But the chief difficulty would be selection of the new site. There would be plenty of applicants.

BEAUMARCHAIS, Friend of America

By LOUIS C. KARPINSKI

Copyright, LOUIS C. KARPINSKI



Pierre Augustin Caron de Beaumarchais, after one of his later pictures.

IN THE year 1775 the genial author of the *Barber of Seville* was occupied in London with some secret affairs of the King. The early life of Beaumarchais had prepared him spiritually and intellectually for his fine participation in the American Revolution. In London, in 1775, the American revolt against the mother country was the subject of much discussion; it furnished a topic of great interest to a Frenchman who remembered the bitter pill which France had swallowed in 1763, in the cession of Canada to Britain. Before the battle of Lexington became known in England, Beaumarchais had written to the King of France concerning 'the troubles of England with her colonies' (April 27, 1775) and the significance of those events for France.

No doubt, with Beaumarchais and with other Frenchmen, the wish that America should be free was father to the thought. It is striking to find such ideas in 1775, a year before independence was declared, and at a time when America was yet hesitating. In September, 1775, Beaumarchais wrote a long memorial on the situation to the King and secretly brought the news himself from England to France. In this document is the prophetic statement: 'All sensible persons are convinced, in England, that the English colonies are lost to the mother country, and that is also my opinion.' Such statements appeared even in print in France in 1775.

With characteristic zeal Beaumarchais continued his communications to Vergennes and to the King in favor of assistance to America. On the last day of February, in 1776, a long letter 'to the King alone' reads, in part, as follows:

> Sire—The famous quarrel between America and England, which will soon divide the world and change the system of Europe, imposes upon each power the necessity of examining well in what manner the event of this separation can influence it, and either serve it or injure it.
>
> But the most interested of all countries is certainly France, whose sugar islands have, since the last peace, been the constant object of the regrets and hopes of the English; regrets and hopes which must infallibly bring us war, unless, by a weakness impossible to suppose, we consent to sacrifice our rich possessions of the gulf to the chimera of a shameful peace, which would be more injurious even than the war which we dread. In a first memorial, sent three months since to your majesty by M. de Vergennes, I endeavored to establish soundly that your majesty's character for justice could not be injured by taking wise precautions against enemies who are never delicate about those they take against us.
>
> At present, when a violent crisis is approaching with great rapidity, I am obliged to warn your majesty that the preservation of our possessions in America, and the peace which your majesty appears to desire so much, depend solely upon this one proposition: the Americans must be assisted . . .
>
> Sire, in the name of God, deign to examine the matter with me.
>
> First, if England triumphs over America, she can only do so by an enormous expenditure of men and money. Now the only compensation the English propose to themselves for so many losses is to take possession on their return of the French islands, and thus make themselves the exclusive vendors of the valuable supply of sugar, which can alone repair all the injuries done to their commerce; and this capture would also render them forever the absolute possessors of the advantages derived from the contraband commerce carried on by the Continent with these islands.
>
> Then, sire, there would remain to you nothing but the option of commencing at a later period an unprofitable war, or of sacrificing to the most shameful of inactive peaces all your American colonies, and of losing 280 millions of capital, and more than 30 millions of revenue . . .
>
> You will only preserve the peace you desire, sire, by preventing it at all price from being made between England and America, and in preventing one from completely triumphing over the other; and the only means of attaining this end is by giving assist-

Communication from Beaumarchais to Vergennes, beginning, in effect, with 'Listen to me in behalf of the Americans.'

> ance to the Americans, who will put their forces on an equality with those of England, but nothing beyond. And believe me, sire, that the economy of a few millions at present may, before long, cost a great deal of blood and money to France.
>
> Believe me above all, sire, that the necessary preparations for the first campaign will alone cost you more than all the assistance you are asked for now; and that the wretched economy of two or three millions will certainly make you lose, before two years, more than three hundred.
>
> If it be replied that we can not assist the Americans without wounding England, and without drawing upon us the storm which I wish to keep off, I reply in my turn that this danger will not be incurred if the plan I have so many times proposed be followed, that of secretly assisting the Americans without compromising ourselves.

THE theme to which Beaumarchais recurred constantly was that, war with England being inevitable at the end of the conflict, it would be better to avert it by assisting the Colonies to weaken England. The official archives of France reveal some fifty communications from Beaumarchais to Vergennes, dating from April of 1775 to February of 1778, when France gave open encouragement and recognition to the United States. These repeated and forceful endorsements of the American cause prepared Vergennes and the King, and made possible Franklin's success.

Early in '76, Beaumarchais conceived the plan of forming a company to sell and send supplies and ammunition to the Americans. He proposed to the King and to Vergennes that secret support for this purpose should be given by France and Spain. On June 10, 1776, one million of livres was advanced personally to Beaumarchais by the French Government, and another million was given him by the Spanish Government at the request of Vergennes. A third million was advanced by the farmers-general of France, with the announced expectation that repayment would be made in tobacco, indigo, and other American products. In this expectation of repayment in kind Beaumarchais certainly participated. The receipts for the two millions from France and Spain read as follows:

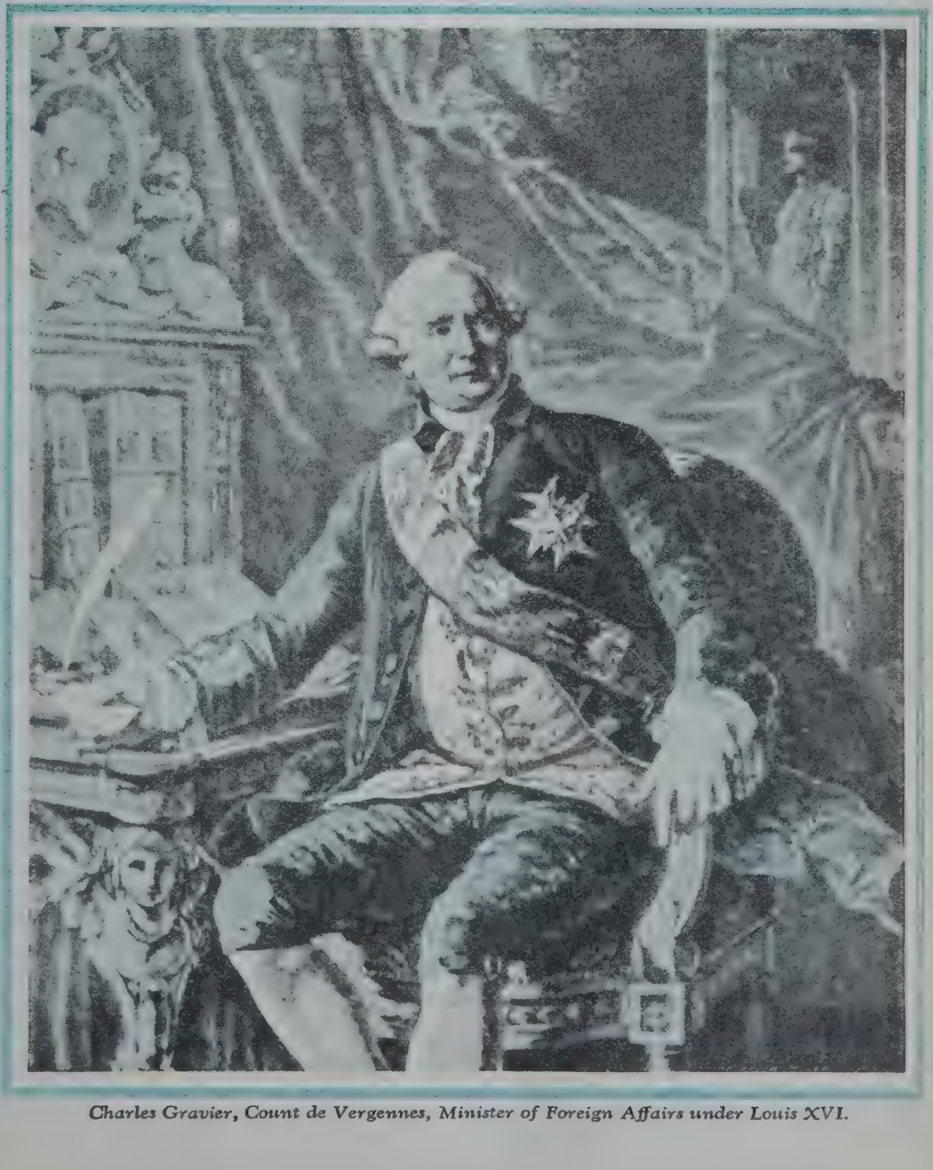
> I have received from M. Duvergier, conformably to the orders of the Count de Vergennes, dated the 5th instant, which I have remitted to him, the sum of one million, of which I will render account to the said Count de Vergennes.
>
> CARON DE BEAUMARCHAIS.
>
> Received one million livres tournois.
> Paris, June 10, 1776.
>
> I have received from his excellency M. le Comte de Vergennes an acknowledgment for the million livres tournois which M. Duvergier had given to the Spanish embassador, with which acknowledgment I shall touch, at the royal treasury, the said sum of a million tournois, for the employment of which I will render an account to his said excellency M. le Comte de Vergennes.
>
> CARON DE BEAUMARCHAIS.
>
> At Versailles, Aug. 11, 1776.

Foreign Minister Vergennes, in communicating the loan of one million to Beaumarchais, stated: 'Our arsenals will give you arms and ammunition, but you shall replace them or shall pay for them. You shall ask no money from the Americans, as they have none; but you shall ask them for returns in products of their soil . . . in a word, the operation, after being secretly supported by us at the commencement, must afterward feed and support itself.'

The firm of Rodrigue, Hortalez et Cie, the fanciful Spanish name assumed by the playwright, began operations upon a grand scale, opening offices in former ambassadorial quarters in a prominent section of Paris. The first cargo totaled three millions, and without any hesitation further shipments were inaugurated and carried through before repayments of any kind were made. In fact the Americans were so confused by the unexpected aid that apparently they regarded all as gifts of the gods, being awakened to a sense of responsibility only by the repeated protestations of Beaumarchais.

The English ambassador in France, through spies, followed closely the activities of Beaumarchais and frequently commented upon the efforts of Beaumarchais to help America. In one report to London, Lord Stormont notes that Beaumarchais had sent much goods to America without asking any pay. Again he notes on December 25, 1776, only three days after Franklin's arrival in Paris, that 'Beaumarchais . . . is with him (Franklin) at all hours . . . ' but 'tho so much together (they) are very suspicious and mistrustful of each other.' This distrust was due in large part to Dr. Dubourg, a botanist friend of Franklin, who himself desired to be the secret intermediary of the French Government in aiding America. Dubourg doubtless honestly distrusted the ability in such matters of so noted (or notorious) a writer.

THE English ambassador was able on one occasion to protest with sufficient vigor to prevent the sailing of vessels bound for America by way of the West Indies. However, Beaumarchais frequently circumvented the English by loading vessels secretly at night, and, as he said, what with 'messengers, agents, presents, rewards,

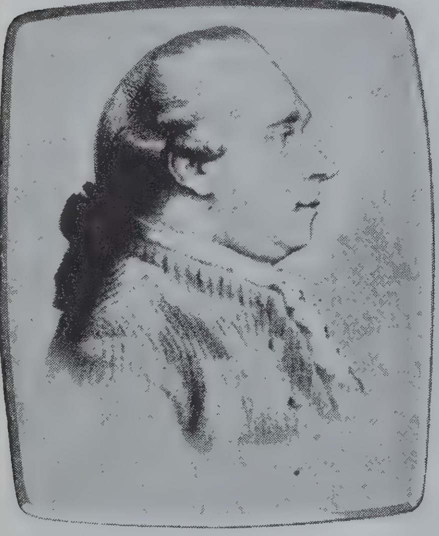


Charles Gravier, Count de Vergennes, Minister of Foreign Affairs under Louis XVI.

no expense was spared. One time . . . I hurried by land to Havre twenty-one pieces of cannon which . . . by water would have delayed us ten days.' It is also doubtless true that, once having engaged this fearless agent, the government hesitated to stop him, fearing his pen.

THREE American commissioners were engaged in France in the first three years of the struggle. One of these, Arthur Lee, met Beaumarchais in London in 1775 and later had further dealings with him in Paris. Lee had some ability as a publicist but failed in his missions in France and elsewhere. His inordinate ambition and conceit brought him into conflict with the other American commissioners and with Beaumarchais. Lee, after his first meeting with Beaumarchais, reported to a secret committee of Congress that, because of his (Lee's) active endeavors, France was going to send 'arms and ammunition to the value of five millions.' This promised aid was then only a figment of Lee's imagination, but it complicated the later relations of Beaumarchais with America.

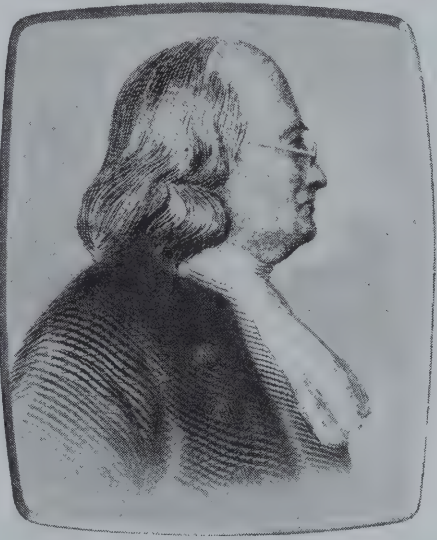
Silas Deane, the commissioner most actively associated with Beaumarchais, was unable to speak French. However, Deane managed to make arrangements through an interpreter to get uniforms, arms, and ammunition. Deane well understood that these were not gifts but purchases, and in the controversies which arose both before and after the the peace of 1783 Deane faithfully supported the contentions of the author-merchant.



Silas Deane, business agent of the United States, at Paris, who, until Franklin's arrival, acted virtually as official delegate to the French court.

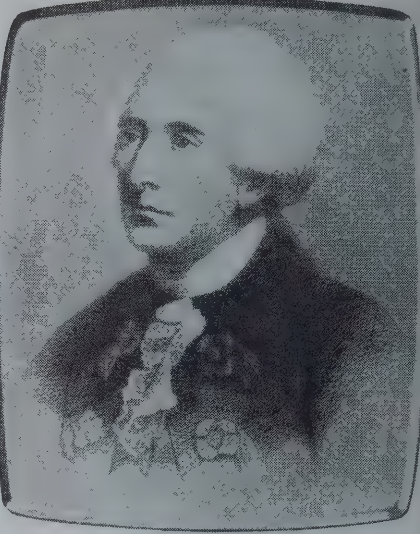
When in Paris in July, 1776, Deane was able to arrange several interviews with Vergennes. At this time the protestations of certain French friends of America caused Deane to become doubtful of the responsibility of Beaumarchais; but Vergennes assured Deane that he 'might rely on whatever Monsieur Beaumarchais should engage in the commercial way of supplies.' This is Deane's official statement as recorded in a letter to the secret committee of Congress, through which he corresponded with Congress. In a postscript of August 15, 1776, to the letter containing the above statement, Deane added: 'I found Mr. Beaumarchais, as I before hinted, possesses the entire confidence of the Ministry; he is a man of wit and genius, and a considerable writer on comick and political subjects. All my supplies are to come through his hands . . . '

At the same time Beaumarchais, under the name Rodrigue Hortalez et Cie, wrote a letter to Congress, typical of his romantic interest. This letter, written in French, is also in our national archives and reads, in part, as follows:



Benjamin Franklin, whose reputation, character and manner secured for America aid which no other man could have obtained.

> The respectful esteem that I bear towards that brave people, who so well defend their liberty . . . has induced me to form . . . an extensive commercial house, solely for the purpose of serving you in Europe . . . Your deputies, gentlemen, will find in me a sure friend, an asylum in my house, money in my coffers, and every means of facilitating their operations, whether of a publick or a secret nature . . .
>
> At this very time . . . I have procured for you two hundred pieces of cannon . . . two hundred thousand pounds of cannon powder, twenty thousand excellent rifles . . . I request of you, gentlemen, to send me next spring, if it is possible for you ten or twelve thousand hogsheads, or more if you can, of tobacco from Virginia, of the best quality.
>
> . . . However well bottomed my house may be, and however I may have appropriated many millions to your trade alone yet it would be impossible for me to support it, if all the dangers of the sea, of exports and imports, were not entirely at your risk . . .
>
> One thing can never vary or diminish: It is the avowed and ardent desire I have of serving you to the utmost of my power . . .
>
> Rodrique Hortalez & Cie.



Arthur Lee, one of the American commissioners to France, whose charges against his colleague, Deane, caused the latter's recall.

> P. S. . . . Everything that passes in your great assemblies is known, I cannot tell how, at the Court of Great Britain . . . In times of great exigency Rome had a Dictator; and in a state of danger the more the executive power is brought to a point the more certain will be its effect . . . It is to your wisdom, gentlemen, that I make this remark . . .

NO ONE can read this without noting that Beaumarchais was devoted to the American cause and also that he fully expected payment for the services which he rendered. Indeed the wonder is that this poet should have been able to continue a business of this magnitude despite the repeated failure of America to remit either funds or acknowledgments or payments in kind.

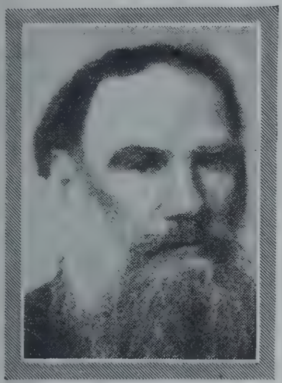
On November 29, 1776, Deane wrote again at length touching these services, reëmphasizing the necessity of payment, and stressing the magnitude of indebtedness to the poet-merchant. Deane wrote:

> I should never have completed what I have but for the generous, the indefatigable and spirited exertions of Monsieur Beaumarchais, to whom the United States are on every account greatly indebted, more so than to any other person on this side the water. He is greatly in advance of stores, clothing, and the like, and therefore am confident you will make him the earliest and most ample remittances . . . Let me by every letter urge on you the sending in season a quantity of tobacco, of rice, and of flour or wheat . . .
>
> I think Monsieur Beaumarchais wrote you under the firm of Hortalez and Co.; if so you will address him in the same style . . .
>
> I cannot in a letter, do full justice to Monsieur Beaumarchais for his great address and assiduity in our cause. I can only say he appears to have undertaken it on great and liberal principles, and has in the pursuit made it his own. His interest and influence which are great, have been exerted to the utmost in the cause of the United States, and I hope the consequence will equal his wishes . . .

Very fine appreciation, in words, was expressed to (Continued on page 26)

GREAT FIGURES *of* FICTION

Ethan Frome *and* Anna Karenina



Count Lyeff Tolstoi, late Russian novelist and philosopher.

—*Wide World.*
Edith Wharton, snapped in garden of her French villa.

By LEWIS WORTHINGTON SMITH

IN MANY respects Ethan Frome does not seem an Edith Wharton creation. He is a man of a common sort. His social relations are simple and unremarkable. The rivalries and the enjoyments of those in whom Mrs. Wharton has been chiefly interested are not for him. He is an utter stranger to the world in which they move.

Yet it seems probable that, inanimate though he is, he may remain Mrs. Wharton's greatest animation. Tragedy stalks through most of the author's fiction, but Ethan Frome is the relentless bite of the sharpest of tragic teeth. It is not his sufferings that make his story important, but the occasion for them in his New England environment and heritage. After a year at a technical school, he has been tied to a New England farm by the need of caring for his invalid and widowed mother. If he were free to choose his own course in life he might make something of his technical abilities. But he has not been free. His mother's death, which might have emancipated him, has imposed another obligation upon him. Zenobia Pierce, through nursing his mother in her last illness, has in a sense sacrificed herself in that service. Her capability has relieved him of many worries. In the break-up of his life at the time of his mother's death he has felt the need of Zenobia. So he has married her and they have planned to sell the farm and seek larger opportunities. That purpose slowly disintegrates with the difficulty of finding a purchaser. Presently, too, it appears that Zeena is not a woman to be transplanted. Moreover in the course of a year she passes from the capability that he has seen in her to a morbid condition that demands relief from the household work. She begins to sit in her room in silent brooding over her ills.

Ethan brings home a cousin of Zeena's, Mattie Silver, to do the work Zeena declares herself unable to attend to. Mattie is not strong, nor genuinely gifted in housekeeping, and Zeena is querulous. But something of youth, of freshness, of gayety, comes into the house with her, relieving the cheerlessness of the lonely farm but accentuating Ethan's disappointment.

Ethan has never loved his wife. He has married her honestly enough. Possibly it has been inevitable that he should marry her. Quite as inevitably he now finds himself in love with Mattie Silver. She is the one bit of brightness in his life. Fatefully he responds to the appeal she makes to him, but he realizes his love only when Zeena suggests that Mattie may be leaving soon, and that perhaps she is going to marry Denis Eady.

Mrs. Wharton has done nothing to surpass her report of Ethan's walk home from the dance at the church that night with Mattie. He waits for her in the shadow of a wall, giving Denis Eady a chance to take his place as her escort. She refuses to ride with Eady and starts off alone. Ethan catches up with her and in the long walk surrenders to the joy and the warmth that radiate from her.

The story rushes swiftly to its tragic outcome. Zeena becomes suspicious and insists that Mattie leave at once. Ethan cannot help her. He has neither money nor influence. He cannot oppose the wishes of a sick wife. Quite as little can he disregard his obligations to Mattie, now dependent upon him. He is caught in the web of circumstances, and it enmeshes him beyond escape.

Ethan Frome is convincingly portrayed. Life has ebbed lower and lower on the New England farm. As one of the lesser characters in the novel explains the situation, 'most of the smart ones get away.' But the door of escape does not open for Ethan. Taking Mattie to the station on a sled, he stops for a coasting slide down the long slope where they have before promised each other that they should have some share in one of the pleasures of the Starkfield young people. They are both desperate. They would rather die than live, and, feeling this, Ethan drives the sled carrying them against the big elm at the bottom of the hill. The crash does not kill them, but Mattie is carried back to the Frome farm so bent and broken that she will never be able to leave the place again.

Zeena marvelously recovers from her ailments

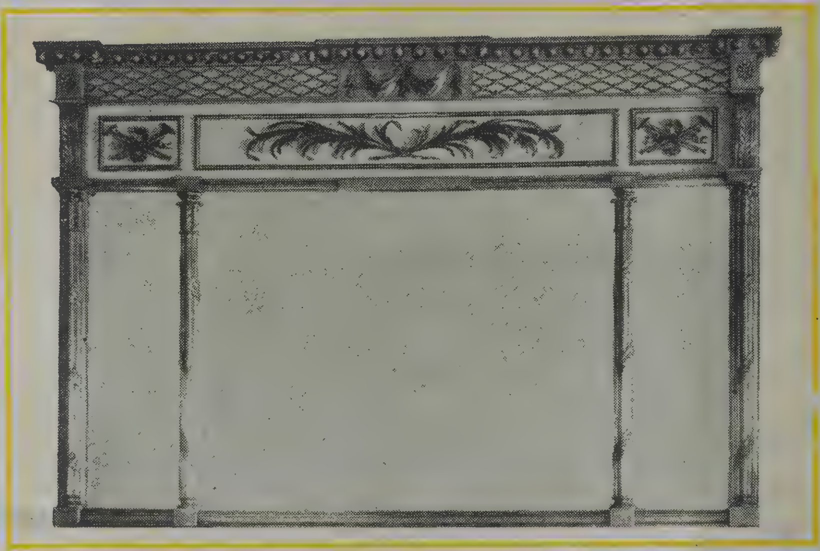
(*Continued on page 22*)

REFLECTIONS of OTHER DAYS

By MARY HARROD NORTHEND

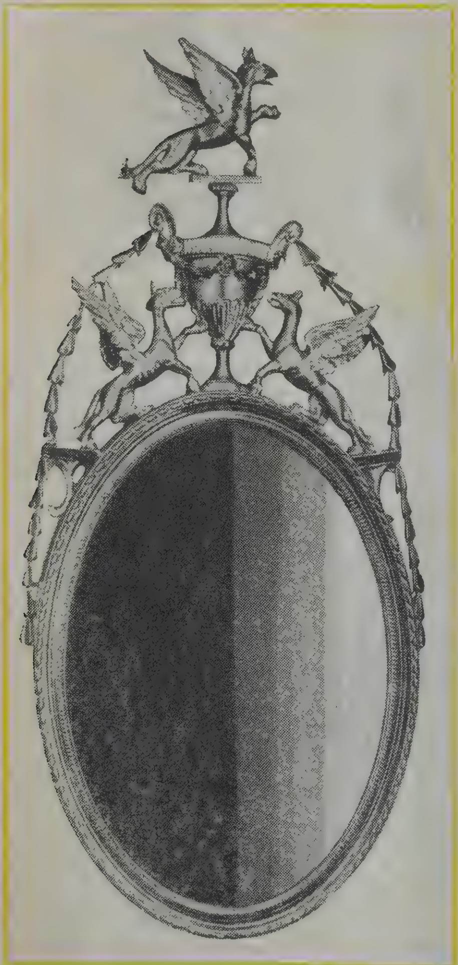
MOST ancient of all our accessories is the mirror, that reflecting bit of glass that means so much in our daily life. Its origin is shrouded in the twilight of mythology, and our only real clews are the fragments which Mother Earth and the tombs have yielded to us, sometimes in a fair state of preservation.

We know that glass was made by the Egyptians, and yet the only mirrors that have come down to us from them, or from any other ancient source, are those made of metal, very highly polished, and often containing silver and gold. The first form of the mirror was the hand glass, and only fragments of it remain to us. We know, however, that metal mirrors were made in sections so arranged in grooves in the wall that they could be moved up and down to show the figure at full length. Cleopatra was supposed to have possessed such a mirror, but its magnificence can only be imagined, for no authentic description is available.



Horizontal mantel mirror with three plates of glass, dating from 1790.

Glass mirrors coated with tin that were used in the days of Pompey have been found in Italy but just when and where silver-backed glass was first employed has never been definitely established. As early as 1373 the Germans had acquired a knowledge of glass mirror work, and in the 15th Century they invented a curious form of mirror construction called the 'bull's-eye.' In the 16th Century the Venetians did a large business in the manufacture and exporting of glasses with quicksilver backs, and in 1665 the French Government induced twenty of these glassworkers to come to Paris, where a method of making plate glass was perfected which made France thereafter the mirror market of the world.



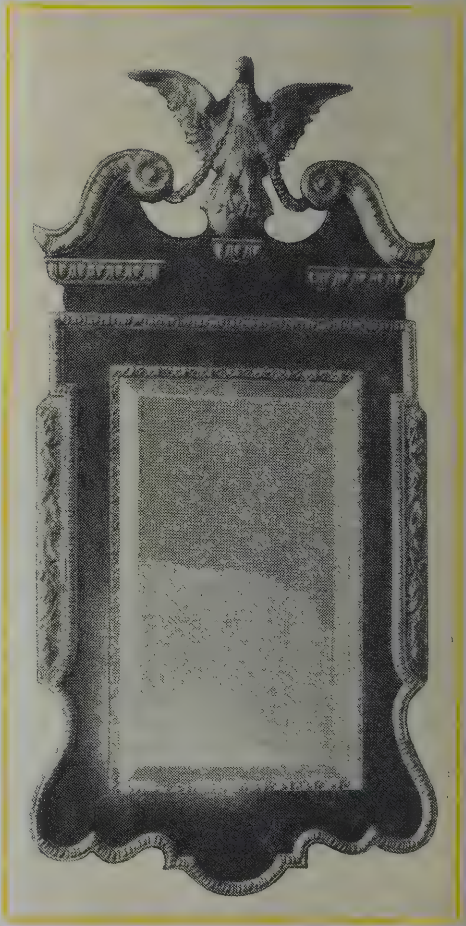
Looking-glass of French make, date 1750, showing Chippendale influence.

The history of mirror-making in England might be said to date from 1670. From that time on, rapid strides were made in the manufacture of looking-glasses, those of the Queen Anne and Georgian periods being particularly notable.

Mirror glass in the early stages was 'blown' and beyond the length of three and one-half feet was too thin to be used in making mirrors. If a greater length was desired, it was necessary to add a second piece, and thus the longer glasses of the early 18th Century were made in two pieces, one overlapping the other, or with a moulding to hide the intersection.

In the latter part of the 18th Century, Chippendale made mirrors of great charm, and it was during this time that Chinese designs became so popular. Later, Hepplewhite and the brothers Adam designed mirrors of real worth, the former making them in shield and oval shapes, usually in pairs.

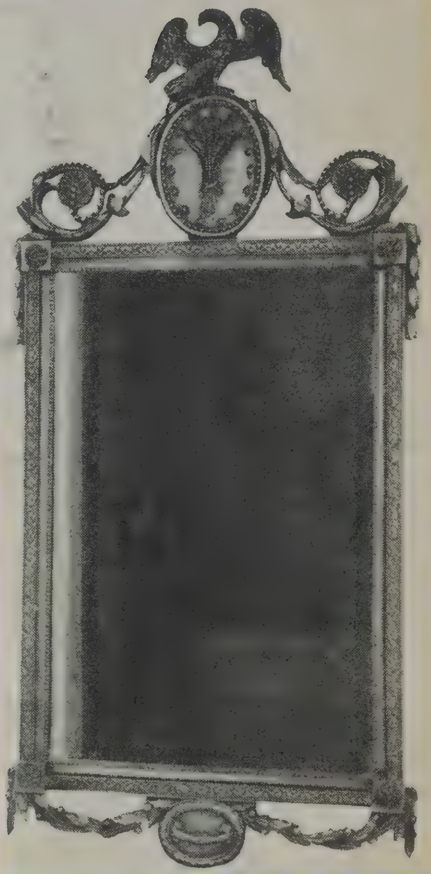
During the earlier part of the Georgian period the revival of the Queen Anne mirror began, and by 1800 the lines of this model were much in evidence. Previous to this, looking-glasses were manufactured in large



Looking-glass of 1750 with scroll pediment, a popular ornament.

numbers in America, and from 1780 to 1790 the famous 'Constitution' glasses were made. This period also marked the vogue of the quaint girandoles and bull's-eyes.

Mantel glasses were in great demand throughout the 18th Century, but more especially after 1760 when both oval and oblong shapes began to be popular. The cheval glass, never at any time a common piece of furniture, enjoyed its greatest favor about 1830. Some excellent designs of this type had been previously fashioned by the great English cabinetmakers, notably Sheraton, but comparatively few of them have survived in this country. At the present time, mirrors of the better type follow the old designs, and so our better grade of modern mirrors are modern only in so far as they are reproductions. Of course, we have progressed in the quality of the glass used, and we have varied the designs to suit our needs—notably the combining of small pieces to form a grouping that fits into the framed wall space over a sideboard or other feature—but in framing we have had the good sense to follow the simple lines and exquisite ornamentations of the old types.



Girondole of about 1800, in the Longfellow home at Cambridge. Left—Frame with scroll pediment and pendant leaves, dating between 1725 and 1750. Right—Betrothal mirror, designated by clasped hands at bottom. Fifteen stars in the top medallion indicate the states in the Union at the time the mirror was designed.

The very word 'mirror' is interesting, meaning as it does 'to look at' and 'to reflect,' but the word is no more interesting than the object itself. Until a comparatively recent period, the mirror was regarded as strictly utilitarian with little value attached to its decorative worth. The vogue of antiques swept the enthusiast into research of hitherto unappreciated accessories, including the mirror, and as a consequence we learned what a decorative object it was.

The old mirrors had a real place in the furnishings, and when we came to realize what they could be made to do today, we set about with characteristic thoroughness to combine our superior modern reflecting surfaces with the exquisitely designed frames of the old types. And while they still serve the purpose of allowing us to see ourselves as others see us (their first requisite) they have come to play a real part in interior decoration, and thus they fulfill their secondary mission 'to reflect' and incidentally enhance and augment whatever there is of beauty and charm within their range.

In the small apartment they are particularly effective in that they apparently increase its size. Rightly placed the mirror endows the small room with an aspect of space and light truly remarkable. Observe the work of expert interior decorators in any type of room, and note the importance they attach to the mirror. It enters into every scheme they devise, and its placing is not haphazard, but carefully planned to catch and reflect the most attractive part of the room.

Adroit use of the mirror in the small, rather shadowed hall creates an atmosphere of cheerfulness. Place within its range a pretty bowl of flowers—apple blossoms, roses, or simple garden blooms—and note the brightening effect the reflection of their colors creates. From another angle the gay chintz hangings at one of the living room windows, glimpsed through the open door, are repeated in the mirror surface, supplying a vivid touch to the somber wall on which the mirror hangs. The value of a mirror in such a spot cannot be overestimated, and so if your hall is a bit shadowy, by all means employ a mirror to give the needed brightening touch.

In rooms facing the north, upon which the sun turns its back during the long winter months, use a mirror in conjunction with notes of orange or red. No colors bring such warmth of tone as these two, and yet they are infrequently employed, probably because they are so little understood. Let us suppose our choice for effect is orange, our room a bedroom, and our wall coverings putty-toned. Hang the mirror above the black chest of drawers which show as decoration narrow bands of orange. Choose an orange runner for the bureau top, softened at the ends with blendings of old blue. Repeat these tints in the curtain hangings, and on the floor lay a two-toned blue rug. Introduce a predominance of orange in the chair cushions, and hang within range of the mirror a wall pocket of blue luster filled with a tangle of orange bittersweet vine. The vivid orange will be repeated from every angle in the mirror's reflecting surface, bringing the glint of sunlight to add a welcome touch, but its vividness will not be overemphasized, thanks to the toning influence of the ebony and the softening shadows of blue.

The average living room shows space for two mirrors, if we are fortunate enough to be able to spare two for this apartment. Over the mantel, the simple oblong mirror in dull gilt frame is a pleasing choice, or if your scheme of decoration calls for a smaller mirror in this space, one of the oval mirrors of the Adam type will meet your needs. Between two windows and above a console, a Queen Anne mirror is particularly attractive; or a Colonial mirror framed in dull gilt, perhaps showing a decoration of grapes in the paneled space just above the glass panel finished in the same dull gilt; or an etched glass panel set into a rounded top is equally enhancing.

If you are fortunate enough to possess an antique mirror, such as a 'Constitution' or 'Rococo,' by all means let your living room have the benefit of its presence, for either is a choice bit that will add immeasurably to the charm of the ensemble.

Fortunately, the average living room in the small house is arranged with proper regard for its size and lighting facilities; hence the need of mirror placing to secure light and space is not important here, though it is wholly important that the objects your mirror surface reflects are worthy of the attention thus bestowed upon them. I always make it a point to have some growing thing, a few colorful geraniums or a grouping of flowers in a pretty bowl—within range of my living room mirror, and thus I am enabled to enjoy their loveliness in double measure. The mirror, of course, reflects whatever its range of surface includes, but it seems to me to reflect with more vigor the glorious beauty of lovely flowers as though loath to lose the gay companionship of their nodding heads.

In the dining room, above the console, the square mirror of good size is very popular at the present time, or if console tables are used, the small-sized oval mirror, one over each table, is much in vogue. Both these arrangements are admirable, especially if their range includes the china cupboard filled with peasant pieces or luster ware. Another arrangement particularly good if dark tones predominate is the placing of long rather narrow mirrors on either side of some feature in a shadowed wall space.

In a dining room showing white paneled walls the mantel mirror is charming, more especially if brass sconces balance it. Gilt, two-toned or polychrome frames are suitable in such a setting, and the mirror through its placing reflects the table and those who gather round it, inviting furtive glances into its clear depths.

The mirrors now available for milady's personal use are wonderfully alluring bits, free of the uprights that heretofore attached them to the dresser. They seem designed for the small house, and their use is constantly growing in favor. Frequently they match the painted chest of drawers and are hung on the wall space at a comfortable height just above it. Sometimes an ornate design with gilt frame is chosen for contrast, or if you are desirous of introducing a vivid note of coloring into the scheme of decoration you may select a mirror frame of dull Chinese red to hang above an ebony chest. The choice of mirror for the bedroom can be as simple or as elaborate as you desire, depending of course on the choice of furnishings.

ONE scheme has a chest of drawers painted soft gray with decorations of garlands of flowers and bright-plumaged birds. The mirror above is of good size also painted gray and topped with an urn of varitoned flowers. Flanking the mirror are silver sconces, their lights shaded in blush-pink silk. This scheme is particularly effective in the bright sun-warmed room of its placing, but it would be entirely out of harmony in an apartment less sunny.

Some of the most effective bedroom mirrors I have seen are framed in black and used in conjunction with black furniture. Somber? Not at all. The window drapes, chair cushions, table runners, rugs, candlesticks and other accessories, showing tones of old gold, jade green, some mauve, soft rose, rich blue, and a dash of orange, each and every one emphasized and reflected not only in the mirror surface but in the ebony of its frame and the furnishings, combine to make one of the gayest ensembles imaginable. Black is a wonderfully decorative background color, as well as a potent factor in lending character to too pale an interior. Therefore do not be afraid to use it if you wish to secure pleasing and unusual effects.

The small mirrors are replacing to some extent the triple mirrors of the dressing table.

Their use in this respect, however, is a matter of preference, and just how far the pendulum of popular favor will swing in the substitution of one for the other is mere conjecture at this time. Both have their good points, and both will undoubtedly enjoy a period of popularity.

Undeniably mirrors occupy a little field all their own, and they are so potently charming in any scheme of decoration that they deserve to receive the same care and consideration in their placing that we bestow upon the more essential furnishings.

Vikings of Lake Michigan

(Continued from page 9)

people have turned the ugly landscape into good homes and busy cities.

The settlers on Washington Island planned in like manner. Their rock-spattered fields have been cleared; their homes have been made comfortable and their lives are devoted, quiet and peaceful. Three school buildings have come with their progress; roads have been built out of crushed stone from their rock-piled hedgerows; harbors have been improved; agriculture has been fostered, and each year about forty thousand bushels of seed potatoes are exported. Purebred Holstein cattle have been imported and it is the dream of the fisher folk farmers that Washington Island may some day have a reputation for purebreds such as is now enjoyed by Guernsey Island off the coast of England.

Mail carrier meets a boat at open water.

Isolation affords certain opportunities for shelter and development, which some people seek. Long before the coming of the white settlers, Washington Island was a well-known Indian meeting ground and about its rough formation many fascinating legends still abound. Early in the 16th Century, it was a haven of refuge for warring tribes; later it was the home of nomadic Winnebagoes. While recorded history does not tell of the many Indian exploits, there is tangible evidence of occupancy and progress everywhere. The water's edge is strewn with camp sites, workshops and cornfields. In the interior are the mounds of the Indian cemeteries. It must have been long the home of red men.

When the first white traders came in their canoe visits through the Mackinaw passage, the place was peopled. For unknown reasons, it was deserted before the time of our Revolutionary War. After the departure of the Indians, Washington Island was left to its dreams and its memories until about the middle of the past century. When wood was the only article of fuel, the expanding cities of Chicago and Milwaukee obtained a part of their supply from this vicinity. Barges were brought here and loaded and the commercial world knew the island only as a cordwood emporium.

Winter snow banked high around the doctor s home on the island.

Fisher folk were the first permanent settlers. Their early landings were at Rock Island, a little mountain of limestone about a mile across at the north. The place was soon deserted, however, because of its barrenness and Washington Island became the common home for the fishermen. So many had gathered by 1850 that a township was organized before there was a county to which it might claim membership. It was not until the settlements of the Icelanders that the agricultural progress of the island started.

The coming of the Icelanders dates back over fifty years when William F. Wickman of Milwaukee, who had spent some years in Iceland for the Danish Government, encouraged a group of Icelanders to emigrate and selected Washington Island as a suitable home for them. It is the oldest Icelandic settlement in America, and with it have been associated men later prominent in the larger settlements in Minnesota and Manitoba as both scholars and writers. These early Icelanders started the fishing trade and developed the soil. The reports back home of their progress resulted in the coming of more of their kinsmen to the Mississippi Valley and it is estimated that there are now more than thirty thousand Icelanders and their descendants in Canada and more than ten thousand in the United States.

INVITING as this fishermen's empire may seem upon a visit, it can only be reached by crossing a treacherous strait so dangerous that its bed is strewn with the wrecks of boats and the graves of people. For the inhabitants this menace of angry waters has been no discouragement. Spanning the narrow distance of twelve miles is a passage called the *Port des Morts*—the Door of Death—so named by early French voyagers and traders because currents and strong winds drove sailing vessels into the danger-fraught byway. Near here, according to tradition, La Salle's *Griffin*, the first sailing vessel to ply the Great Lakes, while laden with a cargo of furs, was wrecked in 1679, and since then scores of passing boats have come to their doom. In the summer of 1871 almost a hundred vessels suffered shipwreck. Treacherous as the straits are in summer, they are even more so in winter. The ice forms late and disappears early. Owing to the strong undercurrents brought inland by shifting winds, the ice breaks up and a surface frozen solid in the morning may be wave-rippled by evening.

The story of how the mail is carried daily through 'Death's Door' to the island settlers is a narrative of hardship which rivals any narrative which has come out of the lands of dog teams and mountain passes. Through conditions so dangerous that they tax any except fiction-fed imaginations, the mail sack at Ellison Bay post office on the mainland is carried in one way or another, depending on winds, to the Detroit post office on the island. During the winter the task is particularly hazardous. The 'Door' is filled with treacherous ice which is constantly moving, and at a moment's notice open water may be encountered. The ice is so thin in places that for miles it cracks under the weight of the carrier and his sack. Heavy snowstorms and blizzards add to the dangers, so blinding the carrier that he often loses his way.

For many years, this mail was carried by Captain Pete Anderson, a character known all along the Lake Michigan shore. Oftentimes he has lain on his stomach on the thin ice, in order to distribute his weight more evenly, and wiggled across. The veteran performed his duty as calmly as the ordinary person would sit down to dinner. Two or three times in the last few years the mail carrier has been carried out into Lake Michigan by powerful moving ice floes. Always his rescue has been accomplished by the heroic assistance of the brave lighthouse guards at Plum Island.

ABOUT a year ago Anderson with a single horse and sleigh was caught on a field of moving ice, which was being broken up. Soon it was barely large enough to float the carrier, sleigh and horse. A stiff wind was carrying him out into the lake, and his position was a most precarious one. Watchers at the lighthouse station on Plum Island spread the alarm. Starting to the rescue in their small boat, they had great difficulty in fighting the ice floes, and it was only through what seemed superhuman effort that they forced their way close enough to the ice cake that was supporting him to throw him a line, but not until he was almost out in Lake Michigan, with the mammoth waves nearly washing over the ice ferry that supported him. The horse and sleigh were saved by towing the ice cake back to calmer waters.

ALTHOUGH Washington Island has a population of one thousand people, there is not a village on the island. A gathering of a few houses, a store, ice cream parlor for summer only, and four or five residences makes the nearest approach to a settlement. One drives along the smooth, open road and suddenly finds himself before a solitary building, which he recognizes as a store. It stands as alone as a farmhouse and looks much the same.

Insular life tends to the growth of community spirit if not to congested building. The people of the island are like one big family, law-abiding, kindly, God-fearing. There is a blending of races. Icelanders have married Danes and Danes have married Norwegians in many cases.

With this genuine community mingling has come progress. There has been a steady improvement in agricultural development within the past few years. Fields have been fenced and the little white cottages have been repainted. There are picturesque homes. Many of the frame buildings are of low setting, mostly of Norse design, much like the country houses of distant Norway and Iceland. Some have blinds with dark-green trimmings. Surrounding the cottages are flower beds and fruit trees, showing a home life artistic and domestic. Pear, apple and plum trees are found on each farm.

These fisher folk of Washington Island are a patriotic people. Icelanders, Norwegians, and a few Danes comprise most of the inhabitants. There are about one hundred farms and thirty fishing boats manned by a hundred and fifty men. Of the one thousand inhabitants, forty-three of them fought in the World War, four of whom gave their lives, and the township went over the top in every war drive.

Fishing boats that put out from Washington Harbor.

Hawthorne and Brook Farm

(Continued from page 1)

to write. One feels, in reading it, the warmth and freedom of a happier mood; fate strikes, but also liberates; life overcomes death.

This second book, *The House of the Seven Gables,* was a fitting sequel to the first. It was happily and freely written, and Hawthorne felt impelled at the same time to compose two volumes of stories for children, based upon classic legends, which are still read by generations then unborn.

But *The House of the Seven Gables* having been launched, a new book must follow, and what should it be?

The author had come out into the world, and had met the flesh-and-blood men and women who inhabited it—persons of the passing moment—whose activities were not overshadowed or controlled by influences from the past. The new book was to be a story of today, concerned with contemporary events. The tone of the narration, the scenery and the ideas should be such as readers might recognize without straining their eyes into the shadows of early Colonial history.

Ten years before, when Hawthorne was engaged to be married to Sophia Peabody and was casting about for a suitable habitation to take her to as his wife, he had considered throwing in his lot with the Brook Farm experiment. This was a sort of Utopia, on what appeared a practical basis: persons of education and refinement, men and women, married or unmarried, with or without independent means, were to associate together in a self-supporting community; the men would raise market produce both for their own use and for sale in the neighboring city; the women would have charge of the household, and in their leisure do sewing and other women's work, for pleasure or profit.

It had no doubt been suggested by Fourier the Frenchman's remarkable writings on the Utopian theory: it was modified to suit New England notions of propriety. Hawthorne, still in his thirties, thought it worth trying; but common sense was strong in him, and before taking a wife thither, he would test its possibilities as a bachelor. For a year or so, therefore, he put on plowman's attire and dug and planted with the best of them. He made up his mind that the thing wouldn't work, and quit, married, rented the Old Manse in Concord, and dwelt in a paradise of his own, writing the tales that made up *Mosses From an Old Manse,* helping his wife to cook dinner, and raising a daughter.

But that year at Brook Farm lived in his memory, and when he needed a theme and place for his new novel, Brook Farm supplied them. Of course, the actual Brook Farm wouldn't serve. But *Blithedale* was the spiritual offspring of the reality, which gave substance to the writer's dream.

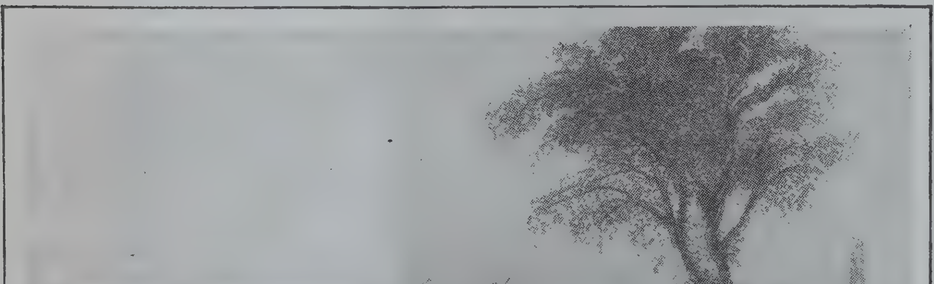
Log cabin built on a small island formed by the brook. Oval—The present quarters of some of the children, originally one of the buildings of the colony.

The story is told in the first person by Coverdale, a young college graduate, with a leaning toward the romantic.

Beneath a tranquil and agreeable surface are latent powerful and tragic passions, disclosed only in the concluding chapters; the detail is charming, and the characters have unfailing human interest. The story develops naturally, and the interest never flags, even though the inner source of interest is but dimly suspected. The climax brings a shock of surprise, but is shown to have been inevitable from the outset. Picturesqueness and simplicity are dominant everywhere, but the structure is strong, and the work is convincing throughout. Yet I doubt if *Blithedale* has had a tenth as many readers as has either of the previous two books.

Not only did Brook Farm furnish a setting for the story, but Hawthorne avails himself of it in various notes and studies which may be found in his journals. We are early introduced, for example, to the character of Old Moody; who, in the end, turns out to have been the very source and center of the whole complication. Such a person is minutely described, from real life, in a notebook of years before. Hawthorne had been living in Boston at that time, and in his leisure hours had investigated the ways and byways of the city, and had come across a queer personage who haunted the doorways of a tavern in an out-of-the-way precinct, offering pencils and other small wares to patrons of the place. He was an obscure and shrinking creature, but he impressed Hawthorne's imagination, and he comes to life in *Blithedale.*

As for the superb Zenobia, the leading



Boston in 1849. Bunker Hill breaks the horizon on the right.

woman in the story, she has no prototype, though readers at that time attempted to identify her with Margaret Fuller, a noted exponent of woman's rights and wrongs at about that period.

Nor can any prototype for Hollingsworth be found among Hawthorne's acquaintance; he is the most powerful character in the story, and perhaps in the whole range of Hawthorne's writings, but he seems to have been as much a creation as a character of fiction can be.

PRISCILLA, however, in her outward aspect, may be detected in a little anemic seamstress whom some benevolent person brought to Brook Farm to recuperate: the journal sketches her portrait. Coverdale, the teller of the tale, was of course assumed to be Hawthorne himself—except by persons who happened to be acquainted with the author. On the other hand, the old farmer of *Blithedale* is no doubt a study from life, and a very real one.

In the latter part of the book, Coverdale visits Boston for a few days, and occupies a room in a hotel in the older city, with a window which overlooks the back yards of both the hotel and the houses in the adjoining street. This place is depicted in the journals, even to the flock of doves and to the cat which frequent the region: Hawthorne had himself lived for a day or two in the hotel, and amused himself by jotting down what he saw.

Not to prolong these similitudes, the main incident of the book is the drowning of Zenobia; and in one of the journals of 1842 or 1843 is a long account of the search in the Concord River for the body of a young woman of the town who had committed suicide by drowning. Hawthorne had taken part in this search, and his young friend George William Curtis was with him: the whole description is very powerful, and the essence of it appears in the book.

After the publication of *The House of the Seven Gables*, in 1851, it was decided to move nearer to Boston; it was almost as far a journey to Berkshire then, as it is to California now. One farm wagon carried our belongings, parents, children—one, a mountain-born baby a few months old—and Luther Butler, the farmer who drove us; but it was impossible to take the cats, seven of which had joined our outpost during the two years of our sojourn.

Luther said he would take care of them; perhaps he did. They followed the wagon for a hundred yards, till the road dipped down the hill; looking back, we saw them sitting in a row, outlined against the sky. Winter was near; the mountains surrounding the little lake—Stockbridge Bowl, as they called it—were gray in the misty morning sunlight; the woods that clothed the countryside were crimson and yellow; the air was pure; we would never see the like again. The children were happy in the mere change of place; but perhaps the older people knew better.

Ellery Channing had been writing to Hawthorne, beseeching him to come to Concord, and Hawthorne had been negotiating for the purchase of the little house which he afterward called The Wayside, a mile from the town center, on the old Boston highroad. But the house was not yet quite ready; so we must stop on the way, and the place chosen was the little hamlet of West Newton, about twenty miles west of Concord, I suppose. It was in no respect attractive, especially after the mountains; but Mrs. Hawthorne's sister, who had married Horace Mann, the teacher and reformer, had leased a large, raw house there, painted white, with green shutters; and begged us to fill the vacant rooms.

Nothing less conducive to literary composition, especially of the imaginative sort, could be conceived; but Hawthorne liked to write in the winter months, and he was by this time full of the story. The interior was like a packing case, papered and painted, and supplied with a New England furnace, with 'registers' in the floors and walls, through which streamed a suffocating heat. In a compartment of this container, the romancer must write his romance. All that the children knew of it was that he was withdrawn from them several hours every day; when he came out, he would walk with them in the snow, or show how to make a snowman and throw snowballs; but it was not like Lenox snow. It may have been from this, however, that he created *The Snow Image*, which was the last of his short tales, and must have been composed after *Blithedale* was done and at the printer's. It was a little masterpiece.

Mrs. Horace Mann, our aunt, had three children, a trifle older than our trio. She and her husband were bringing them up on a system which did not appeal to us, and led to mild disagreements in our contacts with them. It was nothing serious; but we were glad when winter was past, and Concord came.

The new book went very well, helped of course by the success of the previous ones, but, as I have remarked, I doubt if, in the long run since its publication, it has found nearly so many readers as the two first did.

It is a common observation that when an artist has done a telling bit of work, the public expects him to write forever after in the same vein, and is offended if he does not.

Another *Scarlet Letter* was demanded of Hawthorne; at any rate, another *Seven Gables*. But he could and would write only from within; and *Blithedale* was found to be not, so to say, in the legitimate succession.

It revived discussion of the moral and philosophical rights and wrongs of Brook Farm; the real aim of the story was lost sight of.

Hawthorne meant to convey the idea that segregations of humanity do not work; such units must be dependent on the larger mass that surrounds them, and economic independence turns out to be an illusion.

I SAID just now that it was composed under what would seem difficult conditions; but about twenty-five years ago I happened to see the manuscript of the work, then in the collection of George W. Childs, the editor and philanthropist of Philadelphia.

It was remarkably clear and free from erasures; more so than the manuscript of *The Seven Gables:* more like that of the *Wonder Book* stories, which were written rapidly and earnestly. The manuscript of *The Scarlet Letter* was destroyed by the printers, and we know nothing of its character.

The delightful legibility of *Blithedale* indicates, of course, that it was a copy of the original, though the time during which he was occupied with the book was quite short.

Nothing, however, is really known of his habits of composition; even his wife avoided entering his study during his working hours; he always read aloud to her the finished result, and gave heed to her criticisms.

Many years ago, in pursuance of a plan to investigate the scenes of Hawthorne's novels, I visited Salem, Boston and its environs, and consulted with old residents who had preserved relics and reminiscences of the past. After this research, I set forth to explore the present condition of Brook Farm.

Although the institution had been in existence but forty or fifty years before, I found a prevailing ignorance on the part of Bostonians as to where it had been; it could not have been north, or east, or south; it must have been somewhere west. Persistence finally revealed that it was, like 'Blithedale,' not more than a reasonable morning's drive from the city; and I performed the journey in a buggy, accompanied by an obliging friend: this was long before the automobile age.

WE PASSED through several small villages, characterless and forlorn, with empty fields spreading out on either side, and patches of leafless woodland straggling away into the distance. After about an hour, we turned aside from the main thoroughfare, and followed a crooked and difficult lane, which brought us to slightly elevated ground, on the summit of which appeared a large, irregular frame building, which had an uninhabited aspect. The lane seemed to come to an end at the foot of a flight of wooden steps, leading up to the house. As I said before, this was many, many years ago.

We got out of the buggy and made our way up, conjecturing whether the place were tenanted. On the right flowed a small brook, from which no doubt the farm derived its name; beyond, the landscape sloped toward this stream on both sides. We were now faced by a weather-beaten door; there was no bell, and we knocked on it several times, without response.

At last, steps were audible, shuffling across the floor within, and the door was pulled open with a jerk, as if unaccustomed to such treatment. A girl of twelve stood staring at us, as if embarrassed by callers, her scanty hair twisted in pigtails, little round eyes staring in her pale face, her mouth partly open. We asked her if we could see the man of the house. She made no answer, but allowed us to step in, and pushed the door shut behind us. She then led us along a passage, and admitted us to a large room on the left, on the floor of which sat several small children, six to ten years of age, who stared up at us strangely, but made no response to our greeting. The girl who had ushered us in left us standing there, and went off in quest of the proprietor.

The other children remained undemonstrative. At length there was a sound of footsteps in the passage, and a man appeared in the doorway. We were strangers to him, of course, and he looked at us with seeming suspicion, as if we had broken in upon him in some unlawful pursuit. When we made our errand known, he replied haltingly, and with a German accent. It presently transpired that he was unfamiliar with the English language, but as I had lived some years in Germany, I tried him in that tongue, and we began to establish communication. We learned that the house was an orphan asylum for destitute children of parents of German extraction. In those early days funds were none too plentiful and the institution was passing through the critical period of too many inmates for the money available. Today, of course, the institution has progressed to a point where it is no longer poverty-stricken; and it is doing much good among its little charges.

Had he ever heard of the Brook Farm Community? After some reflection, he thought he had but was surprised to learn that this had been its site. He knew nothing of a book called *Blithedale;* but being assured that such a book had existed, and that the son of its author stood before him, he offered to conduct us through the place. He turned, and we followed him down the long passage.

On this lower floor were two or three large airy rooms, with little or no carpeting, and a kitchen, brick-floored, with a range at one side. I have a notion that this kitchen had also been the community dining room; it was large enough to have been partitioned off at one end. But if there had been open fireplaces, they were now bricked up.

HE INDICATED another passage leading into a wing, in which he said a few female paupers were accommodated; we refrained from exploring it. We now went upstairs; the halls or entries were wide; the rooms into which we looked were large as dormitories, with cot beds; the make of the house throughout was massive, dating back to more virile days. Now and then we would come across small groups of children, with books in their hands; they sat in polite submissiveness at little desks, but at the pastor's command—*'Eins, Zwei, Drei!'*—they got to their feet and made their obeisance.

We were glad to get out into the November air. Along the low ridge were the ruins of four or five smaller dwellings; the pastor said that they had been burned some years before. On the border of a piece of woodland, at some distance, stood a cottage which had escaped the fire, but which was unoccupied. Looking through the window we saw heaps of apples and corn drying on the floor: the place had the appearance and the picturesqueness of abandonment. A nearby inclosure contained numerous headstones of graves, but bore no inscriptions; here were buried unknown souls who had departed this life either while at Brook Farm or in some later day, after that community was closed.

Across some plowed land rose a mass of brown rock in front of a clump of trees. In the distance, meadows broadened toward the Charles River. I had seen enough: and this was Blithedale!

The creations of genius are formed of trifling materials, which genius only can spiritualize into scenes of beauty or terror. But Fourier would have been surprised to see the home of his Yankee disciples transformed into an asylum for pauper widows and destitute orphans, administered by a German pastor with limited means. He had dreamed of an Eden on earth, and this was what it had come to!

Ethan Frome and Anna Karenina

(Continued from page 15)

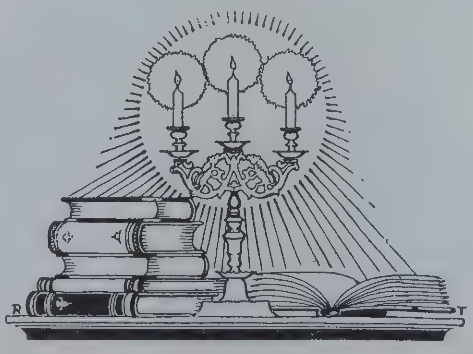
and nurses him and Mattie faithfully. The three go on living, but their life has become mere existence. Grim, taciturn, unyielding, Ethan limps over his barren acres to drag out of them all that they will surrender to his needs. He is thenceforth a soul apart, austere, self-contained, a stern human solitude.

* * *

On a larger scale and in the setting of a fuller life, Tolstoi's Anna Karenina tastes a like bitterness of the unfulfilled and of the impossibility of fulfillment. In the fashion of her people and her time she has married a man she does not love. They have a son whom Anna loves passionately. Her husband is an able man, but he is absorbed in his ambitions. Routine has fastened itself on him. He does the thing he should do at the time it should be done. There is no warmth in him, and Anna's warmth demands warmth in answer. A young military officer with bright prospects has been bestowing on her a devotion such as she has not known before. He is not high-minded or distinguished. But he has charm and he yields to Anna's beauty with an abandon that makes him irresistible. Against her will, Anna soon comes to love him, and to hate M. Karenin.

There is very little that is novel in this situation. A woman, unhappily married, falls in love. Unnumbered thousands of women, unfortunately, have gone the same road. What makes her case distinctive is the network of difficulties by which she is encompassed and from which it seems impossible for her to draw away. An imperious need for genuine fellowship is left wholly unsatisfied by her relations with Karenin. The elegancies with which he surrounds her add only to the hard perfunctoriness of her existence. She has cultivated the society of men and women wholly uninteresting to her, upon whose influence Karenin's political career largely depends.

From her own lips Karenin hears of her new attachment. He might let her see that he suffers in having lost her love. The show of such feeling in him might serve to check the rush of her passion to its disastrous culmination. She is capable of regrets, and even under present circumstances she yields to them momentarily. Her husband does nothing to give them permanence. His chief concern is for his honor. He will not give her a divorce. That is not in agreement with the principles of his church. He forbids her receiving her lover at the house, but he does not object to her meeting him outside. He insists that they shall continue living together and that she shall conduct herself publicly so as not to injure his reputation. Devotion to his career and his public life possesses him more powerfully than devotion to her.



After the birth of her girl it soon becomes no longer possible for them to continue living together. She tries to break off her affair, but fails. When it is clear that she cannot escape, she decides to leave her husband without the divorce that Karenin has tentatively promised. The lover resigns his commission in the army. With the little girl, they go to Italy and establish a home.

It is fairly impossible to escape from those we know or have known. Within the limits of civilization, there is no real refuge from the chance coming of the unwelcome friend. Defying the judgment of the world, the lovers are never unmindful of it. Whether with strangers or with old acquaintances, they must always ask themselves how the friend or the stranger views them and their relations. These anxieties and misgivings torture Anna. The lover lets them pass more easily. At times Anna is buoyantly happy. At other times she suffers terribly. The strain begins to tell upon them. They are abnormally in love, and for that reason Anna is abnormally subject to jealousies and distrusts.

At length they go back to St. Petersburg. The question of their social acceptance becomes burningly insistent. Privately some friends call on Anna, but they let her understand they cannot openly receive her. The one thing that will reëstablish her is a divorce and the legitimating of her relations with the lover. As that possibility fades into disillusion, Anna finds herself the prey of growing suspicions. She has no hold upon her lover beyond his affection for her. His devotion so far has been at the complete sacrifice of his career. He has cut himself adrift, and it is hardly possible, she fancies, that he does not secretly entertain regrets. When he is away from her she is sure that he must be making love to some other woman.

Between her suspicions and anxieties and her unhappiness in being separated from the son she loves, Anna reaches the desperate resolve to make away with herself. She throws herself under the wheels of a railroad train.

Tolstoi has endowed Anna Karenina with a passion for loving, with a passion for sacrifice, with a capacity for suffering, such as make her fiction's strong example of the tragedy of loveless marriage, of the evil of a social system that sets its face too steadfastly against divorce, of the madness of any attempt to live in isolation from the judgment of the world and in defiance of it. She is not a wanton, and she pays the price of being in herself better than the thing she does. Few such women excite pity, few deserve it. Few are so much to be pitied. Even Karenin pities her; but certainly he has a greater right in her first-born than she. They cannot both have him without living together. They can no longer face each other in the same house. Drinking too deeply of the cup of love, Anna flings down the whole goblet of life at last because she has a starved heart.

Thanksgiving

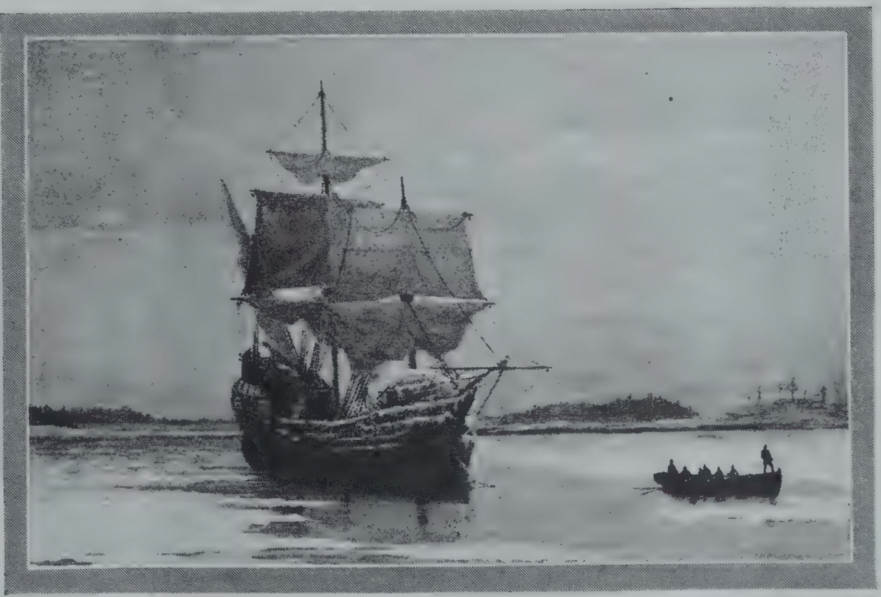
(*Continued from page 7*)

Thesmophoria, the harvest festival of ancient Greece, was akin to the Jewish Feast of Tabernacles and was devoted to Demeter, the foundress of agriculture and the goddess of harvests. Some of its features are identical with those of the harvest festivals still observed in northern Europe. The eiresione, a branch of olive wreathed with wool and decked with fruits, bread, et cetera, carried in procession and hung over the door of the home for the year, belonged to the Erntemai (Harvest May) of Germany.

The harvest festival of the Romans was called the Cerealia, in honor of the deity named Ceres. Festivities began with a fast on October 4, after which there were processions in the fields, with music, rustic sports, and the inevitable feast of thanksgiving.

THE Booth Festival of the Syrians; the Hindu festival of Dasahara; and Carnea, the nine-day festival of the Spartans, all were in celebration of the harvest and resembled in particular the 'Tabernacles' of the Hebrews in that everyone lived in tents or pavilions in memory of their old camp life.

Harvest feasts of the Peruvians, observed by Purchas in 1626, were noted in his *Pilgrimage:* 'In the sixth moneth they offered a hundred sheep of all colours, and then made a feast, bringing the mayz from the fields into the house . . . They put a quantity of the mayz (the best that groweth in their farms) in a thing which they call Pirva, with certain ceremonies, watching three nights. Then do they put it in the richest garment they have, and, being thus wrapped and dressed, they worship this Pirva holding it in great veneration.'



—Copyright, Detroit Publishing Co.

'The Mayflower in Plymouth Harbor,' painted by William Formby Halsall.

The practice in Kent, England, of making from the best corn of the field a figure called the Ivy Girl, which was dressed by the women and brought home with the last load, to be the central figure in a thanksgiving feast, bears a strong resemblance to the Peruvian Pirva.

In England the autumnal festival of the crops was generally called the Harvest Home, and may be traced back to the Saxons of the time of Egbert. It was known in Scotland as the Kirn.

A Journey Into England, written by Paul Hentzner in 1598, contains the following about Windsor: 'As we were returning to our inn, we happened to meet some country people celebrating their Harvest Home; their last load of corn they crown with flowers, having besides an image richly dressed, by which perhaps they would signify Ceres: this they would keep moving about, while men and women, men- and maid-servants, riding through the streets in the cart, shout as loud as they can till they arrive at the barn.'

The manner of escorting the last load to the barn varied in different places. In many parts of England it was borne in a wagon known as the hock cart. A pipe and tabor went sounding merrily in front, and the reapers, male and female, tripped around in a hand-in-hand ring, shouting and singing. A description by Herrick shows how ancient is this custom:

Come forth, my lord, to see the cart
Drest up with all the country art.
The horses, mares and frisking fillies
Clad all in linen white as lilies.
The harvest swains and wenches bound
For joy, to see the hock-cart crown'd.
About the cart heare how the rout
Of rural younglings raise the shout;
Pressing before, some coming after,
Those with a shout, and these with laughter.
Some blesse the cart; some kisse the sheaves;
Some prank them up with oaken leaves:
Some crosse the fill-horse; some with great
Devotion stroak the home-borne wheat;
While other rusticks, lesse attent
To prayers than to merryment,
Run after with their breeches rent.

In Herefordshire, the final handful of grain, left uncut, was tied erect, and was named the 'mare.' The reapers, one after another, threw their sickles at it to cut it down. The successful individual called out, 'I have her!' 'What have you?' cried the rest. 'A mare, a mare, a mare,' he replied. 'What will you do with her?' was then asked. 'We'll send her to John Snooks,' or whatever the name, referring to some neighboring farmer who had not yet harvested all of his grain. This piece of rustic pleasantry was called 'Crying the mare,' and referred possibly to the time when, the land lying open and in common fields, the crops were subject to depredations of the wild mares. The season when they were secure from their ravages was a time of rejoicing, as well as of exulting over their tardier neighbors.

The Twelve Moneths, written by Stevenson in 1661, discusses the Harvest Home in the following manner: 'The furmenty-pot welcomes home the harvest cart, and the garland of flowers crowns the captain of the reapers; the battle of the field is now stoutly fought. The pipe and the tabor are now busily set a-work; and the lad and the lass will have no lead on their heels. O 'tis the merry time wherein honest neighbors make good cheer, and God is glorified in his blessings on the earth.'

In the Abbé de Marolle's *Memoirs,* a description of the state of France under Henry IV, is found the following account of Harvest Home: 'After the harvest, the peasants fixed upon some holiday to meet together and have a little regale (by them called the Harvest Gosling); to which they invited not only each other, but even their masters, who pleased them very much when they condescended to partake of it.'

A figure made out of the last sheaf of corn and called the Bastard signified the harvest in west Russia. A woman and a boy were chosen for the ceremonies. The boy was wrapped in the sheaf and took the part of a newborn child; the woman represented the 'corn mother.' An elaborate simulation of childbirth took place, the boy in the sheaf squalling, and being wrapped, on his liberation, in swaddling bands.

All these thanksgivings have originated in the animistic belief in the corn spirit, or corn mother. The personification of the crops has left its impress upon the customs of all nations.

Modern harvest festivals contain only vestiges of the former practices. Store shelves now intervene between foodstuffs and the fields, and the thanksgiving of the present generation is little more than a too abundant dinner.

However, the Pilgrims, in observing their first Thanksgiving, gave to the world some wholly American articles of diet. The turkey is indigenous to the Americas. It is the only friend of man to be domesticated in modern times. How the bird came to be so named has never been satisfactorily explained. Nothing like it ever lived in Turkey. One reason advanced for the puzzling appellation is that at the time the first settlers dined on wild turkey, a flourishing commerce in novelties from Turkey proper to northern Europe had settled the impression that things unusual came from that country.

And the cranberries that, sauced, complete the *piece de resistance* of the Thanksgiving dinner were formerly unknown to all but an appreciative few, including Noah Webster, who, in one of his first 'Unabridgeds' ventured the notation in small type under the definition of cranberry: 'Sauce consisting of stewed apples is a great article in some parts of New England, but cranberries make the most delicious sauce.'

Under *the* FLAG *of the* BEAR

By FRANCES HOLBROOK PFEIFFER

Copyright, C. M. NEUNER.

ALTHOUGH as early as 1826-27 a trapping party headed by Jededian S. Smith had come overland to Los Angeles, the first organized wagon train came in 1841, a year before Frémont's first expedition.

In this party that started from the Platte Reserve was a young man of twenty, John Bidwell, who became one of California's most distinguished pioneers with large holdings.

It is hard to imagine the courage required to start and carry on a wagon journey in that day. Danger from Indians, the vast wild country, the herds of buffalo through which they had to shoot and force their way for days at a time; the hardship of travel, the scarcity of food; the effort to avoid the deserts to the south, and the fear of the canyons of the Columbia at the north; the hazards involved in reaching the Humbolt River and following it to the great Sink in western Nevada, crossing the Carson River, following the Walker River; the abandoning of the wagons, the hardships and danger of crossing the high Sierras, the discovery of the extreme head waters of the Stanislaus River, the slow descent into the beautiful San Joaquin valley to a land of plenty where rest and comfort and safety was found at the ranch of Dr. John Marsh—all make a long and thrilling story of a six months' journey over an untraveled half-continent, made by the first immigrant wagon train into California!

Several years later the historic Donner party, taking a different route, endured sufferings and privations unspeakable during a terrible winter spent in the Sierras at Donner Lake. The remnant of this party was rescued by brave men who had gone on in advance, aided by Captain John Sutter, the generous and genial guardian of the California frontier.

Commodore Jones made an unfortunate mistake when, from his warship in the bay in 1842, he demanded the surrender of Monterey and hoisted the Stars and Stripes over the old Customs House, believing that his country and Mexico were at war—a mistake which he at once corrected by lowering the flag and apologizing in person to Governor Micheltorena in Los Angeles; the affair ended amicably in a grand ball.

Later in the same year John C. Frémont, 'The Pathfinder,' made his first expedition overland, guided by Kit Carson, to mark out the best road for pioneer travel. Frémont made a second overland journey in 1843-44, and another in 1845, when, with the rank of lieutenant colonel, he was placed at the head of a Government expedition ostensibly to do 'topographical work in California,' but in reality to be Johnny-on-the-spot when the expected war with Mexico should be declared—to keep England out and to seize the province.

Castro, the California general, disturbed by the military aspect of Frémont's expedition, threatened to drive it out and force the immigrant trains to return. Frémont defied the general. It was in this tense state that trouble was precipitated when a party of Frémont's men captured a convoy of horse from Castro's lieutenant.

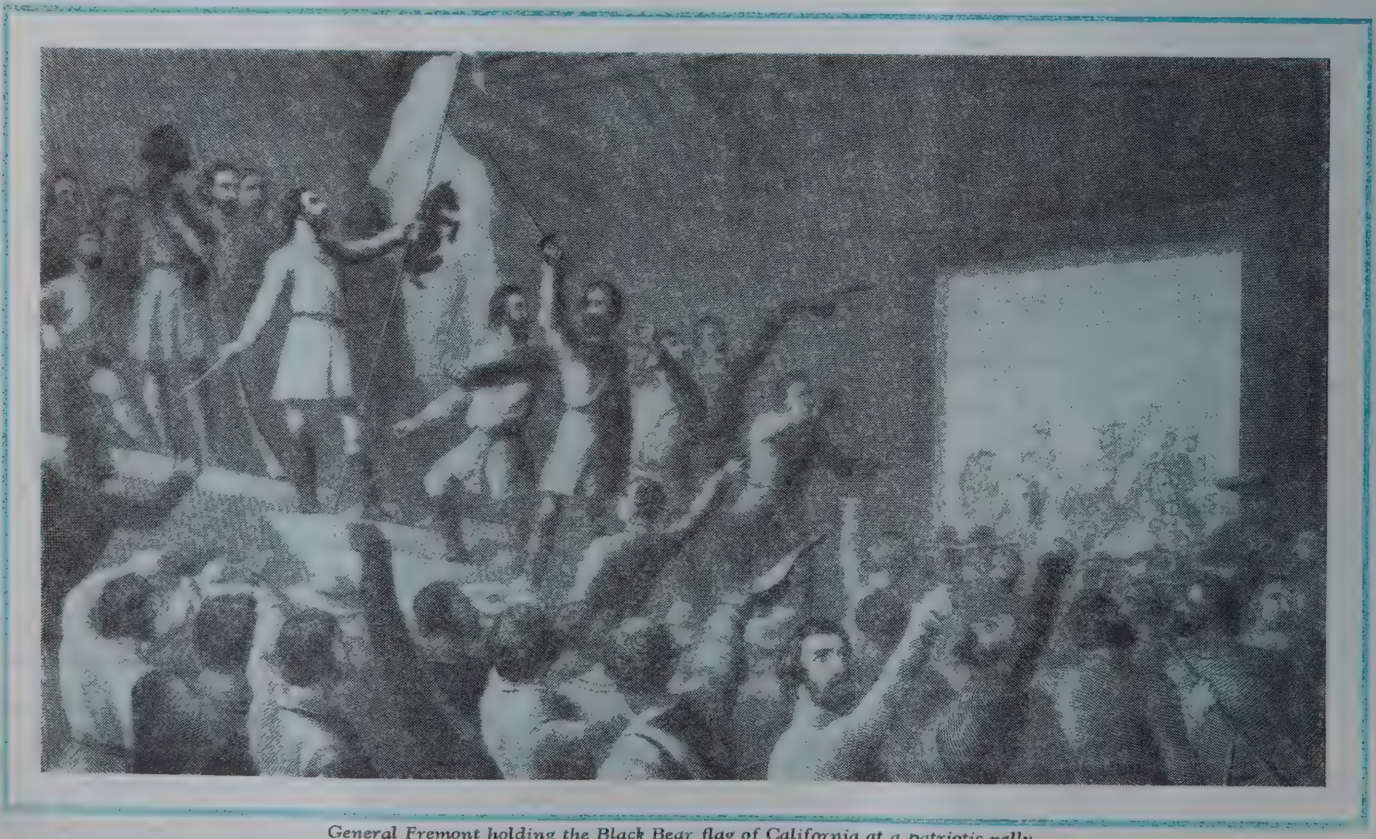
The next step quickly followed! Frémont's men hastened to Sonoma and commanded General Vallejo and his family to surrender as prisoners of war, greatly to that dignified gentleman's surprise.

When the Americans realized that they had had no definite orders from Frémont, they hesitated; but, knowing that if they backed down now their action would smack strongly of horse theft and holdup, William B. Ide made a stirring speech urging them to complete their task. So the prisoners were conducted to Frémont's headquarters at Fort Sutter.

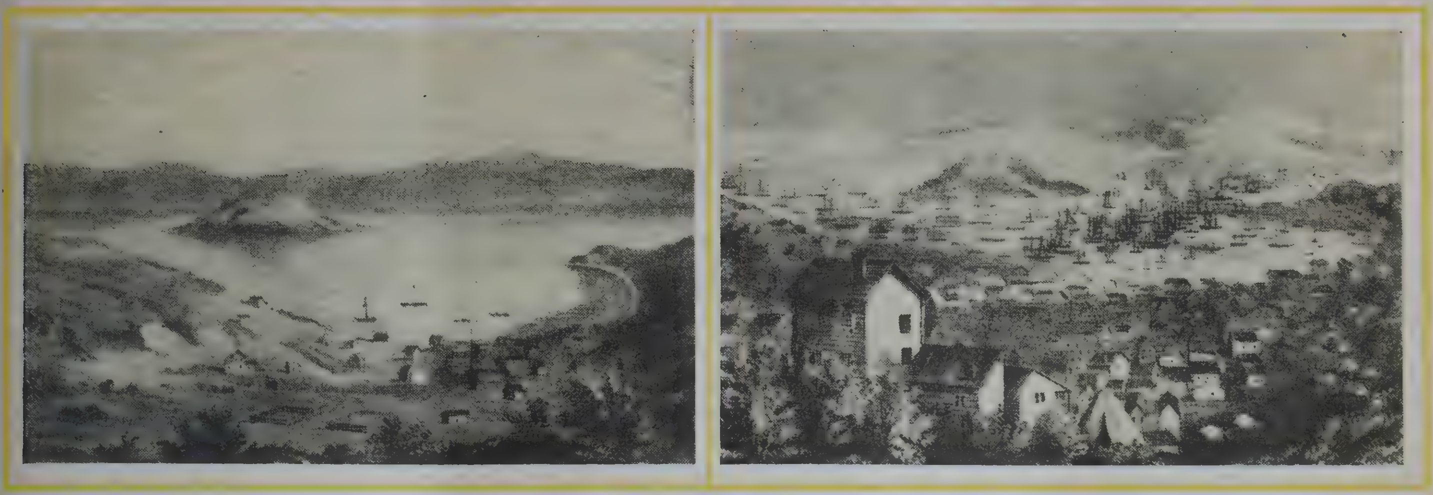
The Americans took possession of Sonoma. Feeling that they had started a war, and not knowing that hostilities had already begun between the United States and Mexico, Ide maneuvered out of a ticklish situation by declaring the independence of the 'California Republic'!

As they deemed it unwise to use their country's flag, they made their own, with the fiercest animal in California, the grizzly bear, for their emblem. This famous flag was lowered only when the republic was at an end—when the Red, White, and Blue on July 10, 1846, unfurled to the breeze over the old Customs House in Monterey, and in other places in California.

For, after Commodore Sloat had issued his proclamation containing the magic words, 'Henceforth California will be a portion of the United States,' and had raised the flag over the old Customs House in Monterey, and when it was finally fluttering in the breezes of Yerba Buena



General Fremont holding the Black Bear flag of California at a patriotic rally.



San Francisco in 1847, and one year later, after the 'gold rush' had begun.

(San Francisco) and Fort Sutter, and had replaced the 'bear flag' in Sonoma in July, 1846—it quickly marked the way down the coast to San Diego.

The United States, as early as 1840, had instructed its consul at Monterey to secretly influence leading Californians to secede from Mexico as Texas had done. The plan was overthrown as it was about to succeed. President Polk tried earnestly to gain peaceful possession of California, but failed. So Frémont was sent out to reconnoiter.

Although there was considerable 'back talk' at first between the greasers and the gringos, friendly relations were established between Californians and Americans as they grew to understand each other.

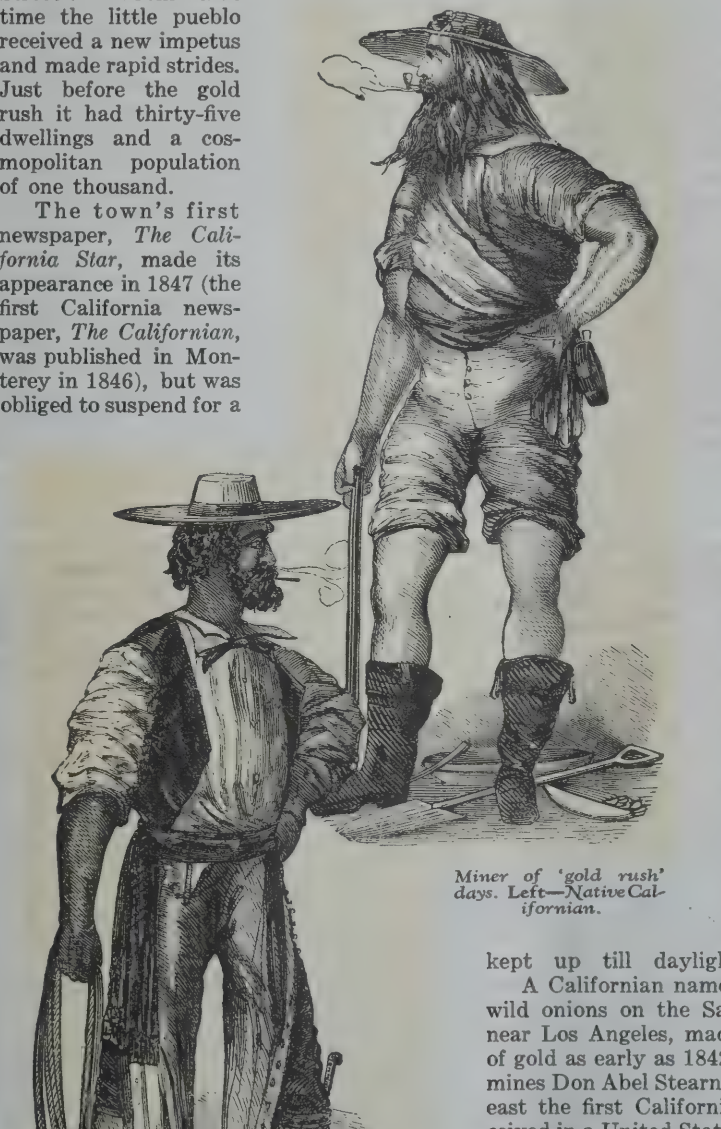
WHEN General Stockton issued a proclamation on August 17, declaring 'California entirely free from Mexico,' the conquest was practically complete. We like to remember, however, that the people made a spirited resistance, especially in defense of Los Angeles, then their capital, which resulted in the battles of Domingues Rancho, of San Gabriel, and of Laguna Rancho. The hardest fight, in which several American officers were killed, was the surprise attack upon General Kearny at San Pasqual Rancho in San Diego County. Without the timely aid of Frémont this battle would have ended disastrously.

Frémont also took possession of the Presidio and San Francisco, and named the 'Golden Gate'—never dreaming of the prophecy implied in that name. The Pathfinder's battalion of mounted riflemen really saved the day in California, giving us, practically, a bloodless victory. And the peace terms proposed by Frémont were so advantageous to the defeated that the way was quickly cleared for amicable settlement when the treaty was signed at the old Cahuengo Rancho halfway between Los Angeles and Santa Barbara.

The Mission and the Presidio of San Francisco were founded in 1776, but the location was considered 'undesirable' for a pueblo. Even so, the lure of the place was not to be withstood. But for many years subsequent to 1841 the residents were largely the agents and the people of the Hudson's Bay Company. There were only a dozen houses in the pueblo in 1844, and about fifty people. In 1846, the Hudson's Bay Company sold out and departed.

When Captain Montgomery raised the United States flag over the Plaza he changed the name to 'Portsmouth Square' for his sloop of war, *Portsmouth*, and named the shore 'Montgomery Street'! From that time the little pueblo received a new impetus and made rapid strides. Just before the gold rush it had thirty-five dwellings and a cosmopolitan population of one thousand.

The town's first newspaper, *The California Star*, made its appearance in 1847 (the first California newspaper, *The Californian*, was published in Monterey in 1846), but was obliged to suspend for a while during the 'gold rush' because everything was gone from 'subs' to 'devil'!



Miner of 'gold rush' days. Left—Native Californian.

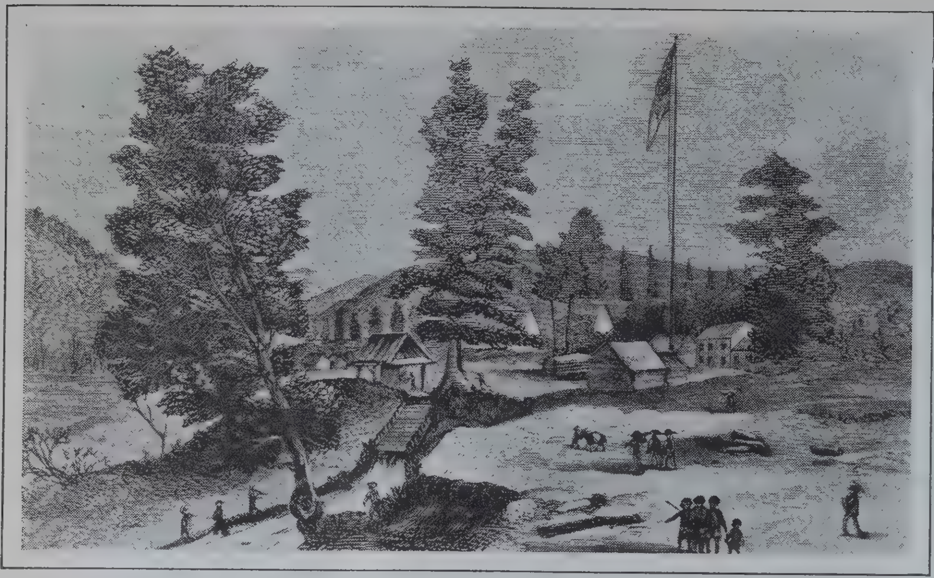
In 1847 the name Yerba Buena was changed to San Francisco. Prices of real estate compare very interestingly with those of the present day: Tide or water lots, comprised now in those many blocks from Montgomery Street to the Ferry Building, sold in 1847 for $50 to $100. The authors of *Annals of San Francisco* comment, in 1853, on the astonishing price of water lots, 'farther out and smaller,' ranging from $800 to $1,600! Land lots uptown, 180 feet square, sold for $16, including fees.

The gayety of San Francisco's social life began right after the conquest, when a large ball was given in honor of the United States officers, 'where upwards of 100 Californian and American ladies were present and a large number of gentlemen. The dancing was very spirited and kept up till daylight.'

A Californian named Lopez, digging for wild onions on the San Fernando Rancho near Los Angeles, made the first discovery of gold as early as 1842. From those placer mines Don Abel Stearnes of Los Angeles sent east the first California gold dust ever received in a United States mint. These mines were worked for about four years, yielding from $6,000 to $8,000 a year.

The real discovery of gold in California, the magic of which was felt over a nation and a world, was made in 1848 by John Marshall, seemingly by accident.

Sutter's Fort was at the end of the emigrant trail, over which hundreds of



Sutter's sawmill at Coloma in 1849.

American families were coming. Captain Sutter, always hospitable and eager to make those weary and hungry people comfortable, decided to build a mill to grind his grain into flour for them.

But first a sawmill had to be built to saw the needed lumber. John Marshall, placed in charge of this work, chose a site on a swift mountain stream, now known as the American River, near Coloma.

In the tailrace of this mill he found the first bright nugget!

At first John did not know what the shining thing was, the color was so much paler than that of any gold he had seen. He took it to Captain Sutter who, scholar that he was, wisely consulted his encyclopedia, found the specific gravity of the metal, and pronounced it gold.

In spite of efforts to keep the discovery a secret, the news leaked out, and before long people began to drift in with pan and shovel, until Marshall and his men with difficulty kept the mill from being undermined.

Early in the spring, samples of the gold were taken to Colonel Mason, California's first American military governor. The governor's adjutant, Lieutenant W. T. Sherman—afterward our great Civil War general—was called in to look at the nuggets and his opinion asked.

Under Sherman's test the metal was again pronounced *gold!*

In the summer the governor and his lieutenant visited the gold region, and then dispatched an army officer to Washington, via Peru and Panama, so that the Great Discovery might be made a part of the President's message in December.

The news spread by sea and land to the emigrant trains on the way to Oregon, many of which then turned south; to sailors who deserted their ships; across the Isthmus to New England, and even to far-off Europe.

Then began the great gold stampede unprecedented in the annals of the world!

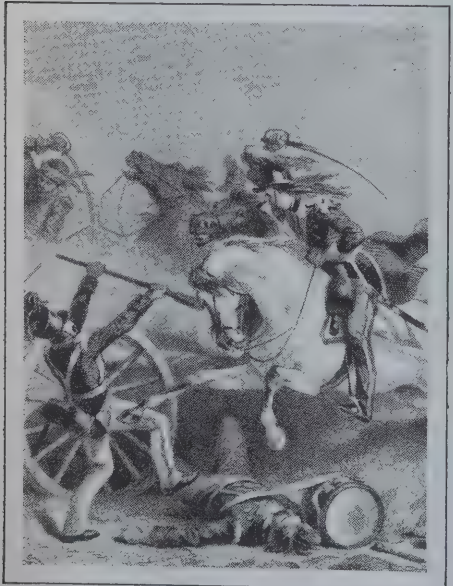
Directly after the discovery of gold in the Sacramento valley, San Francisco, which had been growing into an active community, became a deserted village. Wild frenzy seized all classes. Stores and offices were closed; families abandoned; ships deserted in the bay in the mad rush to the 'diggin's.'

The stampede spread over the state, the nation, and the world. People flooded in over three routes, all fraught with danger; the Argonauts from the north Atlantic states came 'around the Horn,' many in old, unseaworthy vessels which had been freshly painted and sold to meet the great demand; from the Southern States they usually chose the Isthmus route, and the Middle Westerners the crawling wagon trains overland.

San Francisco became a city almost overnight. Ships crowded each other through the Golden Gate, and the bay became a forest of masts. The town filled. Shanties and tents spotted the sands; abandoned water craft were dragged out on the mud flats and used for houses. There were such long lines of people before the post office that many times as much as $100 was paid for a place near the window!

Miners returned with their pockets full of gold to spend hilarious days and nights—and often all their money—in the 'city.' Gambling became a regular business. 'Those who followed it professionally were among the richest citizens of our town.'

There was plenty of money. In the year '49 the mines yielded $40,000,000, and in '53, $65,000,000. In that district today are some of the richest mines in the world.



An intense moment of action in the war with Mexico, depicted by Darley.

Beaumarchais

(*Continued from page 14*)

Beaumarchais by official action of the Congress, recorded in the official *Journal of Congress* as of date January 15, 1779. The resolution reads:

> Resolved, That the following letter be written to Mr. de Beaumarchais:
>
> Sir, The Congress of the United States of America, sensible of your exertions in their favour, present you with their thanks and assure you of their regard.
>
> They lament the inconveniences you have suffered by the great advances made in the support of these States. Circumstances have prevented a compliance with their wishes, but they will take the most effectual measures in their power to discharge the debt due to you.
>
> The liberal sentiments and extensive views which alone could dictate a conduct like yours, are conspicuous in your actions and adorn your character. While with great talents you served your prince, you have gained the esteem of this infant republic and will receive the merited applause of a new world. By order of Congress.

One regrets to add as sequel to this glowing tribute that, when Beaumarchais put in his bill, the same Congress delayed payment, but finally, probably to insure further supplies, gave notes due in 1783 for about one-half of the amount.

Franklin complained in 1782 that Beaumarchais promised him a formal bill but delayed for years in presenting it. Some error is apparent here in that the official *Journal of the United States Congress* of June 5, 1779, gives an itemized statement of four and a half millions of livres owing to Beaumarchais.

In December of 1776 Franklin arrived upon the scene and became almost immediately a popular hero in France. The multitude idolized him as representing the man of the people in power. The aristocrats loved him because of the brilliance of his wit. Within a brief period Franklin became the leading representative of the American interests and within a few weeks of his arrival arranged a loan of two millions, which was much needed. Franklin was able, on February 6, 1778, to conclude a treaty of amity and commerce with France, which resulted shortly thereafter in French and then in Spanish conflict with England.

Any serious study of the official French, American, and English letters of the crucial period from 1775 to 1778 reveals how the way was prepared for Franklin by Beaumarchais. While the American now played naturally the leading rôle in the American play as seen in France, nevertheless the French author-merchant continued energetically his shipments until the very end of the war.

Franklin was not intimate with Beaumarchais, partly because of the machinations of Arthur Lee and Dr. Dubourg, and probably largely because of a certain similarity in mental make-up. Both were men of wit and genius; both were courageous and versatile; both were accustomed to the leading rôle. Franklin repeatedly acknowledged our indebtedness to Beaumarchais, while disclaiming knowledge of the conditions under which the first debts were contracted, as these were made before his arrival.

On October 4, 1779, Franklin wrote to John Jay:

> As to the Accounts of that Gentleman, neither the Commissioners . . . nor myself since, have ever been able to get a sight of them, though repeatedly promised . . . Indeed, if I had them, I should not be able to do much with them, or to controvert anything I might doubt in them, being unacquainted with the Transactions and Agreements on which they must be founded, and having small skill in Accounts.

Again on August 12, 1782, Franklin wrote to Robert Morris:

> That he was furnished with his funds by the government here, is a supposition of which no foundation appears . . . He has often promised solemnly to render an account in two or three days. Years have since elapsed, and he has not yet done it. Indeed, I doubt whether his books have been so kept as to make it possible.

Here it should again be noted that in the *Journal of the United States Congress* for 1779, a detailed statement was made by De Francy, authorized agent for Beaumarchais.

At the end of the war, Beaumarchais began his efforts to secure payment for the debts acknowledged by Deane but disputed by Arthur Lee. American finances at this time and for several years thereafter were such that all doubtful debts were disputed. Beaumarchais himself was also in financial difficulties due to his having planned and executed an edition of Voltaire which cost him half a million.

The gifted author, the noble friend of America, died in 1794. Long before that, Alexander Hamilton, first Secretary of the Treasury, had decided that the United States owed Beaumarchais 2,280,000 livres. The United States disputed one million, though without French support, on the basis that this was intended by the French Government as a gift. Not until 1831 was final settlement effected with the heirs of Beaumarchais by their allowing 800,000 francs as an offset against American claims for damages against France for injuries to American shipping. No glory attaches to this settlement.

The actual documents of history show Beaumarchais to have been honest and honorable in his commercial dealings, and even in his private life, beyond the demands of his day. Undoubtedly the author was not a good bookkeeper; had he been an able financier, the American venture would not have been begun, nor would it have been continued when American repayments in kind failed to arrive. The official archives of France, England, and America, as noted above, reveal the nature and the extent of his services.

Occasionally, historians permit themselves to disparage the services because rendered in the ultimate interests of France. What would you? A drowning girl does not wait for a handsome unmarried rescuer, but accepts the services of even the freckled father of three children.

The gifted author of the *Barber of Seville* was a son of his times, which permitted much upon which we frown today. His very weaknesses contributed to the effectiveness of his service to America! As time goes on, Beaumarchais will stand with Washington and Franklin as one of our great heroes, worthy of national commemoration. To him more than to any other foreigner of the Revolutionary period our tribute is due.

Diplomats of the Quarter-Deck

(Continued from page 6)

brought him world-wide notice and praise.

Back in 1921, the Greeks in Samsun were having a hard time with the Turks, who, according to the practice among fighting Eastern nations, ordered the enemy population deported to the interior of Anatolia. The order applied to all Greeks, irrespective of age or sex. The day after the order was issued to the governor of Samsun, Admiral Bristol personally appealed to Mustapha Kemal Pasha in the name of humanity to rescind the order, at least so far as children and old folk were affected. He called attention to the fact that many of the ten thousand civilians affected would probably die on the way, as had happened on similar occasions. He hoped that Kemal would reconsider a step that would produce a bad impression on the outside world. As a result, the deportation, although not entirely stopped, was materially reduced.

As the representative of the Department of Commerce, Admiral Bristol was charged with promoting trade relations for American business with the Near East. And it might be said in passing that from fifteenth place before the war American commerce has increased until it has tied for second place.

In Brigadier General Russell of the Marine Corps the Navy has had another diplomat of ambassadorial rank. In this instance it was as high commissioner to Haiti.

ANOTHER instance of the employment of a naval officer in diplomatic work was that of Rear Admiral McCully in southern Russia, the genial officer who brought back with him a family of seven adopted refugee children. At the urgent request of the State Department, Admiral McCully was lent for his diplomatic mission in the position of official observer, a responsible post that brought him into close contact with Generals Denikin and Wrangel. His reports, made directly to the State Department, were of immense value in shaping this Government's moves in the Russian tangle.

Rear Admiral Philip Andrews furnished a striking instance of the exercise of diplomatic ability in the course of a purely naval command. At a critical time during the Armistice period he was detailed in charge of the naval forces maintained in the Adriatic to assist in the execution of the terms of the Austrian armistice. His duties were primarily those of a naval officer, but he is generally credited with having kept the peace—averted open hostilities—between the Italians and the Jugo-Slavs, who were ready to fly at one another's throats at the drop of a hat. In speaking of Admiral Andrews' work there, the late Admiral Knapp declared:

'By tact and persuasion, combined with firmness and justice, through many weary months he prevented the tension between the Italians and the Jugo-Slavs in his vicinity from breaking out into open conflict. Surely this was a display of diplomatic qualities of a high order, to which I am the more glad to testify here because they do not seem to have had elsewhere the recognition that they deserve.'

Our watchfulness over the affairs of our sister republics to the south of us has furnished American naval officers with frequent opportunities of displaying their resourcefulness as diplomats. There is hardly a revolution in these sunny volatile republics that does not involve in some way at least one American naval officer, be he an ensign or an admiral. In many instances he is obliged to hasten to the scene of disorder, jump into his gig, hurry ashore, and let the disturbers of the peace know what's what according to their Uncle Sam; and all this many times with no instructions from Washington. He is thrown upon his own resources in interpreting the will of his government in that particular case. Instances of this could be cited almost without end.

A typical case concerns Rear Admiral Bradley A. Fiske.

In 1912, Admiral Fiske was ordered to carry American Minister W. W. Russell to Santo Domingo. Upon arriving there, they found a revolution hatching. The insurrectionaries were awaiting the arrival of their leader Horacio Vasquez, who was then hiding in the island of Saint Thomas watching for an opportunity to cross over and take command of the rebels. Admiral Fiske persuaded Russell that the wisest course would be for the admiral to go to Saint Thomas and warn Vasquez not to come to Santo Domingo. All efforts to get Vasquez to come aboard ship for a conference failed.

Admiral Fiske, however, gained his point in another way. He persuaded the governor of Saint Thomas to promise to prevent the departure of the rebel chieftain from the island, and the promise was faithfully kept.

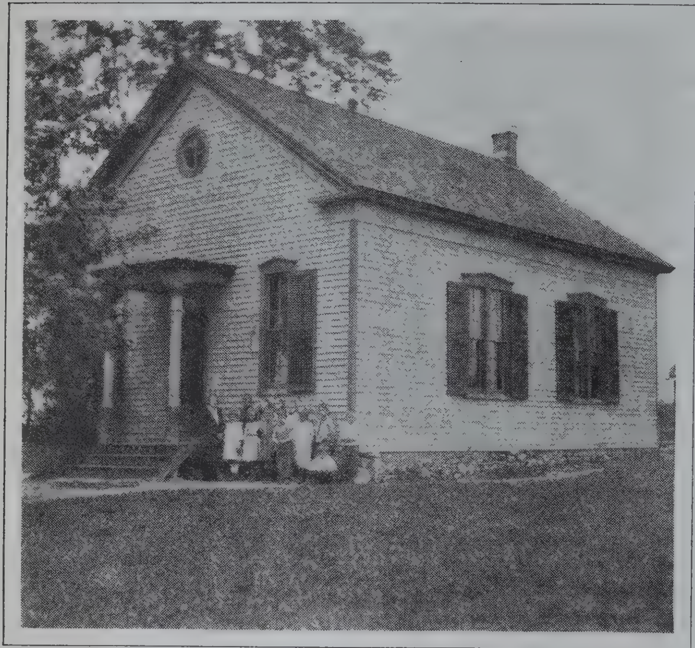
During the occupation of Vera Cruz by our forces in 1914, Rear Admiral Frank F. Fletcher was afforded an opportunity of displaying his ability as a statesman and as a diplomat. It devolved upon him to reorganize the entire government of this important Mexican seaport, which he did with thoroughness and marked success. Apropos of this, it is not generally realized that much of the money appropriated annually for the Navy by Congress is spent in administering civil government in our foreign possessions. Some of this is spent in the Virgin Islands. The Navy has governors also at Guam and Samoa.

NAVAL officers have played a prominent part in treaty making. One of the first instances of this was when Commodore Stephen Decatur brought the Bey of Algiers to terms and in 1815 was cosignatory with William Shaler of a treaty that put an end to the tribute exacted by the Barbary pirates. The United States was the first nation to stop payment of the blackmail.

In 1826, Captain Catesby ap Roger Jones of the Navy negotiated a treaty with the Hawaiian government on his own initiative and without special instructions. It was an excellent treaty, as was discovered after the Senate had failed to ratify it. The advantage of being the first nation to enter into treaty relations with Hawaii was lost. A few years later British and French naval officers negotiated treaties that were ratified by their governments.

The District School

(*Continued from page 3*)



—*Ewing Galloway Photos.*

Thirteen pupils and the teacher of an old-fashioned schoolhouse in Connecticut.

was walking, there was a race to see who could meet her first, and the littlest one had the honor of holding her hand. She was gallantly relieved of any impedimenta.

Presents to the teacher were the fashion. Many and amusing—even touching—were the gifts I used to receive. There were flowers, of course—from the beautiful products of old-fashioned country gardens to tight little bunches of withered nasturtiums or a few leafless and almost stemless daisies and buttercups picked on the way to school. Shiny apples, doubtless polished on jacket sleeves, were a favorite gift. Thimbleberries, strung on long grasses, and buds from the strawberry shrub in the home yard were popular selections; and once a small red tomato was proudly presented to me. I always remember that tomato and the black-eyed little French boy who offered it, warm and moist, from his grimy little hand! But the most wonderful gift I ever received was a marvelous pincushion fashioned of stuffed triangles of varicolored silks, each dangling from a central group of big triangles attached to the standard of an old oil lamp. I kept it as a curio for many years. As a piece of work it was truly wonderful, and as a labor of love—almost pathetic!

Teacher's desk was a veritable museum of articles confiscated from various naughty children. There were jew's-harps, notes, marbles, tops, chewing gum—a collection varying from day to day, as the precious possessions were returned each night unless the offense was too flagrant. Different viewpoints are interesting: I, as teacher, used often to marvel that pranks which seemed so original and clever when we were the perpetrators were so devoid of these attributes when conditions were reversed!

Discipline often had to be ingenious to be effective when one was dealing with such different degrees of age and mental capacity. Feruling was the last resort; it was a back number even in my youngest days.

Standing on the floor in front of the school or in a corner, which involved a terrible effort to look unconcerned and indifferent before one's fellows; holding an extended hand with or without the burden of a book; a split twig adjusted over the end of a delinquent's nose—or tongue, if he was caught fibbing; a girl's having to sit with the boys or vice versa; staying after school; these were a few of the disciplinary aids to which the hard-worked teacher resorted in her efforts to keep order.

I remember an experience of my own in administering the latter mode of correction. One day one of my pupils, who was usually a well-mannered boy, was so unruly that I requested him to stay after school! When we were finally left alone after other cases had been attended to, seeing no signs of repentance in him, I remarked, 'Charlie, remember that I am not keeping you for *my* pleasure or satisfaction. It is inconvenient for me to stay, and I want very much to go home!' 'Let's both go!' instantly replied Charlie, with a twinkle. A hearty mutual laugh cleared the air, and we departed amicably together—with the best of future results.

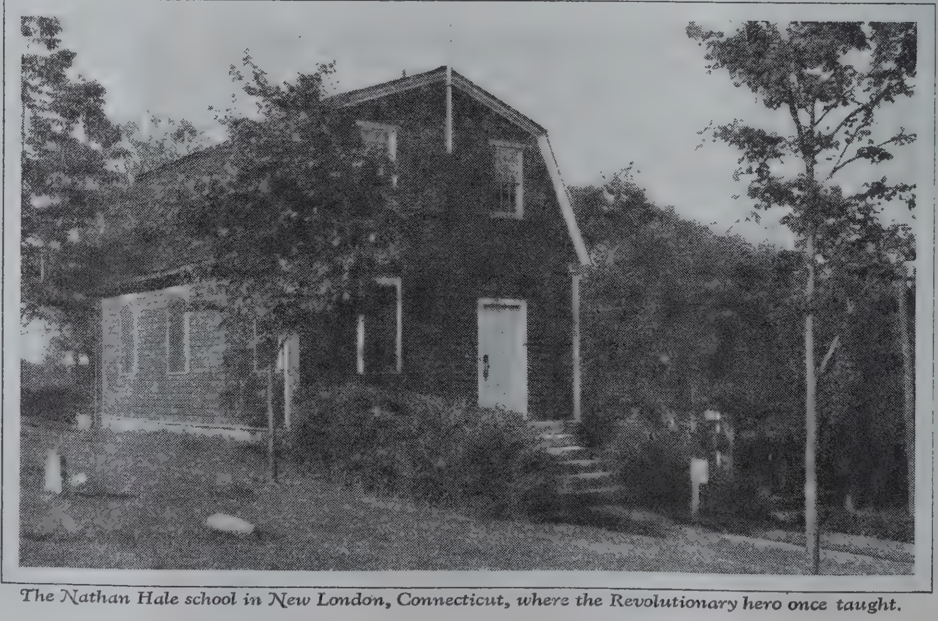
A day's program in a district school was an entirely different proposition from that of a modern graded school. It had to be planned to include all ages and capacities; classes were necessarily numerous and recitations short. The school was opened by roll call; being tardy was considered the deepest disgrace. We used to repeat the Lord's Prayer, without a thought of its being disapproved by priest or parson. Singing followed; next came the various reading classes, beginning with the A B C's of the little ones.

READING books were seldom changed and consequently were all learned 'by heart.' As they usually included good selections, this was no drawback. I have always considered various classics acquired in my youth a valued part of my stock of quotations. The school sessions were from nine to twelve and from one to four, with a fifteen-minute recess in each, affording opportunity not only for play but for airing out the room. Geography, grammar, spelling—four or five classes in each, in an attempt at grading—were sandwiched in as best they could be.

General exercises were always enjoyed. One of our favorites was arithmetic drill for the whole school. 'Order, children! 3 plus 2, multiplied by 6, divided by 10, and so forth'—as far as the teacher's patience allowed. How each tried to be first to raise and frantically wave his hand! This exercise was considered interesting and exciting. The popular spelling matches are a hand-down from district schools, where they were a favorite intellectual delight on occasional Friday afternoons.

Speaking pieces was a dreaded weekly performance, as often the committeeman or the parents visited the school at such times. Singing and a speech followed. The whole was an enjoyable affair hardly to be missed.

Wraps were hung in the long entry outside, but were put on inside. The children marched out, sometimes playing a friendly game, sometimes singing, and once outside



The Nathan Hale school in New London, Connecticut, where the Revolutionary hero once taught.

breaking ranks with much hilarity. Various devices were employed to make the long hours pass more rapidly. If very good, the children were allowed to go out and study with some young friend under the old tree that shaded the district school or—better still—in the old graveyard adjoining. The latter spot was the scene of many social activities. If such freedom was not possible, when the children became so restless that it seemed as if they must have some outlet for self-expression, they would ask to 'speak' to thus and so, supposedly for studious consultation; permission was seldom refused to good children, if asked at reasonable intervals.

Drinking water was usually handed round during the latter part of the afternoon. By four o'clock everyone seemed to be thirsty, and so two favored individuals were allowed to fill the pail from either the pump in the yard—if the school equipment was so generous—or the nearest neighbor's pump. The office of water-carrier was much in demand, and often engaged ahead.

One cup did the whole business, running the gauntlet of sixty mouths; it was considered more delicate to drink near the handle. When one thinks of the present-day horror of germs and microbes, the sterilization of utensils, and the paper cups, one wonders that any of the previous generation ever survived.

THERE were also a few outside diversions connected with the district schools. 'Nooning' was one. Many of the scholars brought their lunches in dinner pails (mixtures of pickles, sausages, pies, and doughnuts). The noon hour, after lunch, was a time of much jolly play suited to the season—tag, blindman's buff, ball, marbles, in summer; snowballing and sledding in winter. There were also many seasonal diversions, usually on Saturdays, such as walks, picnics in some lovely spot—usually near a brook, nutting expeditions. The school turned out en masse: teacher chaperoned and kept the peace.

The 'last day' was a solemnly delightful occasion, not only because it immediately preceded vacation, but for its impressively literary and social character. The schoolroom received an unwonted cleaning; wonderful specimens of colored drawings, ciphering, maps, and elevated moral sentiments in ornamental penmanship were displayed on the blackboards; flowers were arranged in every possible place, and a carefully planned program was many times rehearsed. Pieces were learned and songs practised. Chairs were borrowed to accommodate the expected guests. Prizes were usually offered at the beginning of the term and distributed on this last day. To get a prize in a district school gave delight unsurpassed by any achievement in later life. I own a marvelous red glass vase, acquired at school as a prize, which I never view without a thrill! Speeches and remarks by committeemen or invited guests ended the exciting day.

The district school is now a thing of the past. Even small communities long ago discovered that they could do better by concentration, and that education is bettered by grading and classifying, by improved equipment and larger teaching force.

These old-time schools, however, supplied a picturesque element in the history of the educational methods of the country and, as such, enlist our continuing interest.

The City of Beth-Shan

(*Continued from page 8*)

building a new city on the ruins of the old. It rises bleak and bare above the plains, which are considerably below sea level. Roman ruins formed the foundation for the Byzantine city.

Beneath this city was one built and maintained by the Greeks, who left to the site the name of Scythopolis, apparently drawn from the fact that they had built upon the ruins of a Scythian city. It was in the next layer that the records of Semite occupation were found. Here it was thought the ruins would end with bed rock. But instead Dr. Fisher found the remains of a city apparently built about 1700 B. C., long before the Semites entered Palestine; and there is evidence of still earlier occupation below that.

'The primitive fortress with the little town clustering about it occupied only the top and upper slopes of the rocky knoll,' says the explorer, 'and from then onward the Tel was the nucleus of the city in its many stages of development. In the earlier Semitic periods growth was confined wholly to the saddle of land to the west, sheltered under the lee of the citadel. By the classical period, Scythopolis, by which name it was known then, had developed into one of the great cities of the East, and the ruins of temples, theaters, and public buildings of this epoch cover an extensive area. To excavate these will be the task of many years.

'The strata exposed range from early Arab at the top down through Byzantine and classical levels, each with its characteristic pottery, into a series of mud brick walls associated with pottery of the Semitic periods. The lowest level reached contained a large circular structure approximately dated to 2000 B. C. Below this the débris continued with no signs as yet of the natural rock, thus proving the antiquity of the hill to be even greater than we had anticipated. At this level were several jars of thick, rough, gritty ware with a wash of hematite coarsely applied. On one was scratched a crude drawing of some long-horned animal resembling an ibex.

'At a slightly higher level were two burials. The skeleton of one was that of a young woman laid on her side partly contracted in an inclosure formed by a single row of stones. In this were placed a number of earthenware vessels, the larger against the wall, the smaller behind the skeleton. The types are well known in Palestine as belonging to 1800-1600 B. C., contemporaneous with the expulsion of the Hyksos from Egypt. At the neck were a number of beads, two being of glazed quartzite.'

ON THE summit the explorers found many evidences that at one time part of the hilltop had been occupied by a magnificent domed Christian church. Some of the smaller rooms of this structure were found intact. Beneath them could be traced the outlines of a still earlier building with much the same ground plan. It became evident that in the days of its glory Beth-shan had been a city of magnificence. One section of ancient Main Street was found paved with white marble tiles. In a small vaulted monastic building the explorers found an oven still in a remarkable state of preservation. They found also bronze lamps that had been used in the church. In many places the huge columns lay intact, in pairs. Elsewhere they had been broken up to make seats for use in front of the later Arab houses or had been utilized in the construction of new buildings and walls.

ONE of the most remarkable features of this famous hill is the drainage system, or rather the series of systems, for they were found in every layer of occupation. As a rule, terra cotta pipes were used, incased in a cement which was still intact in most places. One main sewer far down in the hill was made of small stones shaped like bricks, set in cement. Provision evidently had been made in the earliest buildings for carrying off water from the roof and from the ground surfaces.

Historical possibilities are illustrated by a chance discovery. Near the southwestern side of the hill, where there were no pavements or buildings to interfere, Dr. Fisher sank a vertical shaft. 'At a depth of two and one-half meters from the surface,' he says, 'we found a large basalt stele with an Egyptian inscription of Seti I, who reigned from 1313 to 1292 B. C. This lay on its side, with one edge broken away and the inscribed face badly weathered. It was not in its original position and had evidently been reused, as the upper portion containing part of a relief panel had been cut off. The stele bears twenty lines of hieroglyphs in which mention is made of the Syrians. So far as it has been deciphered the inscription is made up mainly of the usual laudatory attributes of the King.'

As at Ur, the excavation of Beth-shan was impossible under the Ottoman régime. The site formed part of the private property of the sultan and was noted for its excessive heat, its malarial climate and its insecure political conditions. The hill is only a short distance from a station on the Jaffa railway, from which the top of the mound is visible. It is interesting to note that the plateau above which it rises still shows signs of the destruction wrought by the Turkish and the British guns in the most recent battle staged there.

'Here and there odd columns and bits of masonry suggest the presence of Greek or Roman villas, and the line of the old city wall can be traced along the north and west until it disappears in the distance behind the modern village. The hill stands at the junction of the river Jalud and one of its tributaries. On reaching the edge of the plateau and looking across the deep ravine through which the main stream rushes, the full height and contour of the Tel becomes apparent and one realizes the majesty and impregnability of its position. The slopes rise steeply, the only practicable ascent being on the west where a narrow path, no doubt following the line of an earlier causeway, leads to the ruins of a gate at the northwest corner. Inside this an almost level terrace extends round the eastern side of the hill, while a second on the west rises more steeply to the summit. The whole surface is clean and undisturbed. Not even the usual Moslem sacred shrine interferes with the complete investigation of the site.'

CAN YOU TELL ME?

In this department we shall do our best to answer questions concerning Government and other matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

Question. Who was the first president of the United States to benefit from the increase in salary from $50,000 to $75,000?

Answer. The president's salary was fixed at $75,000 by bill passed in 1909, William Howard Taft being the first to receive this.

Q. I should like to get some information relative to the battle of Chateau-Thierry.

A. The third German offensive on May 27, 1918, against the French on the Aisne, soon developed a desperate situation for the Allies. Our Second Division, then in reserve northwest of Paris and preparing to relieve the First Division, was hastily diverted to the vicinity of Meaux on May 31, and, early on the morning of June 1, was deployed across the Château-Thierry-Paris road near the Montreuil-aux-Lions in a gap in the French line, where it stopped the German advance on Paris. At the same time the partially trained Third Division was placed at French disposal to hold the crossings of the Marne, and its motorized machine gun battalion succeeded in reaching Château-Thierry in time to assist successfully in defending that river crossing.

* * *

Q. I should like to get some information regarding William Few, who was a member of the Constitutional convention.

A. William Few was born in Baltimore County, Maryland, on June 8, 1748. His ancestor, William Few, came with William Penn to America. In 1758 his family moved to Orange County, North Carolina. After little more than a year's attendance in a public school, he spent his early years in farming. He was colonel of the Richmond County (Georgia) regiment in the Revolutionary Army and did gallant service in several engagements with the British and the Indians. After studying law, he was admitted to the bar and began his practice in Augusta, Georgia; he had moved to that state in 1776, and had been speedily elected a member of its executive council. From 1778 he was surveyor-general and presiding judge of the Richmond County court. From 1780 to 1782 and from 1785 to 1788 he was a member of the Continental Congress from his adopted state, and in 1787 he had a seat in the convention which framed the Constitution of the United States. He was one of the first two Georgia senators under the new federal government, his term expiring in March, 1793. In 1794 he was made judge of the Georgia circuit court, serving three years. In 1799 he moved to New York City, of which he later became mayor. He served in the New York legislature from 1801 to 1804; was United States Commissioner of Loans, and also rendered important service to the State of New York in adjusting Indian difficulties. He died at Fishkill, New York, on July 16, 1828.

Q. What was the earliest date that a copper one-cent piece was used in the United Kingdom?

A. An unsuccessful attempt to introduce copper coinage in England was made during Queen Elizabeth's reign. Private tokens came into use, but the official copper coinage did not begin until the next reign. In 1613, John Lord Harington obtained a patent for the issue of copper farthings. In 1672 a true copper coinage of halfpence and farthings was introduced, but it was not till 1797, in the reign of George III, that copper pence were struck. This copper penny weighed one ounce avoirdupois. In 1860 bronze was substituted for the copper coinage.

Q. I should like to get some information regarding the military record of Jarvis D. Braman.

A. Jarvis D. Braman of Boston, Massachusetts, was appointed assistant paymaster general and commissioned major on the staff of Governor John A. Andrew, December 12, 1864, and lieutenant colonel, December 29, 1864. He was reappointed assistant paymaster general with the rank of lieutenant colonel on the staff of Governor Alexander H. Bullock, January 1, 1866. He resigned and was discharged June 10, 1866.

Q. What is the number of Hindus deported yearly from the United States since 1903?

A. The number of Hindus, or East Indians, as they are designated in the immigration records, deported yearly since 1903, is as follows:

1903, 1; 1904, 2; 1905, 0; 1906, 2; 1907, 1; 1908, 9; 1909, 1; 1910, 4; 1911, 36; 1912, 11; 1913, 32; 1914, 42; 1915, 35; 1916, 38; 1917, 6; 1918, 2; 1919, 11; 1920, 22; 1921, 19; 1922, 70; 1923, 51; 1924, 67; 1925, 67; 1926, 72; 1927, 67; total, 668.

* * *

Q. I should like to know something about 'squatter sovereignty.' What is meant by the term?

A. 'Popular sovereignty' and 'squatter sovereignty' are terms having reference to the right of the inhabitants of a territory to regulate their internal affairs in their own way without the intervention of Congress. Strictly speaking, the term 'popular sovereignty' was applicable only in the case of an organized territory, while 'squatter sovereignty' applied only to an unorganized territory inhabited by squatters. The first assertion of the doctrine of popular sovereignty by a man of prominence appeared in the noted Nicholson letter of General Cass, dated December 24, 1847, in which he expressed the opinion that the people of the territories should be left 'to regulate their internal concerns in their own way.' The new doctrine was accepted by the South and was quite generally regarded as being in harmony with American traditions of local self-government. The compromise measures of 1850, in providing for the organization of New Mexico and Utah as territories without any reference to slavery, would seem to have been the first recognition of the principle; on account of the evasive language used, however, it is difficult to say whether popular sovereignty was a feature of the bill or not.

In 1854 the Kansas-Nebraska Bill expressly adopted the principle as the basis for the government of those territories. Shortly afterward the South came to repudiate the doctrine of popular sovereignty as dangerous to slavery, and put forward the claim that neither Congress nor the territorial authorities could legislate against slavery in the territories, but that it was their constitutional duty to protect the right of property in slaves as recognized by slave states. There is an *obiter dictum* in the famous Dred Scott case which upholds the Southern contention so far as the National Government was concerned. The controversy regarding the question of popular sovereignty, as involved in the Lecompton Constitution for Kansas, brought about a division between the Douglas Democrats of the North and the more radical Southerners, which eventually developed into the split of 1860. With the Civil War and the abolition of slavery, the question lost its significance.

BRIEFLY TOLD

An overpowering perfume of freshly gathered violets so fills one of the rooms of a 300-year-old English farmhouse that the tenant has had to vacate it. Although the room has been thoroughly examined, the odor persists. Legend has it that a girl, while arranging violets in a bowl in this room, was stabbed by her jilted lover.

The lowest temperature ever officially observed in continental United States occurred a few winters ago at Fort Keogh, near Miles City in northeastern Montana, when the thermometer dropped to sixty-five degrees below zero.

In a town near Paris, France, a resident recently found a bill for fifty francs, and, being honest, took it to the mayor. When the chief of police heard about it he had the man arrested under a town regulation requiring that all lost articles be handed in to the chief of police. Brought into court, the honest man was fined two francs.

Howard P. Seese, forest ranger in the Sproul state forest, Pennsylvania, has a chain more than seven feet in length made from the rattles of the snakes he has killed. He maintains that a rattler's age cannot be told by the number of rattles, as from two to four may be gained in a year.

Each day in a darkened room off Edgware Road, London, a number of men study the eighty-one square miles of London thoroughfares by means of three thousand motion-picture slides. They are prospective chauffeurs learning to locate buildings, clubs, and public places so that they can pass police examinations for chauffeur licenses.

The 166th egg laid in as many days by Lady Norfolk, prize Leghorn hen, was sent by air mail to President Coolidge from Omaha, packed in a jewel case.

In a logging camp at the altitude of 6,666 feet near Mariposa, California, a rural schoolhouse is built on sled runners so that it can be moved from place to place.

The silk in a bride's trousseau is allowed to enter Finland duty free, although the duties on imported silks are high and form one of the chief sources of revenue to the state.

The pumpkin, or pompion, was regarded by early New Englanders as one of their greatest blessings, and its meat was used to make beer, bread custards, sauce, molasses, and vinegar, as well as pies.

The eggs of the grasshopper and the locust survive the cold winters of North American latitudes; the live insects do not.

The nation's laundry bundles each week have been found to contain 15,000,000 shirts, 75,000,000 pairs of hose, 16,000,000 sheets, and 168,000,000 handkerchiefs.

At the Smithsonian Institution in Washington during the past few months hundreds of gallons of alcohol have been stolen from bottles and jars used to preserve dead remains of ancient fish and reptile specimens. Since evaporation through the glass bottles and corks is impossible, officials of the institution believe that this 95-per-cent pickling alcohol is being purloined little by little and sold by bootleggers as 'good stuff.'

One man in 2,600 reaches the age of one hundred in Serbia, one in 8,130 in Ireland, one in 43,000 in Spain, one in 177,000 in England, Scotland, and Wales, and one in 180,750 in France.

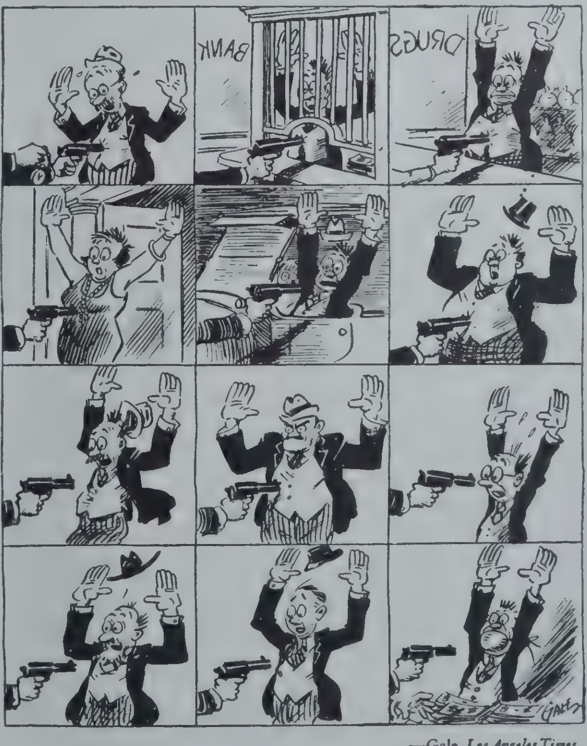
Owing to the reflection of the sun on fine particles of snow in the air, a rainbow may sometimes be seen all day long in a cloudless sky in Siberia.

The word *Canada* is derived from the Huron-Iroquois Indian word *kanata*, meaning a collection of huts.

Scientists have reached the conclusion that soft, delicate music, such as that of violin or piano, aids the growth of the hair, while loud and obtrusive music like that of saxophone, tuba, or bass viol promotes baldness.

Although the whaling industry is reported to be declining in Newfoundland, 1,690 long tons of whale oil were exported in 1926.

After an active life of about three seconds, the time required for 150 to 200 shells to pass through the barrel, a big cannon must be rebuilt.



—Gale, *Los Angeles Times.*

Visitors to Hawaii go to Kilauea in crowds to gain membership in the famous Hole-in-One club by driving a golf ball into the steaming fire pit of the volcano.

Meesick, a rajah's sacred cat, owned by Dr. John A. O'Connell, Dorchester veterinarian, has never been seen to lie down or close an eye during the four months he has been in the possession of the doctor.

The fashion in Ireland centuries ago was to dye horses wholly or in part for ornament. One prince had fifty white horses with ears dyed red and manes and tails purple.

The Woolworth Building in New York City houses more than ten thousand persons during office hours.

John C. Calhoun was the only vice-president to resign from office. He resigned on December 28, 1832, to enter the Senate.

Although appendicitis received its name in 1886, medical authorities have traced cases as far back as 1684.

Among the peers of England are some peculiar hobbies. Lord Knutsford designs his own shirts, Lord Ancaster is the best knitter in the peerage and makes his own socks, Lord Gainford and Lord Listowel are experts with the needle, and Lord Ennismore, just 21, is a skilled embroiderer.

Languages of all the races of the world are being preserved on phonograph records at the new Museum of Languages at the Sorbonne in Paris.

About five miles is covered by the average golfer playing eighteen holes of golf.

NOTES ❦ COMMENTS ❦ CRITICISMS

MR. FORD'S Page discusses this week the relative values of fault-finding, analysis and criticism.

* * *

When Nathaniel Hawthorne was a young bachelor, he tried out the Brook Farm Community idea for one year before his marriage. He wanted to learn whether this community idea would work. It was just as well that he did, since one year at the Farm was enough for him. Out of all this came *The Blithedale Romance.* (p. 1)

* * *

Florence Taft Eaton, who writes on 'The District School,' not only taught in district schools, but also attended one. It was in Concord, Massachusetts, her home, that the district schools were first doomed by the expedient of gathering the children together in the country and conveying them to the larger graded schools in the city. After the attention of educators had been attracted, the first comprehensive description of the new idea was contained in a pamphlet distributed at the Chicago World's Fair, written by William Lorenzo Eaton. (p. 2)

* * *

Daniel Webster, Secretary of State, was too busy to write instructions for Commodore Perry when the latter sailed for Japan to make a first visit to that empire. Perry was told to write his own, and did so well that Webster could not change a word. The London *Times* commenting sarcastically on the proposed trip to Japan said it was doubtful 'whether the Emperor of Japan would receive Commodore Perry with most indignation or contempt.' (p. 4)

* * *

Ninety-one Indians were guests of fifty-five Pilgrims at the first Thanksgiving, November, 1621. The menu served would tempt one's palate even today. For choice of meat there was turkey or other fowl, stuffed with beechnuts or chestnuts and sauced with cranberries; venison, bear steak or fresh fish. For hors d' oeuvre one had a choice of clams, lobsters, eels or oysters. The soup was wild celery. Vegetables included pumpkins and Indian maize, prepared in a dozen different ways. For dessert there were wild grapes, berries, plums and maple sirup. (p. 7)

* * *

On the first Thanksgiving Day menu three items, turkey, cranberry sauce and maize, were strictly American. It may be news to some to learn that the idea of a harvest festival was not original in America. N. L. Van Wegen has traced the idea to the dim past in the land of the Canaanites.

* * *

William A. McGarry, whose article on the city of Beth-shan is in this issue, has made a study of the interviewing of large figures in the business world. His name appears as a frequent contributor to leading national periodicals. (p. 8)

* * *

The city of Beth-shan, McGarry says, is the most fought-over city in the world. Such famous personages as Sargon I, Abraham, Hammurabi, Sennacherib, Nebuchadnezzar, Rameses, Saul, David, Alexander, Pompey, Napoleon and General Allenby, have passed by its ruins or fought at its base.

* * *

Washington Island is the oldest Icelandic settlement in America. It lies off the end of a peninsula which projects like a thumb out past Green Bay into Lake Michigan. Although the island has a population of a thousand, it has not a single village. Nevertheless, the people are as one big family. Forty-three fought in the World War. (p. 9)

* * *

In the year 1775, the prophecy was made in London that 'all sensible persons are convinced in England that the English colonies are lost to the mother country.' The prophet was the Frenchman Beaumarchais, who is described by Professor Louis C. Karpinski as more deserving our tribute for services during the Revolutionary period than any other foreigner. The article is the second written by Professor Karpinski on this notable character. (p. 12)

* * *

Ethan Frome's problem, as portrayed by Edith Wharton, and that of Anna Karenina, as pictured by Tolstoi, are contrasted by Lewis Worthington Smith in one of his reviews of great characters of fiction. Anna was able to fly from a loveless marriage; Ethan could not. Whether Anna or Ethan was happier presents a question that can be argued from either side. Anna was able to find death; Ethan was compelled to live out his life. (p. 15)

* * *

Glass was made by the Egyptians and glass mirrors coated with tin were known in the days of Pompey, but the modern mirror did not reach England until 1670. Mary Harrod Northend whose recent article on 'Mirrors' will be recalled by DEARBORN INDEPENDENT readers has traced the origin and development of the looking-glass. (p. 16)

* * *

Frances Holbrook Pfeiffer of Los Angeles has extracted from California history the human-interest elements and has combined them in a series of articles of which 'Under the Flag of the Bear' is the last. The series has been much enjoyed, judging from letters received at THE DEARBORN INDEPENDENT offices. (p. 24)

REMARKS BY OUR READERS

Rutherford, New Jersey.

In your editorial, October 22, entitled 'Of, By, and For the People,' the writer believes you missed a good chance to tell the good dean [Dean Inge] something. Has 'Government of, by and for the People' ever failed? Has it ever been tried in the United States in any branch but the executive?

We are taught that the American ideal is representative government. To the writer this means that the officials intrusted with the job of governing are chosen by the citizens whom they govern. Tested by this rule the president of the United States and the governors of the respective states are one hundred per cent representative, for, while a candidate is seldom elected unanimously, the citizens who voted against any successful candidate had the opportunity to vote for him if they had wished to do so.

But, how about Congress and the state legislatures? A citizen of New Jersey, for instance, is permitted to vote for not more than three congressmen in any one Congress; that is, for two United States senators and one member of the Lower House. There are 531 members in both Houses. The other 528 make the laws the citizen must obey, but he has no right to vote either for or against them. That is not 'representative government' at all. One cannot climb a 530-foot wall with a 3-foot ladder.

This applies also to the legislatures of the States. In New Jersey the citizen of Bergen County votes for one state senator and four assemblymen out of a total of eighty-one legislators in both Houses. The other seventy-seven make laws which he must obey, but he has no voice in their election.

A Congress of five men, elected by the country at large and not from districts, could accomplish more real work than 530, no matter how elected. And, a Congress of five men, elected at large as the president is elected, would have to be of presidential caliber to be elected.

A body of hired clerks could do everything now done by the great majority of lesser-light congressmen, and do the work much better, as they would be hired with some slight idea of their fitness, each for his or her task. The cost would be less, if that is worth considering; the four million dollars now paid in congressional salaries would give each of the five members a good salary and hire some good clerks as well.

But above all other considerations, the legislatures elected at large would be truly representative.

FRANK MCLEES.

HOUSTON
BEAUMONT
PORT ARTHUR
TEXAS
GALVESTON
GULF OF MEXICO

TEXAS CITIES on the GULF

By CHARLES J. FINGER

THE other day on returning from a trip along the coast of the Gulf of Mexico I met a man with a peculiar sort of mania. It was a desire to get a tremendous number of miles out of a gallon of gasoline in a very short space of time.

I forget the figures he thrust upon me, but I remember very clearly that he seemed happy in a nervous kind of way. His notion of a pleasure trip in an auto was to start from some place and get somewhere else, without seeing anything on the way except the pointer on his speedometer. All his energies were bent on keeping that pointer between two very high numbers, and when it fell below a certain number he was unhappy.

What he really did, in effect, was to race one dial against another. While the hands of his clock registered a certain number of hours and minutes, his speedometer would have to register a certain number of miles, and he lost the game if his third register, the gasoline one, indicated some other number. It seemed to me, as I listened to him, that he could have gained his end while on his vacation had he stayed in his garage or in his back yard and jacked his auto clear of the ground and set his engine to work.

His ideal, I think, would be to go somewhere so very fast that he would get nowhere, see nothing except his dials, hear nothing except his engine, just start and stop. Goal and starting place are one and the same for him, and he would be perfectly happy could he girdle the earth in a wink, moving at the speed with which an atom moves, which is about twenty-five thousand miles in an eighth of a second, or something like that. It is a speed, I am told, of such incredible swiftness that if a man shot off a pistol and the bullet moved at the atom rate, the man shooting would be pierced through his own back ten times while falling.

It would be clearly impossible to write a touring guide for a speed maniac of that sort, because things by the way would be nuisances and distractions. All that pageant which I saw along the Gulf of Mexico on my trip would not exist for him. And, indeed, when you come to think of it, only active-minded people with a taste for things clearly seen, people who are alive to the world, ever see anything.

'I started from Galveston and ran east,' your speed maniac would say, and Galveston would be nothing but a name, whereas your man with eyes would find that good haven a tremendously interesting place. For not only is it a harbor for coasting steamers that touch Central America, Mexico, the Bahamas, Trinidad, and all those semitropical ports where the Spanish conquistadors in fact and O. Henry's characters in fiction adventured; but it is also a place where you may see sailing ships from every port in the world—schooners, barks, yachts, 20th Century four-masted steel sailers, sometimes even inland river steamers, and whalebacks and battle cruisers, and even such monsters as those queer colliers and oil carriers designed for transferring fuel at sea which are all cranes and hatches, to say nothing of sailless wind-driven ships like the *Buckau.*

Because of all those, in Galveston you may see something of a fast-vanishing life—seamen just ashore whose last town was Rio or Punta Arenas or Singapore; other seamen about to sail on round-the-Horn cruises who could stuff you with lies about the culinary excellence of their last ship and the inferiority of the

Section of the beach and sea wall at Galveston.

Typical homes in the young town of Port Arthur.

Circle—This attractive edifice in Beaumont houses a library. Previously it was used for a church.

—Jaycox.

skippers and the unseaworthiness of ships in these latter days. Also, if you took the time, you could find one or two of those wonderful old stores poked away in an odd corner—stores whose owners seem never to sell anything, but only to buy; whose shelves and windows hold a jumble of most astonishing things, such as shells from tropical countries, ship models on shelves and little ships in bottles, tin pannikins and tin knives and forks of a sort to double up under any strain, those apologies for mattresses called donkeys' breakfasts, brass telescopes, razors, revolvers, sheath knives, charts, sandalwood chests, lacquered work, bunches of rusty keys, mother-o'-pearl ornaments, carved coconuts, ancient uniforms, oilskins, sea boots, sou'western and tarpaulin suits, sextants, carpenter tools, pictures of clipper ships framed in cork, fur caps, musty old books, copies of *The Nautical Almanac* for bygone years, odd numbers of such stirring fiction as *Buffalo Bill, Cap Collier, Three-Fingered Jack of the Antilles, Nellie the Beautiful Cloak Model,* and more of a kind to help cultivate literary art in the mariner, to say nothing of those books favored by sailors as revealing the follies and foibles of society, which may be had in 'The Seaside Library' and 'The Family Herald.' For the reading of mariners is not confined to books about the sea any more than the reading of bankers is confined to books about money, trade and industry.

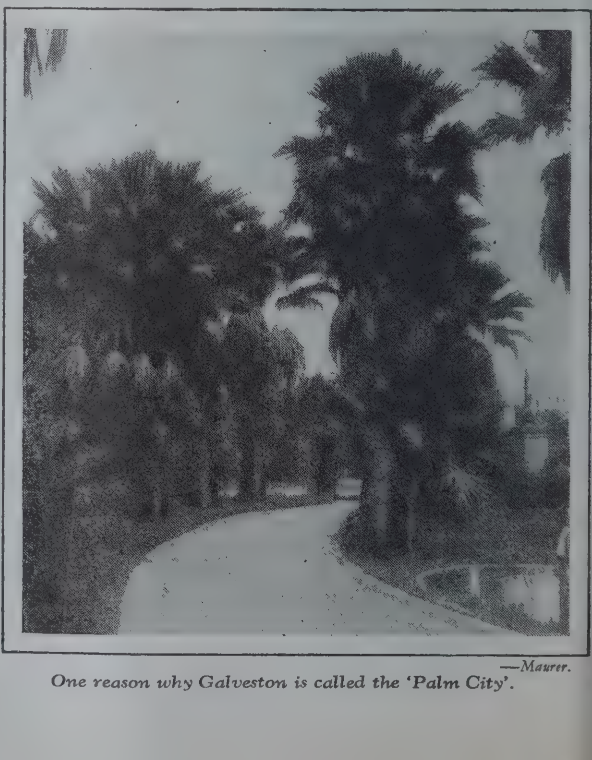
IT IS a place for loitering, not speeding, this dock quarter, and there is a fine flavor of Melville and Conrad and Marryat about it. And if you are of the happy sort that enjoys a little quiet conversation, and lucky enough to tackle the right kind of man, and of stout enough constitution to stand the aroma of his cutty pipe, and patient enough to hear a leisurely tale, you may learn something of the pirate Lafitte who had a mansion on Galveston Island, whose band numbered a thousand, who was pardoned for his piracy and praised for his bravery in the battle of New Orleans by President Madison, and who buried a vast amount of treasure in the neighborhood of Galveston, which treasure sanguine beach combers still hope to find.

Or you may hear the legend of the pirate ship wrecked off Galveston in 1813, from which a white woman was rescued by Indians. Being at the point of death, the woman gave to her Indian rescuer a locket and chain, the locket having within a picture of a boy and a man. The woman, it is said, was Theodosia Burr Allston, daughter of Aaron Burr. By way of verification, the story runs that a dying sailor in Detroit confessed to having been one of the mariners on board the ship that sailed from Charleston in 1813, in which Theodosia Burr Allston was a passenger. He and his fellows had mutinied and forced officers to walk the plank, but had spared the woman.

Leaving the ancient dock quarter you turn a corner at the end of the street, go a city block or so, turn again, and, as by the touch of an enchanter's wand, you are in a world of modern activity, with hopper barges, and hundred-foot steel steeples carrying sixty-foot booms, and covered wharves, and tractors hauling trains of cotton trucks, and railway trains, pipe lines, marine iron works, and traveling electric cranes. You are in the midst of a life stimulating and exciting, a world of bewildering and distracting things, a world of vastness and mechanical force where gigantic steel arms lift and carry, and where men seem to be unneeded.

But the dial on your auto does not register a mile and a half before you are out of all that restless exuberance and in a city of tropic luxury where the air is strangely scented, where there are palm trees, where there are great rhododendrons and radiant flowering bushes. So semitropic in appearance is the more wealthy residence section that the sight of a troop of camels led by desert-born Arabs would not strike a note of discord. I do not exaggerate. While there, I felt as I had felt in some Brazilian town, expecting to find on the outskirts a tangle of vines and of metallic-hued shrubbery where white mists rise from tar-black stagnant waters.

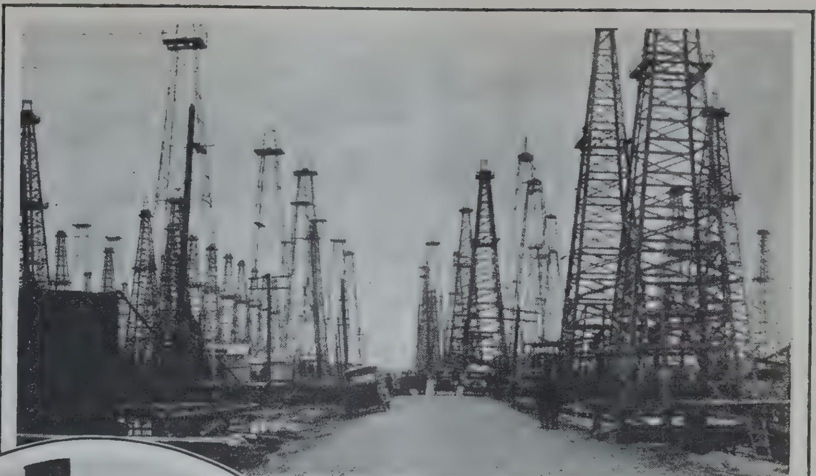
But there is none of that. Instead,



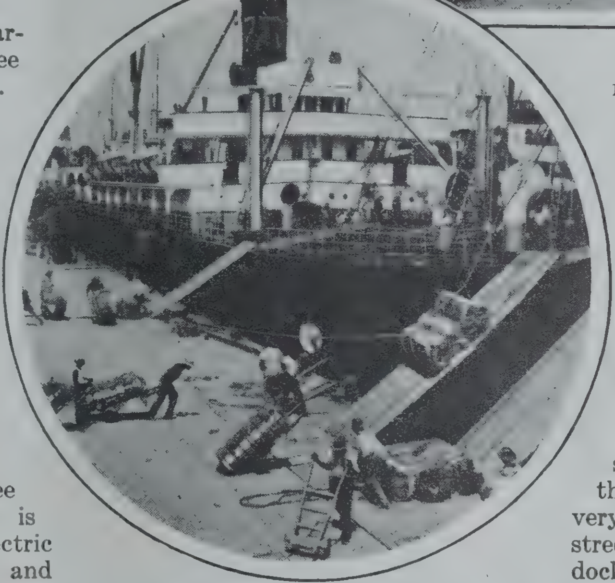
—Maurer.

One reason why Galveston is called the 'Palm City'.

the road skirts the shore for a short time, then runs over level or very slightly rolling country to Houston, then to Beaumont, and then to Port Arthur. All three are important cities, well-governed, sunbathed without oppressive heat because of the gulf breeze that refreshes. I have known people to whom the words *Texas* and *cowboy* are synonymous, who expected to see roping and lassoing and gun play in every Texas town. Actually, mounted cowboys on the streets of Beaumont would cause as much mild excitement as a herd of dromedaries in Denver.



A few of the derricks at 'Spindle Top,' near Beaumont, Texas.



Circle—Section of the bustling docks of the world's largest cotton port—Galveston.

BEAUMONT has its own characteristics, the which you may see at Spindle Top, a few miles out. It is a wilderness of oil derricks. It is an incessant turmoil of throbbing, slow-moving machinery such as exists in no other place on earth. It is a vortex and a whirlpool. It is a place of intermixed clang and clatter, with a strange booming and throbbing that comes from a million motors. It is a place of vast skeleton structures standing stark against the sky. It is an agitated pool of human life.

And at night, for you should see the place at night, Spindle Top is miraclelike with ten million electric lights, and white searchlights, and strange rose-colored glares, and sometimes roaring gas flames, and a ceaseless groaning of unseen machinery, and the shadows of men that seem like giants, and long lines of slow-moving freight trains made up of tank cars, and monstrous squat reservoirs that look like truncated forts.

Stilwell Boulevard, Port Arthur, Texas

Yet, not a ten-minute ride from all that tremendous activity you may find a place of matchless dignity that tells its tale of culture. It is a library that was once a stone church of considerable size. Stepping into the quiet of it you cannot but find the whole effect one of strange richness, with its roof vault, its stone walls and lofty mullioned windows, its secluded niches and corners. It is like the library of some splendid palace built for a monarch—or like some medieval castle hall. It should be made gay with hanging silk banners, and brave with armor and shields.

And there are other evidences of a fine life in this new city—a country club with broad verandas and large windows that look upon a graceful garden with trees hung in Spanish moss, and a lawn that sweeps down to a river. There are societies of men and women devoted to civic interests, and organizations literary and artistic where easy-mannered people discuss things with infinite freedom and zest. Moving about among them you get a sense of a community with sustained confidence in its own future. It is a people believing in itself as a high-spirited youth does.

Sweeping along first-class roads you come to the place where the Sabine River empties into a considerable bay, and there sits the thirty-year-old town of Port Arthur, very picturesque with palm-lined streets, very active with ship-repair docks where they make no more of slicing the bottom from a steel seagoing steamer and fitting on a new one, than you or I would make of ripping open a box of sardines. Also there is an oil-shipping plant from which coal oil is shipped in five-gallon cans to far-away places the very names of which are strange and romantic—Siam, Morocco, Papua, Eritrea, Zanzibar, Patagonia, Portuguese East Africa, Malaysia, the Congo.

IT WAS strange to think of a town of not more than a young man's age feeding those far-away places. It was strange to reflect that Eskimos and Africans and Gauchos and Pacific Islanders would utilize the empty cans, using them as roofs, as buckets, as cooking utensils, as seats, even as safety appliances on proas and canoes and feluccas.

An endless band of them moved—flat pieces of tin at the beginning, filled and sealed cans at the end, two packed in a box and the boxes moving swiftly, without hands, to a descending spiral over a ship's hold, and then down without noise or confusion.

(This is the first of two articles by Mr. Finger about his tour of the Gulf Coast. The next will appear in an early issue.)

The monument erected in Washington, D. C. in honor of Ericsson.

The Father of the BATTLESHIP

By VIOLET K. LIBBY

FASHIONS in naval warfare change almost as quickly as they do in spring millinery. At the same moment that a spirited controversy was raging as to the efficiency of modern battleships, which had been considered as the last word in naval equipment, work was just being started on a monument to John Ericsson, the inventor of the *Monitor*, which, only sixty-five years ago, opened a new era in naval warfare and revolutionized the whole system of fighting on the sea.

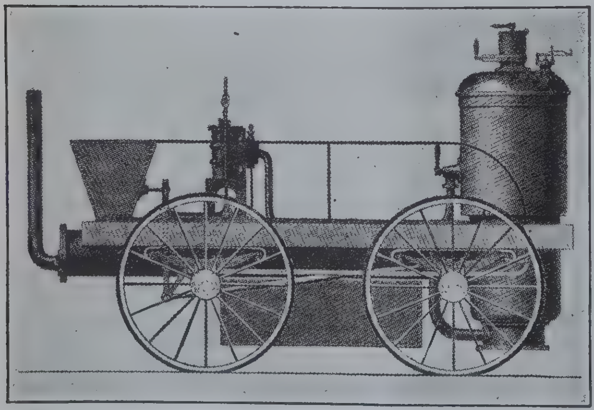
The queer-looking craft which in 1862 steamed into Hampton Roads looks odd enough beside the modern battleship, of which she was the forerunner. She dealt a deathblow to the old 'wooden walls,' and opened up a period of naval construction in armored and submersible vessels, and yet there are those who say that the age of the battleship is over, that defense against an enemy must be by air rather than by water. It may be that the erection of this monument to John Ericsson not only marks the beginning of that period but also stands as its tombstone.

The site of the statue is within a stone's throw of the Navy Department at Washington. The inventor is seated at the base of a pedestal, which supports the three symbolic figures representing Vision, Adventure, and Labor. The whole character of John Ericsson is summed up in those words; his imagination was always leaping forward into new fields of mechanics, and his incessant labor brought into being practical expressions of the romantic fancies created by his adventurous mind.

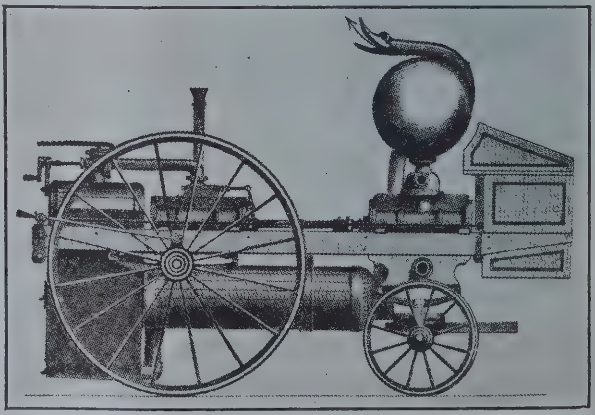
Ericsson was a man to whom a comprehension of the science of motion was as intuitive as sleeping or eating, and even as a small child his playthings were compasses and pencils and such rude drafting and mechanical tools as he could contrive.

The circumstances of his early life provided him with plenty of opportunity for the development of his passion for mechanics. His father, Olof Ericsson, was inspector of mines near the little town of Nordmark in Sweden where John was born on July 31, 1803; his mother was an intellectual, high-spirited woman of Flemish origin, with some Scotch blood in her veins. Olof Ericsson was well educated, and although the family later experienced hard times, he took care that John and his brother Nils should receive a good education. When the elder Ericsson finally found work as a foreman on the Gota Military Canal, John knew enough about mechanics to be able to take the liveliest interest in the machinery and tools employed in its construction.

So apt was he that he was allowed to enter the draftsman's office, and in 1815, at the age of twelve, was commissioned to make drawings for the archives office. Before he was fourteen, six hundred Swedish troops were working on the canal under his direction, although at that time he was still



Left—Ericsson's locomotive engine Novelty, constructed in 1829.

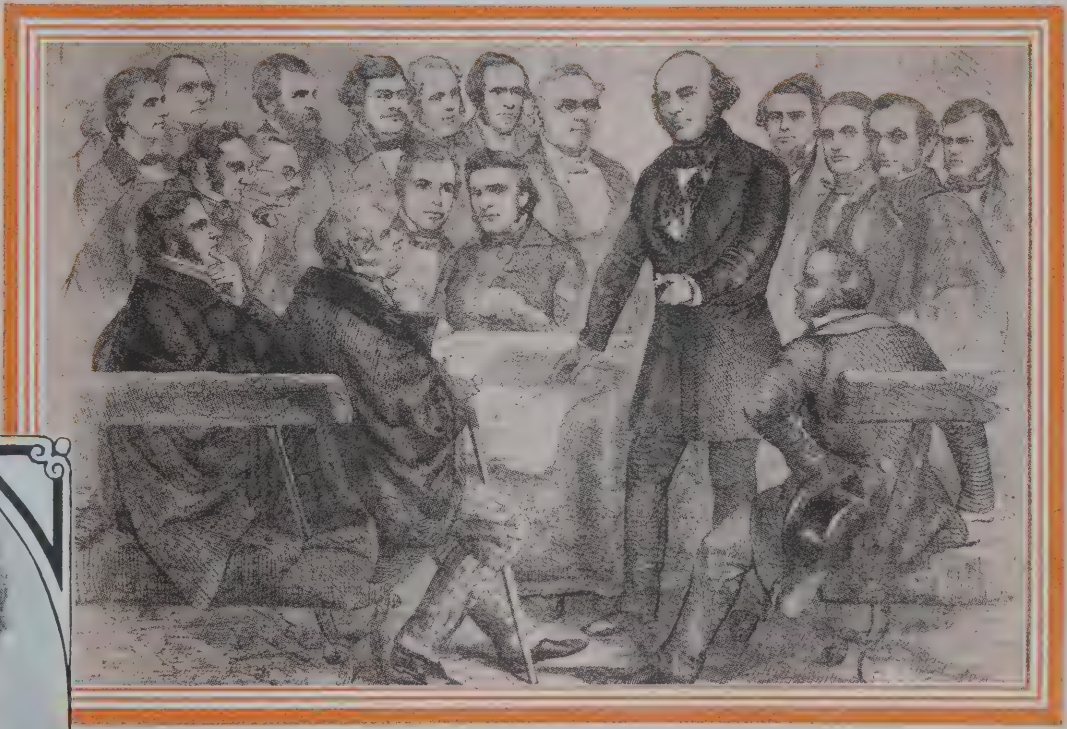


Right—Steam fire engine, capable of sending a stream of water higher than the buildings of its time. Designed in 1840.

so small that he could not reach the eyepiece of his leveling instrument, and had to be followed everywhere by an attendant carrying a stool.

Later he entered the Swedish army. At that time all the field surveying was done by army officers and so he became a government surveyor. Full of energy, he spent all his spare time experimenting and inventing, and his particular interest at this time was to find a means of producing mechanical power by the use of flame. Eventually he contrived a flame engine, by means of which sufficient power could be produced to pump water to a considerable height, and he received a leave of absence to go to England to introduce his invention there.

But the flame engine did not achieve success; funds ran low, and Ericsson had to look around for employment. Although at this time he was only twenty-three years old he was so obviously master of his subject that he inspired the greatest confidence in those with whom he came in contact, and it was not long before the manufacturing house of John Braithwaite took him into the firm as junior partner. He afterward acknowledged that he owed much of his later success to the experience which he gained at this time through the friendship and coöperation of Braithwaite.



—*From the* Illustrated News, *1853.*

Captain Ericsson explaining his invention to the editors of New York City.

John Ericsson when he was twenty-one.

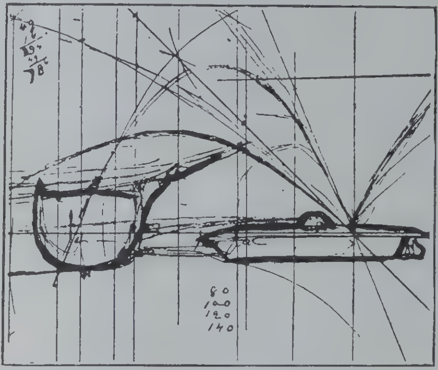
The tale of Ericsson's life is that of one long series of inventions. One of his achievements was the invention of a pumping engine for draining mines, in which for the first time compressed air was used to produce power. He also invented several devices for improving marine engines, of which the most important was the surface steam condenser. Another was a steam fire engine, which could throw water to the tops of the highest buildings of that day. But so many objections were raised to this innovation that it was not until 1860 that a machine of similar design was finally brought into use to fight the London fires, and to replace the squirts and hand pumps which had been used up to that time.

In 1829 Ericsson turned his inventive genius into a new field. Up in the colliery district of the north of England, Stephenson had been working for some time on the steam locomotive. Horse-drawn trams for hauling coal were already in use, but the idea that sufficient power to draw the heavy loads could be produced by steam was ridiculed as absolutely impossible. However, Stephenson finally persuaded the officials of the tramway line, which was known as the Liverpool and Manchester Railroad, to test his scheme, and very sceptically they offered a prize of 500 pounds sterling for the best steam locomotive which could draw a gross weight of twenty tons at the rate of ten miles an hour.

Ericsson heard of the offer seven weeks before the date set for the contest, and at once set to work to build an engine. Although he had never made a locomotive, his quick mind immediately grasped the problems of its construction, and when the day for the trial came, Ericsson's *Novelty*, with its system of artificial draught, was a serious competitor of Stephenson's famous *Rocket*. But although the *Novelty* reached a speed of thirty miles an hour, and easily shot past the *Rocket*, it developed several minor defects which would undoubtedly have been overcome if there had been time for preliminary tests, and was unable to finish the required distance of seventy miles. Although it was generally admitted that the principles of the construction of the *Novelty* were the more scientific, the prize went to Stephenson.

Disappointed in the result, Ericsson lost interest in locomotives, and turned back to the flame engine, and was soon astonishing London with a five-horsepower caloric engine. He next began to experiment with screw propellers, and was so pleased with the results that he built a boat forty feet long which could tow a schooner at the rate of seven miles an hour. This he demonstrated before the British admiralty, but as is usually the case when some new principle is first introduced, there was a great deal of opposition, and naval experts proved to their own satisfaction that the device would be useless in practice. But fortunately for the United States, a Captain Robert Stockton of the U. S. Navy was delighted with a demonstration, and promptly gave Ericsson an order for two boats built with screw propellers. Stockton promised his influence with the United States Government, and Ericsson came over to America.

Two years later, during which time he had built several small screw boats that had been successful, he was called upon to design a screw vessel for the Navy. The vessel carried a number of radical improvements and established Ericsson's fame in this country. He then perfected a revolving gun turret on an ironclad raft, and when in 1861 the Navy Department appointed a board to examine plans for ironclads, he laid before them the designs of the *Monitor*. As in earlier days the British admiralty had pronounced his screw-propelled vessel an impossibility, so now the United States Navy board rejected his design on the ground that such a craft as he suggested would not have sufficient stability, and would be sure to turn turtle. Ericsson patiently explained the mechanics of his design, and finally convinced the board sufficiently for them to give him a very cautious and one-sided contract, by which, if the *Monitor* should prove unsuccessful, Ericsson was to refund to the Navy Department the money paid for her.



Ericsson's sketch of his Monitor.

While the Confederate ironclad, the *Merrimac*, inspired consternation in the North, Ericsson worked night and day on his *Monitor*. The construction of a vessel so radically different from anything which had previously been built was full of problems and difficulties, but Ericsson, with his wonderful mechanical genius, had always a solution, and when at the end of one hundred days the *Monitor* was finished, she contained some forty new and patentable devices!

Courage of a high order was required of the men who were assigned to the new and untried war vessel, in which they were practically submerged the whole time. Under the command of Lieutenant Worden she was towed out of New York Harbor on March 6, 1862, and the first day out was not auspicious. The following is taken from an account of the experiment:

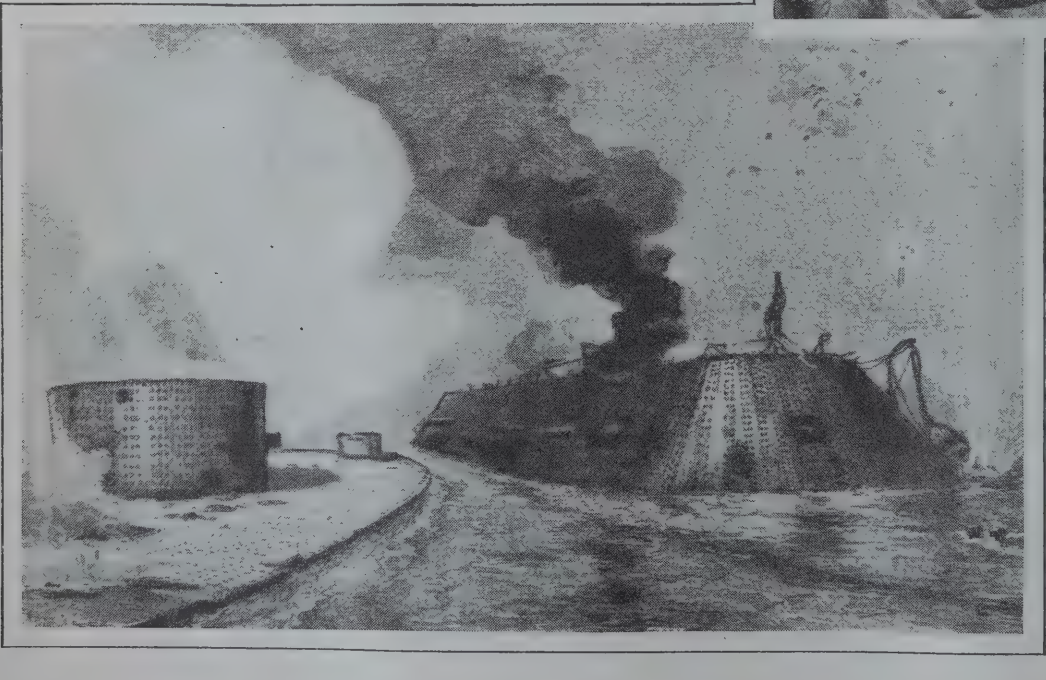
'The waves swept the deck, and forced the water in considerable quantities into the vessel through the hawse-pipes and under the turret, and broke over the smoke-pipe six feet high, and the blower pipe, rising here only four feet above the low deck. This stopped the blowers, and the furnace having insufficient draught, the engine rooms were filled with gas, and the engineer, Isaac Newton, and his assistants were so nearly suffocated that they were carried into the open air to the top of the turret apparently lifeless.'

The ship was at times in imminent danger of foundering, but was kept afloat by the use of hand pumps; the temporarily disabled machinery was set in motion once again, and eventually the *Monitor* reached Hampton Roads. The rest of the story of her encounter with the *Merrimac* is too well known to need repetition here.

For the next twenty-seven years Ericsson continued his work, planning, experimenting, and inventing, working twelve to fourteen hours a day at his desk almost up to the hour of his death. After a life of Spartan simplicity, devoted entirely to constructive labor, he died at the age of eighty-six on March 8, 1889, on the anniversary of the great event which made him famous.

The monument to Ericsson's memory stands near the Lincoln Memorial, and quite close to the new Arlington Memorial Bridge which was originally planned to commemorate the heroes of the Civil War. The expense of the monument, which was designed by J. E. Fraser, is borne partly by the Ericsson Memorial Committee, composed largely of prominent men of Swedish birth living in this country, and partly by an appropriation made by Congress.

It is interesting to note that just as the first Napoleon rejected Fulton's idea of a steamboat, so Louis Napoleon, Emperor of the French in 1854, rejected Ericsson's idea of an armored craft later exemplified successfully in the *Monitor*. It is also not generally known that Ericsson's plans were submitted to the United States Government during the Civil War at the request of the Government, not of his own suggestion.



Crew of the Monitor *on deck after her battle with the* Merrimac. *The impression of a shot is visible on the turret.*

Left—*Battle between the* Monitor *and* Merrimac.

It was because of the *Merrimac* threat that the United States invited proposals for the construction of armored ships; and among others, Ericsson responded. Out of it grew the 'cheesebox on the raft.'

Ericsson's body now rests in his homeland. At the request of Sweden, it was shipped to Stockholm in 1890.

The House in the Fiftieth Congress

Alabama to Minnesota

By BARNES COOLEY

THERE were three hundred and twenty-five members in the House of Representatives of the Fiftieth Congress, which extended from March 4, 1887, to March 4, 1889, and very nearly half the entire number had seen service in either the Union or Confederate army during the Civil War. The Union veterans considerably outnumbered their Confederate brethren, thus reversing the situation which obtained in the Senate of the same Congress, where, out of a total membership of seventy-six senators, twenty-seven had worn the gray as against but ten who had worn the blue. In the House of the Seventieth Congress there is but one Civil War veteran—Confederate Charles Manly Stedman, aged eighty-six and 'going strong.' Not a single Union soldier is there to bear him company. He keeps as lonely state in the House as does Francis Emroy Warren in the Senate, who, a Union veteran, is the only senator who fought in the Civil War on either side.

—*Henry Miller News Service.*

First picture of the Presidential Cabinet since 1925. Left to right, seated—Secretary of War Dwight F. Davis; Secretary of State Frank B. Kellogg; President Coolidge; Secretary of the Treasury Andrew W. Mellon; Attorney-General John G. Sargent and Postmaster-General Harry S. New. Back row—Secretary of Labor James J. Davis; Secretary of Commerce Herbert Hoover; Secretary of Agriculture William H. Jardine; Secretary of the Interior Hubert Work, and Secretary of the Navy Curtis D. Wilbur.

Alabama sent seven Confederate soldiers to the House of the Fiftieth Congress. There were James T. Jones, of Princeton '52, who was an officer in the Fourth Alabama; Hilary A. Herbert, who was disabled in the Battle of the Wilderness and served as Secretary of the Navy in Cleveland's second term; William C. Oates, colonel of the Fifteenth and Forty-eighth Alabama, who was wounded four times slightly and twice severely, losing his right arm at Richmond, August 16, 1864, in his twenty-seventh battle; James E. Cobb, who was made a prisoner at Gettysburg; John H. Bankhead, who served four years and was three times wounded and whose son is now an Alabama member of the House; William H. Forney, who served in the war with Mexico, entered the Confederate army when the Civil War began and was a brigadier general when he surrendered at Appomattox, and, finally, there was Joseph Wheeler, one of the most distinguished of Confederate soldiers. Wheeler, who was graduated at West Point in the class of '59, fought Indians in Kansas and New Mexico and entered the Confederate army as a lieutenant. He rose to become while still in his twenties the senior cavalry general of the Confederacy. He was scarcely more than a boy when he commanded the rear guard on the second day at Shiloh and covered the Confederate retreat. He showed remarkable energy and skill at Chickamauga, fought almost daily opposing Sherman in 1864 and was from the beginning until the very end of the war a fascinating figure. He was a gray-bearded little man, unusually small in stature, with a head disproportionately large. In the war with Spain, McKinley made this former Confederate a major general of volunteers, as he did Senator Butler of South Carolina. The day he again put on Uncle Sam's uniform Wheeler declared to be the happiest of his life, and said that he sought no kindlier fate than to die in the ecstasy of battle. He was commander in the fight of Las Guasimas, June 24, 1898, in which the Rough Riders first came under fire. Later he commanded a brigade in the Philippines and in June, 1900, he was made a brigadier general in the regular army. Retiring in September of that year he died 'up North,' January 25, 1906.

Dunn, Rogers and Peel of the Arkansas delegation served in the Confederate army throughout the war.

Clifton R. Breckenridge was only sixteen when the war began but served successively as private in the Army and as midshipman in the Navy. His ancestry was distinguished. He was a son of John Cabell Breckenridge, who had been vice-president during Buchanan's presidency and proslavery candidate for president in 1860 opposing Lincoln. Breckenridge left the Senate to 'go South.' He became a major general and then Confederate secretary of war. He made his escape to Europe when Lee surrendered and did not find it safe to return until 1868. His grandfather John Breckenridge was in the Senate in 1801 and was Attorney-General in Jefferson's Cabinet. Clifton R. Breckenridge got his collegiate education after the Civil War, served several terms in Congress creditably and was minister to Russia 1894-97.

Only one of the representatives from California, William Vandever, was a veteran of the Civil War. He was a representative in Congress from Iowa when the war began but left his seat and served until the end of the war, when he had become a major general by brevet. Joseph McKenna of the then Third California District, becoming a member of the House in 1885, resigned in 1893 to go on the Federal bench. He left the bench in 1897 to become Attorney-General in

PHILADELPHIA:
Printed by R. AITKEN the Publiſher, oppoſite the London Coffee Houſe, Front-Street. 1775.

WHEN the Pilgrim Fathers landed on the bleak shores of New England more than three hundred years ago, the business of wresting a living from the soil consumed the major portion of their energies. For nearly a century not even a newspaper ventured to make its appearance, and for more than a century no periodical with lighter literature made its appearance.

In January of 1741, Benjamin Franklin in Philadelphia started the *General Magazine*, and about the same time the *American Magazine* came from the press of another pioneer printer of America, Andrew Bradford, also at Philadelphia. Six issues, January to June, completed the rôle of Franklin's effort, while Bradford's survived but three months. Only about ten sets of Franklin's six issues are known; while Bradford's *American Magazine* is far more rare, but does not command the same price.

Franklin's magazine venture stands out as one of the few failures of that universal genius, having had but six monthly issues. The *Pennsylvania Gazette*, which later came into Franklin's possession, was begun on December 24, 1728, by Samuel Keimer, with the title *Universal Instructor in all Arts and Sciences: and Pennsylvania Gazette*. On October 2, 1729, Franklin and Meredith bought out Keimer and gave the magazine the title, *Pennsylvania Gazette*. In 1732 Meredith retired and Franklin continued as owner or part owner until 1766. In 1816 the paper was discontinued.

Boston appeared upon the scene in the year 1743 with two efforts in magazine literature. The *Boston Weekly Magazine*, printed by Rogers and Fowle, had three issues between March 2 and March 16, 1743; the Massachusetts Historical Society has a complete set. *Christian History*, which made its initial appearance on March 5, 1743, from the press of Kneeland and Green at Boston, may properly be called the first successful representative of the present weekly journal. For fully two years—104 issues—this journal continued to appear. Rogers and Fowle revived the *Boston Weekly* in September of the same year as a monthly, under the name *American Magazine and Historical Chronicle*. This enjoyed more than three years of existence, expiring with the issue of December in 1746, with a total of forty issues.

Up to 1783 only twelve other magazines made their appearance, in addition to the five already mentioned.

New York appears with the *Independent Reflector* on November

# of COLONIAL DAYS

30, 1752, a weekly which continued to flourish for one year. Before the end of that year the publisher, James Parker, started the *Occasional Reverberator,* which ceased reverberating within two months. Two years later Parker and Weyman ran *John Englishman* for a total of nineteen weekly issues. Again in January of 1758 Parker essayed at Woodbridge the *New American Magazine,* which continued monthly for twenty-seven issues.

The idea of a magazine, once started, was obviously enticing, for those who began publishing them returned again and again to the effort. William Bradford in October of 1757 began the *American Magazine and Monthly Chronicle,* which fell with the unlucky thirteenth monthly issue. The revival of this, printed by William and Thomas Bradford and edited by Lewis Nichola, enjoyed the popular title of *American Magazine or General Repository;* it ran from January to September of 1769. The *Royal Spiritual Magazine* was sponsored by Cruikshank of Philadelphia, appearing only during 1771.

NEW YORK, PRINTED BY SAMUEL LOUDON,
And ſold by the PRINTER, by Meſſieurs BERRY and ROGERS, Mr. R. HODGE, Mr. S. CAMPBELL, Mr. T. ALLEN, and Mr. T. GREENLEAF.

In Boston the *New England Magazine,* published by Benjamin Mecom, made three vain efforts to appeal to the public. For about twelve years Boston continued without either weekly or monthly literary sustenance of its own. E. Russell ventured the weekly publication of the *Censor* from November 23, 1771, to May 2, 1772, obviously inspired by the spirit of the time. However, it is strange to record that the most patriotic and vigorously anti-British publisher of Boston, Isaiah Thomas, published from January, 1774, to March, 1775, the *Royal American Magazine,* with a title which soon ceased to enjoy American favor.

In this period there was at least one foreign language periodical—the German *Ein Geistliches Magazien,* appearing from the press of Christopher Saur in Germantown sixty-five times at irregular intervals between 1764 and 1771.

During the progress of the Revolutionary War only two periodicals ventured upon the scene. The *Pennsylvania Magazine,* published by R. Aitken of Philadelphia, appeared monthly from January, 1775, to July, 1776. The *United States Magazine,* published in Philadelphia by Francis Bailey, appeared from January to December of 1776. This was edited by H. H. Brackenridge, friend and

OF THE DEARBORN INDEPENDENT

False Values and True

SOME people place a fictitious value on things that are of no importance. If they were very young children this would not be remarkable. In the age of innocence an illusory value is attached to the most trifling things: perhaps a smooth round pebble, a fragment of shell, or a piece of brightly tinted paper. A little girl collects bits of cloth, broken crockery, and glass beads; a boy hoards up marbles, bits of string, and dilapidated penknives. In these things one sees the instincts of primitive man—the desire to possess that which is of brilliant hue, which shines or sparkles, or which to the unsophisticated mind bears an exaggerated importance. Of the intrinsic worthlessness or lack of utility of the objects thus accumulated the child has no conception, although by means of such trifles it derives an extraordinary amount of gratification. But this pleasure is innocuous; parents look on indulgently and say to themselves that the child will know better when it arrives at the age of reason.

But this does not always follow. The characteristic of extravagantly appraising things that are useless is not peculiar to either children or savages, and sometimes the motive that underlies this characteristic is of a more questionable kind.

The experience of ages has shown that the only true test of value is usefulness, and by usefulness is meant the faculty of being of real service to mankind.

THE circulation of spurious coin is bad for a community, but the broadcasting of false values is worse. To detect false currency is comparatively easy; to search out and eliminate counterfeit values is a much more formidable task, for they lurk where they are least suspected, and possess a luster which hypnotizes reason. The only true test of values, either of men or of things, is the test of their ability to make the world a better place in which to live. The only title worth having is that which is built upon merit. If that which has been extravagantly appraised does not assay a fair percentage when passed through the crucible of experience, it will be pronounced a failure.

The setting up of false values when estimating men is even more common than the appraising of things. Sometimes one man will call attention to a passing citizen and in substance exclaim, 'There is a splendid fellow; one of the most remarkable men in the country.' Both assertions may be without foundation. The laudation may be mere sycophancy or the result of a desire to appear broad and generous-minded. In the majority of cases it means nothing at all.

Titles are sometimes tacked onto men just as labels are attached to goods for sale. A high-sounding designation gives an illusory value to men just as a tag often does to merchandise.

If a man is not of the true metal, no amount of gilding will make him otherwise. If his standard of intelligence is low, no flamboyant title can raise it. Much polishing may make pewter look like silver and brass like gold, but the false luster soon fades. The most skilful horticulturist has not yet succeeded in making grapes grow on thorns or figs on thistles.

But certain titles, whether falsely assumed or otherwise, undoubtedly exercise a fascination over the simple-minded. The more extravagant or fantastic the title, the greater its power over weak intellects. Since the beginning of time quacks and charlatans have been sustained by the very audacity of their pretensions until truth and justice have torn aside their mask.

The uninitiated have been deceived by the glittering yellow of iron pyrites on a lump of coal or clinging to the pebbles at the bottom of a clear stream, and have rushed off to tell the world of their supposed discovery, only to find it pronounced 'fool's gold.' The actual value is in the coal, not in the glittering pyrites.

Illusory aspirations must also be included in the category of false values. There are people who are still crying for the moon as they did in their childhood; who are chasing rainbows or pursuing gaudy creatures with painted wings that continually elude their grasp. This futility of purpose and misguided energy lead to nothing but disappointment and disillusionment.

The true road to happiness lies not in seeking those things that merely gratify the senses, but in those which may serve as solid foundations upon which ideals may be built. True value lies in that which will endure, that which is useful, that which is real, but above all things, that which will be most beneficial in promoting the happiness of the greatest number.

There is more true gratification in attaining the goal that has been slowly and steadily striven for than there is in the accidental discovery of a gold or silver lode. In the one case success has been reached in the pursuit of something the value of which lies in the widespread benefits which it will confer, while in the other it is merely the discovery of something that has been hidden for countless centuries, and which brings into the service of man nothing that he did not formerly possess.

OF THE DEARBORN INDEPENDENT

A Nation of Pioneers

THIS is a nation of pioneers. Stanch men and women they were who first pushed frail craft across uncharted seas to establish settlements in an unknown land. And stanch men and women they were who followed them. With the salt of the sea still in their nostrils, they fought their way into the Alleghenies, spread south to the savannas of Georgia and north to the valley of the St. Lawrence. A great human wave flooded up the rivers into the hinterland, and thence across the mountains into the plains and westward to the Pacific.

Where the first pioneers found dense forests, those who followed found good clearings. On these they built more substantial homes than the log cabins left by the earlier visitors. Others, following, transformed settlements into towns and towns into cities. The cry of bountiful land in the Ohio and the Mississippi valleys lured New Englanders on west. The rumor of cheap timber developed northern Lake states. Rich agricultural lands of the prairies and the Pacific Coast attracted additional thousands. In the wake of the pioneer came the farmer, the railroad surveyor, the trader; merchant, mechanic, and financier.

We are their heirs. The skeleton-strewn trails are gone. The lonely farms have vanished, for the most part. The great central plains, once the home of roving bison, now feed millions of people. Character, intelligence, and faith have converted a wilderness into a rich community.

But pioneers still remain with us. Today pioneering takes a new form. In the field of industry and science are men working as hard and living as dangerously as those who led the caravans of land seekers across the Great Plains. An eminent physician and scientist recently gave his life in an experimental test of a new anesthetic he had invented. We are a pioneering people. We discard the old when the new proves better. The spirit of progress is strong within our hearts. One-time luxuries are now necessities. Industry has lightened the labors of millions. The pioneers of today are fulfilling destiny as surely as the pioneers of Colonial days.

The Husking Bee

ONE institution that prevails even in this thoroughly modern day is the old-time husking bee. Sacred to the harvest season, filled with happiness and jollity, the husking bee is not lost to the people who live where good corn grows. Every community in the corn belt has a real corn shucker; not the swivel chair or the steam radiator kind, but one who really gets out into the field and keeps about three ears of corn in the air all the time from the first tinge of dawn until darkness obscures the wagon.

Perhaps corn husking has little interest for the city man who has never donned a husking peg or stripped the corn of its husks and whiskers as he wrested it from the stalk. There is a knack in husking corn, as there is in many other things to which man puts his mind and his hand. In a bygone day, it was sufficient reward that the finder of a red ear of corn have the privilege of kissing the maid of his choice. Now, championships are the reward for special ability. Once a neighborhood frolic, the husking bee has evolved into a national affair with states pitting their champions against the headliners of other states. Communities hold bees at which local champions are selected. Several communities send their representatives to a central place, where a district premier wins his laurels. Then the state champion is selected; and the final bee determines who is to be world champion.

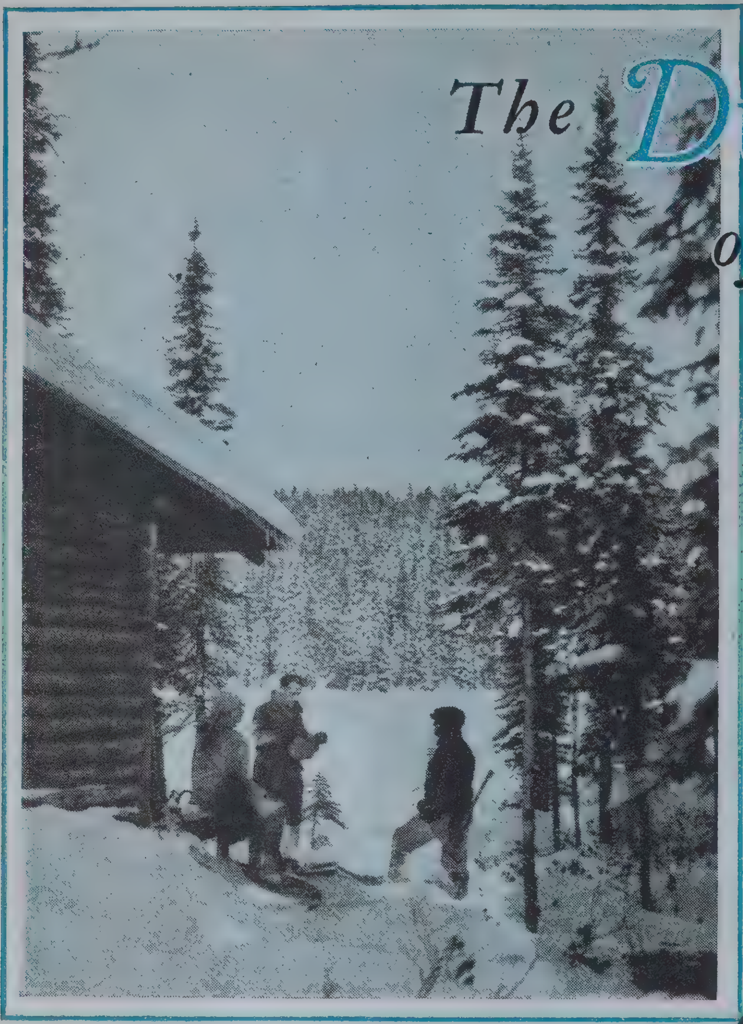
In the South, the old-time darkies pull off husking bees as they did years ago. On a moonlight night in late fall the corn huskers gather about a huge pile of corn. Then to the tune of old-time songs they begin. Fiddlers and banjo pickers keep time to the flying ears. Small boys and girls whisk the husks and shreds away from the feet of the workers. By midnight the corn is all husked. Then comes a midnight supper of fried chicken, mutton, sweet potatoes, corn, fruit, johnnycake, apple turnover, and everything that a hungry worker can think of. Rivalries are wholesome things. The husking bee gives color and zest to farm life.

Fifty Cigars

VINCENT MADDI, University of Maryland medical student, set about it the other day to smoke fifty cigars in eight hours, in the attempt to settle arguments as to whether tobacco is harmful or not. For three hours he smoked steadily, with no apparent physiological reaction. At the end of the next three hours his pulse was 108 instead of 80, his respiration was 30 instead of 17, and his blood pressure had increased from 120 over 75 to 132 over 80. He was feverish, irritable, and restless.

At the thirtieth cigar the test ended abruptly. Maddi had been taken suddenly sick. 'I might have suffered severe ill effects had I continued,' he declared later.

The experiment may not greatly influence others in their attitude towards tobacco. It may not even stir their sympathies as it should. But one feels sure that Mr. Maddi's own attitude in the future will be one, at least, of extreme caution.



The Dude Ranch of the Snows

By
JAMES CLYDE GILBERT

Left—*The beginning of the snow trail. The driver will soon have the dogs in readiness. Meantime see that snowshoe thongs are not too tight.*

Below—*Pierre is a competent guide. In summer he guides the sportsman to the fishing grounds. In winter he follows the same trails on snow and ice.*

—Photographs courtesy Canadian National Railways.

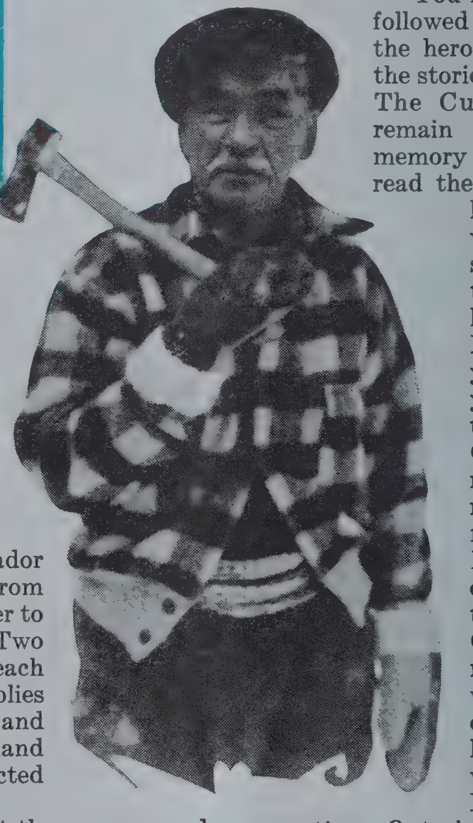
WE SKIRT the lake which lies like a vast frosted mirror beneath a large ruddy sun faintly veiled by the hazy atmosphere of winter. A gentle breeze murmurs among the branches of the dark-green firs. Their balsamic breath soothes our nostrils. Small bushes, heavily laden with purest snow, nestle close to the sheltering canopies of the pines. A ruffled grouse, disturbed from its snowy cot by the lead dog, whirs up from beneath the snow, the white powder bursting from its body like smoke from a rocket. The woods are alive with nuthatches, chickadees and other bird life. The frost is invigorating. We are glad to be alive.

* * *

In 1670 the Hudson's Bay Company received its charter from Charles the Second. Until 1867, when the different provinces of old Canada were brought under the Dominion Confederation, the company held sway over all that country which drained into the great bay. They established their first forts or factories at the mouths of the principal rivers that fall into the bay on the southeast shores. This small beginning of a post or two was gradually continued ever farther south, ever farther west, and north as the requirements of the fur trade necessitated. There the company pushed in and followed its own flag, a standard red ensign with the initials H. B. C. in white block letters in the lower right-hand corner. This flag was known from Labrador to the Pacific and from the St. Lawrence River to the Arctic regions. Two ships visited the bay each summer bringing supplies for the coming winter and taking back to England the furs and oil collected in the past season.

Trappers still hunt the swamps and hills for the rich furs that are to be found there. Sleek mink along the rivers, furtive marten and fisher cats in the timber, all represent wealth to the trapper in winter.

Throughout northern Canada, from the Gulf of St. Lawrence to the shores of the Hudson Bay, lie thousands of square miles of virgin forest, penetrated only by the hunter and trapper, the Indian and the Hudson Bay runner as he makes his journeys between the far-flung posts which dot this mighty hinterland. The company no longer rules the territory over which it once held sway but there is still much game and fur, for Nature recognizes no government. Moose with thrashing antlers still stalk the dark spruce swamps. Round-eyed deer spring through the underbrush at the approach of the hunter. Foxes and wolves pursue their quarry, the more timid rabbit and the low-lying grouse. The streams are alive with fine food fish and the country itself is much the same as it was when Prince Rupert was associated with the first body of 'adventurers trading into Hudson's Bay.'



You have thrilled as you followed the adventures of the heroes and heroines in the stories of Ralph Connor. The Curwood characters remain stamped on your memory long after you have read the stories. You may have yearned to visit the scenes of some of the more thrilling tales. Perhaps the lure of the North has caused you to wish that you, too, might live the free life of the Canadian woodsman. This wish may now be gratified. The typical Dude Ranch of our own West has been transplanted to Canada. Instead of riding the range with the cow hands of Montana you follow the woods trail with Pierre La Roque in Quebec or northern Ontario. The forest pathways of the northland are now open to the tourist who visits Canada in winter. These trails are known as the Blanc Bec trails. With snowshoes and dog teams the more hardy tourist may now penetrate to points hundreds of miles from the railroad if he so desires. These trails have opened a new vista of outdoor sports life for the lover of winter. Each year an increasing number of visitors follow the white trails into the trackless forest, returning with tales of wonderful experiences. There is a joy in living for a time beneath the near Arctic moon. It is something unusual to see the wavering aurora soar high overhead to the very zenith of heaven; to be lulled to sleep by the doleful howl of wolves chasing deer across the icy lake. Be not alarmed, however, for the American timber wolf never attacks human beings.

THE first cabins may lie anywhere from five to thirty miles from the railway. These are built on the shores of river or lake on the edge of the wilderness. They are of log construction and usually comprise three rooms. The outfitter in charge is a man who has had many years of experience in handling hunting and fishing parties during the summer and autumn. With him are the guides, usually part-Indian, who know the woods as well as or better than you know the city in which you live. One of the attractions lies in the healthfulness which results from a sojourn in the North Woods during the winter season, when the air seems charged with health and when the tang of spruce seems to encourage the newcomer to attempt more than would be thought possible under other conditions.

It is great sport to tear through the forest trails behind a hardy string of dogs. The huskies, beasts of burden in the northland during the winter months, are accustomed to hauling their loaded sleighs over the snow and ice trails, and dog teams will cover a vast territory in a single day. Dogs are used when the visitor has reached the point where snowshoeing, without a period of rest in between, has lost further attraction for him. In fact, if he so desires, he may ride behind the huskies entirely and so dispense with the snowshoes. There are convenient shelter houses along the trail and permanent roadhouses. These roadhouses are not to be confused with the institution operating under the same name in the more populated regions. These are forest inns where good beds and plenty of wholesome food refresh the tired traveler. The traveler need have no fear of discomforts from extreme cold, provided he takes the precaution to dress warmly. Those who wear warm woolen underwear, heavy clothing, cap and mittens, with plenty of woolen socks and moccasins, need have no fear from that score. Eiderdown sleeping bags and four-point blankets are provided to keep the visitors comfortable at night.

On the longer trails a halt is called on the surface of a lake. Here a hole is chopped in the ice and the party angles for pickerel with moose meat as bait. The results are astonishing to those who are in the habit of fishing all day for two or three fish at home. Usually ten minutes of fishing will result in a catch too numerous for the party to consume. There are trout streams, too, but the trout is out of season and the true sportsman remembers his creed.

The trails lead through a fairyland of snow-bedecked evergreens, across swift brawling streams, ateem with trout, up hill and down dale. Trees and bushes are loaded with newly fallen snow and assume most weird and fanciful shapes, ready to disappear at the faintest touch of the frail support. Brilliant sunshine filters through the interstices of the tree tops and through the leafless branches of the white birch.

The tracks of fisher, otter, mink and marten are fresh and frequent. Hunger assails the traveler but he knows that at the next log inn he will find savory moose steak and baked beans awaiting him, as well as other better-known foods with which he is familiar. Beans baked in a bean hole have all the flavor of the bean and there is nothing more appetizing and satisfying after a hard day on the trail.

HAVE you ever eaten beans baked in a bean hole? That delightful concoction known to every northwoods cook? A fire is first built in a hole in the ground. This hole is twice the size of the kettle intended for cooking. Dry white beans are used that have been soaking for two days. When the fire has burned itself down to a bed of live coals the kettle is packed. First there is a layer of soaked beans; then strips of sugar-cured pork; another layer of beans on this and another thin layer of pork. The pork and beans are alternated until the kettle is more than half full. A generous portion of the best molasses is poured over all. The pot is then covered and placed in the hole on the red coals, which are raked in about the pot and over the top. Dry earth is then spread over all. The pot is left undisturbed for twenty-four hours. At the expiration of that time it is dug up. The contents are hot. The beans are soft, the pork is well done, and a more savory dish cannot be found in all the North. And it makes for strength on the trail, which means much if you are making a long trek.

As Switzerland has capitalized her snow peaks and ice fields, so Canada has awakened to the natural beauties of her winter forests. She is welcoming those who want to enjoy the health-giving qualities of her northern climate with its annual fall of snow. The cost of these little journeys into fairyland is reasonable considering the equipment

—Photograph courtesy Canadian National Railways.

Last summer the sportsman in his canoe explored this winding waterway. Now, with the big freeze on, and the first heavy snow, the dog team leaves its trail across the stream.

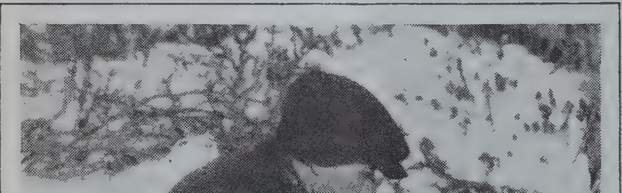
—*Photographs courtesy Canadian National Railways.*

Well-trained dogs whisk your equipment over the snow. The brisk, bracing atmosphere invigorates; the trail leads from frozen lakes to dark, dim-lit forests, the home of numerous winter birds which make merry amid the evergreens.

and man power which must be provided by the outfitter to insure comfort and convenience to his guests. The journey may be either long or short as the guest desires. The trips may cover anywhere from fifty to a couple of hundred miles through territory where none but lumberman, fisherman, guide, hunter or trapper has gone before, and in whatever part of Quebec or northern Ontario they may be made the visitor is assured of a real holiday.

On the trail we forget the devious paths by which we wander up into this folding of the hills, and we have no knowledge of the paths that will lead us out. We depend on the guide and the sturdy dogs for that. Almost we have forgotten whence we came. With the woodland fallen so quiet about us, every birdcall and twig-rustle and waterfall stilled into awe by the fluffy snow, we seem to stand in a country separate and remote from all the world. Plants have locked their life treasure of root and seek no further for strength. The snow on the lakes is most beautiful. The tall spruce surrounding them stand grave and silent-looking rugged sentinels overlooking frozen water spread deep with snow which is as immaculate as a blank page until we print the tracks of our snowshoes and dog teams over it. A rabbit appears, hops furtively out on the white lake, moves his head from side to side apprehensively. At sight of the dogs he turns tail and makes his exit in a panic.

Each morning the great ball of flaming red sun climbs slowly up the eastern sky and flushes the earth with faint warmth. Every tiny twig is incrusted with rosy ice; the rose bushes blossom again with entrancing soft pink crystal. Here is winter in all its nobility, without stain. The entire landscape shares in the enlarging, purifying quiet of the far-reaching snow. Like a benediction it lies over all the world, impressing the beholder with its beauty.



Left—*The varying hare, or snowshoe rabbit, supplements the fish diet, for the husky dogs. The tender young make excellent potpies.*

Right—*Moose steak and whitefish, served piping hot in the open after a long trek over the snow trail, rests and exhilarates the traveler.*

DEMOCRACY in AMERICA

By LEWIS WORTHINGTON SMITH

REPRESENTATIVE democracy is rooted in the conviction that government should be in the hands of the gifted. It was upon that understanding that the Thirteen Colonies broke away from Great Britain. No one could think of George the Third as being made king on such a count. A Binet test might possibly have left him with a second lieutenancy. He was lord by virtue of a Stuart ancestor who had been on the throne of England.

Long ago it was discovered that the son of a king has a better chance of being kingly than the son of a butcher, a baker, or a candlestick maker. As a general principle it is more than defensible. It is true. It has demonstrated its validity in the accomplishments of Englishmen of rank. Probably no other body of men not constituted by a selective process has had so many high achievements to its credit as the nobility of England.

That capacity for ruling should be restricted to a single house, however, was open to question. Now and then, kings were overthrown by wiser or stronger men. That fact alone was sufficient to cast doubt upon the hereditary principle. Inbreeding of royal blood with royal blood is so narrow and circumscribed an affair that it leads almost invariably to impoverishment. So it is that we have come to echo Emerson's

> 'God said, I am tired of kings,
>   I suffer them no more;
> Up to my ear the morning brings
>   The outrage of the poor.'

It is a more or less common notion that, in disregarding heredity in the choice of a chief magistrate for the United States, we discarded the hereditary principle. One of the great problems confronting the framers of our Constitution was that of devising a means for securing able presidents. Our fathers were under no delusion regarding the ordinary man's executive capacity. They believed in the rights of man, but they did not consider government so simple a matter that it could be directed satisfactorily by the incompetent majority. They tried to provide an arrangement by which the gifted should be chosen to rule.

Peasant voters and proletarian social notions from Europe have swept us away from this basic principle. Some anti-American intruders have imposed upon some of the more credulous of us the conception that America is a country where everybody is as good as everybody else, and where anybody should be permitted to do what anybody else does, even to the point of dictating public policy.

This point of view, of course, denies that heredity is a thing of importance in American society. Nothing could have been further from the intentions of the founders nor from the spirit of democracy as understood by genuine Americans. It was to fully free the hereditary principle that a century and a half ago we established a democracy. It was because high ability was to be found somewhat widely diffused outside the limits of a dynasty but was yet not universal among men that we set the experiment going. It is the business of our democracy to liberate all hereditary ability, to give it full opportunity, not to submerge it in the interest of a fictitious dynastic monopoly or a sentimental 'equality' among men. It was in France, not in America, that the cry of the new order was, 'Liberty, Equality, Fraternity.'

THE Declaration of Independence was grounded on the affirmation that all men are created equal. But John Hancock, John Adams, and George Washington were by no means believers in the doctrine as entertained now by some who seek our shores. Adams, in fact, favored a hereditary presidency. The Constitution that was the final embodiment of the political faiths of those and other leaders of the Revolutionary struggle did not provide for political equality *even among white men.*

Manhood suffrage was not made universal even for men who had won their freedom by the sword, as, of course, it was not granted to Negroes. In the different colonies there were property qualifications upon which the right to vote was dependent. These matters were deliberately left for the Colonies to settle for themselves. Settlements already made were accepted as they were.

In relation to this matter J. Allen Smith, professor of Political Science in the University of Washington, in *The Spirit of American Government,* says:

'The American Constitution did not recognize the now more or less generally accepted principle of majority rule as applied to the qualified voters. Moreover it was not until several decades after the Constitution was adopted that the removal of property qualifications for voting allowed the people generally to have a voice in political affairs.'

He says again: 'In so far as the exercise of legislative power is controlled by the Supreme Court our government is essentially aristocratic in character.' In a broader generalization, the same writer has the following further word: 'In any evolutionary classification of government the American system occupies an intermediate position between the old type of absolute monarchy on the one hand and thoroughgoing democracy on the other.'

This is not in agreement with popular assumption regarding the character of our democracy. The common misunderstanding of our institutional life has had consequences far from pleasant. It has been particularly disastrous in the minds of those who come to us from across the water.

The two colonies most active in the whole Revolutionary period, whose influence was greatest by reason of the able leaders they contributed to the cause, Massachusetts and Virginia, were probably the two most aristocratic of the thirteen. John Hancock's tastes were not of a sort to admit plebeian equality with himself. In this he was characteristically representative of Massachusetts. The democratic principle was in full flower there as a theory, but the aristocracy of inherited brains, active first in the pulpit, then in the law, and later constructively in our expanding industrial development, made it of anything but universal application. An aristocracy of letters was growing up along with these other aristocracies. Emerson, Hawthorne, and Lowell were developing a broad human sympathy no doubt, a large faith in the ultimate unity of man. But as practical human beings, they did not consort promiscuously with the world's waifs and strays. They knew that they belonged to hereditary order, the order of New England brahmins, as Oliver Wendell Holmes named them, and they knew that their order did not have a place in it for all sorts and conditions of men.

WHATEVER theories Jefferson and Madison and their fellows may have held in the abstract, it is clear that practically they acted in a spirit colored with aristocratic feeling. They believed in superior men and in the high value to society of such men. They fought with the royal governors and finally flung off royal authority altogether. In doing that they were mainly asserting that they too were men of quality, that they had inherited capabilities that justified them in setting up their judgment in opposition to that of the king

Going-to-the-Sun Mountain and part of St. Mary's Lake.

GOING-TO-THE-SUN
in
Glacier National Park

By DOROTHY E. PILLEY

IT WAS quite hard to stop watching the chipmunks—three or four kinds of them—on the chalet porch, running up to beg for nuts and climbing even the visitors' shoulders with exquisitely alert movements, their enormous eyes shining with greed as their clever little paws stuffed nut after nut into their already overswollen cheeks. But the horses were waiting, the day was wearing on, and we had several miles of trail to ride and thousands of feet to mount, a camping site to find, and a mountain to reconnoiter before evening.

From St. Mary's Lake, Going-to-the-Sun Mountain looks inaccessible. Tremendous limestone precipices encircle it, defending what seems to be a summit plateau with perpendicular ramparts several thousand feet high. One or two lines of weakness may be picked out by the expert, which offer the chance of a successful climb. Round on the north flank, where an ice field with a name of sinister suggestion, Sexton Glacier, clings to a lofty shelf, a difficult and complicated route has in fact been followed.

But our intention on this occasion was to prove once more that almost every mountain, however formidable in appearance, has an easy way up, if you can only find it. Cunning rather than luck is needed in the finding, a point brought home to us by the adventures of two carpenters from Going-to-the-Sun camp the week before. With great courage and enterprise they had made a direct attack upon the cliffs that face the lake. Little by little as they mounted, the rocks had reared up at them. They found themselves finally spread-eagled on the crags, unable to return by the way they had come up and forced to make a sidewise move for some hundred feet or more along a ledge which seemed to them almost too desperately difficult to be followed. One of them remained confident, however, that they had found the way up. A thousand feet only, he thought, had separated them from the summit.

But, alas, when we came later to closely examine their route, we could see clearly that this estimate was too hopeful. Not less than 2,500 feet of quite unclimbable cliffs lay ahead of them. It was fortunate that they had gone no higher. An inexperienced, ill-equipped party, without a rope and the knowledge of how to use it, for example, would have found it very difficult to descend in safety.

Experience is nine-tenths of any battle with a mountain. An eye familiar with precipice problems would have judged these particular cliffs impossible at a single glance. But even upon comparatively easy ground the habit of route-finding counts immensely. Two days after our ascent another party following almost in our steps somehow managed to mistake the nature of the ground and after hours of climbing, hand and foot over difficult rocks, were compelled to abandon the attempt. Their failure astonished us somewhat, for our route had given us only some fifty feet of real climbing; the rest consisted of walking over slopes and ledges which really offered no difficulty.

Several problems absorbed our thoughts as we jogged along the trail which winds high above the blue lake waters, round the spurs of the mountain. One concerned certain bundles which made a heavy load for the pack horses. A motion picture camera, with its tripod and accessory magazines, does not sound a grim impediment to travel until you actually start to carry them over rough ground upon your own back. Part of our design was to take them to the very summit—which helps to explain our desire to find the very easiest way up.

Another worry was the possibility that we might not be able to camp so high up as we wished. Last year had been an exceptionally dry year in the mountains. Water courses which in other years were filled with tinkling rills were now no more than stony, dusty staircases. It would be a serious obstacle to our plans if we were forced to leave our mountain to find water.

The Piegan Pass trail that we were following mounts steeply. It is probably better known as the high-level route from Sun Camp to Many Glacier. From time to time as we mounted, a clearing, where some avalanche had swept down, laying the trees in piles of splintered matchwood, gave us glimpses of our mountain. From almost every aspect it suggested a spacious summit plateau crowning its awe-inspiring cliffs, an appearance that is doubtless in part responsible for the Indian legend from which it takes its name.

Once, in the days before history, so it is told, the Blackfeet tribe suffered from a famine worse than any that was ever known. In the depth of their despair appeared to them a spirit who gathered them together in the mountains and lifted up their downcast hearts with the promise of better days at hand. Having taught and comforted them, he returned to the sun whence he had come, taking his departure from the summit of this mountain, which since then has held a peculiar place in their mythology.

The time came to leave the trail and ride over undulating park land toward the base of the cliffs. On this side, Going-to-the-Sun Mountain throws out a ridge toward Sexton Peak, its satellite summit. The east flank of this ridge is all easy slopes of débris and scree, with only a comparatively low belt of crags slung across them. Even this is broken at more than one point by convenient gullies. It was clear that with only two switchbacks we could literally walk up to the summit.

BUT the water problem was not so easily solved. We crossed channel after channel, curving down between the hillocks of bunch grass which was waving under the sunlight in the light breeze. Each channel was dry. In the end, despairing of the quest for water, we resolved to camp where we were and go down on foot when suppertime came to the permanent creek a mile or more away in the valley.

Rather thirstily, we began the main part of the day's exertions. Afterward, we felt rather bitter about that afternoon's wasted efforts. A motion picture camera is a most unwieldy object to carry in a pack, seemingly nothing but knobs and corners. Bowed beneath our loads of awkward metal we toiled up the slopes, which seemed peculiarly hot and stifling, stopping from time to time to loll on restless beds of shale and watch the evening shadows creep up the slopes. Shafts of saffron light streamed through gaps in the opposing mountains and lighted up Blackfeet Glacier and the remoter ranges. Without our loads, we could have gained the summit that evening. With them, all we could do was to take the main weight up far enough to make certain victory on the morrow. Then, with a last glance round, we hurried down to seek water and set up camp for the night.

This last task was a light one. Trusting to the weather, we had brought with us only sleeping bags and a few tarpaulins. Unsuspicious even of the heavy clouds which had begun to mass themselves in the northeast, we left the camp and made off full of cheerful anticipation toward the distant creek. It proved to be far more distant than we thought, and scarcely had we settled ourselves in comfort beside the purling water and set the teakettle to sing, when a sudden ominous mutter made us exchange questioning glances. The thunder sounded very distant, however, and might be harmless. The tea was just coming to the boil; above us on an outjutting crag an immense white mountain goat, seemingly larger than a horse, had perched himself to look down upon us with a resentful gaze; rest and refreshment were too welcome to be abandoned without necessity. So we lingered in the dusk and sipped and filled our cups again until, without any other warning, the storm began to crash over our heads and a sprinkle of enormous raindrops splashed down on the dusty rocks about us.

We were fairly caught, far from our tarpaulins, all our bedding carelessly spread out in the open two miles away! We dashed off uphill through the already wet underbrush and arrived too scant of breath to curse our folly.

With the storm had come sudden darkness. The almost continuous glare of lightning made up, however, for the difficulty of lighting the lantern. Under this violent illumination we rescued our moist bedding and fixed up our tarpaulins as best we could. We then huddled down and hoped for the best. The storm proved to be of that annoying circular variety. It seemed to pass away only to return with new world-annihilating crashes and fresh aerial oceans that fell lashing through the tormented treetops in tall misty columns which glittered weirdly in the lightning. The spectacle was a considerable recompense for the discomfort and by good fortune the night was warm, even though the rain seemed cold as it flowed through the bedding over our skins.

OTHER thunderstorms in the mountains came back to memory. There was one that flashed up out of a clear forenoon and swept the whole of the Alps before nightfall, coming out of the southwest like the end of the world, just as we were nearing the summit of Mount Blanc. Universal darkness rolled along the horizon, and against this curtain small white advance clouds formed as suddenly as bursts of shrapnel, nearer and nearer, with a peculiarly threatening air. There was no choice but to turn and run down to the safer slopes of the Grand Plateau. Three-quarters of an hour later the bolts, the hissing rain, the furious squalls had ceased and blue sky and sunlight were following the trailing edges of the storm toward us.

But such brief storms are rare in the high mountains. More typical was the great storm which caught us near the summit of the Jungfrau, that lofty queen of the Alps, the storm that ended the fair climbing weather of 1923. We were crowning a long series of splendid climbs by the ascent of that marvelous ridge which runs up from the queer glacier railway station of the *Jungfraujoch*, known to so many visitors of the Alps. We had left the empty, echoing restaurant at three o'clock in the morning and crossed the glacier to the rocks of our ridge by lantern light.

This early start was made necessary by the length of the expedition. In spite of many attempts, only one party had ever succeeded in climbing the ridge, and ours is still the only other ascent. An almost interminable series of lofty towers, linked only by the narrowest ridges of rock and flanked on both sides by tremendous unscalable precipices, leads up to the well-known and much-visited sum-

A difficult ascent. Going-to-the-Sun in the background.

—Ray-Bell Films.

Atop a pinnacle on Rearing Horse Ridge, Glacier National Park. Lincoln peak is to the right.

mit. The ordinary way up was to be our way down. Once fairly launched on the ridge we should have no option but to continue.

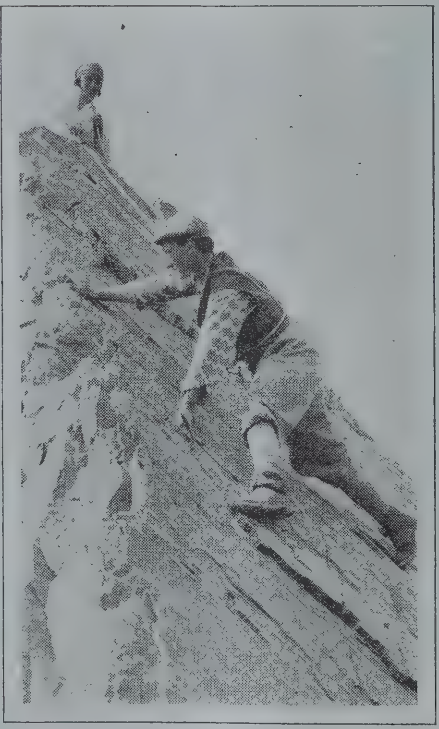
It was easy to recall the anxiety with which, about three o'clock that afternoon, after twelve hours' unceasing activity, we had marked the gradual onset of bad weather. We had made very good progress and were within an hour or two of the summit; only a few towers remained to be climbed, though these we knew would prove to be the most difficult of all. But a murky haze had gathered everywhere; already a violent storm was in progress among the Zermatt mountains some forty miles away. We could hear the uproar and see the flashes. We knew that we could only have a short respite before the storm would be upon us. Desperately we flung ourselves at the final obstacles, in a mood in which every minute gained or lost seemed almost a matter of life or death.

Long before we reached the summit the storm had crept nearer. Queer, hissing, whining sounds came from the steel of our ice axes; a wretched tingling feeling in the scalp led to the discovery that our hair was standing on end. But overriding all apprehension and the sense of the end of all things was a wild exhilaration as we tore along.

We came at last to the snowy crest of the mountain just as the neighboring peaks were beginning (so it seemed in the semi-darkness) to blow up one after another as the lightning struck them. The summit itself is crowned with a great steel signal, the very thing we felt would attract the thunderbolt. But through the wires and bars of this structure it was necessary to clamber to reach the downward way to shelter and safety.

In an agony of panic we scampered up to it and over it, leaped down on the easy slope beyond and tore madly downward. We had barely covered fifty yards when what we had been fearing happened. The whole heavens seemed to turn to a violet flame and the crack of the discharge was so tremendous that time, and existence itself, seemed to have come to an end. I confess that though unhurt, I fell flat upon the ground and both my companions were for a moment convinced that I had been struck.

Almost as loud a crash, with a flare of light that outlined every twig on the lashing trees about us, added liveliness to these memories. All the steps down the Jungfrau were deep in flowing torrents of hailstones which had to be kicked away before footing could be found—no slip is permissible there. Lower down, we sought brief shelter and rest in a crevasse, but were down again at the Jungfrau station in little more than an hour from the summit. It was pleasant to think of the welcome we received from the anxious tourists there. They had been watching us a large part of the day through the telescope and seemed to have made up their minds that we had come to a bad end. So much for memories.



Climbing almost straight up on Rearing Horse Ridge.

No night, however noisy, lasts forever. Toward morning we all slept fairly well, for ten o'clock approached before any vigorous stirrings took place. The morning was cloudy and damp and prospects of photography were disheartening. In the end we split into two parties, one to bring down the cameras, the other to make the ascent of Going-to-the-Sun, for even though our main purpose could not be carried through, we were unwilling to descend without having attained something for our pains.

A summit gained in cloudy weather has a peculiar fascination. One misses the view, of course, but the interest of the route-finding is greater. There is a general opinion that in thick weather the climber is certain to get lost. So he is, unless he knows how to look after himself, how to steer a course on broken ground, and how to follow it back again.

The advice often may be read that, if surprised by mist, one should sit down and wait until it lifts—advice which if followed would usually involve the night out, and a night out, unprepared, high up, is no joke for anyone. This does not mean, of course, that inexperienced parties should attempt mountains in doubtful weather. They certainly should not, and even very strong and skilful parties should keep clear of difficult country, unless the weather is settled.

With an understanding that should the weather grow worse we would turn back, we left the camera party to their thankless task and made off up the mountain. Visibility was very limited, but we knew that by striking upward we should come to the belt of crags that is the only obstacle on this flank of the mountain. Along the base of these crags we could make a way that would be easy to follow on the return. We could work up through them at the first wide break in the belt, marking the route where necessary with small piles of stones built up in prominent places. It was rarely possible to see more than forty feet of the way ahead, and we were perhaps fortunate in being able to follow almost exactly the route picked out the afternoon before. At a bay in the crags, the angle eases off and a rift gives rapid progress.

Above on the gentler slopes that tilt up to the summit ridge—the summit plateau we discovered to be an illusion—we found it advisable to build many little stone men at points where the direction to be followed changed. Thanks to this precaution and ceaseless consultation of the compass, we had no difficulty either in finding the summit or in descending.

After writing our names in the record book left there by the Mazama Club, and noting the rare occasions on which the peak has been visited, we lingered awhile. As the mist forms swayed and drifted about us the force of the Indian legend came strangely home. The clouds thinned at moments and a pale sun, almost within reach, seemed to be lost again as another mass of vapor enshrouded us.

This is a spot singularly cut off from the earth. Thus some solitary wanderer of the Blackfeet tribe centuries ago may have felt. It was easy to imagine the wonder and terror that assailed him. Perhaps in these feelings may lie the origin of the old tradition.

'FORTY YEARS! *Shucks!* What's Forty Years?'

By
HARRY E. BARNET

FROM fabrics which the spiders weave, tiny threads float out and fasten their free ends to this and to that. In such fashion, the gossamer creations set up ranginess of contact.

Likewise, from hundreds of places that in the idiom of today are 'yap villages,' slender memory cords stretch to and twine about the heartstrings of thousands of men.

Forty years ago, these 'fellers' were small boys in the kind of Midwest localities that in the babble of yesterday were 'hayseed towns.'

Forty years! Whew! Also—Shucks! What's forty years?

There was John Snodgrass in our town—cheerful veteran of many of the bloodiest battles of the war between the states. And his side-kick, 'Rubby-dub' Evans. Boys together they were; and men. See one, see t'other. Served as privates in the same company, by crickety, throughout the four years of tumult.

'A battle was impending,' John frequently recalled, 'and the Confederates were approaching. "Here they come, th' graybacks!" shouted Private Evans. "En all they kin do is play rubby-dub-dub on the'r derned ol' drums."

' "Who's afeard 'v 'em?" he shrieked.'

From the hands of the astounded color bearer, Private Evans snatched the Federal flag. Carrying it high, he set forth, alone, to meet the advancing regiment.

No sharpshooter fired at him. The courage of Evans—foolhardiness or stroke of sudden lunacy—raised the respect of the Confederates. They cheered, instead of shooting him down.

John fetched Private Evans back to the company. 'Rubby-dub' was Private Evans' nickname ever afterward.

Forty years! Again—Shucks! Why, John Snodgrass was seventy-five if he was a day. He dug wells and trimmed trees for a living; kept tolerably busy, too, at one or the other job. He could outdig any man half his age in town. Climb trees? With the agility of a coon he shinned up their trunks.

These feats were attested anywhere, at any time, by Rubby-dub. He went out of his way to do the attesting. For he was proud of what John did. And he knew his story. He was always around, seated comfortably in the shade—or where the wind couldn't strike him, in cool weather—the while John picked, then shoveled or sawed, and then hacked at a tree.

'I hain't th' man I used t' be,' complained Rubby-dub to the small boys who never failed to gather about John when he dug a well. In our town, delving in the earth held possibilities.

'Gosh!' small boys said to one another, 'he might find Injun bones, er arrerheads, er sumpin!'

No one who was youthful (and footloose) overlooked such prospect. John had a juvenile crowd always at his heels.

So had Rubby-dub.

'No, siree, Bob, I hain't th' man I used t' be,' he repeated to his audience. 'Ef I was, d'y' think I'd be a-settin' hyur, en leave Jawn ther a-diggin'? No, siree, Bob.'

Suppletory: 'En hain't I a-gittin' a pension?'

Unchanging ritual marked John's tree-trimming jobs.

'I'm afeard y'll fall out o' thet ther tree, John,' shrilled the woman of the house. 'Hold on tight, now!'

Invariably John replied, 'Yes'm. I hain't afeard o' fallin', fer a-fallin', it won't hurt me none. It's th' landin' thet I'm afeard 'v. It'll do th' hurtin'.'

Thereat Rubby-dub laughed, or cackled, or goose-honked his glee.

Rubby-dub remembered his pension! Too much hilarity didn't go with the list of ailments that upshot it.

'Y'd better pull a long face while y'ur out whur folks kin see y',' once advised his friends, 'er y' a gone goslin.'

'*Why?*' queried Rubby-dub.

'*Why?*' was the response. 'Y' might lose thet ther pension o' your'n, *thet's* why, fer y're a putty tough ol' knot yit, y' know.'

Rubby-dub rumbled as a cataclysmic cough was about to emerge. But it never fulfilled its threat.

HOWEVER, the small boys stood about expectant. They'd heard and seen these antics before. Yet, they argued with themselves, you never could tell what might happen.

'Ef y' feed a tawmcat too much raw meat,' Billy Snider argued aloud, 'why, he'll hev fits.'

'When'll he hev 'em?' asked Johnny Sizemore. 'Right away after y' feed him?'

'W-e-l-l,' Billy replied, 'I hain't certain but he'll hev 'em sometime. Y' got t' watch him.'

Rubby-dub fell backward upon the sod—did it brutally, albeit cautiously, to old eyes. There in the shade—or protected from the cool wind—he writhed a spell.

'Gosh!' chorused the small boys, 'I hain't never seen nobody die afore.'

'He hain't a-dyin',' called John from the tree. 'He's a-savin' thet ther pension o' his'n.'

Rubby-dub stiffened. Opened one eye and then the other, slowly. As if he were an acrobat showing off in the center ring, he raised the upper half of his body, without touching ground with his hands.

In a sitting posture, he spat, and eyed John reproachfully.

'Thet ther ol' fool 'v a Jawn,' he said, 'he'll be th' death o' me yit. He's too derned smart fer any use. Always got somethin' t' say, en ez quick ez a cat t' say it.'

Rubby-dub added: 'En me a sick man! En me a-gittin' a pension fer it!'

'Y'll outlive me yit,' replied John, the while he bravely sawed or lustily hacked at the tree.

First of the twain to depart this life, however, was Rubby-dub.

Forty years! The fabric of life in these hundreds of 'hayseed towns' was like an unbroken blossom-bearing mass of trumpet vines, with rich, subdued green soothing to the sight. Pioneering in the Midwest was over and done with. A disturbing national question had been fought out, and settled. There were no motion pictures—no automobiles. Men sat quietly and rested. They were in a comforting lull. You could buy a fat hen to roast for twenty-five cents!

It was a delightful period in which to be a small boy in these 'hayseed towns.' Men and women, horses, mules, cows and bulls, hogs, dogs, cats, and fowl—a few of each must cut curious capers. Of this breed were John and Rubby-dub. Like the high-colored blossoms of the trumpet vine, the curiously capering ones stood out from the 'comforting lull.' They were town characters—tinged splotches, so to speak, against the rich, subdued green mass . . .

Ory Henderson's gander!

In a vacant lot on the western edge of our town, Ory Henderson raised geese. The gander of the flock was an industrious fence analyst. Day in and day out he reviewed each foot of the inclosure, looking for cracks or weak places he could make into cracks. When he found one, or made one, and was able to squeeze through it, the gander paraded himself down the middle of the street toward the public square, honking enthusiastically at whatever crossed his path.

A town character, that gander! He provided more excitement sooner or later than any other one thing, except the regular coming and going of the accommodation train. The latter, however, had a schedule. The gander made his appearance and his noises only when the little gods and goddesses of good luck were lenient.

AND when they were? Well, another such time you never saw! It produced the same effect as the clanging of the fire bell. Everybody with two legs, and with four, turned out. Sunbonneted women, and bareheaded ones; men—some half-shaved, half-lathered, out of the barber shop; small boys and their dogs, all chased the gander through the streets, captured him, and returned in a body to thrown him high in the air, over the fence, and into Ory's goose pen.

'Why'n tarnation don't Ory keep thet ther fence fixed?' men said, 'en keep thet ther ol' gander o' his'n t' home, 'stid o' lettin' it go t' wrack en ruin, en a-makin' people run ther legs off a-ketchin' him!'

Mere words—angerless. Everybody liked the gander chases.

Forty years! The slate has been wiped pretty clean. Though it was a definite part of the nation's history, the intimate fabric of life in these 'hayseed towns' doesn't appear upon the pages of books. It wasn't aggressive. And it has passed on. Seldom, nowadays, do you find its like.

But from this old fabric stretch the slender memory cords to the heartstrings of thousands of men who are now 'twelve o'clock fellers in twelve o'clock towns.'

'WASN'T WORTH *His* GRUB!'

By JOE HENRY

'I hear Bob Hall's got a new hand; any good?' asked one Vermont farmer of another.

'Aw—pshaw! He's jest one o' them there city fellers. I had one last summer a year ago. Ain't worth their grub, sayin' nothin' o' the price they expect to get.'

'Oh, yes, I remember the feller you had. Only stayed about a week. Got blisters on his hands or somethin', didn't he?'

'Yes. And lazy? Say, I had to pull him out o' bed by the feet every morning.'

'Well, I guess poor ol' Bob's got his hands full,' sympathized the first farmer.

But Ellsworth B. Cornwall, a native of New York City, stayed on the farm more than one week. The foregoing conversation took place early in June, 1908, and the 'city feller' is still working on the farm in Vermont; not the same farm, but one of his own.

He has been president and general manager of the State Federation of Farm Bureaus since its organization six years ago, and the very men who ridiculed him when he first went to work on the farm are now his most enthusiastic backers. In January, 1922, he was a delegate to the first National Agricultural Conference held in Washington, D. C.

'Yes, I got blisters on my hands,' said Mr. Cornwall during our interview, 'but it wasn't long before they had hardened to callous spots. I was determined to stay on the farm as I had sickened of the city ways.

'Everything was "you do him or he'll do you" in New York. I had received my B. A. degree from Princeton, where my father was head of the chemistry department for thirty-five years, and I was also a graduate of the New York Law School. Great things were expected of me; you know how it is when a boy graduates from two colleges with honors.

'My people were greatly disappointed when I decided to give up the practice of law and go to work on the farm. I was sorry to hurt them, but I just couldn't stand the continual litigation. Everyone seemed to be fighting everybody else. No harmony whatever; all was in a turmoil.

'During my summer vacations I had visited some friends of my mother's who lived in the country and the remembrance of the peaceful life on the farm had stayed with me and had caused the discontent, I suppose.'

ELLSWORTH CORNWALL was engaged to a New York girl of good family before he left and shortly after he went to Vermont he sent for her and they were married. The former lawyer worked as hired man, did the milking, worked in the fields, and so on, while his wife, who had never known what it was to wash a dish, was the maid of all work, doing everything from making the beds to scrubbing the floors. For this they received eighteen dollars a month and their board.

Mrs. Cornwall tells an amusing story about an occurrence which happened about this time.

'Ellsworth had been getting up at four-thirty every morning doing the work along with Mr. Hall, and he was congratulating himself that he was learning the work so quickly, for we expected to go on a place of our own just as soon as we felt we could do the work alone. Early in the spring following our exodus from the city, Ellsworth was sent out to weed the garden patch. After about twenty minutes I heard him calling and I went to see what was wrong. He looked up from his work and said:

' "Say, Louise, which of these things are weeds and which are the beets?" Fortunately I had been working in the garden before and had learned to distinguish between them,' said Mrs. Cornwall.

THE following spring they made a first payment on a farm of their own. The farmers of the neighborhood again ridiculed the 'city guy' and predicted that he would not last the year out. Cornwall, however, arose at four o'clock in the morning, milked the cows, fed the horses and did several other chores; he then was ready to eat a 'light' breakfast.

'It's hard work that makes for success in everything,' said Mr. Cornwall. 'If a man will just work hard enough and direct his labor he need not be a wizard. Mr. Edison, for instance, could not have accomplished his wonders by sitting down and letting "George do it." The farmer must work long hours to make a living. His income is too small to enable him to have a bookkeeper. When he comes in at night after long physical work outdoors he is too sleepy to think or figure. We must keep this in mind in working out our farm problems. It is one factor which has usually enabled the business man to outgeneral the farmer in public affairs.'

Hard work hasn't been the only thing the Cornwalls have had to contend with. They have had more than their share of hard knocks as well.

When they bought their farm it was in pretty bad condition and they spent what little money they had saved on a new barn and other outhouses. The first summer a severe storm damaged the property considerably and lightning struck the new barn; it burned to the ground cremating five young calves. Fortunately the mature cattle were in pasture when the fire occurred. Mr. Cornwall had just completed making ten new stanchions; they were burned with the barn.

Shortly after the second barn was completed, Mr. Cornwall got blood poisoning in one arm and was laid up for three weeks.

They were forced to hire a man for this period and he, not being acquainted with the animals, led a vicious horse out to water along with the best mare they had. The mare was kicked and was laid up for six weeks with a broken hip. For more than a year she could not be used on the farm and it was necessary to buy a cheaper horse.

This latter horse developed collar sores and had to be put in pasture. This left them with two horses in pasture and they were forced to make out the best they could with only one horse.

The following autumn one of their young pigs was run over by an automobile. Mr. Cornwall, in an attempt to save the pig, jumped off the running board of a machine in which he was riding. He lost his balance and fell, the car running over his arm and dislocating it.

Many a man of less courage would have given up before such onslaughts of fate, but Cornwall had the grit and determination to see it through. It was this grit, this courage, that eventually won the confidence of the very men who had ridiculed him when he first came to Vermont.

Mr. Cornwall was one of the organizers of the Addison County Cow Test Association, and was elected its first president in 1912.

In 1914 he was active in helping to form the County Farm Bureau. He recognized that the only way the farmers could demand their rightful heritage was by coöperation, the same as labor in other lines of work had recognized several years before.

When the National Federation of Farm Bureaus was started, Mr. Cornwall was sent as a delegate to Ithaca, New York, by the Vermont federation of which he was president.

He was chosen a member of the organization committee, which consisted of five members, and he helped to draft the original constitution of that organization. At the first regular meeting of the federation he was made a member of the executive committee and held that position until 1922, when the pressure of other duties forced him to resign.

HE WAS active in forming the Addison County Coöperative Dairy Company. This plant was originally owned and operated by a large city concern, many farmers in the county owning stock. It failed and the farmers would have lost a good sum of money but for the foresight of Mr. Cornwall. He urged the taking over of the plant and its operation by the farmers on a coöperative basis.

He went to New York, was able to make very good terms with the owners, and secured the plant for the farmers. He was manager and director of this company for some time after its incorporation.

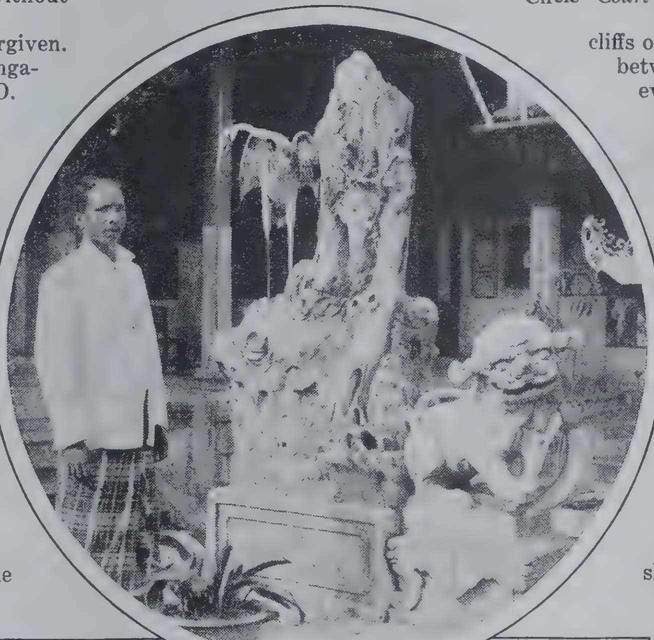
Early in 1922, Mr. Cornwall was forced to choose between serving his neighbors and gratifying his own desires. This was found necessary because the Vermont State Federation of Farm Bureaus, of which Mr. Cornwall has been president since its formation, deemed it advisable that its president should devote all his time to the business of the organization.

Mr. Cornwall says: 'I hated to give up the actual farm work, but I felt that the needs of my neighbors should come before my personal desires. I wanted to stay on the farm and specialize in poultry, that being my hobby, but I guess I will have to delay that a few years. However, I go out to the farm over week-ends and supervise the work,' concluded this true son of the soil.

At *the* WORLD'S CROSS-ROADS

By SYDNEY R. SMYTH

Homes of the fisher-folk of Singapore. *—Ewing Galloway Photos.*
Circle—Court of a Buddhist temple in the famous seaport.



JUST like Middlesbrough!' That's what the cockney said: a shattering accusation enunciated with all the bitter contempt of the Londoner for the provincial. Middlesbrough is apparently next door to hell, but hell without the beauty of eternal flame.

Perhaps the cockney may be forgiven. He had caught his first glimpse of Singapore early in the morning as the P. & O. liner was docking at Tangong Pagar. A Singapore rain was falling, everywhere was dirt and gloom. The air was sticky. The gray walls of windowless warehouses were altogether dreary. The cockney was fed up and he was far from home.

But in this city of the equator, gloom and rain do not last. Soon the sun bursts forth in tropical brilliance and the heat strikes up and down. It makes it hot in the tropics—the heat's striking from above and from below, the latter probably the worst.

Singapore is the world's cross-roads; the guardian of East and West whose great guns stretch out over the cliffs of Mata Island and oversee the border between Orient and Occident, where every race and every tongue and every creed on this terrestrial globe meets and passes; a harbor where ships from every corner of the world drop anchor for a few hours while oil tanks or coal bunkers are replenished.

The traveler sits on the veranda outside Raffles Hotel or The Europe and sees the world pass by. Across the road is the cricket pitch where the colony plays in the evenings. Sports in Singapore are international. One corner is given over to a group of Britishers who are indulging in their national game—cricket. Farther up, a group of Japanese are playing a team of Filipinos for the baseball championship of the Far Eastern league. Up at the other end of the ground a group of Hindu students are playing a nondescript game of football with a number of Malays—though the temperature is around ninety-five degrees.

Down on the sidewalk, which appears to run through the veranda, a Hindu fakir is showing the miracle of making a mango tree grow up in a few minutes. A group watch him idly while some one explains how it is done. Sitting on the steps is a little brown boy with a gayly colored turban and that's about all. 'I am a little Christian boy,' he calls out as you pass him, 'I have no father. I have no mother. I have no dinner. Please can you give me fifty cents? If not, can you give me twenty-five.' An apparition in khaki looms from around the corner, and the brown seems to melt against the black of the railings as the youth escapes from the clutches of the law.

Within a stone's throw of the hotel stand the administrative

Waterfront and harbor from the U. S. Consulate at Singapore.

offices of the Straits Government a huge elephant in bronze guarding the massive entrances like a watchdog. A canal cuts through from the harbor and is spanned by a bridge which is a triumph from an engineering standpoint, but its beauty is forgotten in the stream of life and color which flows across it. Arabs in flowing robes disdaining the world and all its vanities sweep past. Indian rajahs in rich regalia and blazing jewels rub against Chinese merchants. Jew and Greek, Turk and Arab, all mingle together on the narrow pathway of the bridge.

Singapore is nothing if it is not cosmopolitan. On the streets and in the countinghouses everyone mingles with everyone else. There are no barriers. But at night, when the business of the day is over and when clubs and hotels gather in their patrons, there are only two classes of society—white and Asiatic. You belong to one or the other. But it is accepted and there is no resentment.

It is at night that the beauty of Singapore shines forth mystically. The tropical night with its gentle cooling breeze from across the harbor softens the garishness of ugly buildings. The little back streets are beautiful. The noisy torrent of life has shades innumerable, blue and bronze in general—but here's a splash of brilliance: a silvered ricksha flashes past!

A searchlight pierces the gloom and sweeps across the harbor, playing over the narrow entrance, and as it sweeps the cliff sides you catch a glimpse of lean black outlines sticking out from the sandstone rocks. You retrace your footsteps semiconscious of strain, for Singapore feels its burden of responsibility as Guardian of the Gate.

The Magazines of Colonial Days

(*Continued from page 9*)

classmate of Philip Freneau, the poet of the Revolution, whose contributions appeared occasionally in the *United States Magazine*.

These periodicals were published in Colonial America.

Between 1783 and 1800 about seventy-five new ventures were made in the field. Philadelphia was most prolific, with New York and Boston competing for second place. Noah Webster ventured in 1787 the *American Magazine*, at New York, but produced only twelve issues. In the South, Baltimore and Charleston in South Carolina were the only cities represented.

A check list of these periodicals was made in 1889 by the famous historian Paul Leicester Ford, who then listed some fifty-four titles up to 1799. Recently Mr. William Beer has made a further intensive study of the subject, adding thirty-four titles to the list, in an article published in the *Proceedings of the American Antiquarian Society at Worcester*. The library of that society possesses seventy out of the ninety-eight magazines which appeared up to 1800, and only seven other libraries possess even one-half of this total number.

These magazines constitute a real source of American history. Despite their small number they exerted a beneficial influence during the formative period of our history.

Democracy in America

(*Continued from page 15*)

and his satellites. They felt that the too arrogant assertion of superior quality in one man or in a dynasty is inimical to the superior quality of other men.

In an article in *The Atlantic Monthly* for April, 1924, Hilaire Belloc declares: 'The conception that the majority has a divine right to decide in any matter is universal in America, not as a conclusion of reason, but as an accepted dogma.' Possibly our methods of settling our political difficulties have given some warrant for so misunderstanding our modes of thought. Intelligent Americans probably have no faith in divine right of any sort in political affairs. We simply accept the rule of the majority as the best means of arriving at some degree of domestic tranquillity. We cannot carry out our larger purposes in a condition of persistent struggle between the rulers and the ruled. It enables us to arrive at some unity of action. With us the members of a minority manage for the most part to be good sports.

The saying that an Englishman's house is his castle should never be overlooked in making estimate of what is fundamentally our American democracy. It was out of that feeling that much that is best in American political and social life was born. The desire to be secure and undisturbed in one's house looks toward the maintenance of property rights, toward individual liberty within the sphere of one's personal affairs, and toward the preservation of that privacy that is one of the first necessities in the life of a gentleman. These are all more individual matters than community matters. They all have a protective rather than an assertive or aggressive aspect. The individual man in an English (and ideally in an American) community looks to the state to save him from the aggression of others, not to grant him the liberty of being aggressive toward others.

The ideals of gentle breeding and of quiet self-sufficiency which were our ancestral inheritance are by no means of so much moment with us as they were. Our ancient doctrine of freedom of speech, intended to protect the individual from disturbance in his private affairs, has become an assurance to all the raucous-voiced that they may disturb him as much as they please, may assault him to the full of their abilities with enumeration of all the woes consequent upon all the internal or external maladjustments with which nature and destiny have seen fit to afflict them. Peasant throats have discovered here the silver value of speech. They have become conscious of their lungs as a pair of democratic bellows, and have found great joy in the discovery. So we have the spectacle occasionally of an adopted son interpreting the spirit of American democracy to those of us for whom from childhood it has been the breath of life.

The doctrine that a man's house is his castle is at once a doctrine of proprietary possession and a doctrine of peace in that possession. It is a doctrine that concerns itself legally with private-property rights; and socially with manners. My neighbor's manners may be his personal affair, but they may also easily become an affliction to me. In various ways they may so assault me inside my house that it ceases to be my castle. Then I am justified in looking to the state for some sort of relief. It is the business of our representative democracy so to order our affairs that the home of the common man in its security from intrusion shall be as much a castle as that of the lordly. It is only under such protection and in the security so assured that a man may live his own life, think his own thoughts, and possess his own soul.

Americans of the blood of those who made America have always known that family counted, have always believed that quality was of vital importance in America, have always in some degree had the patrician outlook upon life, have always understood that patrician quality was something more or less a thing of inheritance. Neither Puritan in New England nor cavalier in Virginia entertained the hope of picking figs from thistles or of receiving courtesies at the hands of the ill-bred. They had delusions, certainly, and one of those delusions was doubtless that of too warm a confidence in the regenerating possibilities of democracy. The delusion, however, was never so extreme as to include that unqualified faith in the intelligence, ideals and wisdom of the mob which some misconceive as Americanism.

The American tradition is essentially one of allegiance to the fitting, the seemly, and the fine. American democracy does not assume that all men are equal. That is the delusion of those who wish to make that doctrine an excuse for asserting themselves beyond their natural station. What it has always assumed as a constructive possibility is that the democratic mode of political and social functioning administered through a well-organized representative machinery will make it easier for each man to realize the highest of his capabilities. In that degree the general human quality will be advanced. That expectation constitutes the primary warrant for democracy.

To all this there is an obvious corollary. If the American political and social system has come into being as an instrumentality for the freeing of human quality from its prisoning oppressions, it should likewise be an instrumentality for the saving of it from attacks striking at it from below. If it encourages worth of character, it cannot encourage the lack of it. If it believes that America is America because of the quality of those who constitute it, then it cannot well believe that it will continue America when those who constitute it are quite different.

The example of the great liberals and idealists of three hundred years ago, the New England Puritans, is instructive. When everyone believed in witchcraft, they disposed of witches by judicial process. At a time when the Duke of Alva, seeking religious uniformity in the Netherlands, had been putting men, women, and children to death by thousands, the Puritans attained the same object by allowing Roger Williams to go to Rhode Island.

In both these matters the Puritans acted upon a principle of elimination. It is a principle inseparable from the broader principle of selection, and it is only through the operation of that principle that quality, human or other, is achieved.

BOBBY *of* Greyfriars

By PAUL TYNER

CLOSE to the entrance to Greyfriars' Churchyard in Edinburgh, Scotland, as hallowed a resting place of Scotland's worthies as Westminster Abbey is of England's historic dead, the visitor's attention is arrested by an obviously new and bright monument of Aberdeen granite, standing out in contrast with the time-stained gray stone memorials about it. And strange is its inscription:

To the Memory of
JOHN GRAY
Died in 1858.
Master of 'Greyfriars' Bobby'
('And even in his ashes most beloved.')
Erected by American Lovers of Bobby.

Bobby, be it known, was a winsome Skye terrier which in our fathers' days was almost as much an Edinburgh character as was Dr. Brown's 'Rab.' Bobby's life and adventures have been considered worthy of tribute in prose and verse by Scottish and American writers. His story probably tops the many stories of canine faithfulness the world over. For fourteen years he kept watch at his master's grave.

Bobby himself is remembered by a beautiful marble drinking fountain for men and dogs a stone's throw from the entrance to the churchyard, on that busy highway, George IV Bridge. It is surmounted by a life-size statue of the 'wee beastie.' The inscription runs as follows:

'GREYFRIARS' BOBBY'
FROM THE LIFE JUST BEFORE HIS DEATH

A TRIBUTE
To the affectionate fidelity of
'GREYFRIARS' BOBBY.'

In 1858, this faithful dog followed the remains of His Master to Greyfriars' Churchyard, and lingered near the spot until his death in 1872.

ERECTED BY THE BARONESS BURDETT-COUTTS, 1872.

This inscription practically tells the story. It only remains to be added that back in the fifties John Gray was a farmer who came regularly to Edinburgh to attend the Wednesday market, always attended by his shaggy terrier, Bobby. Then as now the hour of one was boomed out by a gun on the Castle heights, a boom by which people all over the city set their clocks and watches. It was Gray's custom then to repair for lunch to an eating house in the neighborhood of Greyfriars' kept by one Traill, who took quite an interest in both the dog and his master, always giving Bobby a bun or a bone.

Gray died in 1858. On the third day following the funeral in which Gray was laid to rest close by the historic church, the habitués of Traill's place were surprised just as the echoes of the one o'clock gun were dying away to see a dog, the picture of woe and hunger, run in and approach the proprietor, into whose eyes he gazed beseechingly. Traill, immediately recognizing Bobby, gave him a bun in answer to his silent pleading. The dog without waiting to eat it ran out of the restaurant carrying his lunch in his mouth. Next day Bobby appeared again at the same hour and again received the bun, running away hastily with it. When he came a third time, Traill out of curiosity followed the dog, which made straight for Greyfriars' Churchyard and lay down near his master's grave to eat his bun.

It was soon learned that the chief and perhaps only mourner of the kind-hearted old farmer was his four-footed friend. After the interment of his master he refused to leave the humble mound which marked the grave until compelled by the pangs of hunger; and then it was only to return with all speed. Over and over, Bobby was taken back to his former home in the country, but he always returned to his post. Here he continued day and night in all weathers, stoutly resisting the friendly advances made by compassionate strangers desirous of providing the dog with a home, and taking refuge only in rough weather under a tombstone hard by.

He continued his daily visits to the lunch room punctually at the hour of one, always receiving his bun from the kindly proprietor. This had been going on for nine years when Bobby and his friend got into trouble with the law, both Bobby and the restaurant proprietor being arraigned for failure in all this time to pay the seven shillings yearly for a dog license! Bobby was arraigned as a 'vagrant' before three magistrates. His friend defended him, telling the story of his devoted death watch. Thereupon the magistrates decided to temper justice with mercy, remitting license fee and fine and dismissing the charge against Traill of harboring an unlicensed dog.

He died in 1872 and was buried in a grave near his master's, now marked by a rosebush.

Mira *the* Wonderful

OUT in the southern sky, in the evenings of winter months, can be seen the constellation of Cetus the Whale. As it appears to observers in the United States, there are not very many bright stars in it, but there is one, known to the astronomer as Omicron Ceti, which is one of the most interesting objects in the sky.

Omicron Ceti is also known as Mira the Wonderful, a name which dates back many centuries, and which does not surprise us if we watch the star regularly.

The star was a variable! That is, instead of maintaining the same brilliancy all the time, as a well-behaved star ought to, it changed brightness regularly, sometimes being bright enough to be easily visible to the unaided eye, while at other times it faded to nearly the tenth magnitude, visible only with a large telescope. It reached its maximum last year in November. By the middle of May, when, however, it will be too near the sun to be seen anyhow, it will be at the minimum brightness, and then, next October, it will be bright again, for its period of variation is about 330 days.

But its variability is not the only interesting feature of Mira, for it is the second largest star known. Measures made at the Mt. Wilson Observatory in California with the great hundred-inch telescope, the largest in the world, and with an attachment called the interferometer, have shown that it consists of a globe of glowing gases 250,000,000 miles in diameter, so vast that if the sun were placed at its center, there would be sufficient room for the earth to revolve in its accustomed orbit within it. Only one other star, Antares, in the constellation of the Scorpion, is known to be larger—it is about 400,000,000 miles in diameter.

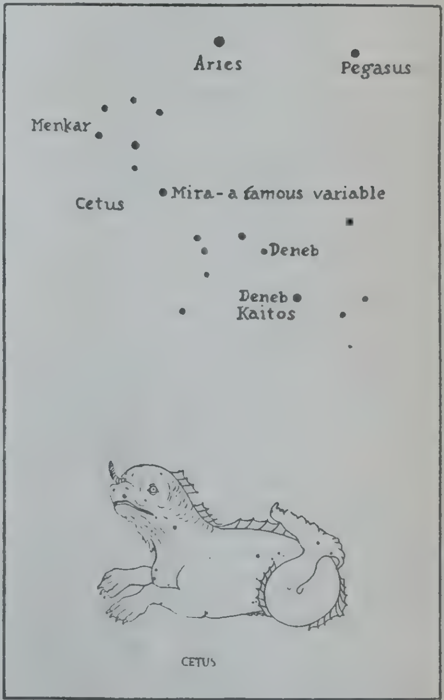


Diagram showing the position of Mira, with respect to nearby constellations and the horizon, on the evening of December 1, at 10 p.m., or December 15 at 9 p.m. Face to the southwest, and the map will show the stars as they appear in the sky before you. The size of the dots indicates their relative brightness. Stars in the constellation of Cetus the Whale are connected by lines.

The House in the Fiftieth Congress

(*Continued from page 7*)

McKinley's Cabinet and in December of that year was appointed a justice of the Supreme Court of the United States.

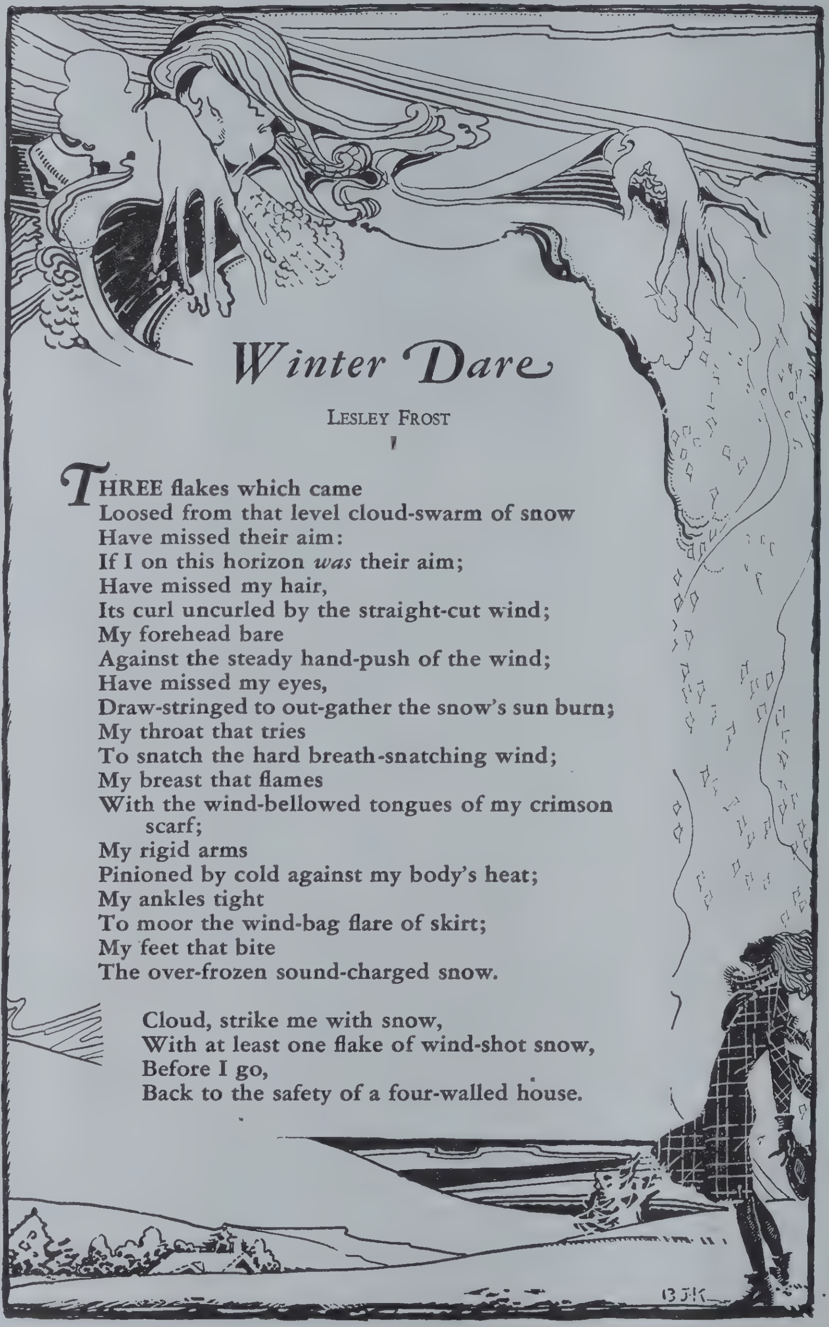
Colorado's single representative, George G. Symes, enlisted as a private in the Union army, April 12, 1861, just a few days before he became of age and served throughout the war, emerging as a colonel. He was wounded in the first battle of Bull Run and again in the Battle of Atlanta, July 22, 1864.

Not one of Connecticut's four representatives entered the army. Two were too young, one perhaps too old to serve. Delaware's sole representative also stayed at home. One of Florida's two congressmen saw service. Robert H. M. Davidson was captain and colonel in the Confederate army but was so disabled by a wound on May 28, 1864, that he was forced to retire.

At least six and probably more of Georgia's ten representatives saw service in the Confederate army. Of these the most distinguished was Charles F. Crisp, who put on a uniform in May, 1861, when he was in his fifteenth year, was made a prisoner of war in May, 1864, and was released from Fort Delaware in June, 1865, when he was not yet twenty-one years of age. He first entered the House in the Forty-eighth Congress and in a short time became the acknowledged leader of his party, being twice chosen speaker, in 1891 and 1893. Then he was elected to the Senate but died October 23, 1896. Thomas W. Grimes of Georgia, John D. Stewart, H. H. Carlton and Allen D. Candler, all saw active war service, as did also James H. Blount. Blount served twenty-one years in Congress and then voluntarily retired in 1893. The House paid him the unusual honor of suspending its regular proceedings to testify its regard for him. A few years later he was the object of abuse in that same House such as few men have endured. Cleveland, at once on assuming office in 1893, made Blount 'Commissioner Paramount' to Hawaii, apparently with intent to undo everything that had been done under Harrison to encourage Hawaiians of American descent to their successful revolt against Queen Liliuokalani. Blount caused the American flag to be hauled down from the Provisional Government House and otherwise so ordered affairs as to withdraw from the 'rebels' the moral support of the American Government. Queen 'Lil' published the glad news that as soon as she was again secure upon her throne she would chop off all opposing heads and the 'Commissioner Paramount' was a long-distance recipient of many a congressional tirade. However, when the Republicans came into power again, Hawaii was annexed and Blount was forgotten.

Of the twenty representatives from Illinois five saw service in the Union army. Thomas J. Henderson became a colonel. Ralph Plumb served four years. Jonathan R. Rowell served three. John R. Thomas rose from private to become captain and Philip Sidney Post, who entered the army in 1861, was severely wounded when a major in the battle of Pea Ridge, and while commanding a division in the battle of Nashville, December 16, 1864, was desperately wounded by a grapeshot. Of the non-combatants rotund William E. Mason, commonly called 'Billy,' and Albert J. Hopkins were to become United States senators. William M. Springer, Democrat, achieved some notoriety by his efforts to reduce the tariff 'horizontally.' He was rarely seen without a red carnation in the lapel of his coat. Of long experience in Congress he lacked the mental agility to deal as Democratic leader with the turbulent Republicans. One day when Springer dramatically proclaimed he would rather be right than be president, Tom Reed retorted in sharp, rasping tones, 'The gentleman will never be either.'

Joseph G. Cannon, 'Uncle Joe,' outlasted all his colleagues from Illinois and won the largest measure of fame. He was continuously in Congress, with the exception of a single term, from 1873 until his voluntary retirement a few years ago. His many conspicuous characteristics and oratorical mannerisms made him a national figure. When he was the floor leader of the Republican side and chairman of the House Committee on Appropriations before the days of his speakership, he was hotly partisan. When unloading his invectives he would teeter forward on his toes and brandish his arms in air in windmill fashion, but his technique did not lessen his effectiveness. It was while Cannon was speaker that the House revolted against longer submission to the autocratic powers of the office that made the speaker of the House of Representatives second only to the president in influence over government. Stalwart as he was, reactionary as he was called, and as secure in his ingenious ability to respond in superior and instant kind, Cannon never minded abuse; Cannon fought the 'insurgents' to the last, but at last they whipped him. When he died in voluntary retirement, however, he was at peace with all the world. Just as with the



Winter Dare

LESLEY FROST

THREE flakes which came
Loosed from that level cloud-swarm of snow
Have missed their aim:
If I on this horizon *was* their aim;
Have missed my hair,
Its curl uncurled by the straight-cut wind;
My forehead bare
Against the steady hand-push of the wind;
Have missed my eyes,
Draw-stringed to out-gather the snow's sun burn;
My throat that tries
To snatch the hard breath-snatching wind;
My breast that flames
With the wind-bellowed tongues of my crimson scarf;
My rigid arms
Pinioned by cold against my body's heat;
My ankles tight
To moor the wind-bag flare of skirt;
My feet that bite
The over-frozen sound-charged snow.

Cloud, strike me with snow,
With at least one flake of wind-shot snow,
Before I go,
Back to the safety of a four-walled house.

Drawing by BETTY JANE KIDD

dying Mazarin, when his confessor asked him whether he had any enemies to forgive, and he responded in a whisper of satisfaction that he had none, that all were dead, so it was with 'Uncle Joe.' If any of his ancient foes survived they had become his friends.

Six of Indiana's thirteen representatives in the House did service in the Union army. Five were Republicans; one was a Democrat. C. C. Matson, the Democrat, enlisted as a private at the beginning of the war and was colonel of the Sixth Indiana Cavalry when it was mustered out in October, 1865. Of the five Republicans, Thomas M. Browne was also a colonel of cavalry. James T. Johnston entered as a private, gained rank, and served until September, 1865. Joseph B. Cheadle was also a private and served until the war ended. George W. Steele 'went in' in April, 1861; was a lieutenant colonel at the termination of the war. He was then appointed a lieutenant in the Regular Army, where he remained ten years. James B. White, who was a tailor when the war began, sold his business in patriotic zeal and enlisted as a private. He was elected captain of his company (in that time the men themselves chose their company officers and filled all vacancies) and served until December, 1862, when, because of wounds received at Shiloh the preceding April, he resigned. Of the noncombatants in the Indiana delegation William S. Holman was the best known. He was frequently called 'the great objector' and 'the watchdog of the Treasury.' Entering Congress in 1859 he sat there during the Civil War years and almost continuously for many terms thereafter. He was resolute and sincere in his demands for economy. His 'I object' was heard so often that it gave him his sobriquet and no persuasion of friends or threat of enemy could move him to desist from his self-assumed, special duty of protecting the Treasury. Holman died April 27, 1897. It is not possible to compute the millions of dollars he saved from wasteful expenditure.

EIGHT of Iowa's eleven representatives had served in the Union army. All but one were Republicans. General James B. Weaver, Greenbacker and Populist in succession, was the exception and he was a Republican during the war. David B. Henderson, born in Scotland, enlisted as a private in September, 1861, and was serving as first lieutenant when he lost a leg, March 26, 1863, and was discharged; in June, 1864, however, he reëntered the army as a colonel and remained until the war ended. In Congress he helped Tom Reed force the Reed rules upon the House of which he himself became speaker in 1899 and again in 1901. He differed so strongly with his party on the tariff issue that he left Congress in 1902, declining a unanimous renomination from his district, and died January 25, 1906. Daniel Kerr; Albert Anderson, who was twice wounded; Joseph Lyman, who went in at the beginning of the war and stayed until the end; Adoniram Judson Holmes; Isaac Struble, all wore the blue.

Edwin H. Conger of Iowa enlisted in his twentieth year and served until the Civil War ended. In 1890 he was minister to Brazil, to which post he was again appointed in 1897, and in 1898 he became minister to China. He was one of the 'foreign devils' who were penned by the Boxers in the compound of the British legation for about two months and who were barely saved from massacre by the expedition of allied forces representing several nations. Early in 1905 he became minister to Mexico, but soon retired and died at Pasadena, California, May 15, 1909. General James B. Weaver enlisted as a private in the Union army in April, 1861, and served with gallantry through the war, attaining the honor of brigadier general by brevet. Weaver organized the Greenback party and received more than three hundred thousand votes in 1880 as its candidate for president. Thereafter, through Democratic-Greenback-Labor combinations, he served some terms in Congress. Joining the People's party he became its presidential candidate and as such received more than one million votes in 1892. John H. Gear was also a representative from Iowa in the Fiftieth Congress. He had already twice been elected governor and later Iowa sent him to the Senate.

Kansas had a solid delegation of seven Union veterans, all Republicans, in the Fiftieth Congress. Edmund Morrill entered the army in 1861 and was a major when the war ended. Edward H. Funston, 'Foghorn Funston' as he was called, also enlisted in 1861 and served principally along the Mississippi until 1865. He made a fairly good record in Congress but one not comparable in goodness with the hog-cholera cure he afterward manufactured, and it should not be forgotten that he was the father of that American D'Artagnan, General Fred Funston. Bishop W. Perkins served four years in the Union army, afterward in the House and later in the Senate. He was one of the 'Old Guard' but it was never possible for anyone to be so much of a statesman as Perkins blandly looked. Thomas Ryan was wounded when a captain in the Battle of the Wilderness, and when Kansas saw red politically, his old house colleague, McKinley, gave him a place in the Department of the Interior. Erastus Turner had but a year of army service. Samuel Peters went into the Union army in 1861 and remained until June, 1865. In city, county and state, Union veterans in Kansas could almost pick and choose politically in those days, for Kansas still remembered John Brown and the Quantrell raids and the painful period of its 'bleeding.' Later there was to come a time in which Kansas could find it in its changed heart to send to the Senate a Virginian who had served three years in the Confederate army—William A. Harris, whose finished courtesy in speech and manner inspired general regard. Had anyone made that prophecy in the lifetime of the Fiftieth Congress the Kansas delegation would have sued out a writ of *De lunatico inquirendo* and made it stick.

Kentucky was a slave state with strong Union sentiments. In the Fiftieth Congress its delegation in the House was made up of men who had strongly supported the Union and of others who had fought for the Confederacy, fairly reflecting the sentiment that had obtained in the state at large a quarter of a century before. Polk Laffoon, Democrat, entered the Confederacy when but a boy, was captured at Fort Donelson, exchanged, and afterward, being a member of Morgan's command on the raid into Ohio, was again captured and confined in the Pennsylvania penitentiary as a prisoner of war. W. Godfrey Hunter, Republican, was a surgeon in the Union army. James B. McCreary, Democrat, who afterward became a senator from Kentucky, served for three years in the Confederate army. George M. Thomas, Republican, was a member of the Kentucky legislature in 1859 and again in 1861 and was one of six members who voted in favor of the Federal Government's exercising coercion against the seceding states. W. P. C. Breckenridge was of distinguished family and himself persuasively eloquent. His snow-white hair heavily thatched a florid face. His portly figure gave him dignity. He seemed the favorite of fortune.

John G. Carlisle, who became one of the leading political figures in Congress for many years, and greatly honored by Kentucky, was a strong Union Democrat and strove courageously to hold Kentucky in the Union. He was five times elected to Congress and three times speaker, for he was a man of extraordinary ability. He became Cleveland's Secretary of the Treasury in 1892 after having served two years in the Senate. In 1896 his term in the Treasury ended. There was no longer any attraction for him in public life nor was there place in the Democratic Party of that day for one who had been a gold standard Secretary of the Treasury. Besides, he had entered upon his sixty-first year; he certainly looked his age and doubtless felt much older, and it was time to make a little money to safeguard his old age. So he went to New York to practise law, receiving fees that in a few years exceeded all he had been paid for his public services from the day he entered public life in 1859 until he withdrew from it nearly forty years later.

Not one of Louisiana's six representatives saw service in the war. Four had been too young; one had been too old. Newton Crain Blanchard, who was a member of the delegation, represented Louisiana in the Senate in the nineties.

MAINE had a powerful delegation in the House composed of Reed, Dingley, Milliken and Boutelle. By reason of long and continuous service, as well as through merit, these four at length acquired a position in the House that gave the delegation great influence. Dingley was in the Maine legislature all through the Civil War years, and Milliken was holding state office, but both Reed and Boutelle served in the Navy. Thomas B. Reed was one of the great congressional figures not only of his own time but of all time. He was born in 1839, and was assistant paymaster in the United States Navy during the last eighteen months of the war, chiefly on a gunboat patrolling the Tennessee, Cumberland and Mississippi rivers. Before that he had gone to California and there had been admitted to the bar, but the Maine-born, Maine-reared young man could not adjust himself to the conditions which in that day obtained on the coast. He served in Congress from 1876 until 1899, when he resigned. The floor leader of the Republicans in 1885-89, he became speaker in the latter year and long will be remembered for the radical reform he wrought then in the rules and practices of the House. Doubtless the House knew stormier sessions in the days before the Civil War, when intensified antagonism between the sections developed hot enmity, and fierce debates were filled with challenges, but it has known no experiences in the last sixty years comparable to those with which it seethed when Reed became its master.

The Republicans began with a small majority in the Fifty-first Congress. Of the 330 members, 173 were Republican, 156 were Democratic and one called himself an Independent. But the House is never without its empty seats. Sickness, death, business cares or mere negligence are collectively accountable for an ever-varying number of absentees and the maximum possible Republican total of 173 was not always present to provide from its own membership the 166 required to make a quorum. The proceedings of the House had always been conducted on the basis of the legislative fiction that a member who did not answer to his name on roll call was not present, though in point of fact he might be seated in his place in plain view—and in Reed's day each representative still had his individual chair and desk. When a minority party filibustered against partisan measure proposed by the majority it was accepted strategy to compel the dominant party to provide a quorum from its own membership. This was relatively easy when the majority was large and coherent—difficult when the majority was narrow. The compulsion was applied by sitting in silence when the roll was called to establish the presence of a quorum. One hundred or more Democratic representatives might be in their seats but precedent entitled them to be recorded as absent if they refused to answer 'Present' when the roll was called. It may seem absurd now that such a practice could have been maintained so long as to ripen into an ancient and governing precedent but it cannot seem more ridiculous to this generation than the present practice of permitting a minority to rule the Senate will seem to the next.

WHEN the proceedings of the House were thus blocked, Tom Reed dealt with the situation in his own resolute way. He 'counted' a quorum. It took moral and physical courage and he had both in exhaustless measure. When the whole body of Democratic representatives sat in their places, each keeping silent when his name was called, Reed counted a sufficient number of the plainly visible recalcitrants to make up a quorum when added to the number of Republicans who had responded, and directed the clerk to record them as 'present.' When Democrats sought to baffle Reed by leaving the chamber of the House, Reed ordered the doors locked and locked they were, although 'Buck' Kilgore, a burly Confederate from Texas, once kicked the locked doors open and walked out into the corridor. In any event, even less than a quorum then had, as it still has, power to compel the attendance of absent members, though it could not compel them to answer when their names were called, on the still valid principle that a horse can be led to water but cannot be made to drink.

No one who did not witness the turmoil of the House in that time of storm can form an adequate conception of the anger of the Democrats. It was then Reed won his title of 'czar,' but that word was a term of honeyed endearment when compared with the epithets hurled at him as he stood upright and inflexible behind the speaker's desk. Reed was a tremendously big man, physically as well as mentally. His trunk was massive, of the build that is associated with strength, vitality and longevity—and yet he had barely passed his sixty-third year when he died. His partly bald, well-rounded head, and firm, clean-shaven lips and chin, gave occasion to his enemies to call him 'moonfaced.' There he stood while the angry Democrats surged down the aisles waving their arms, uttering threats, and shouting abuse. But not a muscle moved in his colorless countenance nor was there the least yielding or sign of fear. He seemed as indifferent as if made of rock except that his eyes, which were singularly bright, gleamed defiance at his political enemies, among whom were hot-heads who threatened to kill him if he persisted in his course. Again and again he counted a quorum and the legality of his sensible method subsequently was sustained by the Supreme Court.

Through the whole of that Fifty-first Congress Reed pursued his course inflexibly and was therein thereafter justified even by his opponents. The House of the Fifty-second Congress, chosen in the election of 1890, was heavily Democratic. It numbered 86 Republicans as against 231 Democrats and 14 Independents and there were only 126 Republicans to face 220 Democrats and 8 Independents in the Fifty-third Congress. While the Democrats should have found it easy to provide from their own number the 167 members required to maintain a quorum in the one instance and the 179 required in the other, Reed, as the floor leader of the Republican representatives, directing his followers to sit silent when their names were called, compelled the Democrats themselves to count a quorum according to the hated czaristic formula. So passed from congressional practice one of the most effective means of filibustering ever exercised by a minority in the House. Reed had destroyed a precedent. He had restored to the House the power of doing business.

Nelson Dingley, Jr., one of Maine's 'Big Four,' was born in Maine as were all his colleagues from that state. From 1856 until his death on January 13, 1899, at the age of sixty-seven, Dingley was the owner and editor of the Lewiston *Journal*. He was governor of Maine in 1874 and 1875, and was elected to the House in 1881, there remaining until his death. His most notable legislative work was the Dingley Tariff Bill of 1897, in which was imbedded, when Aldrich had finished with it in the Senate, all the accustomed benevolences to highly protected industries. It is to be said for Dingley, who was a man of fine rectitude, that he believed in high protection as a perfect principle contributing to his country's general prosperity.

Charles A. Boutelle of Maine, born in 1839, in his young manhood followed the sea, for his father was a Maine shipmaster. Returning from a foreign voyage in the spring of 1862, he entered the Navy and served until honorably discharged at his own request, January 14, 1866. He had seen real service in the North and South Atlantic and West Gulf squadrons and had taken part in the blockade of Charleston and Wilmington and in the seizure of Jacksonville, Florida. He was made a lieutenant 'for gallant conduct in the engagement with the rebel ironclad *Albemarle*,' May 5, 1864. He commanded the steamer *Nyanza* in the capture of Mobile and in receiving the surrender of the Confederate fleet. Like Dingley he became a newspaper editor and owner. The Bangor *Whig and Courier* was his property. First elected to Congress in 1882, he remained there almost until his death, May 21, 1901. He resigned in 1900 and was considerately enough made a captain on the retired list of the Navy, to which he had devoted constructive attention during his congressional service. Indeed, he was the author of a bill in 1890 under which the building of the first modern battleship of the United States was authorized.

NOT one of Maryland's representatives in the Fiftieth Congress seems to have performed military service during the Civil War, but most of them were then too young. Five were Democrats; one was a Republican. Two of the Democrats, Charles Hopper Gibson and Isidor Rayner, afterward were sent to the Senate, as was the sole Republican, Louis E. McComas, who succeeded Gorman for a term from 1899 to 1905. Gibson was so faithful a follower of Gorman that an ingenious Washington correspondent represented him as deploring the fact that 'Gi' preceded 'Go' on the roll call, so compelling Gibson on occasion to pass the call until he could ascertain how Gorman had voted, but this was an injustice to a pleasant, harmless old gentleman. Rayner, who died relatively young, had an eloquent tongue that occasionally involved him in party trouble.

Two of the twelve representatives from Massachusetts saw service for the Union during the war. Edward Hayden, like Tom Reed of Maine, was an assistant paymaster in the Navy. William Cogswell, graduating from Harvard's law school in 1860, entered the Union army in April, 1861, and served until July 25, 1865, at the end being in command of a brigade. Few men in the House were better liked than was this short, heavily built, frank-spoken, agreeable man from Salem. Of the other representatives, Robert T. Davis had been a delegate to the convention that nominated Lincoln. Leopold Morse, Democrat, born in Bavaria in 1831, came early to the United States and was a popular and public-spirited manufacturer who served in several Congresses. Pat Collins, also of Boston and a Democrat, born in Ireland, was prominent in the Fenian Movement and the Irish Land League. This did not prevent his becoming consul general at London, then one of the most profitable of all consular offices. John D. Long, who had three times been elected governor of Massachusetts in the early eighties, was Secretary of the Navy under McKinley during the Spanish American War.

The member of the Massachusetts delegation in the Fiftieth Congress who was to achieve the greatest distinction of any was Henry Cabot Lodge. Sixteen years out of Harvard, Lodge by his ability attracted attention from the beginning of his service. He was an ardent, even intense partisan. His name was given to the so-called 'Force Bill' that was intended to fasten Republican supremacy upon the South by putting the whole strength of the Federal Government back of the Negro. Lodge was a man of literary ability as well as political strength. When only twenty-three years old he had been appointed editor of the *North American Review*, which was then a considerably heavier publication than it was suffered to remain under G. B. N. Harvey's lighter touch. During the whole of his political life Lodge continued his literary pursuits, writing a number of excellent books, many of them imbued with Hamiltonian doctrine. Lodge and Roosevelt when the latter was Civil Service Commissioner, and Taft when in the Department of Justice, became intimate personal friends and Roosevelt and Lodge remained in exceptionally close relation to the end, though Lodge could not follow him in his insurgency. After serving eight years in the House, Lodge went on to the Senate March 4, 1893, and there remained until his death. The outstanding feature of his Senate service was his bitter personal and political feud with President Wilson in which Wilson zealously bore a reciprocating part. Both were intellectually brilliant—each in pride of intellect a little intolerant of common minds and each disposed to be autocratic. They were much alike in temperament and powers though Wilson had the keener intellect and stronger will. In the long fight over the League of Nations they fought a duel to the death. It is within bounds to say that two men never more comprehensively indulged in polished hate. Lodge was not an orator. His presence was good, but his voice was harsh. Yet his intellect gave wings to words that lacked eloquence and the influence of his speech was potent.

Michigan had eleven representatives; five of them fought for the Union. Edward P. Allen went into the service soon after being graduated from the State Normal school. James O'Donnell, who was a printer, enlisted as a private in season to fight in the first Battle of Bull Run. Melbourne H. Ford, having attended the Naval Academy at Annapolis, served in the Navy. Byron M. Cutcheon was graduated at Ann Arbor in the class of '61, served so ably as to be made a general 'for conspicuous gallantry,' was twice wounded at Spottsylvania and was in command of a brigade in the Army of the Potomac when the war ended. Julius C. Burrows was an officer in the Union army 1862-64, served several years in the House and first went to the Senate when chosen in 1895 to fill Stockbridge's unexpired term.

(This is the first of two articles dealing with the members of the House of Representatives in the Fiftieth Congress. The second will appear in an early issue.)

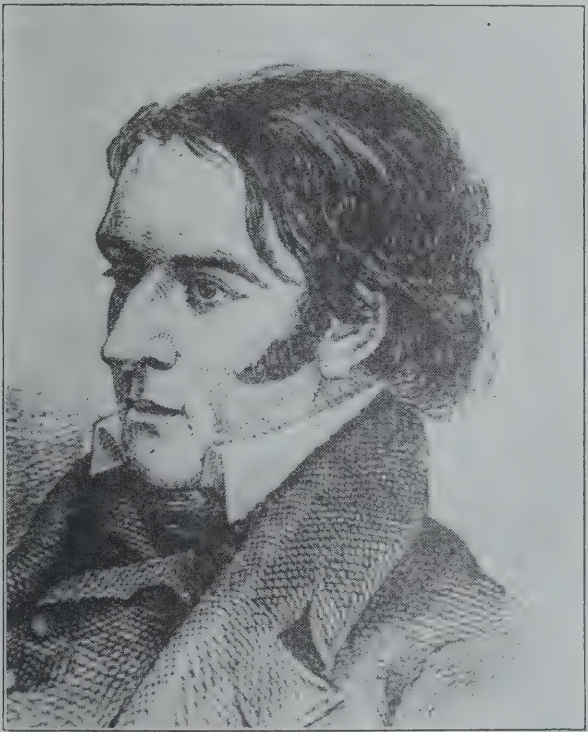
For Marksmanship—DAVID CROCKETT

By ZELLA ARMSTRONG

THE fame of David Crockett, once a name to conjure with, the greatest sportsman, the finest shot, the most popular man in America, was known from Texas to the Lakes and, when he died a martyr at the Alamo, the whole nation mourned. As a hunter and a marksman he probably had no equal even in a time when being a good shot was much more important than being a good speller. Wherever he went hundreds gathered to see him shoot.

David Crockett was a son of John Crockett, who came into the Tennessee Mountains from Virginia about 1780. David was born on August 17, 1786, in the then forest fastnesses of east Tennessee. John Crockett himself was a soldier and a huntsman. He was in the Battle of Kings Mountain we know, and he was probably in other engagements of the Revolutionary War and the campaigns with the Indians which followed.

That the youthful Crockett learned the use of his rifle from his father, and that he quickly became proficient in the other arts of the woodsman we know. His first courting journey is recorded when he proudly jingled five silver dollars won at a shooting contest and felt himself the richest man in the world. He was barely seventeen and the courting was quite fruitless despite the bait of five whole dollars.



David Crockett, whose early years were devoted to a backwoodsman's existence, and whose heritage of pluck and a roving disposition attracted to him many political constituents.

Davy not only shot in contests for sport and in the forest for food, but entered the service of the United States and followed the Indian wars, and when the valorous Andrew Jackson desired volunteers in the War of 1812, and gave Tennessee its glorious name the 'Volunteer State,' Davy Crockett was one of the first eager entries in the lists. He worshiped General Jackson as his followers all did. He became known in camp for his wit and oratory as well as for his accurate aim.

When he returned to his home in Tennessee he was so well known that his neighbors decided to send him to the state legislature, where his shrewd wit and clever stories added to his fame and general popularity. From that office he was elected to Congress and there he repeated his conquests.

As an example of his rugged wit a story is told concerning a suggestion that a well-known college would give him an honorary degree if he would pay a visit there. 'No,' said Crockett, 'the only degree I want, and I have that, is a degree of good sense.'

It is told of him that on one of his visits in the East some one asked him rather rudely who he was. He replied: 'I am David Crockett—I can wade the Mississippi, leap the Ohio, ride upon a streak of lightning, and slip without a scratch down a honey locust. I can whip my weight in wild cats, and if any gentleman pleases, for a ten-dollar bill, he can throw in a panther. I can hug a bear too close for comfort, and can eat any man opposed to General Jackson.'

All of which proves that he had no slight opinion of his abilities. Later when Crockett changed his political views and opposed Jackson the change of opinion cost him his seat in Congress and he was defeated in election although he personally went electioneering among his friends with coonskin cap on his head and rifle over his shoulder. All this was powerless in the face of Jackson's popularity.

Crockett, greatly embittered by his defeat, left Tennessee. After many wanderings he went to Texas, then in the throes of its war for independence. The story of the Alamo where he fell in a martyr's death is part of the imperishable glory of American valor.

Crockett arrived at the fortress, the Alamo, near the present site of San Antonio in time to join forces with the Texans. The commander of the little citadel was only too glad to welcome so distinguished a veteran and fighter. David Crockett was not quite fifty years of age.

Before daybreak on the sixth of March, the Mexican General Santa Anna assaulted the fort with the whole Mexican army.

When day broke, six Americans were left alive and one of these was Davy Crockett. He stood at bay like a lion, blood streaming from a wound in his forehead, his rifle broken, his bowie knife in his hand.

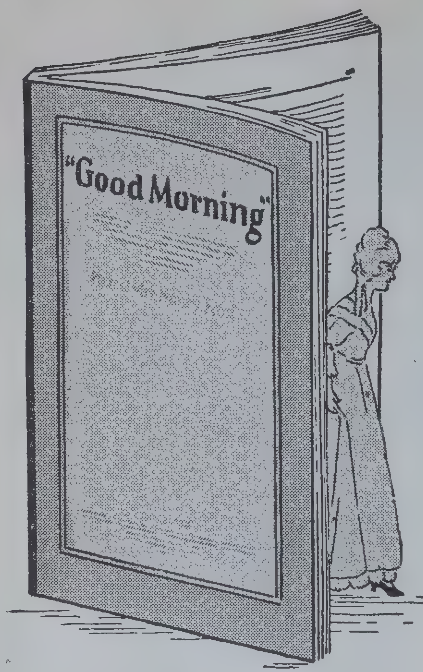
The six were forced to surrender. The Mexicans dragged them before Santa Anna asking what should be done with the prisoners. Santa Anna replied, 'Have I not told you what to do with prisoners?'

Immediately, taking the words as a signal, the Mexicans plunged knives into the hapless Americans.

Crockett sprang barehanded at Santa Anna's throat, but was dragged away and a dozen swords pierced his body. It is said that he died without a groan.

Thus ended the life of a man whose wondrous story is a part of American history, whose life in full reads like that of heroes of old. Perhaps in that last moment he recalled unconsciously his own life motto which is so vividly before us:

'Be sure you're right; then go ahead.'



The RETURN *of the* DANCE

Everyone enjoys the old-time dances. They are easy to learn. They are being taken up enthusiastically by schools, clubs and community groups.

Piano Music for twenty popular old American dances is available. Price 50c the set.

Orchestrations of 13 parts each, including saxophone, for 20 dances. Specially priced $2 the complete set.

Single Orchestrations 15c each.

Edison, Columbia *and* Victor have recorded Old American Dance Music as played by the Henry Ford Orchestra. Your local music dealer handles these records.

THE methods of the world-famed Ford School of Dancing at Dearborn are now made available to everyone in the specially prepared manual entitled

'GOOD MORNING'

Compiled by Mr. and Mrs. Henry Ford

This 169-page manual contains complete information with instructions on each of the dances. Calls, music and pictures visualizing the various steps are given. There is also detailed information on how to arrange and conduct a successful dance.

The origin and etiquette of dancing, style and deportment are also fully described. This feature makes *Good Morning* a valuable reference book, especially in connection with the training of children.

Send for this book today. 50c a copy, postpaid.

The Dearborn Publishing Co.,
Dearborn, Mich.

Please send me the items checked below for which I enclose remittance of

CHATS WITH OFFICE CALLERS

'You can usually measure the enthusiasm for high protective tariffs by the average ages of the men dominant in the industries considered,' said a ***Man Closely in Touch*** with the subject.

'That is, the younger the men and the younger the industries, the more self-reliant they are; the readier they are to trust to American methods, such as mass production, instead of artificial protection, in meeting competition on account of cheap labor abroad.

'More and more, American industries are becoming dependent for continued expansion, if not for continuing prosperity, on the sale of surplus production abroad. One of the big handicaps to the sale of American manufactured goods in other lands is high tariffs, often much higher than ours. Americans can't very well protest against these so long as their country maintains a high tariff wall.

'But, conversely, groups other than manufacturing ones are developing increased fervor for protection. This is the case with several farming groups. The South, which used to be the stronghold of the free trade theory, is veering toward support of protection for its manufactured and farm products.'

* * *

'In no other field of social legislation has greater progress been made in recent times than in child labor,' said the ***Social Worker.*** 'Today every state in the Union has child labor laws; also compulsory education statutes, which probably have had better effect in ameliorating child labor conditions than the laws bearing directly thereon.

'Laws dealing directly with child labor necessarily are negative. They say that children shall not be permitted to do certain things; they do not say that certain things must be done for children.

'Some of the states have dealt with the subject reluctantly. This was true in some states, as in cotton mill sections, where big-scale modern industry was new. Eagerness to develop prosperous manufacturing often overcame humane feeling for the little children of indifferent parents, children whose work was turned into dividends by callous employers.

'In 1912 the National Child Labor Committee put forth what it called a uniform model of a child labor statute. At that time the laws of twenty-one states were below the standards fixed in that proposal. Now those of only three states seem to be below those standards in important particulars; about half the states are much above them. The three states which appear to lag have virtually no industries of the kind covered so far by child labor laws.

'One state, where mining is a leading industry, does not forbid the working of little children in mines; but no children have ever been employed in mines there. So, much of the laxness on the part of some of the states is more apparent than actual; often what would appear to be desirable has not been done for the reason that no existing condition calls for it.'

* * *

'The appeal of the motion picture to the young minds of the world is very powerful,' said the ***Motion Picture Star.*** 'It is the greatest sales force, the greatest advance guard to the commerce of America with the world, that has ever been known. It is the most instructive thing, because of its visual education, that has ever been known since the world began.

'The first language ever devised was a picture language—the moon, a river, a boat told the story. This is built on the same principle. The most subtle psychology of life may be dealt with through the motion picture.

'Douglas Fairbanks once took a picture, made for the subtle mind of the metropolis, up to an Indian reservation 120 miles from a railroad, where most of these Indians had never heard of a motion picture. A lot of them knew nothing whatever of dramatic structure, of the presentation of life through the medium of drama; yet the subtle points—possibly too clever for the ordinary mind—were picked up immediately by these half-civilized Indians.'

* * *

'It seems that Liberia is due to have some attention from the United States,' said the ***Bishop.*** 'Uncle Sam's first child should not be forsaken. Besides, it would seem that the youngster of a hundred years has shown qualities not unworthy of its sire. A good climate, a fertile soil, every other kind of natural resource, and a brave enduring people, these might at least have serious consideration. A capable and sympathetic investigation ought to be worth while.

'If the American founders of the colony in Liberia and the American establishers of the Liberian Republic had been succeeded in their own country by men of like vision, there might have been no Civil War. If the men of today will heed the signs of the times, something worse than that may be avoided.

'Africa is going to be a great country in the future. It is sunny, beautiful, of untold wealth, and has a great future. I see a great possibility for the United States in Liberia in many directions, and not least in the modification of the colored challenge, if not in its solution.

'Beyond this, I see a wonderful colored republic in Africa. But beyond even this, I see the Liberian Republic—strong, orderly, educated, Christian—the great and natural instrument for the civilization and the christianization of millions of Negroes in East Africa.

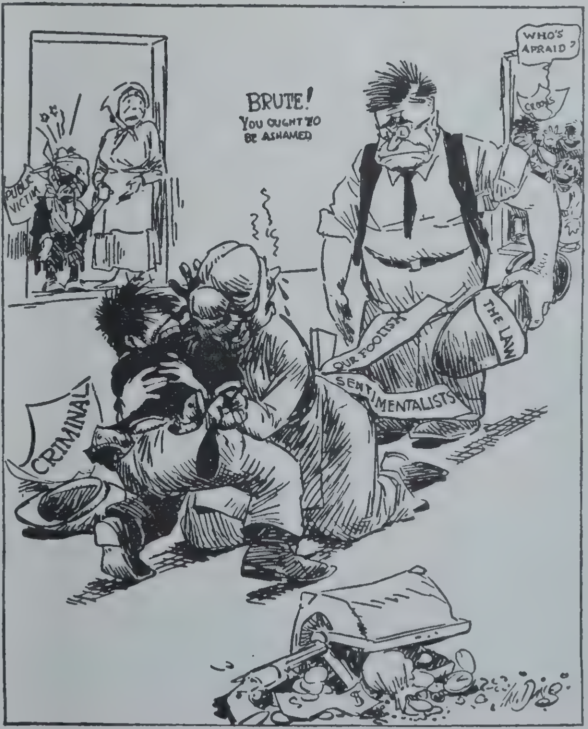
'The average reader may think me welcome to my ideals. But even a preacher may be credited with some wisdom in seeing that, for the white race, it were better that the Negro should be Christian than Mohammedan. The spread of the latter persuasion in Africa in late years is not reassuring.'

* * *

'It has been the custom of moralizers to point to the small divorce record of Canada and, contrasting it with the large number of divorces south of the international boundary, claim it as evidence of the superior virtue of Canadians,' said the ***Man From Toronto.*** 'An examination of statistics indicates that other explanations might be found to account for the difference.

'Very many Canadians suffering from insupportable marital conditions have gone to the United States to obtain the relief denied them in their own land. Human nature is much the same on both sides of the boundary, and equal facilities for procuring divorce would disclose just as much misery in domestic life.

'Confirmation of this is found in the fact that in the first two years after the western provinces, by virtue of a judgment in an appealed case, exercised the right to establish provincial courts for the hearing of divorce cases, no less than 498 applications were filed in Winnipeg alone, of which all but seventeen were granted. The significance of these figures is striking. In two years one of the three prairie provinces formerly under the jurisdiction of the Divorce Committee at Ottawa granted as many divorces as the Dominion Parliament did in fifty-two years, and considerably more than twice the number of divorce bills passed by the federal tribunal in the same two years—1920 and 1921—the figures being in Manitoba 481, and in the Dominion Parliament 200.'



—Darling, *Detroit News* (c) N. Y. *Herald-Tribune.*

NO WONDER WE HAVE MORE INSTEAD OF LESS.

CAN YOU TELL ME?

Question. Was an investigation made as to the responsibility for the explosion of the naval ammunition depot at Lake Denmark, New Jersey, which was struck by lightning last summer?

Answer. An investigation was held by a naval court of inquiry which was headed by Rear Admiral Robert E. Coontz. The report, made public on August 3, 1926, stated that 'the court, in the light of all the evidence, cannot conscientiously fix the responsibility for this disaster upon any human being.' Although the storage of explosives at Lake Denmark was believed by all responsible officers to present no danger other than that inherent and unavoidable in the storage of large quantities of ammunition, the court reported against the maintenance of any such large ammunition base at Lake Denmark in the future.

* * *

Q. Can you tell me what was the estimated aborigine population of North America at the time of its discovery?

A. Compilations of figures from the stories of early writers would indicate a population of somewhat under 200,000 for the territory east of the Mississippi and it is not likely that the Indians north of Mexico numbered very many more than 500,000 when the whites appeared.

* * *

Q. Why did not George Washington sign the Declaration of Independence?

A. George Washington was not a member of the Continental Congress when the Declaration of Independence was signed. The Virginia Convention which met in July, 1775, elected delegates to represent Virginia in the Continental Congress for one year. These delegates were Peyton Randolph, Richard Henry Lee, Thomas Jefferson, Benjamin Harrison, Thomas Nelson, Richard Bland and George Wythe. These men signed the Declaration of Independence for Virginia, with the exception of Peyton Randolph who had died and Richard Bland who had declined to serve on account of advanced age. They were succeeded by Carter Braxton and Francis Lightfoot Lee, both of whom signed.

* * *

Q. During the Battle of Germantown, did George Washington have his headquarters at a place called The Green Tavern, and who was the owner of this tavern?

A. Hotchkiss in his *Germantown, Mt. Airy and Chestnut Hill* says that the headquarters of Washington during his sojourn in this neighborhood were at the residence of George Emlen, at Chestnut Hill. Charles F. Jenkins in his *Washington in Germantown* says that Washington occupied the house of Henry Hill late in July or early in August, 1777, and that later (but before the Battle of Germantown) he made his headquarters at Stenton, which had been built in 1728 by James Logan. No reference to headquarters at The Green Tavern has, however, been located.

* * *

Q. Why are motion pictures of heavy-weight championship boxing bouts prohibited in interstate commerce?

A. The Federal Act prohibiting the transportation of fight films from one state to another was passed in 1910 after the Jeffries-Johnson heavy-weight champion bout, as it was feared that a bout between a colored and a white contender would increase race riots, which were quite prevalent in various places at that time. Federal Judge Henry W. Goddard recently ruled that it is legal to exhibit films and receive prize fight films from one who, not being a common carrier, has transported them across the state line.

* * *

Q. Have the slides from the banks and the oozings from the bottom of the Culebra Cut definitely ceased and if so, when was the last slide? How many dredges are in operation at present in the Culebra Cut? Is there any danger lest the slides close the canal to navigation?

A. There has been no interference to traffic in the Panama Canal on account of slides since March 24, 1920, and while some slides have occurred since that date none has been of sufficient extent to block the channel. While the Panama Canal is not entirely free from the danger of slides in the Gaillard (Culebra) Cut, it is not probable that any slide will ever occur which will close the canal to navigation so long as the present policy is continued of having dredging equipment immediately available for work on slides as soon as they occur. The situation is being improved steadily by the removal of whatever material may slide into the prism, by the grading of the banks, and by the draining of the land beyond the outer limits of the banks. It is assumed that any oozings from the bottom of the canal would be removed in the ordinary course of maintenance work. Three fifteen-yard dipper dredges are at present engaged in maintaining the canal channel in the Gaillard Cut.

* * *

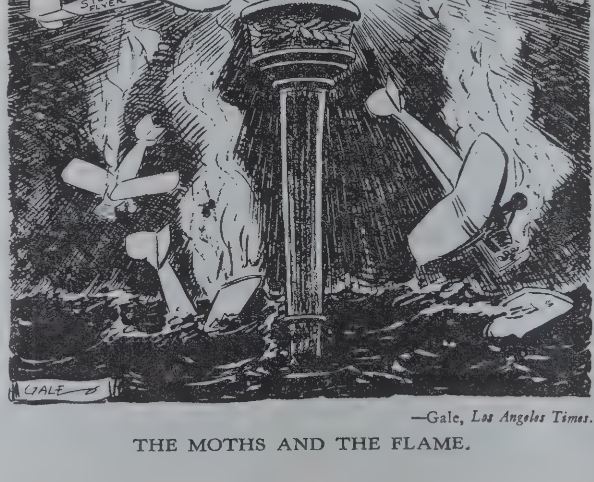
Q. Beginning with A. D. 1066, please give the name and length of reign of the ruling houses of England.

A. William of Normandy who was crowned King of England in 1066 died in 1087 and was succeeded by his son William II who died in 1100; he was succeeded by his brother Henry I, who died in 1135. The family name of William of Normandy is unknown. On Henry's death the throne was seized by Stephen Count of Boulogne, son of Stephen Count of Blois and Chartres, and Adela, daughter of William I. Stephen died in 1154 and was succeeded by Henry II, son of Geoffrey Count of Anjou, and Matilda, daughter of Henry I. Henry II began what has been called the Plantagenet line but what is now styled by historians the Angevin House. This house ruled in the direct male line until 1399. With the death of the childless Richard II in 1399, the crown passed to the House of Lancaster, descended from John of Gaunt, fourth son of Edward III and therefore in reality a branch of the Angevin. The Lancastrian monarchs were forced to contend against the claims of the House of York similarly descended from a son of Edward III. The line of York attained the throne in the person of Edward IV (1461-83) but with the death of his brother, Richard III (1483-85), the crown passed to the House of Tudor. Elizabeth, last of the Tudors, died in 1603 and was succeeded by James I, first of the Stuart kings. By the usurpation of Cromwell the Stuarts were excluded from the throne from the defeat of Charles I at Naseby in 1645 until the restoration of his son Charles II in 1660. With the death of Queen Anne in 1714, the Stuart line gave way to that of Hanover, George I being the first of that line on the English throne. By the marriage of Queen Victoria to Prince Albert of Saxe-Coburg-Gotha, the House of Hanover came to an end and the dynasty became the House of Saxe-Coburg-Gotha with the family surname of Wettin. This was changed to the House of Windsor by proclamation of King George.

* * *

Q. What are the capitals of Russia, Scotland, Norway and Holland?

A. The capital of the Union of Socialist Soviet Republics (Russia) is Moscow; of Scotland, Edinburgh; of Norway, Oslo; of the Netherlands (Holland), The Hague.



—Gale, *Los Angeles Times.*

THE MOTHS AND THE FLAME.

BRIEFLY TOLD

Each of the four King Georges preceding George V, present King of England, died on the same day of the week.

The Paris Opera House is the largest theater in the world, covering a ground area of three acres.

Sir William Richmond, famous English artist, had a favorite cat which loved him so much that she attended him even while he was having his bath, and when he got out she would crouch down to lick his great toe adoringly. When Richmond was commissioned to design mosaics for the choir roof of St. Paul's Cathedral, he showed his appreciation of his pet's devotion by using her as a model for the lioness in his panel of Adam between a lion and a lioness.

The Dead Sea, in the southeast border of Palestine, which covers, according to tradition, the towns of Sodom and Gomorrah, is the lowest spot on the earth's surface, lying 1,300 feet below the sea level.

A statue of Queen Elizabeth, bearing the date 1586, is said to be the oldest public statue in London. It was originally set up on Ludgate Hill, but since 1760 it has stood outside St. Dunstan's Church.

It has been estimated that the volume of stone in the Great Pyramid weighs nearly 7,000,000 tons; there is enough to build a city of 22,000 ordinary-sized houses.

A dime spent for clams recently netted Raymond Curtis of New Bedford, Massachusetts, $174.90. One of the shellfish contained what Curtis thought was a black shoe button, but the jeweler to whom he took it thought differently, declaring it to be a rare and beautiful specimen of black pearl worth $175.

Basil I of Russia had a wax nose, his own having been severed by a sword. Unaware of this, the German ambassador and his suite were once terrified at seeing Basil's nose drop off during a court ceremonial.

Credit for introducing the idea of daylight-saving time should go to Benjamin Franklin, who, while minister to France in 1784, wrote an article explaining how, by changing their clocks, the people of Paris could save millions of dollars a year in candles.

That science which has to do with the measurement of the earth's surface is known as geodesy—a word of Greek derivation meaning 'to divide the earth.'

Cricket was introduced into England from France in the Middle Ages. The name of the game is derived from the French *criquet*, a stick used in the game of bowls.

An animal jawbone weighing more than twenty pounds has been found in a gravel pit near Shelbyville, Indiana. Preserved in the bone are a number of teeth one and one-half inches wide and about five inches long.

Leavenheath, a village in Suffolk, England, has eighty bachelors out of a total population of about one hundred.

The bird spider of South America, with a leg spread of seven or eight inches, is the largest spider in the world.

England spent more money on golf during the past season than on all other games combined.

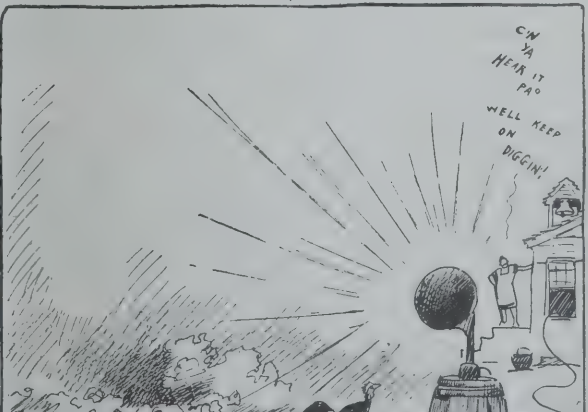
The police in certain portions of Japan, through fear of increasing robberies, have forbidden the habit of sleeping with the window open.

The heart of Kosciuszko, the Polish patriot who fought in the American Revolution, has recently been sent from Switzerland to the Polish capital to be placed in a museum.

Only five per cent of the nineteen thousand children in orphan asylums in nine states are full orphans.

Twenty of the sixty-two airplane records officially recognized by the International Aeronautic Federation of Paris are held by the United States.

So far as the size of the mouth and throat is concerned many species of sharks could swallow a man with ease.



C'N YA HEAR IT PA?
WELL KEEP ON DIGGIN'!

—Donahey, *Cleveland Plain Dealer.*

MA ALWAYS HAS A WAY TO KEEP GRANDPA HAPPY.

According to Herr Emil Ludwig, Otto von Bismarck smoked a hundred thousand cigars and drank five thousand bottles of champagne in five years.

Women are eligible for the post of minister or ambassador in the United States diplomatic service, although no women as yet have ever held the position.

Finland boasts of being the northernmost republic on the globe; the first country to give absolute equal suffrage to women; the first to adopt prohibition. She also has the greatest forest area of any country in Europe; the greatest number of lakes of any country, and the largest paper mill in Europe.

The blue or sulphur-bottom whale is the largest species known; one specimen, captured off the west coast of North America, is said to have been 95 feet in length, with a weight of 147 tons.

The origin of the pocket has been traced to the 15th and 16th Century custom of wearing the pouch at the side where, according to Shakespeare, it was customary to wear one's dial.

As a means of advertising, W. S. Eaton, in charge of the barber shop in the old Palmer House in Chicago, had 365 silver dollars placed in the tiles of the floor. Only ninety of the old coins have withstood the wear of the years.

In Shakespeare's *Two Gentlemen of Verona*, the two principals travel from Verona to Milan by water, despite the fact that both cities are inland with no water to connect them.

The president of Czecho-Slovakia is elected for life.

About one in every seven hundred tortoise-shell cats is a male.

Seven hundred tons of water are required during the growing period of an acre of potatoes.

During the Civil War there were 2,400 military engagements considered important enough to be identified by name.

A giant cypress tree in Santa Maria de Tule, near Oaxaca in southern Mexico, believed to be two thousand years old, rises to a height of 140 feet and is 110 feet around.

The boats used by the ancient Egyptians were large enough to carry four thousand rowers, four hundred sailors, and three thousand soldiers.

The language spoken by the Eskimos from Greenland to Siberia is so similar that widely separated tribes would not have much difficulty in understanding one another.

NOTES · COMMENTS · CRITICISMS

MR. FORD'S Page this week discusses false values.

* * *

In touring the country, one should measure the trip, not by miles covered nor by points visited, but by the people and the things one has seen. Charles J. Finger, writer of adventure tales, has rambled along the Texas Gulf Coast and has described his findings in two articles, one of which is in this issue. (p. 1)

* * *

John Ericsson, inventor of the revolving gun turret on an ironclad raft, was a precocious boy. At the age of twelve, he had charge of six hundred Swedish troops who were digging a canal—when he was so small that he could not reach the eyepiece of his leveling instrument. An attendant followed him with a stool, so that he could stand on it. (p. 4)

* * *

Ericsson contested against Stephenson for a prize that was to be awarded to the best steam locomotive which would draw a gross weight of twenty tons at the rate of ten miles an hour. Seven weeks before the close of the contest, Ericsson heard of it and entered. His engine reached a speed of thirty miles an hour and easily passed Stephenson's *Rocket;* but it was unable to finish the required seventy miles because of minor defects.

* * *

In the House of Representatives of the Seventieth Congress, there has been but one Civil War veteran. In the same house back in 1887, during the Fiftieth Congress, nearly half its number had seen service in either the Union or Confederate army. The Union veterans considerably outnumbered their Confederate brethren, although in the Senate of the same Congress that condition was reversed. (p. 7)

* * *

In January, 1779, the front cover of the *United States Magazine* advertised as feature articles of the issue such items as 'List of the Members of Congress for the year 1779'; 'Apology for the Cornwalliad, a Proposed Heroic Poem'; 'An Oration on the Advantages of American Independence'; and Number 7 of a series of 'Political Discourses Founded on the Scriptures.' The Table of Contents was styled: 'Particulars.' (p. 8)

* * *

Alongside the Dude Ranch of the West comes another to take its place as the Dude Ranch of the Snows. Instead of ponies and saddles, it offers dog teams and snowshoes. Where the Westerner has his wide-open range, the Northerner has his great snow spaces. Instead of hunting, there is the winter wild life, the tracks across the white. (p. 12)

* * *

It was to free the hereditary principle, writes Lewis Worthington Smith, that we established a democracy in America a century and a half ago. 'It is the business of our democracy to liberate all hereditary ability, to give it full opportunity, not to submerge it in the interest of a fictitious dynastic monopoly or a sentimental equality among men.' (p. 15)

* * *

Dorothy E. Pilley, well-known mountain climber, started out one day last summer to prove that 'every mountain, however formidable in appearance, has an easy way up.' The peak of her choice was Going-to-the-Sun Mountain in Glacier National Park. Cunning rather than luck was needed, she avers, and illustrates her point by referring to another party which tried to follow her footsteps after she had completed the ascent. The second party was compelled to abandon the attempt. (p. 16)

* * *

Ory Henderson's gander was a town character. He was always breaking through the fence, leaving his geese, and venturing forth into town. Then came the excitement of driving him back, in which the whole town joined. Everybody liked the gander chase, although the men pretended to grumble because Ory didn't keep the fence fixed. That was forty years ago! (p. 19)

* * *

Ellsworth B. Cornwall was graduated from the New York Law School and received a Bachelor's degree from Princeton. But with his bride, he went north to Vermont and hired out as a farm hand, in order to learn agriculture. That was in 1908. Today he is president and general manager of the State Federation of Farm Bureaus in Vermont—and a successful farmer. (p. 20)

* * *

Singapore stands as the guardian of East and West, on the border between Orient and Occident. Every race, every tongue, and every creed meets here; ships from every corner of the world drop anchor in the harbor. It is nothing if not cosmopolitan. There are only two classes of society—white and Asiatic. But it is accepted and there is no resentment. (p. 21)

* * *

Lesley Frost, whose poem, 'Winter Dare,' appears in this issue, is the daughter of Robert Frost, the loved poet of New England. But she has established herself as a writer of verse in her own right, and her poems breathe the spirit of nature love and high purpose. (p. 24)

REMARKS BY OUR READERS

Los Angeles, California.

At the regular meeting of Angel City Branch No. 24, National Association of Letter Carriers, on November 5, it was unanimously voted that a letter of thanks and appreciation be sent THE DEARBORN INDEPENDENT for the very fine article by the Honorable Clyde Kelly of Pennsylvania, 'Clearing the Postal Deficit' which appeared in the October 15 issue of THE DEARBORN INDEPENDENT.

The postal employes are very much interested in the postal policy as advocated by Congressman Kelly, and the publicity given by THE DEARBORN INDEPENDENT to matters of this nature will greatly assist in having enacted into law a postal policy.

FRANK H. BILLIG,
Recording Secretary.

Asheboro, North Carolina.

Just a line, from a busy 'Colaborer' in the newspaper field, to express appreciation for the beautiful editorial on Indian summer in your issue of Nov. 12. A week-end trip through the Shenandoah Valley prepared me for it. You have wonderfully described the sunset, the fields, corn, crows and beautiful colorings in the skies. I thank you.

(MRS.) WM. C. HAMMER.

Berlin, New York.

Of the numerous faults of your publication, the first is that it is too small. The editorials are excellent but very short. If to be brief is the soul of wit, then they are brief.

I do not always agree with Mr. Ford's Page. But it certainly causes serious consideration which is most welcome, and in our opinion should be two pages instead of 'Page.' I stopped reading it as I found it should be studied to get better results.

The articles are most interesting especially those on Pioneer America and Science and Art. But all are too short. The INDEPENDENT has one redeeming feature seldom found. I have yet to see a biased article.

JOS. L. MCLAUGHLIN.

Oshkosh, Wisconsin.

I have taken your magazine for a number of years and it has been a liberal education to read it. I am writing this letter to thank you for all the good your magazine has done to thousands of your readers.

(MRS.) DOROTHY C. RICE.

Where MAN *Built For* ETERNITY

Cradle *of* Civilization *Is* Yielding Up Its Treasure

In the Valley of the Tombs of Kings, Egypt, Pharaohs dug subterranean chambers for burial vaults, to prevent posterity from discovering their treasure. Today we are prying out their ancient secrets. —Ewing Galloway.

A shadoof, or sweep, at an irrigation canal near ancient Heliopolis. —Publishers' Photo Service.

Camel with his rich trappings and his turbaned rider, silhouetted against a palm-bordered lake at Kaphia village, Egypt. The Pyramids as seen in the distance look like gray cones rising above the horizon. They are frequently disappointing in their first impression; only on closer view are their immensity and wonder apparent. —Publishers' Photo Service.

Herder and flock, with Pyramids as background. Today the Great Pyramid is 300 feet lower than Herodotus described it—the rest has been carted to Cairo for buildings.

This Pyramid is almost a solid mass of mighty stone blocks in step formation. The king who built it for his tomb lived three hundred odd years before Christ. —International Film Service Co.

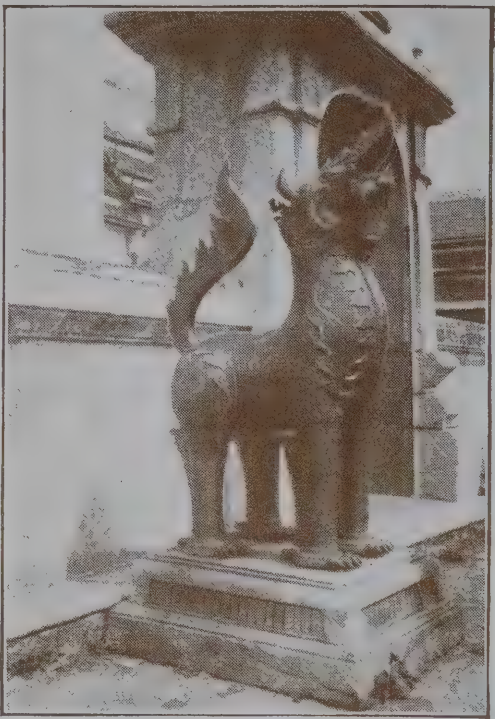
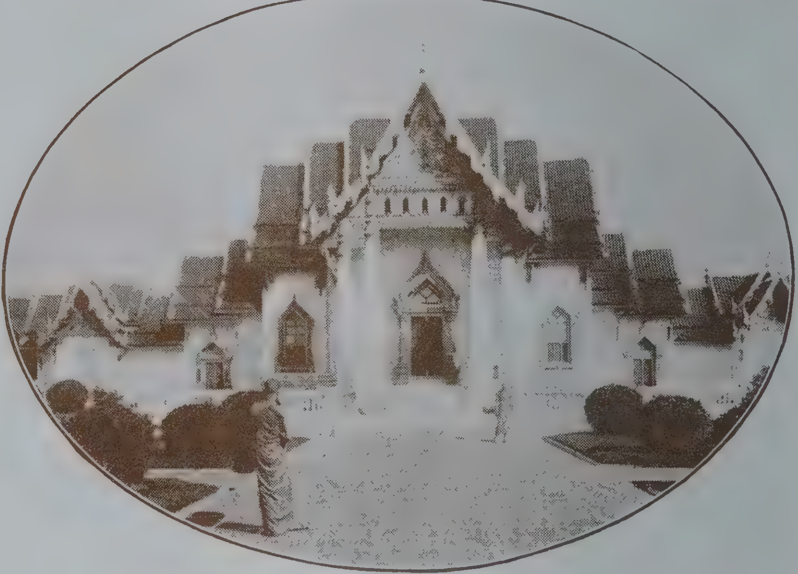
ART From the Land of BUDDHA

Curious Specimens Glimpsed *in* Siam

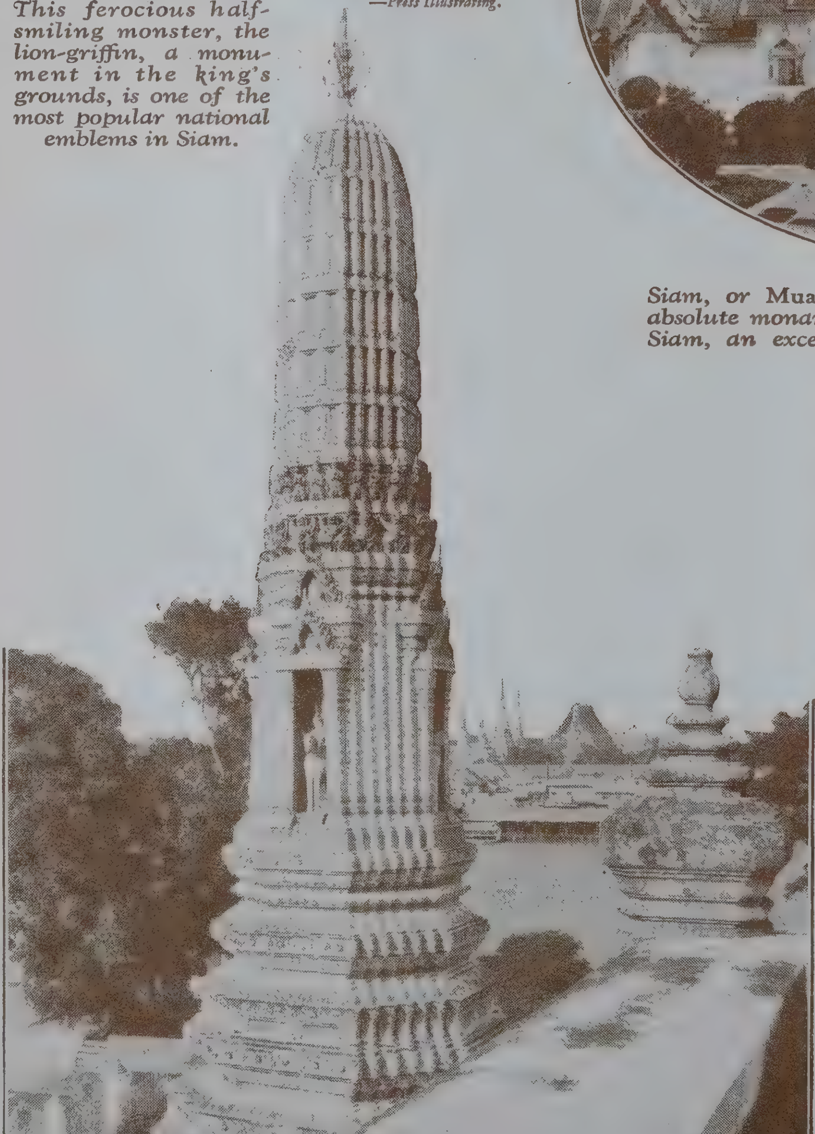


—Press Illustrating.

This ferocious half-smiling monster, the lion-griffin, a monument in the king's grounds, is one of the most popular national emblems in Siam.

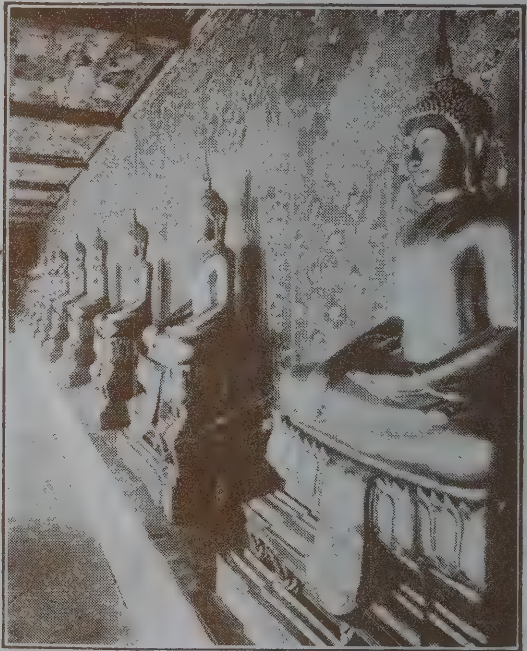


Siam, or Muang Thai, is one of the few remaining absolute monarchies. Above is Royal Wat or Temple of Siam, an excellent example of the architecture found in this interesting land.



—Herbert.

An outstanding example of Siamese art, which stands within the grounds of the Royal Palace, is this tower of porcelain, made from salvaged crockery. Its conception began with the wrecking of a ship-load of fine English porcelain in the Gulf of Siam. The ship's cargo was salvaged and worked into the design of this intricate structure.



Two-thirds of Siam's population are native Siamese, who profess a form of Buddhism. There is a close connection between the laity and priesthood, for the Buddhist rule which prescribes that every man shall enter the priesthood for at least a few months is almost universally observed, even by young princes and noblemen educated in Europe. Above is an unusual view of the Buddhas in the Royal Wat or Temple.

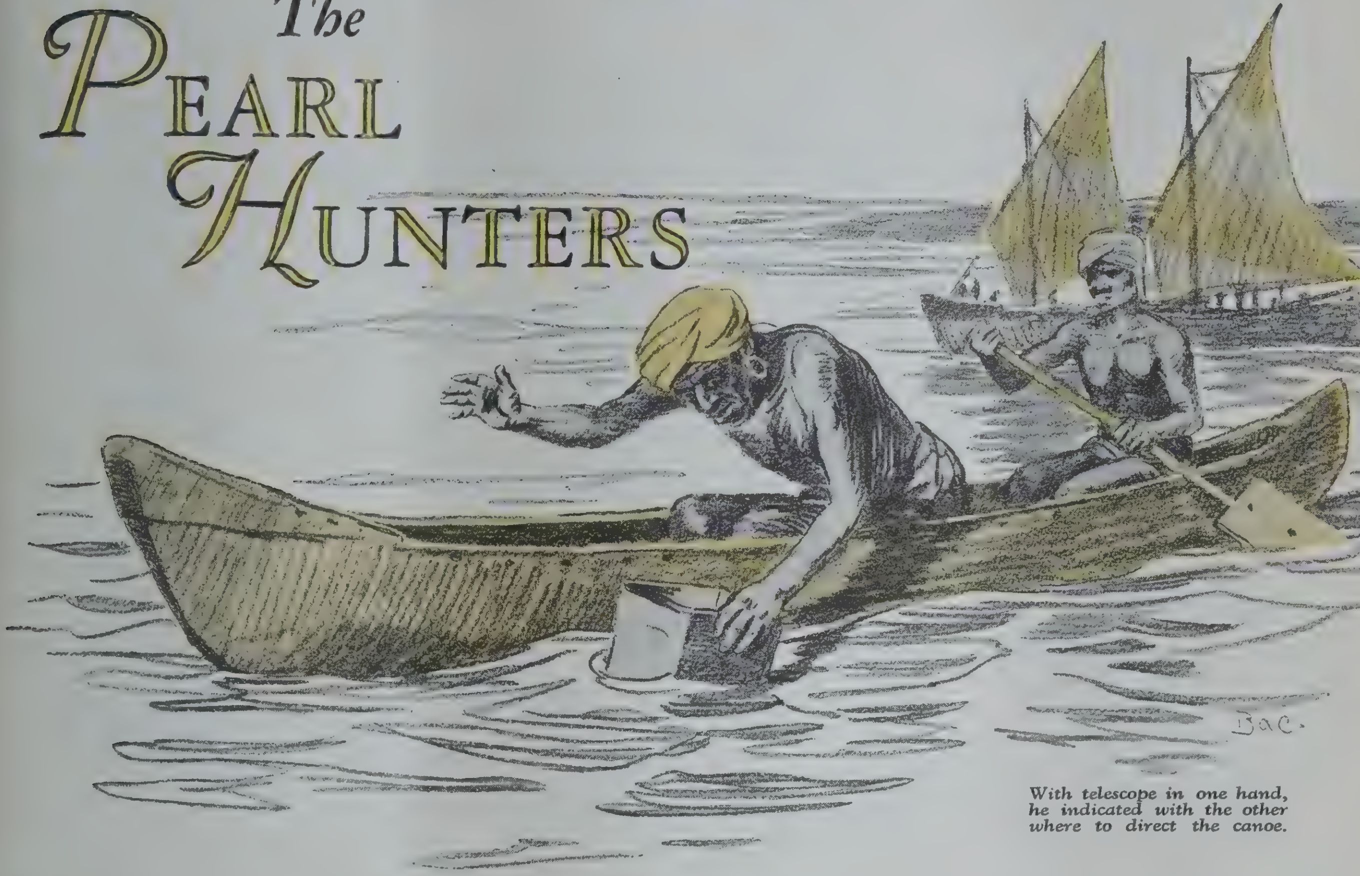
The PEARL HUNTERS



With telescope in one hand, he indicated with the other where to direct the canoe.

By A. BENKLEVSKY

I AWOKE hearing a strange noise like heavy rain pelting the surface of the water. I raised myself up in my hammock to look overboard and sat dazed with astonishment. The surface of the sea, smooth as a mirror elsewhere, seemed boiling over one spot of about thirty meters diameter. Silvery, sparkling foam threw high splashes, making a sharp gurgling. As it moved rapidly from one place to another, it suddenly vanished, leaving on the sea surface only a network of light circles expanding and crisscrossing.

The Arabian nahuda, or pilot, smiled: 'The flying fish are playing, kovaja (sir). They are glad that the sun will soon come out.'

It was daybreak on Tajura Gulf. It was even broad daylight. A pleasant morning coolness relieved the suffocating heat of a tropical night.

Our sambouka was riding at anchor in the roadstead near Jibuti among a mass of shipping. Along the low sandy shore stretched a white design of houses, cupolas, needles of mosques—with spots of green. In front, extending out to meet the sea itself, and sunk in palms, sat the white battlemented governor's palace with its large windows in Moorish style. The tricolored flag of France waved lazily on a high mast nearby.

Direct from the palace a straight wide dam reaches far into the sea. To the right, the level shore of Jibuti graduates into low hills, and vanishes. On the other side of the gulf rises a serrated line of high purplish mountains. Europeans seldom risk going there. The wild warrior *domkali* do not favor the whites. Their *tajuri*, or sultan, will treat the European guest to coffee and dates. During friendly conversation, as he looks kindly into his guest's eyes, he will give the furtive signal with his brow, then—the blow of a broad dagger in the back . . . and the sultan does not change his pose the while his slaves search and carry out the murdered.

Let not the inexperienced European trust to marked and varicolored geographical maps. The Dark Continent, divided off in diplomatic salons, has not yet given up its wild liberty and often harbors many unexpected and severe surprises for the white victors.

The day would be hot. Kovaja had shown his yellow teeth. The sun had not yet risen, but the cloudless pale-opal sky shading to the east into pale pink-and-yellow heat colors held something resembling a light fog, and everyone could feel that there below the horizon quickly rolled, coming closer, the red-hot ball of the large African sun, autocrat and despot of life in the tropics.

I had been invited by Sayid Gussein to go hunting pearls. We were to remain at sea about three days. I had moved the day before to the sambouka. The sambouka is a broad schooner of about thirty tons, roughly made of thick boards. Only one forward-leaning mast holds a long sail yard and a very large three-cornered sail. Deckless, on stern and fore it provides platforms on which several persons can stand. Between the boards on the inside are benches which were designed not for seats but more probably as braces to the craft. Such primitive construction has remained from the time of ancient Egypt, like many other things in this part of the world.

Our crew was busy with preparations for departure. The sailors were naked, bronze Arabians, wearing a medley of colors in turbans and in large scarfs wrapped round them in peculiar fashion. These scarfs serve them in this climate for breeches. The divers were black well-formed Sudanese. A skinny old man named Ahmet, a Sudanese with keen eyes, prepared his 'sea telescope.' He would indicate the places where the divers must descend and would supervise the work. His apparatus—a *tanico* it was called—was a kerosene can in which bottom and top had been cut out and a plain glass inserted. Ahmet had spent all his life on the sea. He had experienced much and knew many things. His left hand had been amputated many years ago, being caught in the ropes.

All knew and respected Ahmet. Sayid Gussein, the master—a wealthy Arabian—valued his experience highly and paid him well.

'When will you quit sailing, Ahmet?' I asked him. 'Are you not tired yet, or have you not saved enough money?'

Ahmet pressed his crippled arm to his breast and looked at me reproachfully.

'Are you not a seaman yourself, kovaja? Then why do you ask me such a thing? Don't you know that Allah gives the heart of whom he will to the sea forever? There is no necessity of Ahmet's working to earn money. Ahmet has two sons and a married daughter. If the master, Sayid Gussein himself, should give Ahmet his house and say, Live here, Ahmet would bow to him and reply: My lord, I have never fooled you; if you wish to make me a gift, give me your new sambouka which is to sail to India. I will go on it to where the sun rises and return to where the sun goes down. Ahmet cannot live without the sea.'

He fell silent, looking pensively out to where the thin line of the islands becomes one with the far horizon of the open sea. I understood.

THE pilot, an aged hunchbacked Arabian, gave orders to tighten the sail. With naked feet, sailors skilfully ran from fore to aft along a narrow beam nailed to the sambouka's board. Strange that these people do not have the wit to put two boards along the middle of the schooner where they can walk without risk of falling into the water: perhaps the sea is kind here. They fastened a heavy furled sail to the yard with thin old cord.

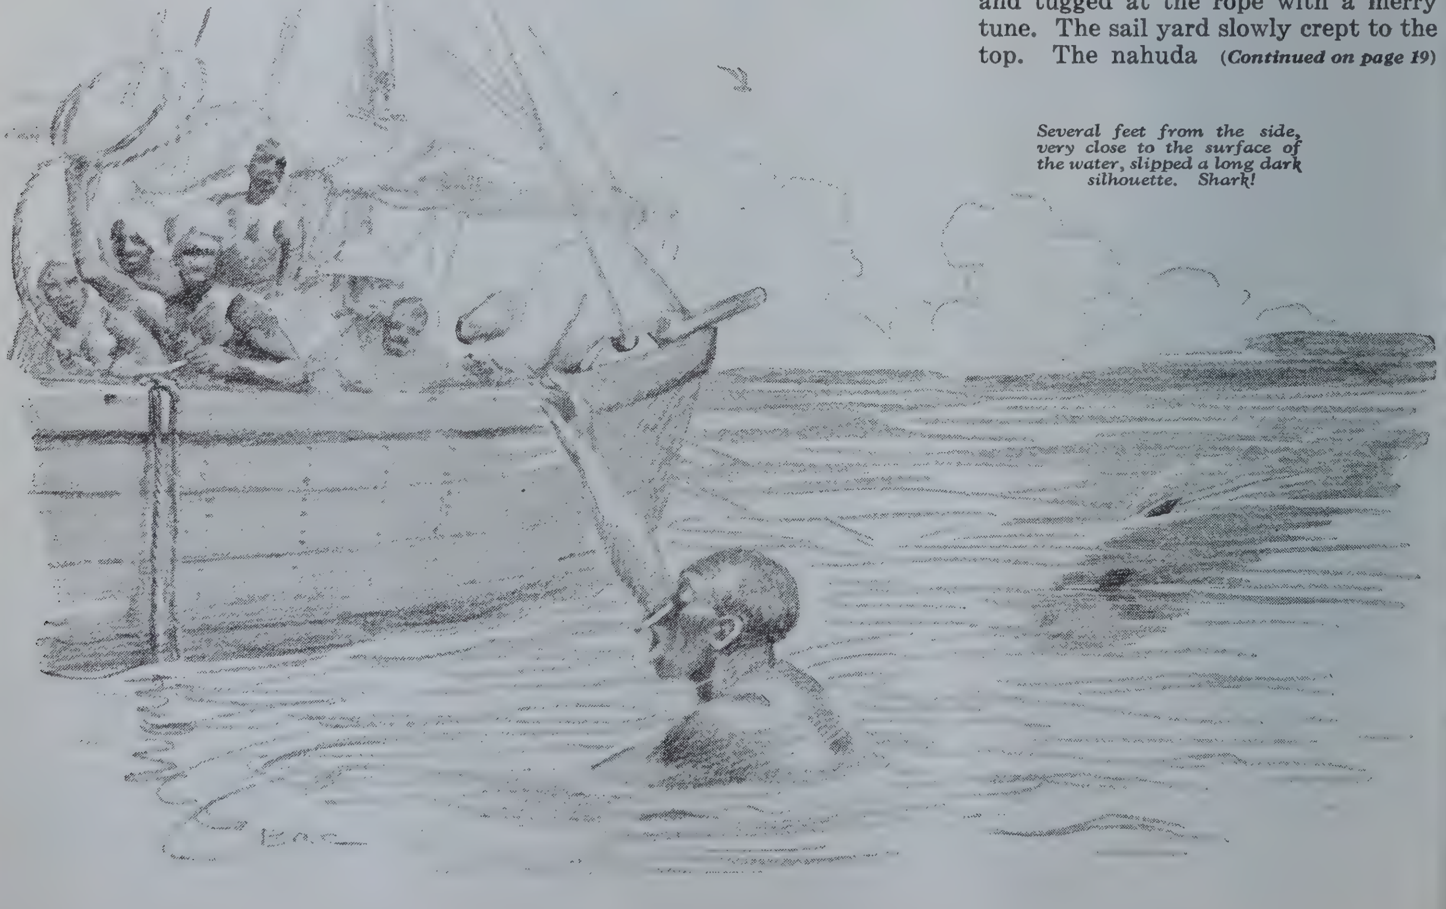
The roadstead became alive, the same work in progress on neighboring samboukas. Sharp guttural cries were heard from all sides over the smooth and sleepy water. Black canoes began to dart in various directions. These were so narrow that there was scarcely room for one man to sit aft and manipulate the one paddle on both sides in turn—a queer-shaped oar made of a stick with a wooden slab on the end. Friends shouted to each other. Happy laughter was heard.

On the large sambouka which had hailed from Aden the day before, action was especially lively. This sambouka differed from all the others in its size and its resemblance to the galleons of the Middle Ages. Its boards were painted with broad black-and-white horizontal stripes; it had an old two-story stern rising higher above the water than its bow. The heavy wooden deck was visible. The ship was aflutter with flags—on masts, on forward deck, on stern; mostly red, square and three-cornered, and bearing a particular emblem. She resembled a pirate ship of the 16th Century. She was on her way to India. A group of black sailors on the forecastle, standing in a circle, sang in a strange language, swaying from side to side, the tempo of their song gaining speed all the while. The leader suddenly made a sign with his hand and the whole company, with cries of glee, began to beat time with naked feet in some wild step. Song and dance filled the roadstead with rhythmic sound in steadily gaining measure, till again a motion of the hand brought all to a sharp finis. Perhaps but yesterday these people had struggled with winds and waves, their faces serious and their strong, rough hands barely holding the jerking ropes.

RIPPLES covered the sea. A light north wind turned our squadron of schooners, which had been standing in disorderly assemblage in the breezeless harbor, out toward its entrance with prows foremost.

'Kovaja, we should catch the wind right now and get under way,' said the nahuda to me, as he solemnly took the seat by the rudder.

A large wooden block squeaked shrilly on top of the mast. 'La-ma-na! La-ma-na!' The Arabians crowded and tugged at the rope with a merry tune. The sail yard slowly crept to the top. The nahuda (Continued on page 19)



Several feet from the side, very close to the surface of the water, slipped a long dark silhouette. Shark!

Where the Ferris Wheel Spun Around

By

FRED L. HOLMES

—Underwood & Underwood.

Fine Arts Building, being reconditioned to make a convention hall.

IF THE twelve million individuals who visited the World's Fair at Chicago in 1893 were to return to the scene today, what would be their emotions to find it transformed into one of the finest boulevards and city parks of the nation?

Those to whom the Midway represented the dazzling splendor of the exhibition will find little to recall the surroundings of thirty-five years ago. Time has effaced the Irish village; gone are the dancing girls; the Javanese huts and the quaint houses of the Japanese; the streets of Cairo; the oriental shops, bazaars and restaurants, and the famous Ferris wheel. In the days before the airplane, what a wonder was this wheel that seemed to touch the clouds!

Where these stood, a mile of boulevard has been developed and bordered with trees and shrubs; in summer, the park grass is as fine and thick as velvet; the open spaces have been scooped into sunken gardens, which, when the scheme of beautification has been worked out, will be spanned with little bridges.

The stretch is still known as the Midway Plaisance. The color and bizarre of this offshoot of the fair has been turned into the subdued dignity of a garden. The Midway is now a connecting link between Washington and Jackson parks—the latter once the main fair grounds. Along the Midway's broad avenues moves an endless procession of hurrying automobiles.

Jackson Park has changed also. Only a few of the colossal structures of the famed White City stand today. Most of the buildings, the towers, and the temples have fallen into decay or been removed. Over the grounds where once tramped a great industrial phalanx of builders, followed by a host of visitors in festal days, an expansive park has been developed in which many of the exposition marvels of water and lagoon, of tortuous pathway and wooded islands, have been retained.

This development is directly attributable to the fair. A desire to celebrate the four-hundredth anniversary of the discovery of America by Columbus moved Congress to pass an act organizing the exposition, which was approved on April 25, 1890. Several cities contended for the honor, but Chicago came with a purse of $5,000,000 for lands and buildings. Because of this generosity she was accorded the privilege. Of the sites suggested, however, Chicago's seemed the least desirable. The tract where Jackson Park is now located was a dreary water's edge on Lake Michigan composed of swamps and sand dunes. Marsh grass and scrub trees abounded. Within two years after the offer was accepted, an army of workers, grading and planting, turfing and road building, laying pipes, conduits and electric wires, had transformed the landscape into a marvel of beauty and sublimity.

Replica of the Santa Maria, in a bay of the old fair grounds.

States and nations vied with each other in the erection of buildings. Meantime, architects had discovered the possibilities of 'staff' for the adornment of buildings. Its use accomplished great architectural triumphs. Some of the state buildings were castles in white design. These creations for the exhibition of art and education, invention and production, were connected by a system of canals and lagoons, over which passengers were transported in Venetian gondolas from one sight to another.

The fair was officially opened by President Cleveland on May 1, 1893. The throngs of visitors increased from about one million in the first month to nearly seven million in October. The gross attendance was 27,529,400; it is estimated that the number of individuals attending was 12,000,000.

When the fair was over, Chicago determined upon a park policy which has since redounded to the benefit of a large majority of her people. The Midway has become a grand boulevard six hundred feet wide, and the main fair grounds are the present-day Jackson Park.

Jackson Park extends along the Lake Michigan water front for more than a mile. There are eight miles of drives, 254 acres of lawn, and 108 acres of ponds and lakes. Two golf courses with finely equipped shelters are at the disposal of the public, besides tennis courts, baseball fields and bathing beaches.

As one enters Jackson Park at the Midway and turns north along the west drive, the Fine Arts Building is reached—the second largest building at the fair. Time has tarnished its white, shimmering outline. During the fair it contained rare paintings gathered from all over the world, statuary, tapestries, and other works of art. For many years afterward it was used to house the Field

Below—Stone-paved court of the historic Cabildo Prison. —*Franck.*

MY MOST astonishing adventure at Port Arthur was one which no man in haste could have had, and this was the manner of it.

Going down to the sea I saw a man standing under a palm tree fishing in a pool that joined the main body of water by a narrow neck. He was of middle age, dressed in a pair of old overalls, barefooted, with a hat that could scarcely be called by that name, for its brim was torn away and the crown of it hung by a sort of hinge. His hair was long and black and matted, and his hands were like claws. I gave him good day; he answered with a nod, and at least a minute passed before anything more was said.

As he was not surly and had a kind of doglike, would-be friendliness about him, I being curious as to the man, asked him the name of the place from which he hailed. He answered me in rough French, saying that he came from a 'far country.' Then, later, he wanted to know my place of residence, and I told him, Ohio; whereupon he said something which I did not understand, because of his queer talk, and so he repeated it, trying to make himself understood by using words that seemed American but which were strange.

Presently I made out that he said something like this: 'I work, long time ago, for ver' rich Ohio man. He buy fifty acre rice land and soon go broke.' That is about as nearly as I can transcribe what he said. His utterance was hardly articulate. After a little time of silence I asked him if he was a native of France and he replied: 'No French. No 'Merique. Me Cajun.' We got no further than that in mutual understanding except that he gave his name as what sounded like 'Pertrinka,' which seemed Russian. A week later I learned the solution of the mystery of the Cajun, when I was in the bayou country in the Caillou Bay neighborhood.

It is no country for the speed maniac, that land of the Mississippi delta, with its long canal-like bayous running far inland, its banks of alluvium, its unexpected channels, its marshes which must be skirted. There are poorly built houses, many of them on piles, many of them scarcely weather-tight. A few chickens and a few razor-back hogs may be seen here and there, but for the most part the dwellers seem to be primitive folk who live by fishing and duck hunting; and many of them are malaria-stricken. Their language, I found, was the language of the fisherman I had talked with. They, too, were Cajuns. And it came with a shock when I discovered that the word 'Cajun' was a corruption of Acadian. From Acadia, or Acadie, their forerunners had come, and they were the descendants of those stalwart Frenchmen who had landed in Nova Scotia in the spring of 1604. Because of the quarrels of princes, simple folk had been disturbed. For when Port Royal fell into the hands of the English, many of the settlers sailed south to settle in Louisiana. And yet they are the blood-brothers of that fine

folk living in the Gaspé peninsula who sometimes gather at Quebec, displaying their arts of weaving and wood carving and spinning, and singing the songs of old France which they have preserved and treasured.

It set me to wondering, when I recalled that my fisherman had told me his name was Pertrinka, as it sounded—set me to wondering whether that poor fellow could have been the descendant of Baron Poutrincourt, of the Court of France, who founded Port Royal. To put the matter mildly, this case of the Cajuns is a strange instance of a people's becoming adapted to a less varied and less complete condition of life. But in comparing them with their cousins of the Gaspé peninsula the balance is all in favor of the latter and the more complex mode of life. Endurance, the fighting against adverse conditions, the cheerful and undaunted playing of the game of life—all of these helped to make the Gaspé people what they are.

In New Orleans, the proper tourist should have eyes for nothing but the historical part of the town, heading for the old cathedral and circling the great square in front of it—a place full of old memories with people lounging on iron benches in sunny idleness as they have done since the first stone of the cathedral was laid. To make a circuit of the cathedral neighborhood, is like a dipping into the 1820's.

Everywhere one comes upon trails of the past: At Chalmette old stone walls and houses with signs of the battle of January, 1815, when Andrew Jackson defeated the British under General Pakenham; Beauregard Square where the old slave market was held; the Cabildo with its old-time prison and stocks and stone-paved court yard; an old building intended as a palace for Napoleon Bonaparte; houses with features of architecture reminiscent of Spain; courtyards in which are majestic palms;

other yards seen through archways giving on stone stairways; tall old houses with iron-railed balconies which bring the Creole stories of George Cable to mind; and glimpses of the water front with ferries bound to and from Algiers across the Mississippi, which bring Mark Twain to memory.

We drove out on a shell road to Lake Ponchartrain, which a Creole gentleman told us was nearly forty miles long and twenty-five miles wide, though it did not seem to be so large as that on account of the low marshlands bordering it. But we were ready to believe it a thousand miles long before we crossed the Pearl River, because of the flatness of the surrounding country and its lack of exciting things to see.

BUT suddenly you are out of the waste and in a land of strange beauty. Along the road are giant trees, often garlanded with Spanish moss: laurels, myrtles, orange trees, cottonwoods, palms. Somehow, an air of peace seems to pervade the entire countryside. Southward the sea lies motionless, a sweep of pale blue, here alive with flashing white sea gulls, there again quiet and hardly to be distinguished from horizon haze.

Sometimes, quite close to shore, so close that you may hear the voices of the men and the creaking of blocks, you see a fishing schooner beautiful with bellying sail of brown or white, though the wind is hardly strong enough to ripple the water. The sweet smell of the sea mingles with the soothing scent of mimosas. There are long avenues of cypresses with a view of some comfortable home, the house rose-covered, the gardens bright with color.

Once you glimpse a pleasant church, its tall spire showing through trees. And once, at Gulfport, you catch sight of a wide lawn, with fountain playing, and with cooing pigeons; and hundreds of girls walking about or playing tennis; some of them boating; all of them, it seemed to us, touched with joy. It was a vision of refinement and grace. As we ran past the place we caught sight of some of the girls at archery on the sea beach, for the place, I should have said, was a college for women. One girl in blue let fly an arrow at the target, and before it had reached its mark she had fitted another shaft to the string—it was a picture of ease and swiftness of motion.

The route along this part of the Gulf Coast is one in which you can rest or loiter anywhere, and we camped a little to the west of Beauvoir, in a honey locust grove that was musical with the murmur of bees and the whirring of brilliantly colored humming birds.

So we came upon Beauvoir itself in the early morning, and Beauvoir, you should know, if you are in touch with your history, was the home of that old war horse, Jefferson Davis. He bought the estate for his last home, purchasing from Sarah Anne Dorsey, the forgotten author of the novels *Lucia Dare*, *Panola*, *Atalie*, and *Agnes Graham*. It was the same Mrs. Dorsey who helped Davis in the writing of his *Rise and Fall of the Confederate Government*, written, I think, in Beauvoir.

The house is one of those tremendously planned yet simple structures still to be seen in Mississippi Valley towns, planned and made when lumber and labor were easy of price. You picture it as perfectly symmetrical, the right half an exact reverse of the left; an eighteen-foot-wide stairway leading to a twenty-foot-wide veranda; a very wide entrance hall more like a covered way leading from front entrance to rear entrance than a passage; doors tall enough to admit a giraffe. The house stands in wide grounds and is very majestic with its tall ornamental columns and its high windows.

As for the rooms, to see one is to see all. In the middle of the wall, opposite the entrance door, is a fireplace. Depending from the center of the ceiling hangs a huge chandelier which is a mass of scrollwork. The rooms run to a tremendous height, judged by modern rooms, say fourteen feet from floor to ceiling. For the furnishings, imagine shiny and stiff horsehair chairs, a square piano with a screw-up-and-down music stool, a splint-bottomed rocker in every room, some hickory chairs, oil paintings of war heroes, marble-topped tables to fit in corners, mahogany center tables. Then there would be rag carpets, and ornaments of wax flowers under glass shades, a grandfather's clock, heavy curtains, a few daguerreotypes, a few samplers.

IT WAS not difficult to imagine the old statesman standing on his veranda and looking out to sea, recalling all those days of aims and desires when he had a vital hold on men; recalling his earning of spurs during the Black Hawk War; his other adventures as officer of dragoons fighting against Pawnees and Comanches and Apaches; his retirement to plantation life and emergence at the time of the Mexican War when he distinguished himself at Monterey and Buena Vista; his days in the Senate and that momentous hour and speech when he affirmed the right of secession.

Then Fort Sumter and those tremendous times when he created an army and a navy and arsenals and all the machinery of war; his inauguration as President of the Confederacy; his capture and two years' imprisonment. For his eighty-one years of life were close-packed, and he was effective in discipline, and (*Continued on page 20*)

Two Books: *Dealing with* Doctors *and* Geology

A Doctor Looks at Doctors. By Joseph Collins, M. D. Harper & Brothers.

Always wise, with kindly humor and penetrating eye, Dr. Collins in this little book looks at his own profession. Some of the readers of THE DEARBORN INDEPENDENT may remember this essay, for it was republished in this magazine from *Harper* last March. Those who read it then will want it in this new handsome form, and those who have not read it should—at once. Doctors are not wont to be frank with the laity when it comes to discussing doctors. Dr. Collins can be frank and humorous and wise, all at the same time, and we suspect that the ground for this ability is to be sought in his personal experience and his intellectual honesty. Although he is now one of the most honored members of a highly honored profession, it is plain to see that in his own life Dr. Collins has suffered from the ignorance and indifference of doctors who had him in charge at various times during the past fifty years.

In this charming essay no less than thirteen doctors pass in review—or, rather, it should be fourteen, for Dr. Collins is there too. But the other thirteen come in and out of the picture as illustrations of deficiencies or powers which have had a considerable effect upon the physical and psychological Joseph Collins. For the wise doctors—there were probably two out of thirteen—Dr. Collins' admiration is tender and profound. For the others, his lack of bitterness, his forgiving understanding, are just as tender and profound. A good many deep things meet lightly together here, and make themselves felt.

Not only should the disease be understood, Dr. Collins says, though this is a great thing, but the possessor of the disease must be understood, which is often the greater thing. He thinks that medical schools neglect the psychology of medics as much as physicians neglect the psychology of patients. The work of the physician is not only to thwart fear but to engender courage. For, as Dr. Collins says, 'there is one medium in which Nature does her best work. It is fearlessness.'

This little book is a tonic in itself. It projects something of the true healer's spirit to the reader.

The Story of Geology. By Allan L. Benson, *297 pp., illustrated, with bibliography.* The Cosmopolitan Book Corporation.

It is colder ten miles above the Equator than it is ten miles above the Arctic Circle. There is enough cold above the Equator and enough heat a few thousand feet beneath the Arctic Circle to completely reverse the weather of those extreme parts of the Earth and to equalize the temperature of North and South America.

The best wheat-growing country in the world is the bed of a Great Lake which no human eyes ever saw. It is Lake Agassiz, named after the man who read its record on the rocks, and it occupied Southern Manitoba, North Dakota, and Minnesota.

It was only the 'day before yesterday, geologically speaking,' that great things occurred in the (*Continued on page 28*)

Two Romances of World Trade

By THOMAS CAMERON TAYLOR

—Ewing Galloway Photos.

Tapping a rubber tree in Java.

THEY peek at you from the crests of billows of foliage—islets in broad seas of tropical forests. The low, deep-verandaed bungalows are perched on high places. Each has its cluster of long, cool buildings, conveniently placed but not too near. All down the Malacca Straits, they show up as specks on the dark-green distance. Farther on, should you sight the coasts of Sarawak and Borneo, you will find them also. The hard-bitten coastal sailors who carry on the huge trade out of Singapore will tell you that those forest islets have nearly all been carved out in the past twenty years; that there was a time, chiefly between the years 1907 and 1911, when they sprang up between voyages.

For the reason of their being, one must look chiefly to America. To the need which created them, America made the largest contribution. American industry, thousands of miles away, demanded of tropical forests an essential, and those little forest communities represent the response.

In each a few chosen Britishers are at work on one of the most noted trade romances of the century. In each, there is everything that experience can suggest to keep those men physically and intellectually keen despite the effect of the tropics.

Each has a building which in equipment and cleanliness will compare with the best of our creameries. It is, in fact, a rubber creamery.

Twenty years ago, the great natural rubber-producing area of the world was at our back door. It extended over one million square miles. It contained the best rubber trees known. Practically speaking, it supplied all the rubber markets of the world. About that time an alert foreign people turned its attention to the possibilities of lands within its control. In those lands the best rubber trees did not grow naturally; the labor supplies were alien to the controllers, difficult to organize, and 'touchy' in the handling. Soil and climatic conditions seemed favorable, though that had to be proved.

Within twenty years, the original rubber producer has been practically equaled in quantity of production—and, it is asserted, surpassed in general quality and manufacturing suitability of product—by a comparatively tiny group of tropical territories on the other side of the world, territories to which the rubber seed and seedlings of the big rubber land had to be taken in the first instance as immigrants, together with a fellow immigrant from Assam.

This achievement has been presented for the consideration of America from many angles, with emphatic declarations that in this very important matter of rubber supplies America should be independent. This country, in which the automobile industry alone consumes about 84 per cent of the rubber production of the whole world, has become dependent upon those little bungalow groups in the East; it carries on a vital industry by permission of our British cousins who, in turn, depend for the production of rubber upon the good will, toward them, of alien peoples liable to strange stirrings. And this, with Earth's greatest natural rubber country at our door!

The British Empire now plans to achieve independence in supplies of cotton. Our best cotton buyer aims at a point where he will be independent of our supplies. We, the world's largest rubber buyer, have declared that we should be independent of his supplies of rubber. Two of the most important trade factors in the world are affected by those declarations of independence.

Indians selling rubber at an agency in Peru.

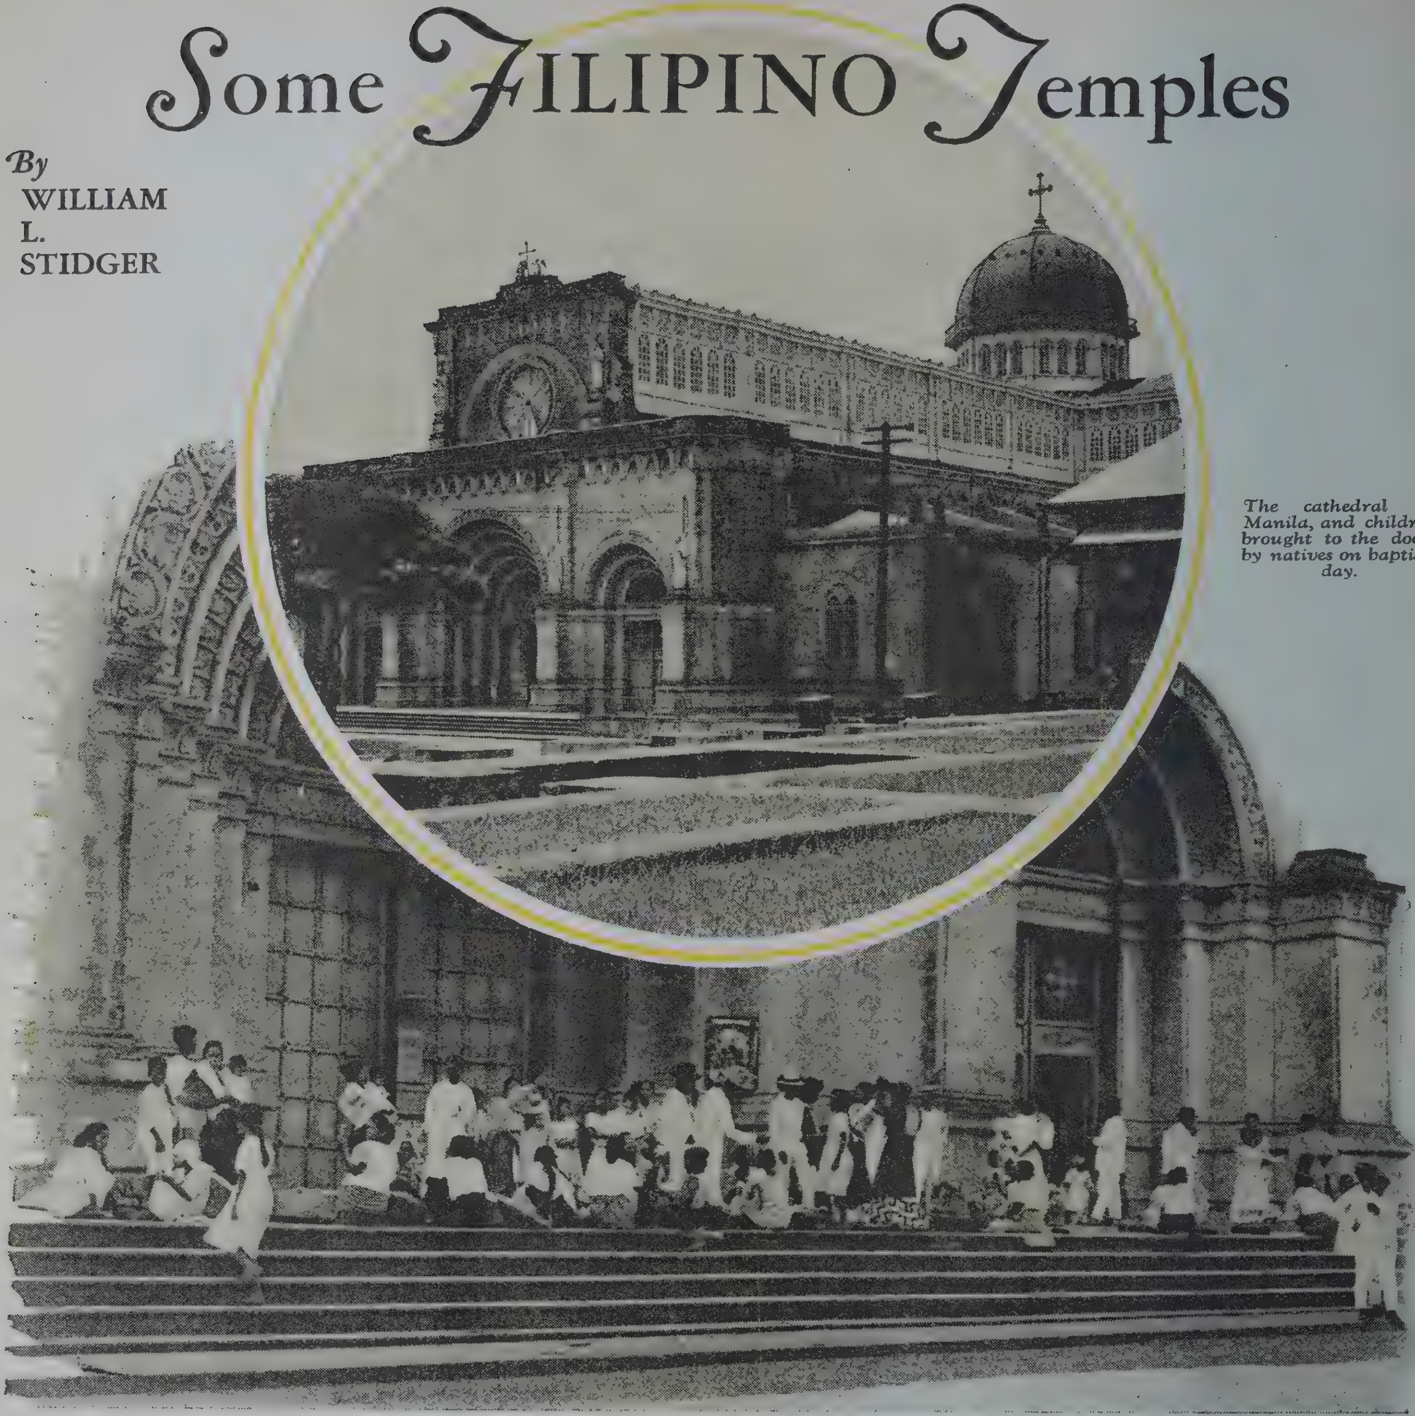
Some FILIPINO Temples

By
WILLIAM L. STIDGER



The cathedral at Manila, and children brought to the doors by natives on baptism day.

—Ewing Galloway Photos.

ONE is fascinated by the ruined temples and cathedrals of the Philippine Islands. They come from the dim past like misty pathways of light across the waters of the present day and age. One sits and looks upon them, moved by their ancient beauty, romance, and history.

One finds ruins at every turn of the highway and in every village, for the most distant province was visited by the padres of ancient days. Some of these temples of worship were ruined by the elements; some were destroyed by a revengeful people during the insurrection. Some of them were partially destroyed by American batteries because they were being used as lookouts by the insurgents.

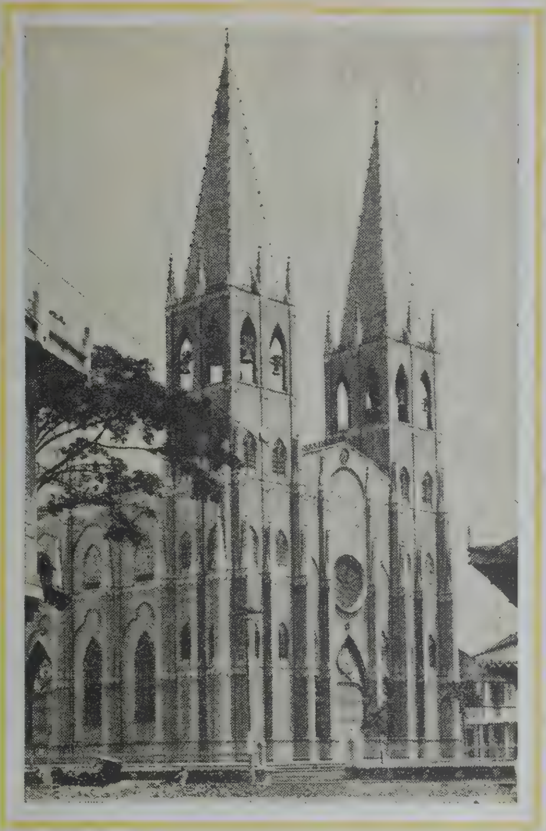
In one village of the Island of Luzon is the ruin of what must have been a most beautiful cathedral in its day, for its tower and its walls which still stand, roofless, are full of grace and strength. Inside the walls a bamboo chapel has been built, a church within a church. Here, in this simple structure with crude altar figures, the faithful worship each Sabbath. One cannot help comparing these ancient ruins with our old missions of California which are neither so old, nor so beautiful, nor so filled with romance.

They all have strategic locations. It is not uncommon to enter a city down a long vista of highway and to see at the end of this highway, lined with bamboo trees or great mango trees, the magnificent tower of a cathedral commanding the entire village. Almost without exception the cathedrals have been located on the plazas, or main squares of the villages, close to the markets and the meeting places of the people.

One evening I was approaching a village not far from Manila. A beautiful stone bridge spanning the Rio Grande River, the largest body of water on Luzon, led into this village. As I drove onto the bridge, the slender tower of a cathedral loomed suddenly before us, reflecting its shadow on the river behind a clump of trees and pointing like a great finger into the heavens. The sky was old rose and crimson. Tall bamboo trees swayed in the evening breeze above the river, gently caressing the silhouette of the tower now and then with their slender bamboo fingers.

The sweet odor of Ilangiland, as fragrant as the scent of wistaria, burdened the air with its insistent presence. Then, in the very midst of this wonder-touched atmosphere, came floating the tenor voices of a boy choir practising Easter music. The tenors ceased and a bass chorus took up the hymn, presenting a beautiful contrast with the sweet voices of the tenors until one voice, like a far-off cornet solo, carried the theme alone. The great bells in the tower began to chime and a white-clad Filipino boy, whom we could see through an open window, began to light the tapers about the altar. The whole scene was soul-stirring!

It was in the Walled City of Manila that I attended the ten o'clock service at the cathedral one Sunday. I entered the church half an hour earlier in order to absorb the full quiet and beauty of the hour. The cathedral is just within the walls on the Escolto side; the cars come from the Escolto out through Intramuros. It is a great rambling mass of masonry surmounted by a dome, atop which gleams a cross. The architecture is impressively beautiful and the old structure covers a square.



—Ewing Galloway Photos.
San Sebastian Church, Manila.

The heat was oppressive outside. I had walked about for two hours, and and was uncomfortably hot. But the moment I stepped within those great stone walls, which are from four to eight feet thick, I felt a coolness which was the coolness of a cave in the jungle. It was a refreshing escape from heat, and so I settled down for an hour of rest to soul and body. I suddenly became aware of the important part real bodily comfort plays in worship.

I sat well up front. The Filipinos gradually came in, by the front door and through side entrances. All were in immaculate white. They came in entire families; mothers lifted their little babes to the font to dip their fingers in the holy water, touching forehead, breast and heart. It was an impressive sight. Young men, old men came. Some knelt on the cold stone floors all through the service; some sat in the seats. Presently a crowd of American chorus girls, who were playing in a Manila theater, came in, crossed themselves and sat down to worship side by side with the beautiful Spanish *senoritas.* American business men came in quietly and worshiped as they would at home.

Music rose softly. It was a great organ, its low tones quietly swelling from arch to arch and from sanctuary to vestibule. Time after time, as the music grew heavier and full stops were employed, sparrows flew down among the people, as unafraid as the children who sat with their parents.

A white-robed boy appeared high up on the altar, and began to light the innumerable candles. Electric lights were suddenly switched on, illuminating the beautiful statue of the Virgin Mary. Then as suddenly a cross flashed on in full glory of white electric light.

To see the ancient glory and beauty of Intramuros in Manila, one must attend service in one of the many cathedrals within the somber, crowded streets.

To me, the most impressive of all the cathedrals was the great one which I have described. But the San Sebastian Church is an imposing structure and one of the few with pointed spires in all the island. These spires can be seen for miles distant and they stand in marked contrast to others, like fingers pointing to God. San Sebastian was built in Belgium several centuries ago, transported to Manila and erected. It is called 'the steel church' because it is the only church of steel construction in the Walled City.

Saint Augustine, Saint Thomas and the Recoletos are beautiful structures. Dr. George A. Miller, in his interesting book on Manila, says:

Saint Thomas Church and courtyard, Manila.

> The European may be pardoned for lack of interest in buildings that are young beside the hoary monuments of Barcelona or London or Rome, but to the American the three centuries of Saint Augustine and the Recoletos seem very respectable, and for anyone there is enough of interest to brighten many an otherwise monotonous day of tropical ennui.
>
> 'Who with the faintest trace of historical instinct in his make-up can fail to be interested in such monuments of toil and sacrifice of generations dead and forgotten? Beautiful these old churches are in their scars and moss and vines. Who can sit

(*Continued on page 22*)

MR. FORD'S PAGE

OF THE DEARBORN INDEPENDENT

The True Goal of Progress

PROGRESS is measured by the ambitious according to the increase in opportunity which it brings; by the vegetative, according to the amount of ease and comfort it permits; by the contemplative, according to the number of the problems it creates; and as it rarely occurs that any mind is destitute of all these qualities and as most minds possess more than one of them in some degree, it comes to pass that mankind is alternately praiseful and critical, sometimes fearful and sometimes boastful of Progress.

What we call the problems of Progress may be its poisons or its good fruits. Progress has its price in change and struggle, but this is also true of life; and nothing is more evident than that there is often change and struggle that does not spell Progress. And there is a Progress that does not pro*gress* but that seems to go backward which is really fruitful in the regathering of experience once passed through but not absorbed. Progress is a mystery, and for that reason the few items we may assuredly know about it should be known through and through.

It is clear, for one thing, that we are not the only race to experience Progress. The remains of our early predecessors on the earth indicate that some of them outdistanced our present record in certain fields. That is, in what they knew. They discovered facts and made knowledge. They seem to have discovered some facts that are yet beyond our most eager grasp, and to have made a knowledge the most distant confines of which are not yet within our vision.

> *PROGRESS is not a poison thrown off by the action of life. It is more nearly a test of humanity's fitness to survive. It is the measure of men and of races. It is the greatest test any civilization has confronted, and and most of them have fallen before it. Progress is a gift of material power and requires a moral development for its government and use. Power without justice passes away. Progress unmixed with moral responsibility ceases. The fact is fairly clear. Human advance is governed in the end by right use of what is won.*

Yet they are gone. They left nothing, hardly the memory of their names. They passed on no torch, not even an improved plot of ground. 'Our debt to the past' does not run so far back as our knowledge of the past; if there is any debt it is the past's debt to the present for giving it life again in human thought.

What we know is this: their progress did not save them from extinction; their progress did not serve to thrust the world forward. All their glory is like their works, forgotten dust.

Another thing we know is that the glory of Progress is not ours; it is something not ourselves that enables us to go on. There is a sometimes amusing and sometimes pathetic element in the airs which man takes to himself upon making a discovery. For discovery is the simple act of seeing what is. It is simply coming to be conscious of what was there all the time. Progress is not so much an achievement of man as an intellectual entity, as it is a test of man as a moral being. The progressive civilizations of the past—why did they disappear? Did their physical vitality fail? Did their intellectual life, like a flower, come to full bloom and die of the effort? Is there a law that civilizations shall rise and fall, that races shall come to full circle and distintegrate? Apparently there is no such law, and those who assume it take far too much for granted. Occurrence in the past is no warrant for repeated recurrence in the future.

The point to which attention is increasingly directed in ancient civilizations is the use that was made of them. Progress was assuredly given; what use was made of it? Power was given; to what end was it used? Wealth was accumulated and widely distributed; but to what ministry was it devoted? Knowledge was wrested from mystery; did its possessors use it to further liberate or further bind men? These elements of Progress were all present in ancient times; what was done with them?

These questions open up the court of history's judgment hall. We know something of the case that was tried there. The elements of Progress were all given to some of the ancient peoples that were ready for them, but the use they commonly made of them was to exalt human pride, establish tyranny, enslave poverty, further degrade human deficiency—in brief, to call all Progress gain and to call none of it responsibility.

Progress is moral. If there is no moral progress, there is no Progress at all. If it can be said that Progress has a purpose, that purpose seems to be to test man's reaction to it. We have ample grounds for saying that it is man's immoral reactions to Progress that change his progress to be his doom.

It is safe—in the prudential sense, anyway—to say that our modern progress is the test of our ability to attain a moral greatness equal to our other achievements. The lack of balance between a people's power and their justice, between their knowledge and their wisdom, between their ability to accumulate possessions and their ability to use them wisely—it is that which causes downfall. The downfall is perfectly natural: it is not retribution, it is failure to achieve normal conditions. Justice is the normal condition of power.

EDITORIALS

OF THE DEARBORN INDEPENDENT

Just Before Christmas

SOMEHOW there is a pleasing ring to many a story that creeps into the newspapers just before Christmas. There is, for instance, the story of the New England lad who went to New York to seek his fortune; and then slept on subway trains so he could send his slim savings to his mother back home. He was arrested for violating the law which prohibits sleeping on subway trains, and lost his job. On top of that a magistrate with little sympathy in his heart sentenced him to the workhouse. But a newspaperman heard of the case and printed it. New York responded with true Christmastide spirit. Another magistrate freed the boy; generous citizens raised a fund to help him; and he was given that—to New Englanders—greatest of all gifts, 'a job of work.'

Then there is the story of Fred Pittman, hillbilly of the Carolina mountains. Fred's father was a moonshiner; he was sentenced to life for shooting a sheriff. An older brother was given a similar sentence. Then Fred, his mother, and a younger brother were all arrested, also on charges of moonshining. The cup was full. There was nothing remarkable about the family, unless it was its illiteracy, its poverty, and its apparent ruffianism. There was no money for lawyers, and there seemed no defense worth presenting. But when the trial came young Fred Pittman, acting as lawyer for himself and his kin, conducted the case with such native brilliance and intuitive sharpness that all were acquitted. Nor was that all. The youth aroused such honest admiration by his conduct that a fund was raised to send him to school, so he would have the opportunity to pull himself above his environment. There is a ring of Christmas to that story, too.

Stories for Ghouls

IT IS fair to say that the press of the nation, particularly that branch of it known as sensational, will be on trial between now and January 12, the tentative date set for the execution of Ruth Snyder and Henry Judd Gray. That there will be appeals for clemency is inevitable and natural. Death is death, whether inflicted by the state or by a private individual. The ordinary arguments used against capital punishment—and they are powerful ones—apply in the present case as in all others. Newspapers have a legitimate and thoroughly ethical right to employ them in protesting against the Snyder-Gray executions.

But if these arguments fail and the proper authorities decree that only death will expiate the atrocious crime that Gray and the Snyder woman committed, white paper should not be sullied with such hideous portrayals as attended the death throes of the bandits Chapman and Whittemore. Grisly pictures of the death chamber, gruesome descriptions of the agonizing last moments of the condemned, long-drawn stories of the execution itself (both faked and otherwise, for the tabloid press has stopped at nothing in reporting similar occasions in the past) should be definitely barred. There is little to justify the admittance of reporters to the death chamber at the time life is snuffed out. Their stories provide no deterrent to crime; they serve no ends of justice. One thing and one thing only do they do: they glut the whetted appetite of the morbid and the abnormal.

The fact of death is in itself enough. On the State of New York and the newspapers of the nation rests a great responsibility. If death must be done, let it at least be done decently and in order.

Flood Relief

FLOOD control now definitely faces Congress. The Mississippi and New England disasters, widely separated in time and locale, are joined before the nation's chief legislative body. No longer can floods be treated as local or even sectional affairs; they come plainly under the head of national matters and must be treated as national problems.

It is to be regretted that politics has entered into the flood-relief situation. Axe-grinders and back-rubbers will probably always be with us, particularly in Congress where there are so many axes to be ground and backs to be rubbed. But flood relief and prevention is something that even the grinders and rubbers should leave alone. It is of too vital importance to vast numbers of citizens to be made a political prize.

Much Ado About Washington

FURTHER 'startling exposures' about George Washington come from the pen of a novelist turned historian—and cause less of a ripple than a pebble in the ocean. Once perhaps they stirred up some interest and a grain of resentment; now they cause as little excitement as a child's letter to Santa Claus. The reason is that the new-school historians have nothing new to tell. They are not scholars who have devoted their lives to tedious research. They have not sources of information denied to the ordinary historian. Nor, even, have they courage to tell the truth where others have told lies. Their chief tool not used by the others is a headline writer's sense of values. They magnify and minimize and distort until the smallest incident becomes a glaring flaw and the noblest action a petty gesture.

Early ENGLISH and AMERICAN Road Books

By LOUIS C. KARPINSKI

IN THE days of the stagecoach and travel by the open road guidebooks were in demand, just as they are today, to show the route and the points of interest along that route. The descriptions of two centuries ago are given almost in the same form as they are today.

In England the earliest survey of the roads was made by John Ogilby who published in 1671 a fine road book with detailed description of the main routes from London to various cities in the Kingdom, with a road atlas of one hundred excellent copper plates. The coats of arms of the various cities were used to ornament the maps. Upon the map the traveler could find the distances very clearly given, as the scale was a mile to the half-inch, and all the crossroads were indicated. Ogilby's road book continued as the popular bluebook of England's roads for a hundred years.

Road guides for the vicinity of New York City, above, and London, England, left. These are reproduced from maps published in the early 1700's.

The title of Ogilby's work is *The Traveller's Guide*; or, *A Most Exact Description of the Roads of England*. It was published in 1671 and had many later editions. The road from London to Sudbury in Suffolk County, fifty-three miles, is described in detail.

A description is given of each important town, with points of historical interest. Thus concerning Sudbury, Ogilby relates: ''Tis indifferent large, and well built, containing 3 Parish Chs. and driving a considerable trade in Sayes. 'Tis govern'd by a Mayor, Recorder, 7 Aldermen, 1 Bayliff, 24 Burgesses, etc. Sends Burgesses to Parl. and has a plentiful Mt. (Market) on *Saturd.* 'Twas sometime of note for its Priory of Black Monks.' 'Sayes' refers to a cloth manufactured in Sudbury.

Ogilby's *Guide* of 1671 was displaced after a hundred years by Daniel Paterson's, *A New and Accurate Description of all the Direct and Principal Cross Roads in England and Wales*. This appeared first in 1771 and saw more than twenty editions. It

The House in the Fiftieth Congress

Minnesota to Wyoming

By BARNES COOLEY

MINNESOTA had five representatives in the Fiftieth Congress. One was born in Ireland, one in Sweden, one in Scotland, one in Norway and one in Vermont. Knute Nelson, born in Norway in 1843, and Edmund Rice, born in Vermont in 1819, saw military service. Rice served in the Mexican War, was president of various railroads, and came to the Fiftieth Congress as a Democrat. Knute Nelson was but six years old when he was brought to the United States from Norway in 1849. He served in the Union army three years as private and noncommissioned officer. He was wounded and taken prisoner at Fort Hudson. Nelson served three terms in the House; then two as governor of his state, and, entering the Senate in March, 1895, served there continuously until he died a few years ago.

All seven of Mississippi's representatives of course were Democrats and all seven had served the Confederacy in the field. 'Private' John M. Allen was in the ranks during the whole of the war. He was only thirteen or fourteen when he enlisted and after the war ended, he carried no bitterness into the years that followed. Few members on either side during the sixteen years he served were better loved. His kindliness and irrepressible wit made him a delightful extemporaneous speaker.

He gained his sobriquet of 'Private' from his declaration that he alone, single-handed, had fought and held back the entire Union army for four long years. He pointed out that all his fellow Confederates were captains, majors, colonels or generals. He had yet to meet anyone who confessed to having been or having long remained a private, and so had been forced to the conclusion, difficult as it was to accept, that he had in his single person composed the entire Confederate army.

James B. Morgan resigned his place as judge to enlist as a private and emerged a colonel. Thomas C. Catchings served throughout the war. It was to 'My dear Catchings' that Cleveland addressed that blistering letter wherein he condemned the Wilson Tariff Bill (that Gorman and Company had framed and that Wilson himself had repudiated) as a thing 'of perfidy and dishonor.' F. G. Barry wore the gray and C. C. Anderson was a second lieutenant in Bradford's Cavalry Corps of Scouts. Thomas R. Stockdale, enlisting as a private, became a colonel and was severely wounded in battle.

Charles E. Hooker was reared in the home of his maternal grandfather, who had been a soldier in the Revolutionary War and who had died at the age of ninety-six. Hooker was in the legislature when the war began and resigned his seat to enter the Confederate army. He was a captain during the siege of Vicksburg and in the second week of battle was so severely wounded by a cannon ball as to lose his left arm. He took part in the defense of Jefferson Davis, who had been indicted for treason. Hooker first entered Congress in 1875 and served sixteen continuous years, and then, having lived six years in retirement, was sent to Congress again.

At least two of Missouri's delegation of fourteen served in the Union army and at least one, probably more, wore the gray. William Henry Hatch, a popular member of the House, served as a Confederate captain until 1863 and then until the war ended as Assistant Commissioner of Exchanges. William H. Wade, a Republican, served in the Union army from April 17, 1861, until he was mustered out, April 26, 1866. Major William Warner, Republican, was in the Union army nearly four years. Later he was elected senator from Missouri.

ALEXANDER Dockery and John T. Heard were Democratic members of the Fiftieth Congress in 1887 and died forty years later almost in the same month. Richard Parks Bland, 'Silver Dick,' removed from Missouri to California in 1859 and from California to Nevada when Nevada was part of Utah; ten years later he tired of sagebrush and returned to Missouri. For more than twenty years he was a great legislative apostle of free silver and had hoped that when the issue became dominant, he would be called upon to lead free silver's hosts. Bitter indeed was his chagrin when leadership went to Bryan and he was ignored.

James Laird, Republican, one of Nebraska's delegation of three, was only twelve years old when the war began but he got into a blue uniform as a private a few days after his thirteenth birthday and served with the Army of the Potomac until the close of the war. G. W. E. Dorsey recruited a company and entered the Union army in 1861, served in the Army of the Shenandoah and was a major when the war ended.

Nevada's single representative, William Woodborn, was born in Ireland in 1838, came to America in 1849, but did not see war service. Only one of New Hampshire's two representatives fought in the Civil War. Luther F. McKinney, Democrat, enlisted in August, 1861, and served as sergeant until 1863 when he was discharged for disability. His colleague was Jacob Gallinger, one of twelve children. He was a printer in early life and then became a physician with a practice that reached into surrounding states. He was as active in politics as in his profession and, indeed, in later years, politics became his profession. He sat four years in the House, declined renomination, and then went to the Senate in 1891.

NOT one of New Jersey's seven representatives saw Civil War service on either side. John Kean, who was but eight when the war began, became rich and was elected to the Senate in 1899. William Walter Phelps, of Yale '60, was a law student while the war was in progress. In 1881 he was minister to Austria but resigned in 1882.

Some of New York's delegation of thirty-four members achieved celebrity in their day. 'Deacon' Steve White was a banker and broker. Amos Cummings became a printer as a boy and boasted that he had set type in nearly every state of the Union. He was but a boy when he joined Walker in an invasion of Nicaragua.

Cummings fought in the Army of the Potomac and won the Congressional Medal of Honor for gallantry on the battlefield. Afterward he was on the editorial staff of the New York *Tribune* under Horace Greeley and that of the *Sun* under Dana. The boy printer of twelve had become the editor of the *Evening Sun* when first elected to Congress in November, 1886. He died May 2, 1902, just having passed his sixty-first birthday.

Lloyd Bryce, an Oxford graduate and a Democrat, did not make much of a dent in politics or in Congress; he was editor of the *North American Review* for seven years and wrote novels of which not even the titles now can be discovered outside of library catalogs. Tim Campbell as a printer worked on the New York *Times*, *Tribune* and *Herald* and was working at the case when sent to the state assembly. Thereafter his life was given to politics. Samuel Sullivan Cox was a graduate of Brown University and six or seven years before the Civil War owned the Columbus (Ohio) *Statesman*. He had served several terms in Congress from Ohio before and during the Civil War and eight or nine from New York after the war, interrupted by his term as minister to Turkey. He was well known and well regarded as a lecturer in his day and wrote several books, among them, *Why We Laugh*.

Francis B. Spinola, of the New York delegation, was a delegate to the historic Democratic National Convention that met at Charleston, South Carolina, in the spring of 1860; he also was a brigadier general in the Union army during the Civil War and was twice wounded. Truman Merriman, who was a newspaperman, served in the Union army from September, 1861, to December, 1864.

Bourke Cockran, born in Ireland in 1854, came to America when seventeen, taught school, studied law, entered politics and became Tammany Hall's spellbinder. He was perhaps the readiest and most eloquent extemporaneous speaker of his day. He was powerful in build, brilliant in intellect, and courageous of heart. Cockran was not generally liked. Tom Reed was personally fond of him and gave him opportunities.

The National Capitol, and, behind, the Congressional Library.

—Ewing Galloway.

John H. Ketcham, of the New York delegation, served in the Union army as colonel and general, and had many terms in Congress. Charles Tracey served in the Papal Zouaves at Rome. John H. Moffit went into the Union army in April, 1861, and next year was wounded at the battle of Gaines' Mill. James Schoolcraft Sherman was but ten years old when the Civil War ended. He may be remembered as having been named with Taft on the ticket the Republicans nominated as their standard bearers in 1912, when they carried only the two states of Utah and Vermont. Sherman died a little while before the election was held.

James J. Belden, born in 1825, made a fortune as a railroad builder. Ira Davenport, Republican, came within a few votes of defeating Dave Hill for governor in 1885. Charles S. Baker went into the Union army when the war broke out and was disabled at the first battle of Bull Run. John M. Farquhar, who was a printer, twice president of the National Typographical Union, enlisted in the Union army as a private and came out a major. John B. Weber entered as a private and became a colonel, while Warren G. Laidlaw served in the United States Navy.

All but one of North Carolina's representatives in the Fiftieth Congress were Democrats and six of the eight Democrats served in the Confederate army. Louis Latham entered the service in May, 1861, as did Charles W. McClammy who surrendered at Appomattox. Alfred Rowland also enlisted in May, 1861, but was captured in battle at Spottsylvania and was imprisoned in Fort Delaware until June, 1865. John S. Henderson entered when eighteen years old in the last year of the war.

W. H. H. Cowles, enlisting as a private in the spring of 1861, fought to the end, when he was a lieutenant colonel, having meanwhile been twice wounded, once through the body at Mine Run in 1863 and again severely in the head in the closing battles around Petersburg in March, 1865. Thomas D. Johnston had been compelled to leave school because of failing health but he nevertheless entered the Confederate army in the spring of '61 and received three desperate wounds at Malvern Hill from which he still suffered when in Congress. F. M. Simmons, of the North Carolina delegation, was only seven years old when the war began. He first entered the Senate, March 4, 1891, and is still in senatorial harness.

Two-thirds of Ohio's delegation in the Fiftieth Congress had seen service in the Union army. Charles E. Brown, who had lived in Louisiana and had taught school there for several years just before the war, enlisted as a private in an Ohio regiment, came out a brigadier general, but lost a leg at Atlanta. Elihu Williams served during the whole of the war. S. S. Yoder was a private and became a lieutenant. George I. Seney, who had been a Buchanan presidential elector in 1856, was a lieutenant. M. M. Boothman served through the Atlanta campaign, and in a charge at Jonesborough, September 1, 1864, was wounded so severely as to require amputation of the left leg.

JAMES E. Campbell, Democrat, when but a boy, was in the Navy during the war and after his service in the House became governor of Ohio and received party consideration as a possible Democratic nominee for the presidency. Robert P. Kennedy, going in as a private, became brigadier general. Albert C. Thompson was discharged from the army in 1863 because of wounds received in battle. Charles P. Wickham, who had been a printer, served with credit through the whole of the war. Charles H. Grosvenor was a white-bearded veteran, whose grandfather had served in the Revolution as did his father in the War of 1812. He became a general during the Civil War and during his later years achieved fame for the accuracy of his forecasts, that were widely published, of the results of national political campaigns. Joseph D. Taylor had been a captain, George W. Crouse a sergeant, Martin Foran a private in the Union army.

The conspicuous figure of Ohio's delegation in the Fiftieth Congress was William McKinley, Jr. Born in Ohio, February 26, 1844, he enlisted as a private in the famous Twenty-third Ohio, May, 1861. He had then, therefore, barely passed his seventeenth birthday. When he left the service in the autumn of 1865 he had become a major and it was as Major McKinley he was known when he was first elected to Congress in November, 1876. In that election Rutherford B. Hayes, who had been colonel of the Twenty-third Ohio, was the Republican candidate for the presidency. Little did that colonel guess in war-time that one day he would be President of the United States; still less could he have guessed that the seventeen-year-old boy in the ranks of his regiment, Private McKinley, also would hold that same high office.

McKinley served in Congress ten successive years. He made the protective tariff his

(Continued on page 25)

GREAT FIGURES *of* FICTION

Raskolnikov *and* Colonel Carter

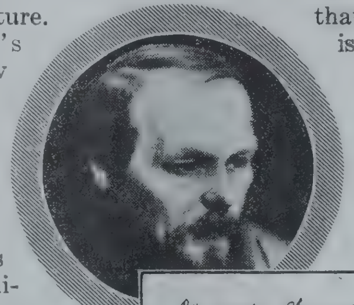
LEWIS WORTHINGTON SMITH

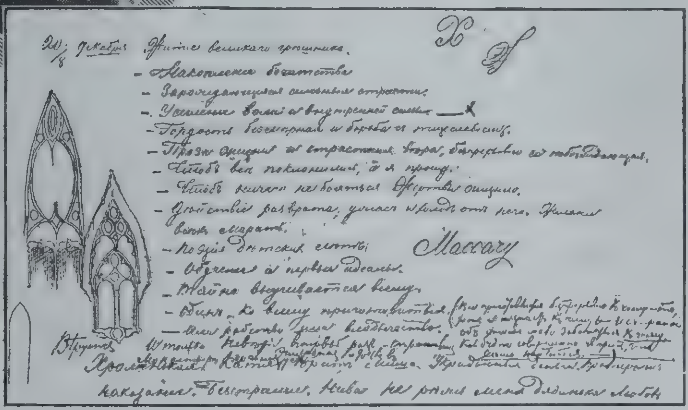
FOR intensity of mental suffering, for the conflict of intellect and emotion, for convincing exposition of the psychology of blood-guiltiness, Dostoyevski's portrayal of Raskolnikov in *Crime and Punishment* is probably surpassed by nothing else in the whole range of literature.

Like Turgenev's Bazarov, Raskolnikov is peculiarly Russian, the product of a primitive culture and heritage coming face to face with the issues and problems of the developed West. He is a student in the university of St. Petersburg. His resources are reduced to less than he needs for living expenses. He goes to an old woman who has previously lent him money on a ring, and pawns his watch for a ruble and a half. The woman from whom he borrows seems to him a useless creature. Her life is of less than no moment. On the other hand, his own seems valuable. He is a man who deserves help. It is absurd that her futile existence should be permitted to prolong itself, while he is compelled to give up his university studies for lack of means. When the story opens Raskolnikov has gone through this process of thought and is making preparation for the murder of the old woman. He takes the watch to her as a sort of rehearsal of the part he means to play. Accidentally he discovers the hour when the money-lender will be alone in her room, her sister having an appointment away. He slaughters the old woman with a hatchet. Her sister returns sooner than he had expected and sees what he has done; he kills her also. Then, his wits desert him. Confused and frantic, he seizes a few trinkets and escapes.

Raskolnikov has been impelled to commit the crime by a theory that is purely a product of his intellect. Gripped by his theory, he accomplishes the deed. He stands amid the bloody wreckage and his undisciplined emotions overwhelm him. He turns away with horror and loathing. He conceals the trinkets, so that they serve only as further incitement to the fears that have at once begun to beset him.

Not long before Raskolnikov has sold to a magazine an article in which he has advanced the doctrine that the human family is divided into ordinary and extraordinary men. Extraordinary men are superior to the moral limitations that hedge ordinary men about. Murder is permissible for a Napoleon. What is a crime in other men is not a crime in him, for through his crimes social good is achieved. The article comes up for discussion between Raskolnikov and several of his acquaintances. He defends his opinions clearly and distinctly. He is for the moment an intellect pursuing a line of thought, not a man who fears some chance word may betray him to the police.





Facsimile from Dostoyevski's manuscript, The Life of a Great Sinner. Circle—F. M. Dostoyevski.

He insists that he does not think of himself as one of those extraordinary men to whom murder is permissible. None the less it is thinking of this sort that has brought him to murder. Through his consideration of the question there has run a distinction between wrongdoing and crime that has given support to his practical application of his theory. Crime is wrong as defined by usage, social custom, law. Conceptions of crime must change with changes in society, with alterations of the social order. In further defense of his idea he tells his hearers, still discussing his article, that 'all legislators and rulers of men have been criminals, for whilst giving new laws, they have naturally broken through older ones which had been faithfully observed by society and transmitted by its progenitors. These men most certainly never hesitated to shed blood, as soon as they saw the advantage of doing so. It may even be remarked that nearly all these benefactors and teachers of humanity have been terribly blood-thirsty.'

Abstractions do not fasten themselves upon the Western mind so easily nor so powerfully as upon the Oriental and the Slavic. Raskolnikov's emotions and his will have not been made proof through experience against the aberrations of his thought. He yields to the pressure of an idea. When that idea has discharged itself in act, he gives himself up to the more human sentiments and passions by which he is naturally distinguished. They shake him terribly.

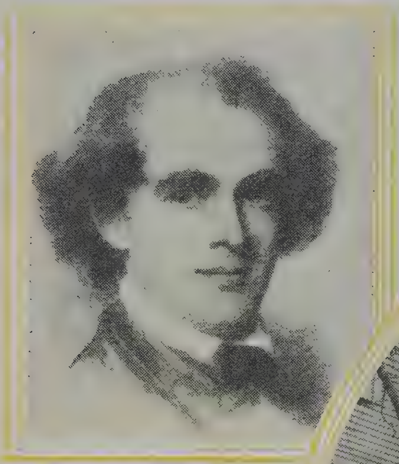
Francis Hopkinson Smith.

Almost at once he feels urged to confess his crime. The logic by which he tries to convince himself that he has had full warrant for what he has done is not proof against his warmer human feelings. These find a temporary object in a poor girl of the streets, Sonia, one of the most pathetically moving creatures any novelist ever portrayed. Isolation from the interests of men, insincere and meaningless speech with

(Continued on page 22)

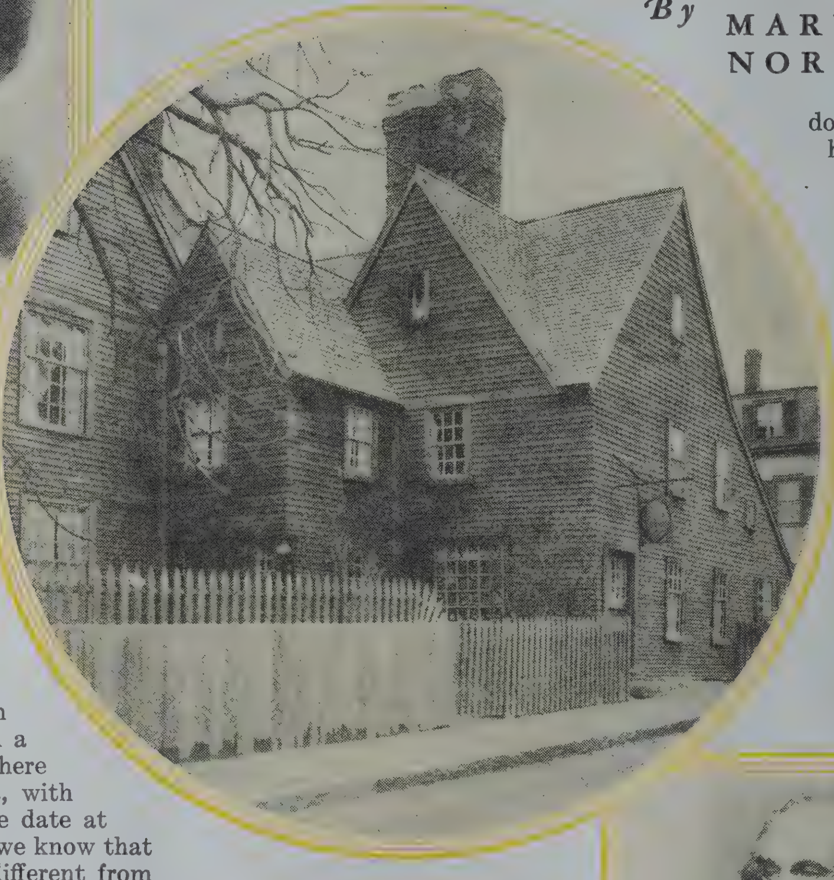
HAWTHORNE *and the* HOUSE *of* SEVEN GABLES

By MARY HARROD NORTHEND



—From painting by Johnson.

Nathaniel Hawthorne in 1841.



The House of Seven Gables on Turner Street, Salem.

IN SALEM, Massachusetts, stands a Seventeenth Century silver-weathered house which takes its name from its seven gables. The time of its building, according to records of the Essex Institute, has never been determined. Many claim that it was in 1662, from a fireback which was found here bearing that date; others, with equal authority, place the date at 1668. Be that as it may, we know that its architecture was far different from that of today.

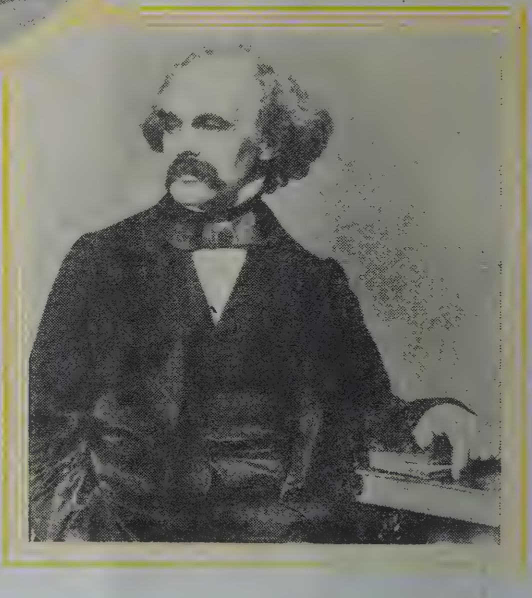
During the first period of its existence it was three stories high and contained two rooms in which the ceilings were so low that the average person could easily reach them. The outside showed the second story projecting over the first, as was the fashion of that period in Northern Europe and Holland; this has disappeared in the remodeling of the present-day structure. A lean-to is said to have been added at some unknown time, but that also has been removed in the reconstruction.

The house itself stands at the foot of Turner Street, overlooking the landlocked harbor. When commerce was at its height, the old house saw ships coming from and going to every land. In 1704 it must have watched Major Sewell and John Turner set out with forty men to capture 'Pirate' Quelch and his crew. They succeeded, too, and on their return carried not only Quelch but many of his men to Boston, later to be hanged.

When Captain John Turner took possession of this house in 1669, he removed a portion of the northern exterior, including two of the gables, and added more rooms to the southern side, together with three gables. These replaced the two that had been removed and by so doing gave to the historic house its name. Tradition tells us that this was done to accommodate the many guests who had been invited to attend the wedding of young Turner to Mary Kitchen, one of Salem's famous belles.

Captain Turner was a man of note, having been elected representative to the General Court. He was also a man of military prowess, as proved by the fact that he commanded a troop of militia and had six scalps of red men to his credit. That was before the days of commercial exploits on the seas, before Derby Street had been laid out into a great commercial thoroughfare filled with bustle and traffic. Vessels from foreign shores were constantly tying up at the docks, bringing in their holds silk from India, pepper from Sumatra, coffee from Arabia, gum copal from far away Zanzibar; the streets were filled with seamen from foreign lands.

In 1782, after the house had been the home of three generations of Turners, it came into the possession of Captain Samuel Ingersoll; it was then that its connection with Hawthorne began. He was a cousin of the Ingersoll family, and hence was a frequent visitor at the home. Proof of this is given in a series of letters written by Horace Conolly, the adopted son of Susan Ingersoll, the only daughter of Captain Ingersoll. Conolly was sent by her to Harvard, where he was graduated with honors. He then entered Yale that he might study for the ministry.

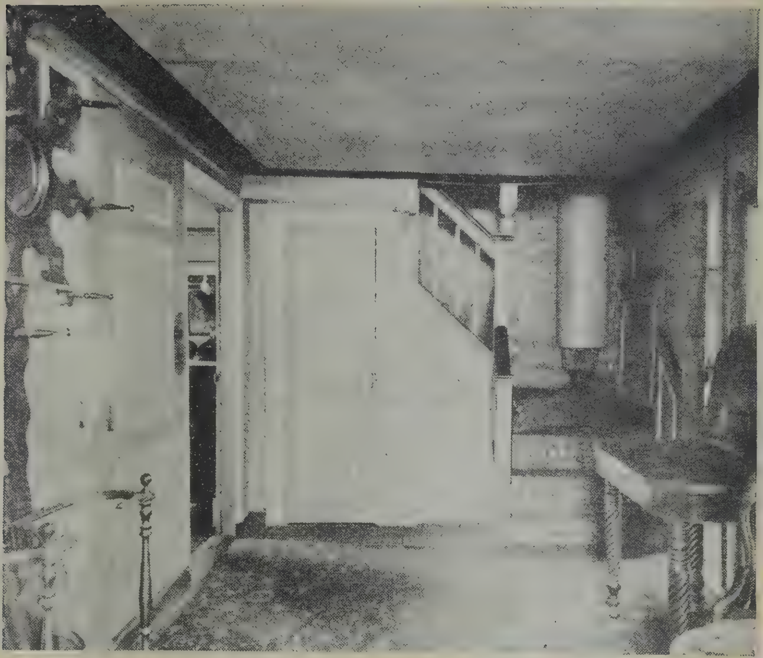


Hawthorne in 1860.

It was at Yale that he first met Hawthorne, destined to become a lifelong friend. This meeting is accurately described by Conolly in a series of confidential letters written long afterward at the request of my father, the Honorable William D. Northend, who had befriended him during his latter days.

In the first letter, written not many years before Conolly's death, he says:

> I propose to write a series of letters in order to give you my personal recollections of Nathaniel Hawthorne, commencing with my introduction to him in October, 1828, through a long period of years, thirty-six in number, to my last interview at Boston in March, 1864, eight weeks before his death in May at Plymouth, New Hampshire. Long had I known about him through his friendship with the Ingersoll family, but singularly enough had never met him until he came to New Haven when I had been in Yale only four weeks. It was on a Sunday morning when, on going to the hotel to see the arrivals, the names of Samuel Manning and Nathaniel Hawthorne greeted my eyes.
>
> Having known Mr. Manning through his intimacy with the Ingersolls, inquiry was made of his whereabouts. Soon he came into the office accompanied by his nephew Nathaniel Hawthorne. So different was he from what was expected that almost without thought I said, 'You do not in the least resemble any of the Hawthorne family in Salem, and I know them all.' Back came the answer, given with force and emphasis, 'I am glad to hear you say this, for I don't wish to look like any of them,' showing his desire to be exclusive and not included with his relatives who, however, were fine representatives of the name.
>
> Entering into conversation and being told of the cave of the Regicides, a desire was expressed to visit it, a thing that I absolutely refused to do.



—Couzens Photos.

Hallway of the House of Seven Gables.

The sequel tells of the disgust felt by the romancer when he saw what purported to be a cave with no formation. The fraud told on the sensitive Hawthorne, to whom the whole world seemed suddenly to have turned sour, remaining so until the early hours of the Sabbath, when he regained his liveliness; he had seemingly forgotten the incident by the next morning. This interview was the only communication between the two for ten years. Conolly finished his college course and became rector of a church in Boston.

In May, 1840, Conolly received a characteristic letter from his friend Hawthorne in which the latter told him of a visit to the House of the Seven Gables to see how his cousin Miss Ingersoll felt after a severe storm. He took with him his friend David Roberts. As they were sitting by the open fire, Miss Ingersoll remarked upon the alterations that had been made in the gables during the occupancy of the place by Colonel Turner. Hawthorne, interested, visited the attic, peering into every nook and corner, to find traces of only five gables. In a later discussion of this matter, however, he was told that the marks of the missing gables could be plainly seen.

'Why don't you write a story about it?' Miss Ingersoll asked; and thus the seed for the book of that name was sown. On his way home Hawthorne remarked to Roberts:

'House of Seven Gables—I must enter that in my notebook,' and, 'The

The parlor with its antique furnishings.

Duchess has started a host of ideas that I can work upon.'

While the name suggests the house, there is no fact which authentically identifies it. Hawthorne expressly tells us he had no particular house in mind, but, without doubt, the visit to the attic and the suggestions of the 'Duchess' were not forgotten. There were at that period several houses that might have been taken for his ideal, among them the Hunt House, which stood on the corner of Lynde and Washington streets. This was built in 1700 by Lewis Hunt, from whom it descended to a son, William. The old building was demolished in 1863. It is supposed by many to have suggested the House of the Seven Gables, since it agreed in certain points of architecture with the description of the house in the famous story.

IN JUNE, 1840, Conolly wrote that he went to the home of George S. Hilliard on Pickney Street, Boston, Massachusetts, for the purpose of visiting his old friend Hawthorne. As he entered his room he saw on the table the finished copy of *Grandfather's Chair*, also suggested by the 'Duchess' to Hawthorne. It was not alluded to, for the conversation immediately turned to the 'House of the Seven Gables,' which he was then revolving in his mind, although it was not finished until ten years later. So fascinated was he with the subject that he said, 'I believe that I can make something out of it; and if I write it, as I hope to, I mean to have what I consider the full value for it [meaning royalties].'

On Conolly's return to Salem, he asked his adopted mother concerning what had happened during the evening, referred to above, which Hawthorne had spent at the house. She said that he had seemed to be enraptured with the idea that he might make something out of the plot. 'It was just what I wanted,' Hawthorne had said. This conversation was confirmed by Roberts.

The book was written slowly, the author waiting on his mood. This was while he was still living in the Mall Street house near the home of Susan Ingersoll—not his birthplace, for that stands on Union Street.

On her death, Susan Ingersoll left the house with its wealth of furniture to her adopted son. There were portraits, much silver, and a wealth of fabrics that had been brought home during the period of commercial prowess on the seas. Nothing is left of this valuable collection except a chair that was presented to the House of Seven Gables by Mrs. Charles Waters. It was a favorite armchair covered with leather, which had been left to the Waters family, who, realizing that it belonged to the old home, gave it back.

Another old chair, which is preserved in my own family, was given to my father by Conolly, and a trunk filled with treasures also came into our possession after his death.

The trunk contained, among other things, a death mask of Susan Ingersoll. It is now in the Essex Institute together with one of Conolly's own mother. There are also two paintings still preserved, one of Molly Clough and the other of Susan Ingersoll. In addition to these, Conolly gave my father the knocker (and its history) that once adorned the door of the historic house, and a wonderful pin, probably a painting of the 'Duchess,' showing diamonds in her hair.

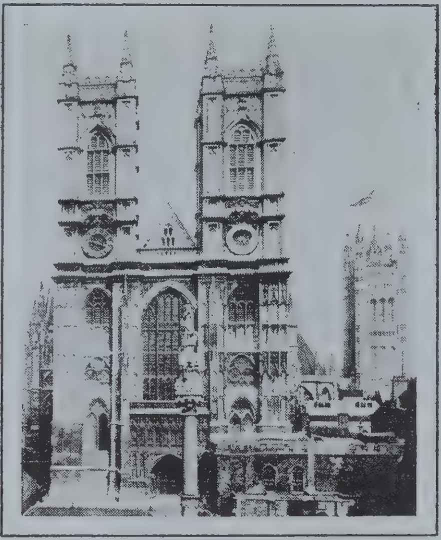
America *and* Westminster Abbey

By WILLIAM L. STIDGER

THE ancient Abbey of Westminster is an architectural miracle.

It is also a symbol, the world over, of something about Great Britain, which we all admire, but few Americans know that four of our great men have been immortalized in this magnificent structure.

This gem of architectural beauty stands first in the hearts of all Englishmen. It stands just across from the Parliament buildings on the banks of the Thames. The first church which stood on this spot, as far back as 616, was built in honor of St. Peter, by the Anglo-Saxon King Sebert. When this church was destroyed by the Danes it was reconstructed by King Edgar in 985. Edward the Confessor built a great abbey here between the years 1049 and 1065. The present structure was erected in the latter half of the 13th Century.



Westminster Abbey. —*Ewing Galloway.*

The English people have used it as a Hall of Fame. Its transepts and nave, its chapels and its archways are full of statues, tablets, and other memorials to England's great. To an American the interior has the aspect of being littered up. There is an amazing mass of these memorials.

There is a decided question about the right of some of the names enshrined here to immortal recognition in so sacred a place as England's national monument.

The first thing to fascinate the American visitor is the memorial to the Unknown Soldier who was buried in the Abbey with great ceremony. I have copied the inscription that appears in carved letters on the floor over the grave of this man:

> 'Beneath this stone rests the body of a British warrior unknown by name or rank, brought from France to lie among the most illustrious of the land, and buried here on Armistice Day, November Eleventh, 1920, in the presence of His Majesty King George 5th, his Ministers of State, the Chiefs of His forces and a vast concourse of the nation. Thus are commemorated the many multitudes who, during the great war of 1914 to 1918 gave the most that man can give, life itself, for God, for King, and Country; for loved ones, home, and Empire—for the sacred cause of Justice and the Freedom of the world.
>
> They buried him among the Kings because he had done good toward God and toward his Home.'

Inscriptions on four sides of this memorial are:

'In Christ shall all be made alive.'
'Unknown, and yet well known,
Dying, and behold, we live.'
'Greater love hath no man than this—'
'The Lord knoweth them that are His.'

A Congressional Medal from the United States hangs on a stone pillar in a case as a part of this memorial. It was laid on the grave of the Unknown Soldier by General John Pershing on the day of the ceremony.

To thousands of Americans one of the sacred shrines in the Abbey is the chapter house where the first assembly of the common people, the first representative parliament, convened in 1265.

Another memorial that interests millions of Americans is the one to John and Charles Wesley. It is a beautiful marble plaque carved in relief showing John Wesley preaching to a crowd of people. Above this plaque, also carved in white stone, are the profiles of these two founders of Methodism.

Three inscriptions carved below these profiles and the preaching scene are:

'The best of all is, God is with us.'
'I look upon all the world as my Parish.'
'God buries his workmen, but carries on his work.'

America is also interested in the memorials to her own sons.

The most recent one is that of Walter Hines Page which is a tablet just outside the chapter house, and it reads:

'To the glory of God and in memory of
Walter Hines Page
1855-1918
Ambassador of the United States
of America to the Court of St. James
1913-1918,
The Friend of Britain in her sorest need.'

Above this memorial to Walter Hines Page is the James Russell Lowell memorial. It is interesting to note that Lowell, like Page, is remembered because he, too, was an ambassador to the Court of St. James and not particularly because he was a great American poet. In addition to the Lowell tablet there is a memorial window. The inscription reads:

'This tablet and the window above
were placed here in memory of
James Russell Lowell
United States Minister at the Court
of St. James from 1880 to 1885,
By his English friends.'

The other two memorials to Americans are those to Henry Wadsworth Longfellow and George Peabody, philanthropist, who did much in England to help the poor.

The Pearl Hunters

(*Continued from page 2*)

gave an order. They pushed, strings holding the sail in furl snapped, and with a pleasing sound the three-cornered sheet fell and straightened. Next followed noisy work with the anchor.

Objects on shore gradually seemed to move from their places. We slipped smoothly past the stern of the 'pirate' ship. The roadstead became dotted with sails. A large orange-colored sun suddenly rolled up from the blazing horizon and flooded everything with dazzling light. The sails like a flock of pink birds with wings aslant directed their courses to the mouth of the gulf.

'A-a-a-a!' drawled a queer seaman's call, shouted by our crew with one accord to the pirate ship. Surprised, I looked first at our Arabians and then at the other ship. Heads appeared from behind the gunwale.

'A-a-a-a!' was returned, in the same long measure.

The nahuda smiled again at my show of interest: 'It is the seamen's salute as they meet at sea, or as they arrive or depart from the roadstead. It is well, kovaja: all seamen are brothers.'

LONG afterward I heard the seaman's call under circumstances which proved the tradition: We were riding at anchor off the Mascarene Islands when the shadow of a ship bore down upon us in the night, with no regulation lights. Catastrophe seemed imminent. At the last moment the ship swerved and, as she slipped by our board, from the darkness came the salute, 'A-a-a-a!' Our men replied in meaningful drawl, 'A-a-a-a!'—with no thought at all of cursing the stranger who had nearly wrecked us!

The sun rose rapidly. The water became transparent. The blue deep danced with fiery sparks. Wonderful tropical sea! Near our gunwales a school of porpoises sniffed and bent their spines elegantly, accompanying us. I watched a porpoise youngling and how it followed its mother exactly and how, as they leaped simultaneously from the water, the naughty child kept always just over the big fish's back.

The low line of the islands came to meet us. This sea possesses a unique peculiarity: shallows, even in the distance, show a clear emerald color and, if there is rock or coral underneath, the emerald spot produces white foam in the correct form of a crown. A beautiful sight! Through the transparent depths it was strange and dreadful to see the pale coral forests or the darker shadow of reefs pass under our schooner's bottom. One blow, and our wooden craft would perish in two minutes! But the nahuda knows the place as well as his own five fingers.

At last we entered the archipelago. Sail was struck. Ahmet and an oarsman seated themselves in the canoe which tossed at our stern. Lowering into the water the tin can with glass bottom so that part remained above the surface, the old man began peering through it with sharp eyes. The ripple on the surface of the sea could no longer interfere with the vision, for this was the purpose of the contrivance.

With the 'telescope' in his hand he indicated to the oarsman with the free arm where to direct the canoe. This continued for half an hour. Remaining on the sambouka, we followed the canoe, working laboriously at our crude oars.

Suddenly the old man became tense; he gesticulated with his hand and spoke quickly in a guttural language, his head thrust deep into the *tanico* as he hung overboard.

The canoe made circles. The arm cut round sharply, paused uplifted, and stopped the oarsman. Excitedly Ahmet drew his *tanico* from the water and began to signal with it, calling us. By certain signs on the bottom, by the experience of others in the past, and by his own peculiar instinct, the pearl bank had been found! Here would be nacre—the large pearl shell, which is valuable because of its extra heavy quality suitable for the manufacture of articles of luxury; and *troca*—the sharp cone-shaped shell from which buttons are made; and *bil-bil*—the small shell which is the most plentiful, sometimes containing, as well as the nacre, the precious pearl grain.

As we reached the indicated spot, the old man reboarded the sambouka to watch with the nahuda the opening of the shells and the search for the pearls. Gazing searchingly into the water, I seemed at times to see something sparkle hazily under the high rays of the sun.

Excitement gripped us. The rope ladders were lowered from the gunwales. Ten divers removed their clothes and took each his 'pince-nez,' contrived from a piece of wood in the shape of a small two-forked crotch which pinched the nose so watertight from the under side up that this organ looked as thin as a pancake. I noticed small metal spikes fastened to the hands of several and learned that these serve to knock the shell when it lies with bivalves open and heel fastened to the bottom of the sea. As the blow frightens the mollusk, he immediately closes his valves, when the shell can be torn from its moorings without risk of finger pinching.

HEAVY stones for weighing were brought to the ship's board, and several divers prepared for the plunge, each grasping one firmly in his hand. Naked black bodies shot simultaneously through the air, their elastic silhouettes slipping into fifteen meters of water and vanishing. Forty insufferable seconds passed. Suddenly three stomachs appeared on the surface in different places. A raised hand held a large gray oval disk. Breathing heavily through open mouths, the divers swam to our side. Ten seconds later appeared the fourth with three or four shells in a small net worn about his naked body like a belt.

The fifth diver was still below. More than a minute passed—which seemed mortally long. I worried. The smooth emerald water was indifferent and calm. Thoughts chased one another in my head as I recalled the dangers to naked divers in the sea. Shark? Octopus? Seaweed? The sharp coral trees? Or had he been swept away by the undercurrent and caught beneath some reef?

A half-minute more passed. I turned with alarm to old Ahmet.

'Don't fear, sir, Hassan is expert and can remain long under water—habit,' he said laconically.

On the other side, to which I happened to transfer my gaze, quite far off, a black head bobbed up. 'At last,' I breathed, scarcely able to say the words. He swam quietly and climbed over the side, his lean muscular body slightly quivering from the strain, his eyes slightly dilated. He threw on the platform two marvelous shells! At the same time the second group of divers plunged in, not waiting for orders.

The nahuda and a sailor began to open the shells. With a short knife they cut, through the opening, a muscle in the heavy lower shell. The mollusk convulsively opened wide its valves. The knife slid skilfully between animal and shell, and a slippery, shapeless mass the size of the palm of the hand fell helplessly to the platform. In contrast to the rough gray exterior of the shell, the nacre inside shone tender white, changing to all the colors of the spectrum. The substance of the shell had an average of a finger's thickness.

Each new shell held its problem: Was there anything or not? Was there anything or not? Was there anything or not? It was like drawing the ticket of the pearl lottery purchased at the risk of human lives. Ahmet kept his eye on the work.

IT WAS intensely hot. The sun's rays pierced even the awning under which we stood. The pervasive slimy smell of the discarded mollusks was disgusting in the suffocating heat. The pulp dried up immediately and stuck to the platform; it was thrown overboard occasionally, but more accumulated. The divers began to grow weary and made longer and longer interims between divings. Their faces grew pinched and their eyes sparkled feverishly. They suffered noticeably . . . there was pain. A pile of shining pearl shells on the dirty bottom of the schooner dazzled the eyes.

But the pearl had not yet been found.

I sat down fagged on the bench along the side, suffering from the suffocating heat and mopping sweat from my face. I looked away in the distance where the pale emerald horizon showed the profile of a steamer with its slow transparent smoke trailing off in the sky. I transferred my eyes to the flat stony little island nearby, surrounded with its crown of white stationary foam, and then to the empty canoe bouncing sleepily at our stern, and . . . became dead from fright!

Several feet from the side, very close to the surface of the water, slipped a long dark silhouette.

Shark!

The thought of two jaws which I had seen in Jibuti pricked sharply and painfully in my memory. They had been offered for sale by a native. With these opened wide on their tendons as on hinges, he wore the deadly hoop about his body. Those terrible semicircular bones with five rows of small three-cornered and serrated teeth! One row immovable, but the other four folded back or raised with muscles at the will of the monster!

The shark has small eyes placed low; as they are semiblind, two small fish 'pilots' always swim close to them and act as guides. When prey is near these guides change their location, one darting up and the other down. It is the signal. The shark turns on his back and, with jaws open, throws himself ahead with enormous speed. He rarely misses his victim.

On transparent emerald water the shark

cut slow, wide circles. Suddenly all looked at one another with scared eyes . . . Who? . . . The old man raised an arm to his white-turbaned forehead. His maimed stump shook . . . 'Allah! Hassan, Hassan!'

We gazed into the sea as if riveted to our places, searching in vain for the place where a head would appear. Our nerves strained. The seconds were painfully long.

The smooth surface parted at last over a black head, shoulders, and an uplifted hand with a shell. We became like wood. Hassan swam slowly with tired stroke. He looked at the sambouka and the men who stood transfixed upon it and . . . understood!

Seizing the gunwale with my hands, I bent as if hypnotized. My heart thumped and something pinched my throat. He came closer and closer. I saw nothing but wide gleaming eyes popping from dark skin. He swam looking to neither side but straight at me. A few feet remained. At our prow slid the dark shadow elastically . . . blood pulsed in my head . . . one more stroke, two . . . crazed hope implored from the face. At the side . . . a rope . . . he threw into the schooner a shell. With dull thud it fell on the wooden platform and rolled.

Suddenly the white stripe of the shark's stomach glanced along the bottom and straightened like an arrow. An inhuman, heart-rending cry pierced the air. The backthrown head and distorted face were turned up to the sun . . . brightly lighted eyes mirrored the last mortal terror. The smooth surface slowly crimsoned. The large circles expanded indifferently and lazily around.

All were silent.

'Allah, Allah! He is the seventeenth,' wailed old Ahmet, breaking the silence.

Depressed with the happenings, I sadly lowered my eyes. Before me on the dirty platform, with dull, even glow, sparkled a pearl.

The Gulf Coast

(*Continued from page 6*)

he rode high, and he was of untiring energy. A gallant old heart, Jefferson Davis! Sitting on the wide porch, looking out over the sea which that morning was the palest of emerald we seemed to sense the presence of ghosts of men coming and going.

The road skirts the sea to Biloxi where there are folk, oyster fishers, whose houses are built on piles over the sea so that a man may step from his kitchen into his boat. But the town itself is a considerable one, with twisting streets and houses with gardens, and a strange cemetery; the dead are buried above ground in vaults of brick and stone, for to dig four or five feet is to come to water. Some of the vaults are moss grown and old, because Biloxi marks the site of the first settlement made upon the Mississippi by white men who came from France in 1699.

My tour ended at Biloxi. Chiefly because of the lack of time. The municipality of Fairhope stands on Mobile Bay. And Fairhope, I learned, was a municipality that had never known a felon case in its courts, and which was conducting an experiment in trying to exempt all improvements from taxation by holding all land in the name of its corporation and, in short, aiming to conduct a model community.

(*This is the second of a series of two articles by Mr. Finger, describing a tour of the Gulf of Mexico shore.*)

Where the Ferris Wheel Spun

(*Continued from page 3*)

Museum. Its massive pillars and pilasters, its pediments and its expansive dome, made it an example of architectural achievement. But latterly, even during its use, it was permitted to crumble and decay. Plaster was allowed to crack and fall. Since the moving of the museum to a new home closer to the Loop district, it has been entirely deserted.

This abandonment is only temporary, however. Chicago people still have an historical pride in the old surroundings. In 1924 its citizens voted a bond issue of $5,000,000 to be used in reconditioning the Fine Arts Building and restoring it as an inspiring example of architectural beauty.

The repair of the building will give Chicago the largest convention hall in the United States, with a seating capacity of twenty-five to thirty thousand. Moreover, it will be used for a select collection of architects' and sculptors' casts, a school of industrial art, and a great community center for the people of south Chicago. A part of the work of restoration has been undertaken, but the final plans are now under reconsideration, as Mr. Julius Rosenwald has tentatively offered $3,000,000 additional funds to establish an industrial museum in connection with the restoration plans. Whatever plans are finally adopted, one thing is certain, this building will remain as Chicago's chief memorial to the World's Columbian Exposition, which did so much to acquaint foreign lands with the rapid progress in achievements of the people of the United States.

BUILDINGS are not the only reminder of the fair. 'Wooded Island,' south of Fine Arts, with its Japanese houses, its rose gardens, and its Cahokia Courthouse, has been retained. The landscape has not been changed.

The old courthouse goes back to the days of the French régime and the time of Louis XIV. It was originally erected by the French at Cahokia in 1716 and at different times has served as the seat of local government for French, British, and Americans. Its use spans the period from Indian wars to commercial supremacy. The walls of the building are of squared walnut logs set up perpendicularly and held together with pegs of wood.

'Did you want to see Cokey?' asked the policeman when we visited the place. He pulled the key out of his pocket. It is the romance which pervades that old building which makes one thrill with pride as one gazes at it and recalls the stirring events it has witnessed. Today it is the oldest frame structure in the upper Mississippi Valley.

Farther along, on the site of the main building, the largest of the fair group, is a gilded bronze statue of the Republic. This memorial at the central gathering place is the work of Daniel Chester French and is a replica of the great gilded statue of the Republic which stood nearby in the Court of Honor.

'"Big Mary" the people called the statue during the fair and, although it has been rebuilt and placed on this block of granite, it is still called by that name,' remarked the policeman, in answer to our questions.

The Court of Honor at the center of the main group of buildings consisted of a wide plaza with a lagoon in its center having at one end a beautiful electric fountain sculptured by MacMonnies and at the other a graceful peristyle. This is gone, but many of the other landscape features are there.

Turning toward the lake shore, one finds modern improvements. A bathing beach pavilion with facilities to accommodate six thousand persons has been erected.

FROM its upper windows one can see the yacht harbor, a lagoon of twenty-four acres reserved for the anchorage of private pleasure boats. During the exposition this bay was used for the anchorage of the replica of the *Santa Maria*, one of Columbus' three sailing vessels in his first voyage to America. It was presented to the fair by the Spanish Government. The *Santa Maria* is still an amusement attraction which is visited annually by thousands.

Before the opening of the fair it was sailed to the West Indies along the same route as was traveled by Columbus, later being brought to Chicago by way of the St. Lawrence River and the Great Lakes.

The varied beauty of the surroundings makes the place one of Chicago's most attractive park areas and a mecca for thousands of tourists, as well as the residents of the South Side.

Winding paths and roadways all lead to the Midway, along whose broad avenue once stood the motley collection of amusement enterprises. The most interesting of these consisted of representative scenes from the daily life of various peoples of Europe, Africa, and the Orient.

Down this boulevard past the spires and pinnacles of the stately Chicago University buildings, one reaches a statuary group recent in design, but none the less interesting. Here the sculptor has depicted the changes wrought by Time from the beginning of life to the grave. The work is the 'Fountain of Time,' by Lorado Taft.

Before its group of figures, billowed like the waves of the sea, stands Father Time—a tall, rugged, mysterious form holding tightly his flowing white garment as he reviews the hastening panorama of men. The story of peoples from primitive ignorance to advanced intellectual development has been boldly portrayed in the moulds of cement. Man is also shown tragic in his declining years, borne down with burdens, kneeling, gazing terror-stricken over the brink into the unknown. It is the story of passing generations.

Other monuments to scientists and national benefactors are planned for this landscape where the civilized nations of the world held eight months' festival a third of a century ago. Chicago has decreed that the old fair and its surroundings shall be dedicated to the exposition's yearnings for higher achievements in art, science, and educational development.

The Virgin *of* GUADALUPE

By DONALD B. DREW

IT HAS been a mystery for nearly four centuries. It is a very small mystery, a trifle more than two yards long and one yard wide, and less than one-quarter of an inch in thickness. Exactly three hundred and ninety-six years ago it covered the shivering shoulders of an Indian boy, herding goats a mile and a half above sea level on the Mexican plateau. Today it attracts, in one day, more than one hundred thousand men, women, and children, most of them also Indians. They come to gaze and wonder, worship and adore, a mystery which has been unsolved since a December morning of 1531.

The *tilma* was the blanket of Juan Diego, probably a Toltec, possibly an Aztec. It now hangs imprisoned behind thick plate glass in a heavy gold-plated metal frame in the main church at Guadalupe Hidalgo, a suburb of Mexico City. It has been a puzzle for the scientists and the art experts of the ages.

The person who joins the throng of thousands of pilgrims, drawn from all parts of Mexico, on Guadalupe Day, December 12, and takes his turn in line with them in passing into the basilica of Guadalupe, will see above the altar a strip of grayish-brown cloth, coarse in texture, crudely woven, seven feet long by rather less than three in width, containing an unusual picture of the Mother of Christ. Unlike all other known portraits of the Virgin Mary, this bears unmistakable resemblance to an Indian girl.

The colors of gold, black, cream, violet, rose and green seem at a distance to be as brilliant as they could have been when they first appeared on the *tilma*. They have been examined closely by American chemists, painters, dye experts and weavers; the National Museum of Mexico at one time appointed a commission of men from similar professions to investigate it; yet not one of these has been able to say by what means the picture was placed on the cloth.

The *tilma* is merely a brother to hundreds of thousands of other blankets worn by the Indians, or on sale in the shops of every village and town from the Rio Grande to the Guatemala line. Its duplicate can be purchased for a *peso* or less, any day in the year anywhere in Mexico. The maguey, better known to Americans as the 'century plant,' furnishes the fiber from which the modern *tilmas* are woven, just as a maguey furnished the fiber for this. Yet on no other blanket appears the image of the Virgin, either in Mexico or elsewhere.

Pilgrims in the church at Guadalupe. The sacred tilma is in the frame above the altar.

Church dignitaries, and some authorities not of the church, proclaim that a miracle was performed on lonely Tepeyácac Hill on a December morning early in the 16th Century. Besides these, there is a considerable group of American and Mexican scientists and artists who have studied the *tilma* and its picture from all angles and by all methods, yet who admit they do not know whether paint, dye or colored threads produced the image on the blanket.

—Ewing Galloway Photos.

Village of Guadalupe, from Tepeyacac Hill.

Back of the *tilma*, and aside from its mysterious character, lies an interesting and detailed story. This tale is more than legend. It is told in precisely the same manner in the records of the church and in the profane histories of the *Biblioteca Nacional*, in Mexico City, where the writer has read both the religious and the worldly accounts, written before the middle of the 16th Century in the somewhat florid Spanish of that day and age.

Whatever doubt there may be as to the miraculous origin of the painting, and whatever trickery may be charged, the story of the *tilma* of Juan Diego, born *Quauhtlatohua* in the ancient village of Cuauhtitlan, stands today as he told it first, and as he continued to tell it until the day of his death.

According to the story this *Quauhtlatohua* had removed his family in November, 1531, and set up a new brush *jacal* in Tolpetlac, a village nearer to Mexico City. On December 9, of the same year, this Indian, who had been baptized Juan Diego, that is, John James, started to still another Indian village, to attend Mass. His path led him beside a barren volcanic hill called Tepeyácac, and now better known as 'the Hill of Guadalupe.'

As Juan Diego hurried past, he heard distant music, which increased in volume until it seemed to envelop him. Turning his eyes upward, he saw, first, a rainbow-like arch of myriad colors, spanning the hill and holding in the center a brilliant golden light. A voice came to him from this light, saying:

'My son, approach.'

As he drew nearer he beheld a woman resplendently clad, who continued to encourage him, until, though he felt great fear and tried to run away, he found himself kneeling at her feet. The vision informed him that she was the Virgin Mary, that she wished a chapel built on the site of the Indian temple, and instructed him to go straightway to the bishop with this message.

The bishop questioned Diego closely, who, after finding that he told the tale the same way at each of several repetitions, ordered him to return to the scene of his strange experience, and obtain from the apparition some sign by which the churchly dignitary might recognize the divine command. As the Indian left, the bishop sent two trusted men to follow him, but, when Diego stepped across a small, narrow stream near Tepeyácac Hill, he disappeared from the view of the two spies, though the country roundabout was open, and the hill plainly visible.

Again the vision appeared to him, and bade him return next day, when a convincing sign would be given to him. Diego, however, failed to appear on the following day, December 11, because of the illness of an uncle. On December 12, the Indian was sent again to the village to obtain the services of a priest for his dying uncle.

Fearing the Virgin was angry Juan Diego passed on the other side. The radiant woman appeared once more. Diego fell to his knees and stammered forth the story of the illness of his uncle.

'Be not afraid,' said the voice of the vision, 'nor yet filled with anxiety regarding your uncle. I have just left him and he is completely recovered. Go thou rather to the top of this hill, pluck there the roses you shall find blossoming, wrap them in your *tilma*, and bring them to me.'

The Indian obeyed. Returning to the place of the vision, with the roses wrapped in his *tilma*, Diego placed them in the outstretched hands of the woman, who gazed at them for a moment, and instructed him to take them to the bishop.

The bishop received the Indian, but, instead of taking the *tilma* into his own hands, commanded the bearer to unroll it. As the roses dropped from the blanket, there appeared upon it the figure of the sacred woman of Tepeyácac. The bishop and the other church officials present fell on their knees and gave thanks for the manifestation of the divine will. The *tilma* was placed in the oratory of the cathedral in Mexico City, and, on the following day, the bishop, accompanied by a number of church and civil authorities, followed Juan Diego as his guide to the spot where he had perceived the vision.

From a crevice in the rocks at exactly the point on which Diego said the Virgin had appeared, a spring of clear, pure water flowed.

It was not until 1667 that Pope Clement IX set apart December 12 to be forever a day of holy *fiesta* in honor of the Mexican Virgin.

In 1754, a Jesuit priest, Juan Francisco Lopez, journeyed to Rome and obtained from Pope Benedict XIV a papal bull proclaiming the Virgin of Guadalupe to be the protectress and patroness of New Spain, later to become Mexico.

An order of the Virgin of Guadalupe was created by Agostin de Iturbide, first emperor of Mexico, in 1822, with a decoration which is still in the possession of some of the older families in the southern republic. In 1824, the national congress decreed Guadalupe Day, December 12, a national holiday, and Felix Fernandez, first president of the new republic, changed his name to Guadalupe Victoria, by which he is most commonly known to history.

Great Figures of Fiction

(*Continued from page 15*)

his friends, the constant watchfulness that is his haunting necessity, become unendurable. Driven by the ceaseless accusings and excusings of his own thoughts, he at length takes Sonia into his confidence. She urges him to confess, and this he finally does.

The punishment of his crime is a sentence of eight years at hard labor in Siberia, but Sonia goes with him voluntarily. Expiation is a long and bitter endurance, but Raskolnikov is happier for it.

When we have walked too much the streets of St. Petersburg with Dostoyevski's hero, we could meet no one more relieving than F. Hopkinson Smith's Colonel Carter. At the moment of making his acquaintance, indeed, he is in somewhat straitened circumstances. The Civil War has swept away his fortune and has carried with it the opportunity for legitimate leisure and for that exercise of the social graces that leisure may encourage in those who possess them. They are an inalienable part of the qualities of a Southern gentleman. It is in that character that the author presents him to us. In him all the best traditions of the Old Dominion endure, even though the conditions of their origin and growth have passed away.

It is because they have passed, because the energetic, achieving spirit of the North has borne down upon them, that Colonel Carter, 'Colonel Carter of Cartersville,' in the title of the novel, is unusually interesting and engaging. He has not learned to do anything for which anyone will pay him money. He is compelled to live by the more or less concealed benevolence of his Aunt Nancy. At best he can be counted, productively, as scarcely more than a futility. If humanity at large had no greater genius for work than he, he could not have the duck or the claret or the contents of the bottle labeled 'Old Cherry Bounce, 1848,' for the dinner with which the story opens.

IT IS after this dinner that we first learn of the Colonel's project for the reviving of his fortunes, the Cartersville and Watertown Airline Railroad. His chief reliance for the success of the railroad is not on any money that he has to invest in it, not on any traffic that it can reasonably be supposed to obtain, but in the fact that it is to be supported by the distinction of the patronage of some of the first families of Virginia. The narrator of the story asks why some twelve seemingly useless miles of road are to be built. The Northern business man to whom the Colonel has intrusted the management and financing of his scheme says quietly, 'To reach Carter Hall.' When this brings out a further question as to the possible advantage of making connection with the Colonel's ancestral residence, he is at once on his feet.

'Any advantage? Major, I am surprised at you! A place settled mo' than one hundred years ago, belongin' to one of the vehy fust fam'lies of Virginia, not to be of any advantage to a new enterprise like this! Why, suh, it will give an air of respectability to the whole thing that nothin' else could ever do. Leave out Caater Hall, suh, and you pa'alize the whole scheme. Am I not right, Fitz?'

'Unquestionably, Colonel. It is really all the life it has,' he explains to the major.

The Colonel's sense of honor is interesting and, from the standpoint of his Northern friends, unique. It has two striking aspects. One appears in his dealings with his grocer, who shows him the courtesy of an extended credit such as a Southerner of quality like himself may think his due. The Colonel accepts it in that spirit and is sincerely unwilling to offend the grocer or do injury to the fineness of his consideration for him by any reference to a possible date of payment.

The other aspect of his sense of honor reveals itself in the delightfully humorous episode of his affair with the broker, Klutchem. Klutchem is financially almost as much on the ragged edge as the Colonel. In a moment of irritation he addresses the Colonel as 'Old Garden Spot,' at the same time speaking contemptuously of the projected railroad. The Colonel is roused at once and demands satisfaction for his aggrieved honor. Friends convince him Klutchem was right, and the duel is forgotten.

Some Filipino Temples

(*Continued from page 9*)

silent in their vaulted aisles without hearing from those stained and mellow walls whispered prayers of priests who long since have vanished, and shadow chants of acolytes who have joined the choir invisible?

'The exact number of these churches it is impossible to learn. Even in the Walled City, there are so many sanctuaries and chapels that the count never results twice alike, and, in this air of old Spain, who cares how many there be?'

Of the religious orders that erected these ancient piles of architecture Dr. Miller says:

> 'To those who are able to read the lines between the altars and arches, the individual characteristics of the different orders are reflected in the churches they have built. The austerity of the Augustinians seems to hang about the somber shadows of the old church and the sincerity of life of the great order finds fitting expression in the building of genuine stone with no plaster of make-believe in its construction. Such building has stood for centuries and such character will stand forever.
>
> 'The higher culture of the Jesuit is nobly expressed in the most beautiful of all the cathedrals of the Philippines, and the Gothic arches of old Santo Domingo are the purest type of that most striking of all forms of church architecture.'

The most famous of all the ruins of the Philippine Islands is that of the old monastery which was destroyed by fire when the Americans were fighting insurgents who took refuge within its already toppling walls; this is Guadalupe, which overlooks the Pasig River not far from Manila.

Overgrown with grass and trees and flowers as it is, the arches, altars, and stairways of this old monastery still tell of its former beauty and glory, and one can imagine the thousands who went there to worship, and the other hundreds who gave themselves over to training for the glory of God.

Two Romances of World Trade

(*Continued from page 6*)

The cotton resources of British India are represented at the present time by about 18,500,000 acres from which there is an annual output approaching 4,500,000 bales. For the more recent and definite expression of the British policy of independence in cotton supplies, however, one must pass from those resources.

To follow the trail made by the British cotton experts during recent years would take one all over the British Empire. As each great tract of 'the new and naked lands' came under control, among the first of the men who were sent to judge of their possibilities were the men charged with the duty of determining in what areas cotton could be grown. It is a curious fact that some of those men were American. There was no island too small and no stretch of little-known country too vast and wild for them. And the results?

—*Ewing Galloway Photos.*

Preparing soil for planting cotton on the site of ancient Memphis, in Egypt.

From the British point of view the results are satisfactory; from the American, charged with importance. In the Transvaal two million acres have been marked out as suitable. A survey of Natal showed that that colony had also at least two million acres available. The rapidly increasing hundreds of thousands of natives must spill over at no distant date; South Africa must find for those huge populations an outlet in productive activity.

Then there are the Nigerias, away on the West Coast of Africa, with a population over sixteen millions and an area available for cotton-growing which is estimated at twelve million acres. Movement in the Nigerias has been cautious. Powerful interests were concerned with the palm-oil and palm-kernel trade there, and anxiety that native attention should not be diverted too suddenly from that has somewhat slowed the development of cotton-growing. An output of about 12,000 bales seems almost negligible in American eyes; but a beginning has been made, and the fears regarding other activities have been dispelled.

In the Kenya Colony of British Central Africa, the seekers of cotton lands have traversed one of the most favored spots on earth. It is a great plateau in the center of Kenya, a plateau beloved of independent big-game hunters. It has an altitude of 4,000 feet, and although right on the Equator has a glorious climate, comparable to that of California. The plateau is well over 200,000 square miles in extent, or about three times the size of the United Kingdom without the trimmings. There, staples yield two crops a season. By all the visiting experts this great plateau has been pronounced a cotton-growing land par excellence, and equally suitable for rubber. The decision has been in favor of cotton. A start has been made.

This plateau is to be the Society Section of White Africa. Settlers with capital can find a footing, if their capital is sufficient, if they are Whites of European stock, and especially if they possess a name that can be traced in Debrett, the British Social Register; or a commissioned record in the Services, or the social status which comes of a university degree. The immigrants in the neighboring lowlands have seen or heard of the land, but their efforts to find a footing have been vain. Its labor needs are to be met from the very sparse native population of the plateau or from the lowlands close by.

Britain has relaxed her hold upon Egypt, but she has no intention of giving up the Sudan. Extensive development work has been carried on there, chiefly in the interests of the policy of independence in cotton supplies. The initial contribution of the Sudan has been about 200,000 acres to Britain's total of cotton lands. The natives are taking to the work well; and the territory available is of great extent.

Of importance is the hold which cotton-growing has obtained in Australia. Backed by government guaranty of a market and a price, growers in Queensland have put thousands of acres under cotton, and the prospect is that the increase will be steady.

One finds Americans doing research work of similar character in many parts of the world, for other countries; lacking the opportunity, some say, to do it for their own. They are to be found in the Northern Territory of Australia, in New Guinea, in the Malay Archipelago, and in many other parts of the non-American East.

The development of a convenient and comparatively compact block of American rubber interests on this continent is more than ever possible by the opening of the Panama Canal and the establishment of an important American center in the Canal Zone. The Canal is near both coasts of the Central American countries — Mexico, Gautemala, Salvador, Nicaragua, Costa Rica and Panama—all natural rubber pro-

Seeded beds on a rubber plantation in Borneo.

ducers. It is also near other great producers such as Venezuela, Colombia, Ecuador, Peru and Bolivia. In these countries practically every species of profitable rubber tree can be grown.

Practically the entire area of the Philippine Islands falls within the rubber zone, even the most northerly parts lying within the latitude at which a valuable but curiously neglected rubber producer, the *Bleckrodea tonkinensis*, flourishes on the Asiatic mainland. In the islands the United States controls a territory as great as that with which Britain has secured a dominating hold upon rubber production. Climatic conditions are held to be favorable by planters, and the 40,000 square miles of virgin forest which the islands include are asserted to offer valuable possibilities.

To some extent the Philippines come within the scope of movements in the East which are viewed with misgiving by all interested in assured and unbroken supplies of rubber. The labor overflow of India, China, and Japan is to be found in all the rubber lands upon which we have come to depend. Over all those countries movements are sweeping: national, political, and religious movements which are liable to find expression in ways embarrassing to production. The doctrine of noncoöperation is filtering through. Mohammedanism, now undergoing closer organization, is realizing that there are things to be gained through its labor, or withdrawal of its labor. National antagonisms must be reckoned with occasionally.

The whole situation is rife with uncertainties, the least uncertain of which are disturbing in their possibilities.

So widely scattered are the developing resources of the British, so varied the areas and peoples concerned, that under almost any imaginable conditions of dislocation of production, they can rely on obtaining cotton.

The development of rubber within short voyage of the Canal Zone offers to America all the advantages inherent in varying populations and individuality of conditions, with a first-rank advantage, in addition, not possessed by Britain's new cotton fields: the geographical advantage which has placed all those other useful conditions within a comparatively compact area.

Sport *of* Kings

By ZETA ROTHSCHILD

THE chariot racing of the Romans, made familiar to the public in this 20th Century by motion pictures, was one of the earliest examples of a sport that has lasted through many centuries.

The Romans, who later implanted their customs on English soil, sent their horses to the race course thirty days before the celebration of the games. Although attendants took care of the horses, their noble owners themselves rode in the race. Philip, King of Macedon, and Hiero, King of Syracuse, were noted for their horsemanship on the race course.

Some claim that Caesar was the first to bring race horses to England; others, that the native breed was first improved when Hugh Capet, of France, in the Ninth Century sent several race horses to Athelstan, whose sister Ethelswitha he was courting.

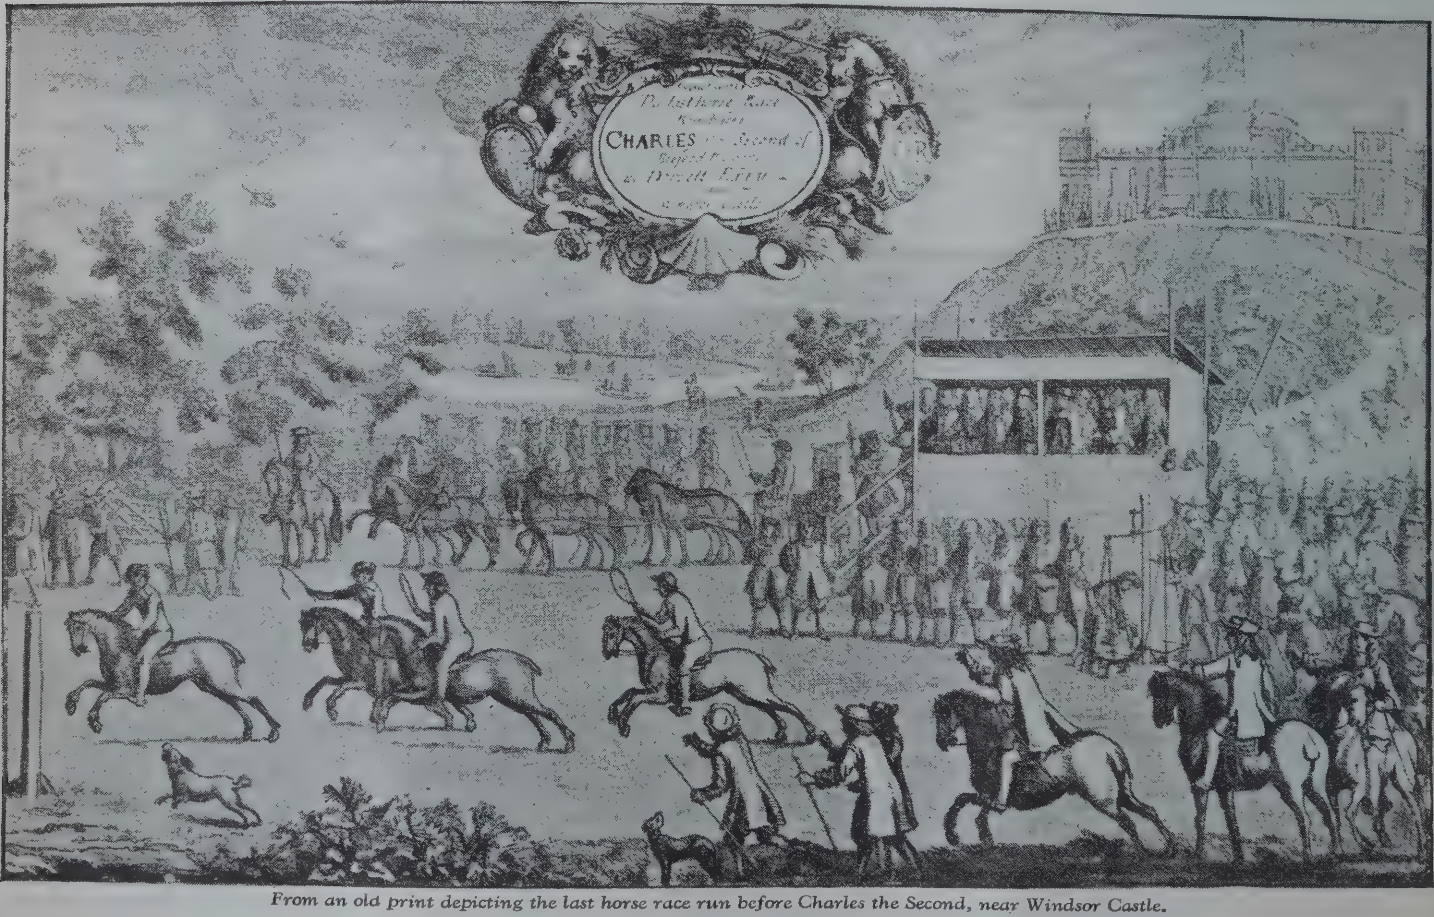
However, horse racing came slowly. At first at country fairs, especially at Smithfield, the farmers would race their horses to show their good points and thereby get a higher price. But not until the reign of James I did private matches between gentlemen jockeys become the fashion.

The rise of Epsom, the great English racing center, sixteen miles outside London, was first due to a famous salt that bears its name. A spring on the downs having been accidentally discovered, the fashionable physicians of the middle 17th Century sent their patients to drink of its beneficial waters. James I had a house there, and Pepys, a follower of the current fashions, notes in his diary in 1667 that he 'did drink four pints of the water.'

When sea bathing became fashionable, the physicians patronized the seashore resorts. But as Epsom and its downs were not easily forgotten, in 1730, the first annual race was there inaugurated, and it remains one of the racing events of the English.

Gradually the custom of jockeying by gentlemen gave way to commercialism. Every country gentleman had a few horses that could be used in racing, which however were given no better treatment than the other animals in his stable.

But when the King himself began to be interested in the development of 'running horses,' the nobles had to follow suit. Arabian horses were imported which, by crossbreeding, brought into being the magnificent race horses which have fathered winners of both English and American classics ever since.



From an old print depicting the last horse race run before Charles the Second, near Windsor Castle.

The House in the Fiftieth Congress

(*Continued from page 14*)

specialty, and, being a man of fine presence, an eloquent speaker, and of a kindly and most friendly disposition, early assumed high place among the leaders of the House. In the Fifty-first Congress he was a candidate against Reed for the speakership and, fortunately for himself, failed of success. Many as were McKinley's good qualities he lacked Reed's stubborn fiber and aggressiveness. His conciliatory character never would have allowed him to follow the course Reed pursued in quorum counting. Losing the speakership, McKinley became chairman of the House Ways and Means Committee and the author of the tariff bill that bore his name and finally made his presidential candidacy possible. In preparation for the election of 1890 the Ohio Democrats gerrymandered McKinley's district, but even then so great was his popularity McKinley came within three hundred votes of winning. His opponents resorted to the curious trick of sending among the farmers in McKinley's district peddlers who demanded preposterous prices for tinware, defending their charges by the explanation that McKinley had so protected the tin-plate industry in his tariff bill as to deliver consumers over to exploitation by the tin-plate trust. Housewives were horrified by the prices asked and McKinley lost many votes.

That year was disastrous to Republicans everywhere throughout the country. They elected but eighty-eight representatives, the smallest number in any Congress since the party was fairly organized, while the Democrats elected three hundred and thirty-three. During Cleveland's Administration McKinley was governor of Ohio. Then came the free silver campaign and McKinley's first election to the Presidency, with Mark Hanna represented by cartoonists as the dollar-marked dominating boss. That was a mistaken notion in some of its implications. Hanna was of a masterful disposition but he never mastered McKinley. The President was the stronger man of the two and by long odds the best politician. The Spanish-American War, in which McKinley was overborne by the jingoes of both parties, the annexation of Hawaii, his second election, and his assassination in September, 1901, by Leon Czolgosz, are sufficiently recent events historically to be fresh in public recollection.

Pennsylvania had thirty-seven representatives, some of them of national note. General Bingham, of an old Philadelphia family, was wounded at Gettysburg in 1863, at Spottsylvania in 1864 and at Farmville in 1865. Charles O'Neill and Samuel J. Randall each were elected to Congress in the year in which Lincoln was first elected to the Presidency and each served continuously year after year until death. Randall, a Democrat, was nevertheless a protectionist, which partly accounted for his successive reëlections from a Republican district. A silk merchant's clerk in his youth and then contrastingly in the wholesale iron trade, he had a good war record, serving in the Union army from the beginning. Leading the fight against the Force Bill in the Forty-third Congress, he won party leadership and was chosen speaker in three successive congresses. He was speaker when the Electoral Commission plan was adopted in settlement of the Hayes-Tilden controversy but the plan never had his approval. Few men ever served in Congress who were more sincere advocates of economy in expenditure—few more rigid in their demands for honesty on the part of public officials. He died April 12, 1890, after an exceptionally useful career.

William D. Kelley, born 1814 and a proofreader in his youth, was another member who served in Congress for thirty or more years. Kelley was a delegate to the convention that nominated Lincoln in 1860; he served in Congress from March 4, 1860, until his death, January 9, 1890. Charles N. Brumm enlisted when yet a student at Lincoln's first call for troops. Frank C. Bunnell went into the Union army as a private in 1861 and was discharged in 1863 because of disability. Louis E. Atkinson was a Union surgeon throughout the war but was so badly disabled that he could not continue practice in civil life and became a lawyer. Levi Maish, a Union Democrat, recruited a company in 1862, was wounded at Antietam, was made colonel at Fredericksburg and was wounded again when leading his regiment at Chancellorsville.

John Patton was delegate to the Republican National Convention in 1860. John Dalzell, of Yale '65, was a corporation attorney. Thomas N. Bayne fought as a colonel at Fredericksburg and Chancellorsville. Oscar L. Jackson served from 1861 to 1865, was on 'the march to the sea' and through the Carolinas after having been very severely wounded in battle at Corinth, Mississippi, in October, 1862. William M. Scott was among the wealthiest members of the House.

One of Rhode Island's two representatives, Henry J. Spooner, took part in the Civil War, serving in the Armies of the Potomac and the James.

Five of South Carolina's representatives served in the Confederate army. Samuel Dibble volunteered at the beginning and fought until the war ended. George D. Tillman was a private for three years. James S. Cothran, entering the army at the outbreak of the war, surrendered at Appomattox as a captain, having meanwhile been three times severely wounded—at Second Manassas, Chancellorsville and Jericho Ford. William H. Perry was a cavalryman during the whole of the war and William Elliott, an officer.

Leonidas C. Houk of Tennessee was self-educated, having had but three months of schooling, but he taught himself Union principles. He was a member of the Loyal East Tennessee Convention in 1861, and that year enlisted in the Union army as a private. Three of the others in the Tennessee delegation fought in the Confederate army. There was John R. Neal, who enlisted as a private and was elected a captain; James D. Richardson, who left college at eighteen to become a private and then adjutant and who retired from Congress to give all his time to his duties as head of the Ancient and Accepted Scottish Rite, and Washington C. Whitthorne, who served as an officer in the Confederate army from the beginning to the end of the war.

Benton McMillan after became a senator and governor of Tennessee. James Phelan was only four years old when the war broke out but his father was a Confederate senator.

At least eight of the eleven representatives from Texas fought 'endurin' the wah'

The Voice

MARIE ALDRICH

IT MAY be from the silence, or
It may be from the dusk
That ventures near the vine-clad door,
A voice is calling as before.

Perhaps it is a night bird, or
The whirring of a bat,
That penetrates to the heart's core
In runic tones of ancient lore.

And peace leaves those who listen, for
The years of life are few;
In death the voice will call no more,
The urgent voice will cry no more.

and all of them, of course, for the Confederacy. William H. Martin raised a company and took part in all of the battles of Lee's army until the surrender in April, 1865.

Constantine Buckley Kilgore, better known as 'Buck,' was wounded at Chickamauga and, being captured, was held prisoner in Fort Delaware. When Tom Reed, counting his quorums, ordered the doors of the House to be locked, 'Buck' Kilgore, his white chin-beard bristling, strode down the aisle and kicked the locked door open. David B. Culberson, esteemed one of the best lawyers of the House, served in the Confederate army as private and officer and in his later years eschewed political advancement for himself that he might better forward the prospects of his son Charles to whom he was devoted and who subsequently became governor of Texas and senator from that state.

Silas Hare, who had been a private in the war with Mexico and was chief justice of New Mexico in 1862 under the Confederate government, became a captain in the Confederate army. Jo Abbott was a lieutenant and L. W. Moore also saw active service.

Joe Sayers, who fought for the Confederacy from '61 to '65, was one of the best-loved men in the House on either side, and afterward became governor of Texas. S. W. T. Lanham became a Confederate private when a boy. One of the notable figures of the Texas delegation was Roger Q. Mills, who was bitterly disappointed when Crisp of Georgia was chosen as the Democratic candidate for speaker in the Fifty-second Congress. He was a fluent and an able man. The Texas legislature had removed the disability of minority so that he could be admitted to the bar when but twenty.

DURING his congressional career Mills was inclined to severity in dealing with the money devil but was considerably less ferocious after he 'struck' oil.

Grout of Vermont not only served as colonel in the Union army but was made brigadier general of the Vermont militia at the time of the now almost forgotten St. Alban's raid in 1864.

Eight of Virginia's ten representatives saw service in the Confederate army and two of them, strange to relate, were Republicans. William E. Gaines, Republican, fought from '61 to '65 in the Confederate army, surrendering with Johnson; his fellow Republican, Bowen, was a cavalry captain in Lee's army until captured in December, 1864, when he was confined in Fort Delaware. T. H. H. Browne was an artilleryman throughout the war, George D. Wise was captain, and John R. Brown, a private. Samuel J. Hopkins served through the war and was wounded several times. Charles T. O'Ferrall, who later was to become governor of Virginia, enlisted as a private in the cavalry and, after having been several times wounded, was at the end of the war in command of all the Confederate cavalry in the Shenandoah Valley.

He was a likable man who still felt the effects of the wounds he had received. W. H. F. Lee, while yet at Harvard in 1857, received an appointment in the regular army. He was a member of Albert Sidney Johnston's expedition against the Mormons, then resigned his commission and was living like an old-school Virginia gentleman on his estates when the Civil War began.

He at once raised a company of cavalry and at last became a major general. Wounded at Brandy Station, he was later captured and held prisoner at Fort Lafayette. There he was exchanged and he resumed service, surrendering with his illustrious namesake at Appomattox.

Nathan Goff of West Virginia, Republican, served in the Union army and later became senator. William L. Wilson of West Virginia served in the Confederate army as a private throughout the war and then for six years was a college professor of ancient languages, but it was as the author of the Wilson Tariff Bill that he achieved political fame. It was that bill, as mutilated in the Senate, that Cleveland characterized, without reflection upon Wilson, as a measure of 'perfidy and dishonor.' Later Cleveland made this scholarly, refined gentleman Postmaster-General and he ended his career as president of Washington and Lee University, which office he held when he died October 17, 1901.

EASILY the most famous of the Wisconsin delegation in the Fiftieth Congress, Robert M. La Follette was far too young to serve in the Civil War. Born in Wisconsin in 1855 he was graduated from the state university in 1879, became a lawyer and soon after entered upon that notable political career that deservedly was to make of him a national figure. Placed on the Ways and Means Committee of the House, he was given early opportunity to win distinction and helped McKinley frame his tariff bill.

Leaving the House in 1891 he became governor of Wisconsin in 1900, 1902 and again in 1904; he was elected to the Senate in 1905 where he remained until his death. La Follette's life was one of ceaseless political war. In all his conflicts he had Wisconsin at his back. All the money and all the cunning of his enemies could not shake the confidence the people had in him.

His fight was ever against the dominance in government of special privilege and private interest. Again and again he carried to the national convention of the Republican Party proposed reforms that caused him to be hooted as a visionary and denounced as a 'red'; yet nearly all his proposals came later to find a place in party platform or Federal statute. He gave his life in sincere, honest service to the common people of the land, and when he died, although no corporations flung out black signs of mourning, he was lamented by millions of men and women who knew his worth at last in all its greatness.

Two—and only two—of the Wisconsin delegation of nine served in the Union army. They were Charles B. Clark and Ormsby B. Thomas.

In that day there were eight territories represented by delegates: Arizona, Dakota, since divided into two states; Idaho, Montana, New Mexico, Utah, Washington and Wyoming. Delegate Marcus A. Smith afterward became senator when Arizona was admitted as did Delegate Fred T. Dubois of Idaho. Delegate Caine of Utah crossed the plains in 1852 and founded the Salt Lake *Herald*. Delegate Joseph M. Carey of Wyoming became a senator after Wyoming was admitted.

Early English and American Road Books

(*Continued from page 12*)

gave not only distances from London but also information about market days, always an important institution, county seats, 'circuits of the Judges of England,' from which we get our circuit courts, and other information of the kind.

In America, Christopher Colles published in New York in 1789 'A Survey of the roads of the United States of America' on the scale of one inch and three-quarters to the mile. Colles specified 'all the cross-roads and streams of water which intersect' the main roads, and included the 'names of all the most noted inhabitants of the houses contiguous to or in view of the road, . . . the taverns, blacksmiths' shops . . . ' and, in general, all points of interest.

'A traveller will here find so plain and circumstantial a description of the road, that . . . it will be impossible for him to miss his way, . . . if his horse should want a shoe, or his carriage be broke he will be able by bare inspection of the draft to determine whether he must go backward or forward to a blacksmith's shop.'

Colles' work was limited largely to the region of New York and Philadelphia, including Boston. It was replaced in 1802 by Moore and Jones' *Traveller's Directory* for New York to Washington.

When compared with modern travelogs, the following excerpt from Ogilby's *Guide* offers amusing contrasts:

Miles, F(urlongs) (Note flv. for 'river')

From London to	
Mile-End-Green	1'0
Mile-End-Village	0'5
Bow	1'2
Cross a St. Brid. over Lea flv.	0'2
And enter Essex

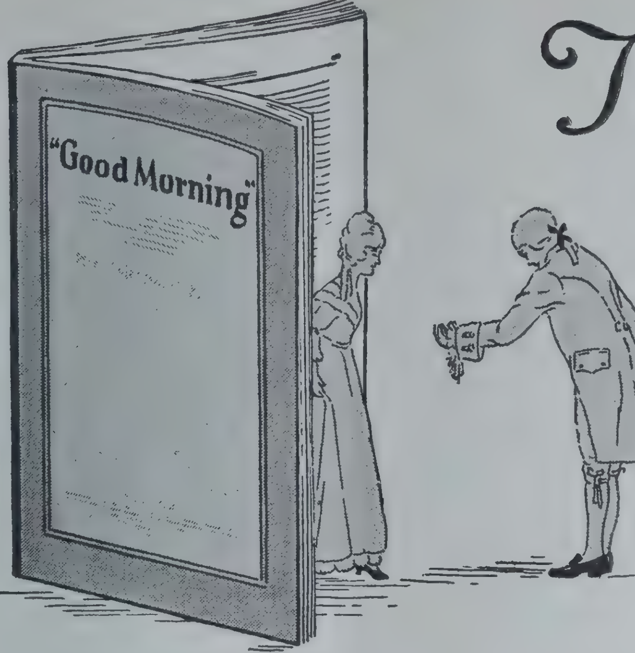
Cross Stour flv. (river) to (53'4) Sudbury	0'4
Enter Suffolk ibid.	

'Forward turnings to be avoided' and likewise 'backward turnings to be avoided' are mentioned.

With the advent of the railroad the necessity for the road books for travelers seemed to disappear. However, first the bicycle and then the automobile revived the road book, making possible the detailed accounts which we have today of the main roads in all of America. Our modern road book is the direct and evident literary descendant of the road books which appeared first two centuries and a half ago.



The RETURN *of the* DANCE

Everyone enjoys the old-time dances. They are easy to learn. They are being taken up enthusiastically by schools, clubs and community groups.

Piano Music for twenty popular old American dances is available. Price 50c the set.

Orchestrations of 13 parts each, including saxophone, for 20 dances. Specially priced $2 the complete set.
Single Orchestrations 15c each.

Edison, Columbia *and* Victor have recorded Old American Dance Music as played by the Henry Ford Orchestra. Your local music dealer handles these records.

THE methods of the world-famed Ford School of Dancing at Dearborn are now made available to everyone in the specially prepared manual entitled

'GOOD MORNING'

Compiled by Mr. and Mrs. Henry Ford

This 169-page manual contains complete information with instructions on each of the dances. Calls, music and pictures visualizing the various steps are given. There is also detailed information on how to arrange and conduct a successful dance.

The origin and etiquette of dancing, style and deportment are also fully described. This feature makes *Good Morning* a valuable reference book, especially in connection with the training of children.

Send for this book today. 50c a copy, postpaid.

The Dearborn Publishing Co.,
Dearborn, Mich.

Please send me the items checked below for which I enclose remittance of
$................

Table of Contents
'GOOD MORNING'

- The Return of the Dance
- Style in Dancing
- Deportment in Dancing
- Arranging for a Party
- Positions of the Feet in Dancing
- Dictionary of Dance Terms
- Floor Manager
- Prompting
- Quadrilles
- The Lancers
- Novelty Quadrilles
- Contra Dances
- Minuet
- Exercising the Knee Joints
- The Waltz and Other Round Dances.

planet Earth. Great things are still occurring, but we are occurring with them, and so we don't notice it. Most of the earth fashions we know, such as land and sea, highland and lowland, are new-fashioned landscaping. Niagara and the present Great Lakes are, so to speak, this season's novelties. The 'eternal hills' of the poet are about as eternal as a soda biscuit; they have their ups and downs like everything else.

The continents crept apart slowly. By piecing the eastern coast of South America with the western coast of Africa, one can see where the division began as the fissures opened and the divided land 'crept' apart—first a crevice, then a creek, presently a 'sound' like that between Long Island and New York, and last an ocean.

Our weather reporting is still an imperfect work. All our 'weather' originates in the little film of air, ten miles thick; and besides, there being nothing that we can do about it, as Mark Twain said, there is not too much known about it. If news were gathered on the same basis as weather reports, you might read in the evening newspaper that there had been a riot in the Far West or in mid-Pacific and that the rioters had all bought tickets for your town.

Two Books

(Continued from page 6)

But you would never know what it was all about or why they were headed in your direction.

As to 'weather signs,' some of them are good, others not. Because the birds have more feathers and the beasts have thicker furs, it does not necessarily indicate a hard winter. It may only indicate an unusual abundance of food during the summer season.

These are some of the points that stick out in memory from a reading of *The Story of Geology* by Allan L. Benson, published by the Cosmopolitan Book Corporation. It is the first book of geology that I have ever read with interest, though I have studied a number because I had to. In a canvass of my friends and acquaintances I did not discover one who had read geology for enjoyment, until they met this book. It makes the Earth what it really is, a living thing with a tremendous history and a big job on its hands right now. 'The Living Earth'—that should have been its title! 'The Story of Geology,' as a title, does not do it justice, unless you look at it in the light of Will Durant's *Story of Philosophy*.

This book makes the Earth more real than it ever has been to my mind before, gives it a true and noble personality among the company of planets.

It puts the reader fully abreast of the state of the science today. It shows the point where knowledge has arrived, and some of the steps by which it came.

It is the clearest of clear reading and the soundest of sound science.

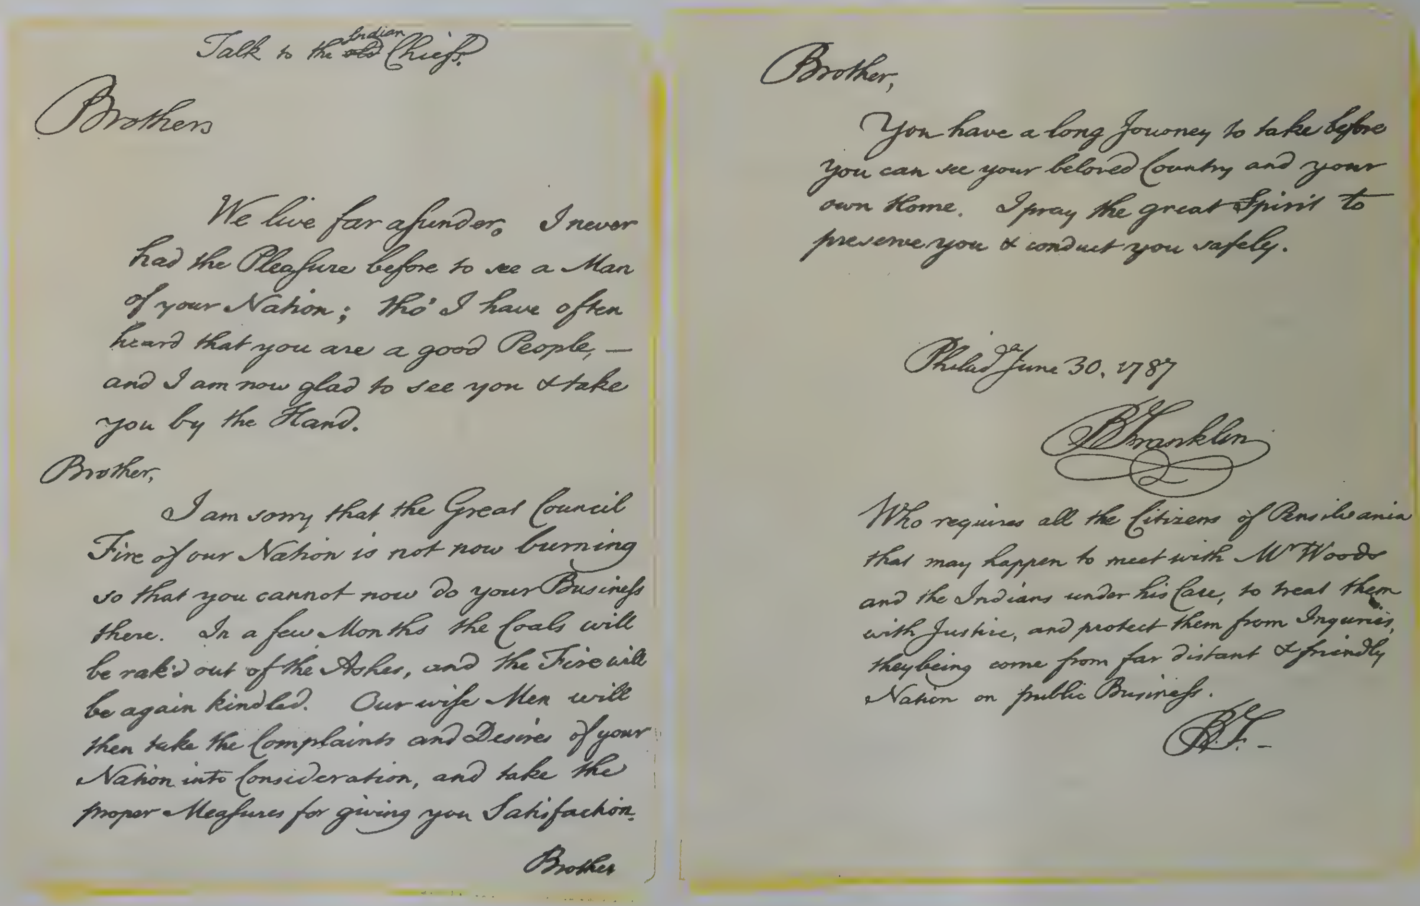
It brings cosmic history quite near; for example—have you thought that the Ice Ages were far in the prehistoric past? Why, we are living in the last Ice Age now. We are still in the closing period of the Pleistocene Ice Age. Only half of the ice is gone, in fact. The last great freeze put twelve million square miles under ice. Well, there are still six million under. It is only a little while ago, 'yesterday,' geologically speaking, that the ice retreated from the United States. Canada and Greenland and Europe and Asia still have plenty of it. In a few years, comparatively, the Arctic will be green.

In ten generous chapters, *The Story of Geology* treats of theories of origin, ice ages, the bowels of the earth, oceans, the weather, life—plant, animal, human. A great, true, dramatic story. W. J. C.

An Interesting Letter *by* Benjamin Franklin

IT IS characteristic of a great genius that even his ordinary letters, written often in haste, reflect the greatness of the writer. While searching recently in the archives of the Indies in Seville for maps relating to America, I chanced upon a letter written by Benjamin Franklin to an Indian chief. The resources of the wonderful libraries of Seville do not enable one to determine the circumstances under which Franklin wrote this letter. It may be stated parenthetically that for old and rare Spanish books these ancient depositories of printed treasure are incomparable, but that for material printed since 1800 one must go elsewhere.

This letter of Franklin's is largely self-explanatory. It reveals those qualities which made our first American statesman beloved equally by European princes and princesses and by Indian chieftains. L. C. K.



Talk to the ~~old~~ Indian Chief.

Brothers

We live far aſunder; I never had the Pleaſure before to see a Man of your Nation; tho' I have often heard that you are a good People, — and I am now glad to see you & take you by the Hand.

Brother,

I am sorry that the Great Council Fire of our Nation is not now burning so that you cannot now do your Buſineſs there. In a few Months the Coals will be rak'd out of the Ashes, and the Fire will be again kindled. Our wiſe Men will then take the Complaints and Desire of your Nation into Consideration, and take the proper Meaſures for giving you Satiſfaction.

Brother

Brother,

You have a long Journey to take before you can see your beloved Country and your own Home. I pray the great Spirit to preserve you & conduct you safely.

Philada June 30, 1787

B Franklin

Who requires all the Citizens of Pensilvania that may happen to meet with Mr Woods and the Indians under his Care, to treat them with Justice, and protect them from Injuries, they being come from far distant & friendly Nation on publick Business.

B.F.

CHATS WITH OFFICE CALLERS

'We are apt to think of our boyhood days in small towns as a most delightful period,' said the ***Man Who Is Getting Old.*** 'It was a calm era, when ways of living were reposeful. Not stagnant, however. There was plenty of romance, tragedy, comic relief. Many elements—but none of them skyrockety—among the unstrained ways of living.

'Its history is a broad patch of the life story of the Midwest. Taking all things together, however, the patch is like a mistreated record of antiquity, sadly torn, and with big pieces missing from it. Because, unlike its predecessors and its successors, the rest-and-be-thankful era was exactly as its name. It followed intensity of pioneering; and of fighting out a big national question, as well as the mishmash of its aftermath. Succeeding eras have been lively.

'The quiet era was too tranquil for its own good. It didn't get up push enough to shove its record very far into the books. Its memoirs penetrated less distance into the remembrances of men. In scrimpy course of time, therefore, section after section of this historical patch separated from the totalness of it. The sections slid into oblivion. Odds and ends of the sections, only, remain. They're scattered, and elusive. In these days, the best you can do by dint of a lot of running around—and by a world of talking—is to hound down and rail in a few of them.

'That is why it is so difficult for fiction writers to create the atmosphere of that period. Other cross sections of our history are much more colorful and have less detail.'

* * *

'From the union of the Canadian provinces in 1867 up to 1909 the divorces granted by the Dominion Parliament averaged less than four per annum,' said the ***Ontario Clergyman,*** 'but since then the number has rapidly increased.

'In the Parliamentary session of 1920 the divorce committee succeeded in reporting one hundred bills to the senate. After the applications increased, the number of bills enacted was the same—one hundred.

'Of a total of one hundred and thirty-five applications at one session, three were rejected, one hundred and fourteen were recommended and fifteen could not be considered until the next session. Of the 114 reported to the senate 14 could not be passed through all their stages before prorogation.

'Working at high pressure throughout the session the divorce committee could accomplish no more. It was hoped that the establishment of divorce courts in the three prairie provinces a few years ago would relieve the pressure on Parliament but the number of applications continued to increase.

'The senators long felt the consideration of divorce matters an injustice to applicants and an imposition on the Upper House. They recognized the incongruity of being called upon to act as a quasi-judicial body when their proper function, under the constitution, was legislative. The divorce committee was admittedly a competent and eminently just and impartial tribunal, but its duties could be discharged quite as effectively and with much less delay and expense to the petitioners by a judge, and applicants would not have to run the gauntlet of the two Houses containing many members who are opposed to divorce on any ground whatever.'

* * *

'Children living today do not realize in the least degree how much happier their childhood is than was that of boys and girls one hundred years ago,' said the ***Student.***

'In the early factories of Great Britain children only six to ten years old often were worked fourteen hours a day. Persons still comparatively young have seen children of that tender age working from eleven to twelve hours a day in dark, noisy, dusty factories in this country.

'In 1819 the first factory act was passed by the British Parliament. It forbade the working of children not more than nine years old for more than twelve hours a day in factories! The enactment of that law, as with nearly all subsequent laws dealing with the subject in both England and America, was opposed by the bulk of affected employers.

'In the 1850's the Massachusetts legislature enacted the first law for the protection of child workers in this country. But not until within the present century did child labor laws become common in this country.'

* * *

'Upon the eastern edge of the public square in our town stood the tree-shaded town pump,' said the ***Old Resident.*** 'It was an institution noted throughout several counties. Our townfolk were inordinately proud of it. It was of iron, of the "force" variety, and something recent in our locality. It threw a powerful stream. Wood was the material of our other pumps. They were homemade.

'But the town pump! When it gave of the cold, sparkling limestone water that is characteristic of our locality, you knew all about the proceeding, wherever you were about town. With the raising of its handle, the town pump ran the ascending musical scale. Rapidly. Began with "*Scr—*" toned as "C" below the staff of the treble cleff; continued, "*e-e-e,*" running aloft, and ended with "*ch!*" sounded as if it were written staccato upon the first added line above the treble cleff staff.

'The handle was elevated. In the descent, the change was to "*Y-o-w!*" It made its way downward in the same drawn-out musical fashion. "*Thump!*" was finale. You knew then that the handle struck the bumper upon the pump's barrel.

' "*Scr-e-e-ch! Y-o-w! Thump!*" Same intonation, done over and over again, while water gushed into the battered tomato can from which you drank. The can, when not in use, hung open-end-downward upon a piece of lath nailed upright to the trough. Water gushed with such force that it almost knocked the can from your hand . . .'

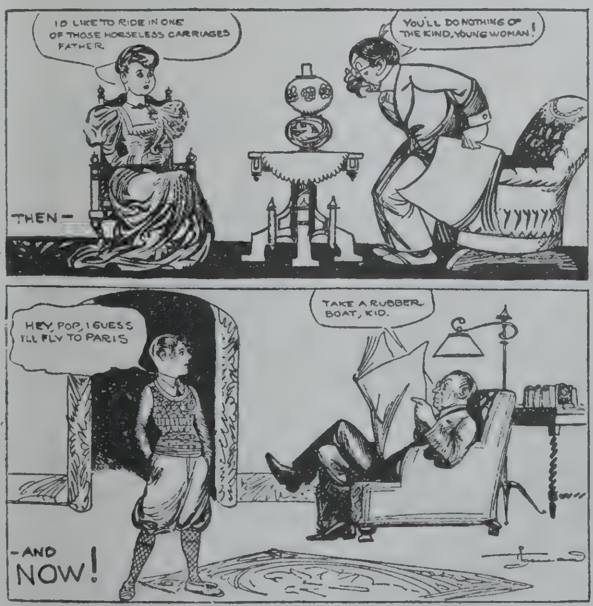
* * *

'Comparing the feeding of vegetation with the feeding of animals has often led to misconception,' said the ***Botanist.*** 'Animals possess organs that are capable of digesting and assimilating their food, but food for plants is assimilated for their use in the air and in the water of the soil because plants have no organs for the purpose of assimilation. Since they have no such organ plants feed through their leaves upon the atmosphere, and through their roots upon the moisture of the soil, by the process of absorption.

'The purpose of food for animals is to maintain life, and the blood and its circulation is the life. Circulation of the blood is made possible by heat, and the source of animal heat is the carbon of their food combined with the oxygen of the air.

'The life of vegetation is maintained by water and temperature in the soil and in the air. The circulation of water in the soil and the temperature in the air are dependent upon heat, and the source of heat for vegetation is the sun.

'It is a matter of common knowledge that the water of the soil and the air of the atmosphere alone are capable of furnishing vegetation with all the elements which enter into their composition; namely, carbon, hydrogen, oxygen and nitrogen. In other words, a seed may germinate, vegetate, give birth to a plant which shall attain to complete maturity by mere concurrence of water and the gases or vapors which are diffused through the atmosphere. This fact is easily demonstrated by planting a seed in fine, moist brickdust or moist common sand and placing it where it can receive the sunshine.'



I'D LIKE TO RIDE IN ONE OF THOSE HORSELESS CARRIAGES FATHER
YOU'LL DO NOTHING OF THE KIND, YOUNG WOMAN!
THEN—
HEY, POP, I GUESS I'LL FLY TO PARIS
TAKE A RUBBER BOAT, KID.
—AND NOW!

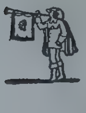
TOMBOYS.

CAN YOU TELL ME?



Question. Can you tell me who claims the land around the South Pole?

Answer. The Antarctic region is divided into four quadrants, or sectors: The Weddell, the Ross, the Victoria and the Enderby. Until the rise of the whaling industry the Antarctic can be said to have had no political significance whatever, but since the beginning of the century the territorial waters of the continent, if not the land itself, have acquired a value. Two sectors are now portions of the British Empire, being known as the Ross Dependency, administered by New Zealand, and the Falkland Islands Dependency, administered by the government of the Falkland Islands.

Q. Will you please give me some information regarding the inventor of the Diesel engine?

A. Rudolf Diesel was born in Paris on March 18, 1858. He was educated in England and at the Polytechnic School in Munich. He became manager of a refrigerating plant in Paris, where he remained for some years, returning to Munich in 1895. For many years he conducted experiments in internal combustion engines, and about 1893 news of his discoveries in this field caused considerable comment. In 1897 he introduced the engine since known as the Diesel engine and subsequently brought it to a high state of perfection. He came to America in 1912 and delivered a series of lectures. He lost his life in the Channel while on his way to England in 1913.

* * *

Q. Will you please give me some information about the early settlers in California?

A. The Spaniards attempted to civilize the country by the establishment of missions along the coast. In 1769 the first mission in California proper was erected at San Diego by the Franciscans, and by 1823 these religious houses had grown to twenty-one in number and acquired great wealth in olive, orange, and grape plantations, and in cattle and horse ranches. The Indians were converted to Christianity and gradually weaned from their nomadic and barbarous habits. In 1820 the Spanish constitution was sworn to in California, and in 1822 allegiance was given to Mexico. From 1824 to 1840 there was a complicated movement of local politics and a preparation for the future: The missions fell; republicanism grew; the sentiment of local patriotism became a political force; foreign commerce and immigration and foreign influence increased. The Russians came in 1805, and in 1812 founded on Bodega Bay a post which they held till 1841; here they traded and hunted for furs. Sailors and traders of diverse nationalities settled in the province. In 1826 American hunters first crossed to the coast; in 1830 the Hudson's Bay Company began operations in northern California. By this time the foreign element was considerable in number, and it doubled in the next six years; although the true overland immigration from the United States began only about 1840. The discovery of gold at Sutter's Mill, near Coloma, on January 24, 1848, gave an impetus to immigration from all parts of the globe. The great body of gold seekers arrived in 1849, by the end of which year the population exceeded 100,000.

* * *

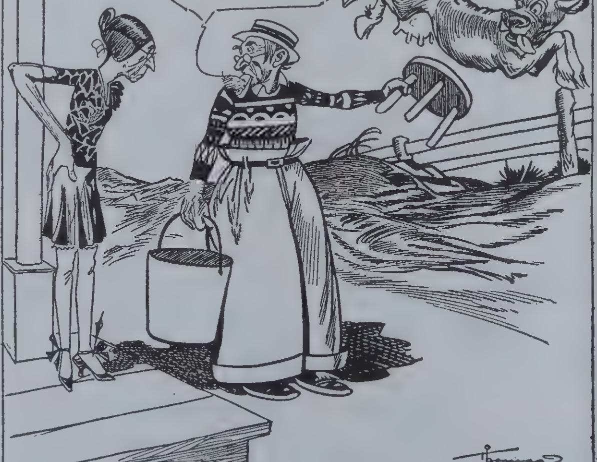
Q. I should like to get some information about daylight-saving time.

A. The daylight-saving movement was originated in England by William Willet in 1907 by the publication of a bulletin entitled: *The Waste of Daylight.* Early in 1908 a daylight-saving bill was introduced in the House of Commons but it was not till eight years later in 1916 that a bill of this nature was finally passed as a war measure. This bill called for the advancement of clocks by a full hour on May 21 and return to normal time on October 1. The same month (May, 1916) the system was introduced in Denmark, Germany and Holland; Italy, France and Portugal followed in June. In Germany permanent adoption of the system was proposed in July; New Zealand rejected it (after approving) in August; Tasmania adopted it in September; Victoria in November, and the Australian Dominion Parliament passed the measure to take effect in January, 1917. Norway decided in favor of daylight-saving in May, 1916, but rejected it in April, 1917, as also did Denmark and Sweden in the same month, while Spain adopted it in May, at the same time that the Australian Cabinet decided to repeal the act. Turkey, Switzerland, and Russia also adopted daylight-saving; Nova Scotia and Newfoundland were the pioneers of the scheme in the New World. A daylight-saving bill was passed by the United States Congress, June 22, 1917, to take effect on the last Sunday in April, 1918. Actually it came into force at two o'clock on the morning of Easter Sunday, 1918. The act was effective from March 31 till October 27, 1918, and again on March 30, 1919. The law was repealed, August 20, 1919, over the President's veto, due to strenuous opposition from the farmers. Since then the question has been left to the various state and local authorities with the result that daylight legislation has been sporadic and intermittent.

* * *

Q. How does the Government put money in circulation? Explain the terms 'legal tender' and 'lawful money.' How is paper money maintained at its par value in gold?

A. United States money is whatever Congress declares it to be. The distinguishing titles 'standard' and 'lawful' refer to coin money—dollars in silver and higher denominations in gold. Legal tender applies simply to that character in which a creditor is bound to receive money in payment of debt. Gold and silver, being standard, are a full legal tender for all debts, public and private, and the certificates representing them are redeemable in the metal designated; but under the law they are not interchangeable; that is, gold may not be demanded for silver. Every bill of paper carries upon it the authority under which it has been issued, the extent of its legal tender quality, and the manner of its redemption. Putting money in circulation is simple. The annual receipts and expenditures of Government each exceed the amount of currency in circulation. As fast as revenues are received, the old bills can be destroyed and similar amounts in the new currency deposited in the Treasury; or, banks or individuals may exchange the old for new in certain amounts. Money is paid out of the Treasury only for service rendered. The new money authorized is intended simply to replace that at present in circulation. Under a special provision of the law, the Government is pledged to maintain all lawful money at its par value in gold. It does this by accepting it for all public dues, although the law authorizing lawful issues is as yet unchanged. This is at present accepted in good faith throughout the country, although the law recognizes the validity of contracts payable in specific manner, as in the gold bonds universally on the market, by which the creditor is promised payment 'in United States gold coin of present legal weight and fineness.' Only authorized currency has a legal right to circulation; and to counterfeit is a crime, either in making or in attempting to pass. Clearing-house certificates are legalized, and other currency, as that of Canada, is frequently tolerated but has no official backing. The holder takes his chances.



WHAT IN SAM HILL IS THE MATTER WITH THAT FOOL COW, MAW?
Thomas

COLLEGE STUDENTS ARE SENDING THEIR OLD CLOTHES TO NEW ENGLAND FLOOD VICTIMS.

BRIEFLY TOLD

The phrase 'humble pie' is believed to have originated from the custom of baking the leavings from the English masters' tables into a pie for the servants, or humbles, as they were called.

Collecting wild ferns has become a popular industry in Washington. A carload of ferns containing 750,000 plants is worth $3,000.

A fruit grower near Berlin, Germany, has successfully kept the birds from his orchard by connecting a loud speaker to his scarecrow.

The new reptile house of the zoölogical gardens in London has a snake hospital containing comfortable beds, a resident physician, a diet kitchen, a battery of artificial sunlight, and an adjoining space where rare bugs are raised for the patients' food.

Ginger is the oldest spice known. Gingerbread cakes in the shape of dolls, horses, and other objects have been made for the amusement of children since the Middle Ages.

Three tea caddies emptied into the harbor on the night of the Boston Tea Party have been bequeathed to the Massachusetts Historical Society.

According to scientists, most animals, birds, and insects carry on their courtship by gifts, perfumes, and dances in much the same way as human beings do.

The opal was once prized by the ancients above all other stones.

A number of new uses for wild animals have been found. At Hillsdale, Michigan, a mud turtle was used to burrow through a drainpipe that had become clogged with silt; the Indians of Guerrero, Mexico, train boa constrictors sixteen to twenty feet long to kill rats, play with the children and guard the house; and in Venezuela a species of crane is used to guard sheep.

Motor buses are used for the transportation of children by 986 schools in New England.

Although these birds have been known to science for 150 years, the first nest and eggs of the rare Arctic surf birds were found recently on Mount McKinley, Alaska.

Eighty thousand chests of tea, worth about $2,450,000, pass through the London market every week.

The native farmers of Bulgaria still use the *ralo,* or wooden plow.

Elephants in captivity have been known to remain on their feet for five years.

Because motion picture photographers recently attempted to film the body of Enrico Caruso for a screen stunt, the Neapolitans have placed a one-and-a-half-ton slab of granite before the entrance to shield the coffin from prying eyes.

A diamond will turn permanently green if exposed to the rays of radium.

A deed dated 1597 has been found at Adderbury, England, relating the acquisition of property at Sulgrave Manor by Lawrence and Robert Washington, ancestors of George Washington.

The word '*bible*' is derived from the Greek word *biblos,* meaning book.

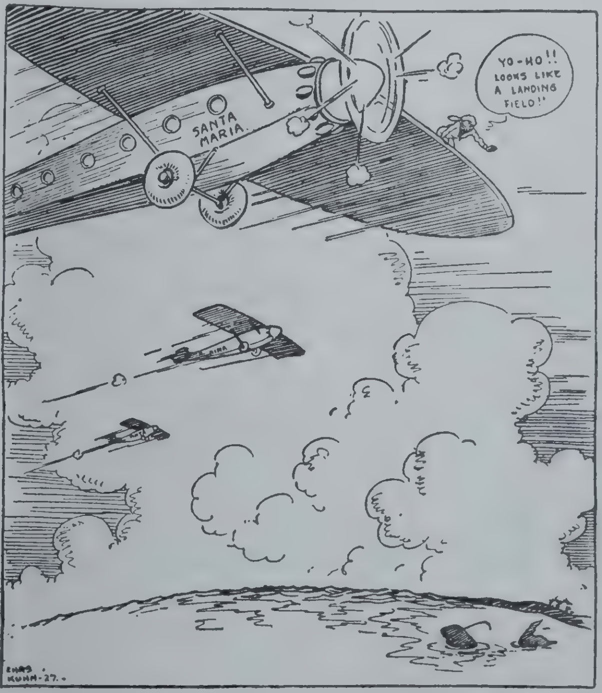
At the Gillies' Ball given recently on the royal estate in Scotland, Queen Mary danced twelve of the fourteen reels, polkas, and Circassian circles with gardeners, footmen, and chefs.

Only forty-four persons live on St. Kilda Island, far off the coast of Scotland, in the Atlantic. These forty-four speak Gaelic. They are very devout. The men take great risks on the cliffs in search of puffins and other sea fowl, often hanging over the ocean at a height of a thousand feet.

A nature-loving magistrate in China fines the prisoners a number of butterflies instead of taels or Chinese dollars.

The clothing industry has more than seventy-five names for rabbit fur.

Lion cubs, which can be kept with safety until about two years old, are becoming popular as pets in Europe, the price for a cub ranging from $375 to $475.



YO-HO!! LOOKS LIKE A LANDING FIELD!"

IF CHRISTOPHER WERE TO DO IT TODAY.

It has been estimated that the average person in the United States makes 185 telephone calls a year.

In the village of Tuscarora, Nevada, there is no public school because, of the fifty inhabitants, none are less than twenty years of age.

According to Dr. Samuel A. Tannenbaum, the Shakespearean authority, none of Shakespeare's works in the poet's own handwriting are now in existence, but there are in existence books which belonged to Shakespeare and in which he wrote.

The temperature range in the Sahara Desert, the largest desert in the world, is as much as forty degrees between day and night.

Among certain Eskimos bad temper is considered a sign of being possessed by a devil, lying is a crime punished by death, and marriage is compulsory.

A congressman arriving after the appointed hour at George Washington's home and finding the party at the table was informed that the cook at that home did not ask if the guests had arrived but if the hour had.

As a part of the celebration for Apple Week in Yakima, Washington, an apple pie weighing more than a ton was baked. It required four bakers, wielding rolling pins fifteen feet long, to roll the dough, a specially constructed oven, and 2,100 pounds of apples.

According to some physicians it is inadvisable to disturb a biting mosquito, for the reason that he first injects a poison to dilute the blood and then when the meal is over will suck the poison back again. If the mosquito is driven away the poison remains, causing the pain and swelling of mosquito bites.

The term 'watered stock' originated from the custom among certain farmers of feeding their cattle a lot of salt, letting them drink all the water they wanted, and selling them by weight.

The natives of Uganda, Africa, consider ants such a delicacy that patients in hospitals are frequently given a plate of boiled ants.

A man in Sussex, England, who had lost his voice ten years ago owing to a gas attack during the war recovered it after a nightmare caused by witnessing a startling film.

Provincetown, Massachusetts, a keeper of traditions, is the only town in the United States that has a town crier.

Butterflies are so called because it was once believed they stole butter and milk.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S Page this week discusses the true goal of progress.

* * *

Every pearl has a story of its own—adventure, danger, bravery, often death. The perils of pearl-hunting are particularly notable because wherever pearls are to be found, there also is to be found the tiger of the sea. The description of that dangerous profession, as presented in this issue by Commander A. Benklevsky, is doubly interesting, for the reason that the author's present home is not far from the scene of the story. He writes from experiences he has actually witnessed. (p. 1)

* * *

Where once throngs of hurrying sight-seers plied with their guide-books, today an endless procession of automobiles moves on the thoroughfares of the old World's Fair. Lagoons, tortuous pathways, wooded islands, spreading lawns and bathing beaches, combine to give Chicago a playground and beauty spot unrivaled. That metropolis has followed a wise course in utilizing her old fair grounds for the nucleus of one of the finest park and boulevard systems in America. (p. 3)

* * *

In the second of a series of two articles prepared by Charles J. Finger relating to the Gulf Coast, that well-known writer narrates an interesting incident which befell him not far from New Orleans. He encountered a man who was neither French nor American, and who claimed to be 'Cajun.' Later Mr. Finger learned that the stranger actually was an Acadian, descendant of that race which had been transported from its original home back in the days of Evangeline. (p. 4)

* * *

Two trade romances of modern commerce have to do with rubber and cotton. America is investigating the possibilities of rubber production closer to the Panama Canal. Since rubber had its origin in Brazil, it should not now be an insignificant commodity in the country of its birth, where Nature doubtless intended it to grow in abundance. Similarly, the English are rapidly moving toward an independence in cotton. The southern lands in Africa have been studied and much ideal cotton land has been developed. Australia is another fertile field. What will be the end of this race for independence? (p. 7)

* * *

During his travels in the Philippines, Dr. William L. Stidger visited many of the ruined temples and missions on the islands. To him they seemed more beautiful than the famous missions of California. 'They are older,' he added, 'and more romantic.' One of the cathedrals that aroused his admiration, and which he describes in his article in this issue, was built originally in Belgium and transported to Manila. (p. 8)

* * *

In 1671 a description 'most exact of the roads of England' was written by John Ogilby and published. The book was illustrated with one hundred copper plates, which in great detail set out the main roads leading from London. The scale was a mile to the half-inch, and every crossroad was indicated. For a century this book ranked as the great authority and guide of Britain. Then in 1771 came 'a new and most accurate description of all the direct and principal cross roads in England and Wales.' This volume went through twenty editions, proving that even in that day guide-books were popular. (p. 12)

* * *

The colonel of the famous Twenty-third Ohio regiment during its Civil War career was Rutherford B. Hayes. In the regiment was a seventeen-year-old private, William B. McKinley. Few other regiments can claim to have held two future presidents of the United States at the same time in their ranks—in this case the ranking officer and the youngest private. Barnes Cooley presents his final article on the Fiftieth Congress. (p. 13)

* * *

Lewis Worthington Smith's series of articles on 'Great Characters in Fiction' which has been praised by quite a few readers of THE DEARBORN INDEPENDENT, contrasts in this issue Raskolnikov, the strong figure in *Crime and Punishment*, with Colonel Carter, *the* Colonel Carter of Cartersville, from F. Hopkinson Smith's novel of the same title. It would be difficult to select two characters more diametrically opposed. (p. 15)

* * *

When Horace Conolly, a student at Yale, first met Nathaniel Hawthorne he remarked, 'You don't in the least resemble any of the Hawthorne family in Salem, and I know them all.' To which the future author replied, 'I am glad to hear you say this, for I don't wish to look like any of them.' So writes Mary Harrod Northend, in relating some hitherto unpublished anecdotes of the House of the Seven Gables and its noted friend. (p. 16)

* * *

The greatest mystery in America is said to be the sacred mantle of Guadalupe, now hanging as a relic in a Mexican shrine. No one has satisfactorily explained how the picture of the Virgin Mother of Christ was placed on it, in colors of gold, black, cream, violet, rose and green. American chemists, painters, dye experts, and weavers, all of whom have examined it closely, cannot read the riddle; neither could a high commission appointed by the National Museum of Mexico. (p. 21)

REMARKS BY OUR READERS

Fort Smith, Arkansas.

Your fourth cover-page of THE DEARBORN INDEPENDENT, so far as concerns one subscriber, is never dull, rarely wide of the mark, always courageous, and seems often to be a center shot of inspiration.

Anent the issue just at hand (October 29) may I add:

Where a multitude is, individuals have neither root not stock to buffet the elements the pioneer matched and conquered. In the multitude, individuals are in one another's way.

A thousand yards from my window is a beautiful group of three elms in the shape of one. Separate, they are but poor misshapen things.

He blazes a trail who writes a page uniting reason and revelation, though he does it by a strength conserved by electric lights, steam heat, a civil and religious liberty, a spiritual hope, and countless other products of other pioneers of other times. Every man is a pioneer in his own niche, and as big as the biggest if he works that way. I wonder if you are familiar with the words of Mary Baker Eddy: 'As the crude footprints of the past disappear from the dissolving paths of the present, we shall better understand the Science which governs these changes, and shall plant our feet on firmer ground.'

A pioneer schoolgirl, Edna Beck, wrote this:

'Who paints a rose with all its heavenborn beauty
Doth shadow forth the Christ as well as he
Who paints a young child's head with glorious,
Farseeing eyes. For Christ is truth and where
The truth is told, the Christ is imaged forth.'

May your journal and its makers 'live long and prosper.'

HERBERT M. BECK.

Lancaster, Pennsylvania.

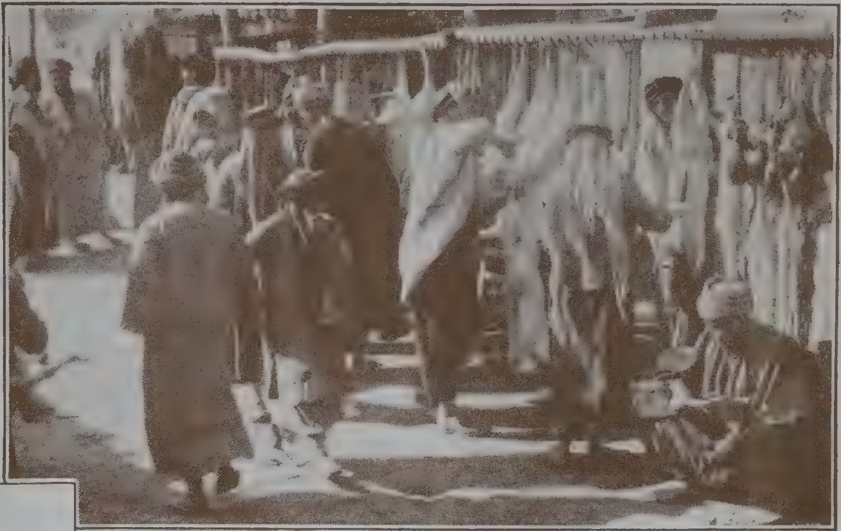
I certainly cannot be classed among those who 'connive to belittle the enforcement of the Eighteenth Amendment,' to use the words of a 'man from a Southern City' in your issue of October 15, page 28. Nor can I be classed among those who fear they are 'going to die immediately when . . . we can get no more whisky.'

In my opinion, the amendment is a mistake since the Constitution is no place for a measure of this kind. The conditions it was designed to remedy have developed others of a far worse nature in which no one seems concerned. Finally, the Government has lost the income from the revenue taxes and has doubled this loss by enforcement expenditures, to pay which additional taxes have been laid.

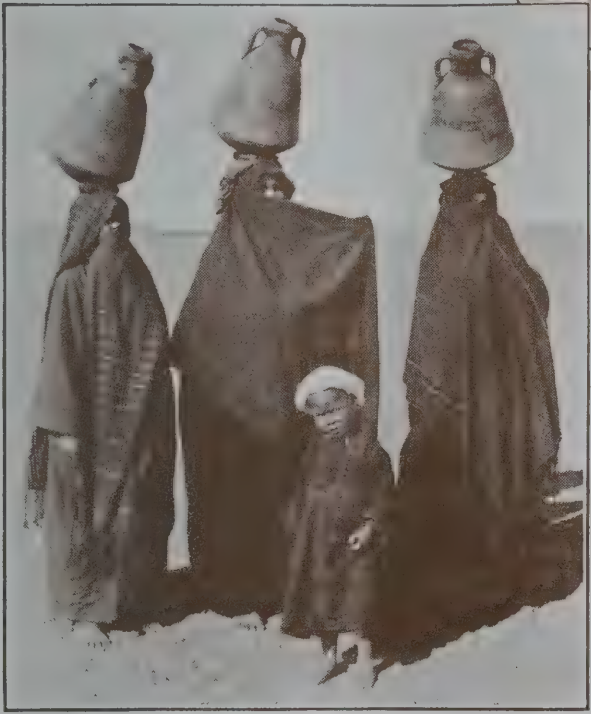
H. K. LANDIS.

EVERYDAY LIFE *in* Foreign Lands

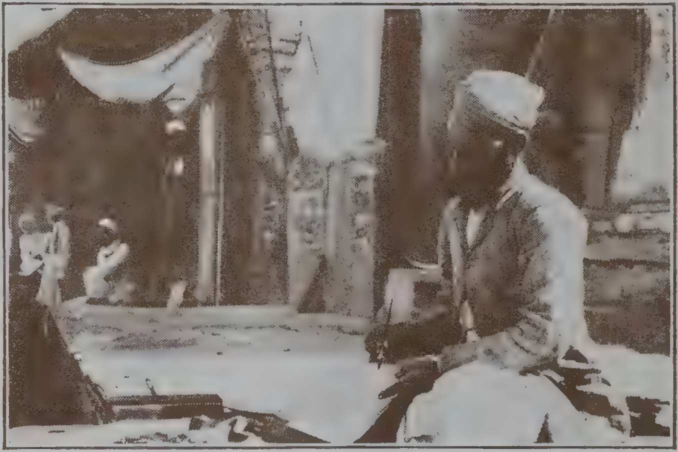
Customs *and* Costumes Change Slowly *in* Orient



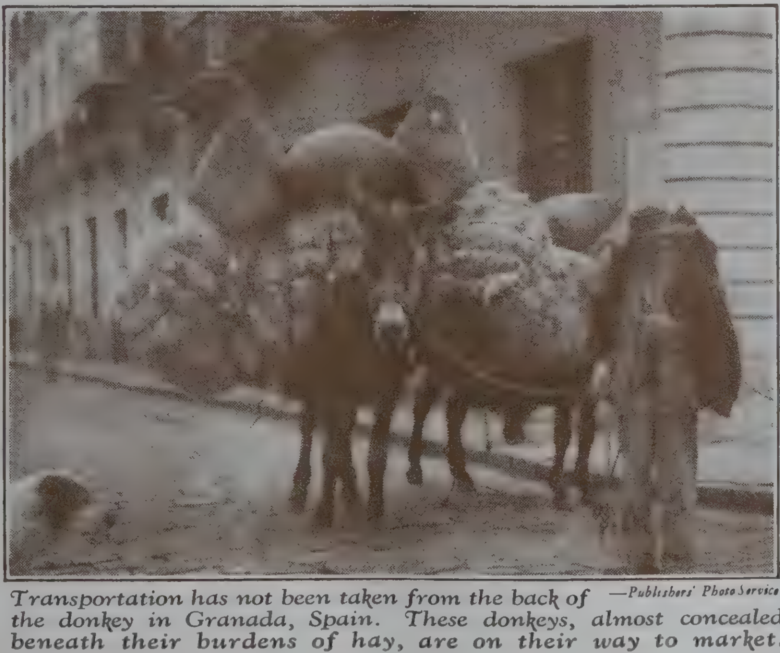
Even mutton is sold in the street in Mosul, Mesopotamia. Shoppers become exacting under such conditions, which prevail in many parts of the Old World. —Underwood and Underwood.



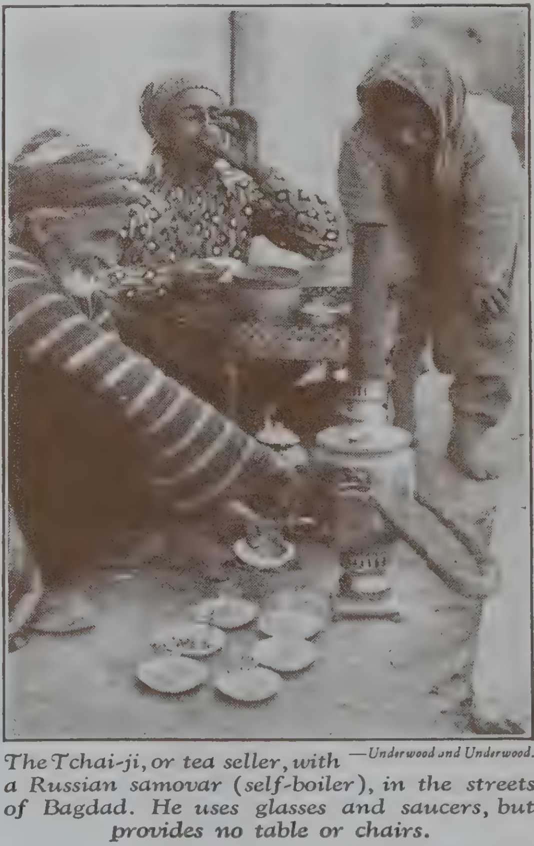
Women water carriers of Luxor, Egypt, manage to 'wear' their water jars at rakish angles. Their costumes change little from generation to generation, and they modestly withdraw from the gaze of strangers behind the protection of their shawls, while the child gazes with frank curiosity. —Herbert.



Workers and merchants of India persist in their time-honored ways. This banker of India is drawing up his balance sheet. Only the pen evidences modern progress. —Herbert.



Transportation has not been taken from the back of the donkey in Granada, Spain. These donkeys, almost concealed beneath their burdens of hay, are on their way to market. —Publishers' Photo Service.



The Tchai-ji, or tea seller, with a Russian samovar (self-boiler), in the streets of Bagdad. He uses glasses and saucers, but provides no table or chairs. —Underwood and Underwood.

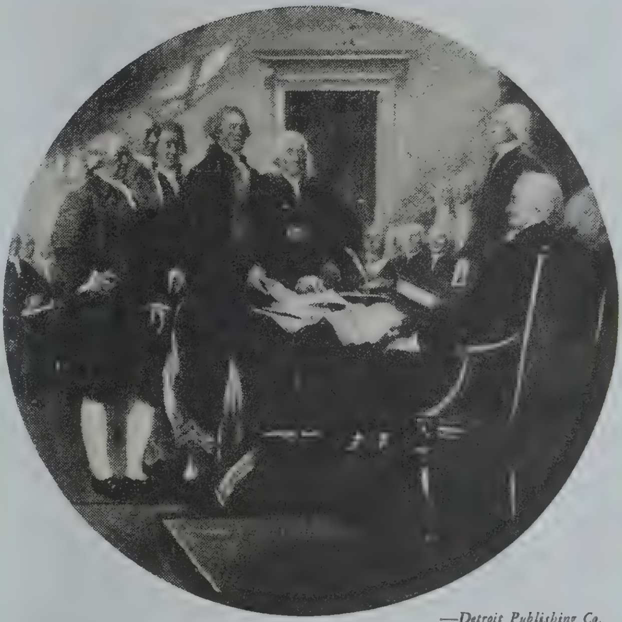
BENJAMIN FRANKLIN—Greatest American

By
AARON HARDY ULM



—Detroit Publishing Co.

Franklin and Revolutionary patriots drafting the Declaration of Independence. After the painting by John Trumbull in the Yale School of Fine Arts.

> *HERE are some reasons given by Mr. Ulm for rating Franklin as the greatest of all Americans, and undoubtedly entitled to rank among the greatest men that have lived:*
>
> *1. The expression of his greatness did not depend on events beyond his control.*
>
> *2. He would have been a great man in any period of the world's history, in any land.*
>
> *3. He would have been among the great even if his endeavors had been confined to one only of several lines of activity in which his achievements were of the highest rank.*
>
> *4. He would be a great man if he were living today.*

AMERICANS were rather amused some time ago by a cabled dispatch telling of a celebration in the little fishing town of Auray on the French coast. The celebration, done with great spirit, was of the 150th anniversary of the landing on French soil of Benjamin Franklin as the representative of the American Colonies in revolt against Great Britain.

It was not because of Franklin's mission that the day was celebrated; others on a like errand had arrived ahead of him—and are forgotten. The celebration was because of Franklin's high place, then and now, in the esteem of the French people, a place that ranks near the top of those dedicated to greatness.

Tuesday, January 17, is the anniversary of Benjamin Franklin's birth. It will be celebrated as usual in America but not as the anniversaries of several other great Americans are observed. Those of Washington and Lincoln have become national events. So has Thomas Jefferson's in a measure and somewhat similarly Alexander Hamilton's. Theodore Roosevelt's and Woodrow Wilson's are bidding for places in a like category of observation. In the South the anniversaries of Robert E. Lee, Stonewall Jackson and Jefferson Davis are widely and formally celebrated every year. But on Franklin's there is no oratorical deluge, no huge banquets, and little of that solemnity which marks the celebrations of the anniversaries of other great Americans. We are inclined to smile when reminded of the great reverence shown in France and other quarters of the world for the man who on many counts might be rated as the greatest this country has produced.

The last statement, I suspect, will provoke question among some who read it. Benjamin Franklin a greater man than George Washington or Abraham Lincoln! The assertion many will be inclined to say is ridiculous! But if put forth anywhere in the world, except the United States, it would not be so considered.

There is naturally no exact standard by which human greatness can be measured or compared. Few persons, no matter how well informed, could agree on who are the twelve or twenty greatest men of all time. But a large number would include Benjamin Franklin. It is probable that outside the United States Franklin would be named more than any other American as among the few greatest men of all time.

With all reverent recognition of their greatness, it is nevertheless admitted that but for the Revolutionary and Civil wars the names of George Washington and Abraham Lincoln would be barely remembered today. Thomas Jefferson might have gained some renown as a philosopher; Alexander Hamilton might have stood out as the ablest lawyer and public administrator of his day. But their figures would not have loomed nearly so large, except for the events on which they grew.

Franklin was known throughout the world as a great man long before the Revolutionary War, in which he played a part as big as that taken by any other great man of the period.

As philosopher and scientist he would have taken his stand among the immortals at any time, anywhere; for this side of Franklin was wholly an evolution from within. With scant formal education, he developed as a philosopher and a scientist in a land where at that time everything weighed against original inquiry and expression. When he was born there was not a library worthy of the name in all the country. He helped his brother start the second newspaper published in the country. In most of the Colonies there was not even a printing press. Yet he became a truly great scholar and was recognized as such by even the University of Oxford in England.

It is as a philosopher and scientist that he is still first thought of. But it is doubtful if there has ever been a more capable politician and diplomatist.

And as a writer he ranks truly with the most renowned. He was not artist; much of his writing, as mere writing, is mediocre; but he was the author of the one American book, his *Autobiography*, which undoubtedly ranks with the classics. And his epigrammatic proverbs have imbedded themselves in the speech of man as fully as those of Aesop.

He ranks with the foremost of philanthropists, not because of monetary gifts but on account of the practicality and endurance of institutions he founded. He is the father of the public library, the city police and fire department systems of American cities, the public hospital and, in part, the state universities.

What might have been his contributions to the practice of medicine would have put Franklin close to Galen and Harvey but for the fact that these gifts were far ahead of his time. He showed, a century and a half before the truth was accepted, that fresh air in plentiful quantities can hurt no one whether ill or well.

Then he was one of the most capable business men and might have been, as such, among the very greatest but for the fact that he retired from business, but not from activity at the age of forty-two, the possessor of a comfortable fortune honestly earned.

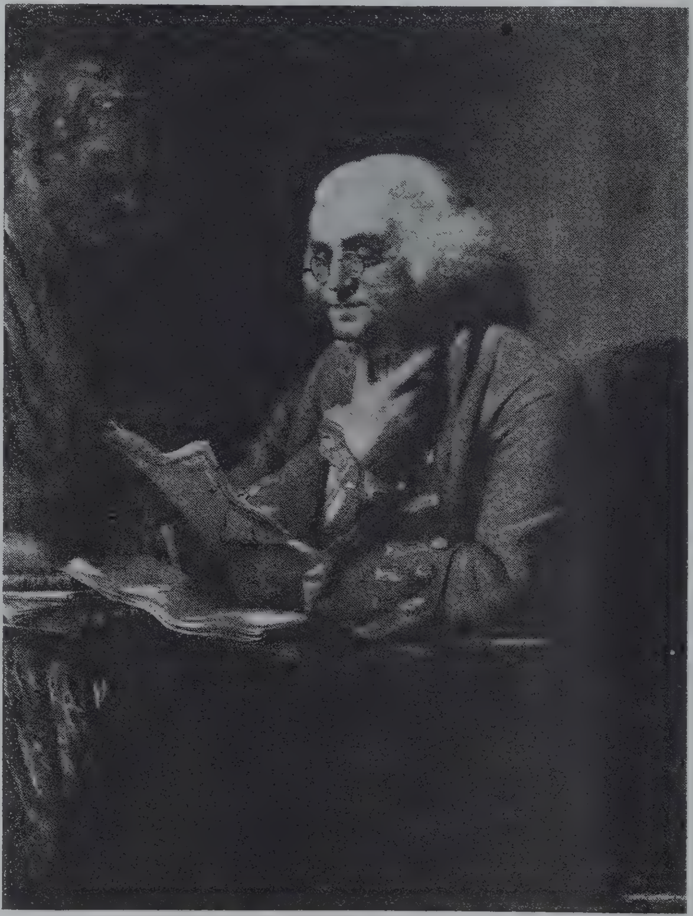
'Half-peasant and half-man of the world,' as someone has described him, Franklin was perhaps the first typical American, though he was born of an immigrant father; and he would be a typical American if he lived today.

Benjamin Franklin would not be an oddity at a Rotary Club luncheon, a meeting of a scientific body, a political campaign meeting, or elsewhere, today.

'If to be venerated for benevolence, if to be admired for talents, if to be esteemed for patriotism, if to be beloved for philanthropy, can gratify the human mind, you must have the pleasing consolation to know that you have not lived in vain,' wrote Washington to Franklin in 1789.

It was to Franklin that virtually everybody of his time deferred. He probably looms no bigger in the national concept now than he did during his lifetime. In some ways he has been honored equally with Washington. His name, given to towns and counties, is spread over the map of the country. It came near being given to a state; when informally organized what is now Tennessee was called the State of Franklin. It is estimated that there are more than a thousand formal monuments to him in this country. None is more appropriate than the bust set up in Paris shortly after his death and bearing the single word 'VIR'—that is, 'MAN.' But there are no great Franklin memorials as to Washington and Lincoln.

In the common mind the image of Franklin is clearer probably than that of any other American long dead. A reason for this is that his life, redolent of human interest, is more 'readable' than that of any other, and it is perhaps the best known. Data bearing upon it are unusually abundant.



—Detroit Publishing Co.

Benjamin Franklin, by David Martin. After the painting in the Pennsylvania Academy of the Fine Arts.

The facts of worth about Franklin are so multitudinous, the background of his entire life so varicolored, his activities distributed in so many diverse fields, that no one has been able to present a really full-length portrait of his gigantic and many-sided figure.

Librarians say, however, that books about Franklin rank with ones about Lincoln in general popularity. All of the books about Franklin are interesting, for the reason, if for no other, that his story is such a good one that it can't be spoiled utterly in the telling. It is so easy to get an oversupply of interesting facts about him that no one has dug deeply for new ones.

Every Franklin historian has refrained from setting forth some facts of record. In Russell's biography there is documentary matter, which, though available, was excluded from other books of the life of Franklin. Even Senator William Cabell Bruce, in his *Benjamin Franklin Self-Revealed* hurries past some episodes in the life of this great man.

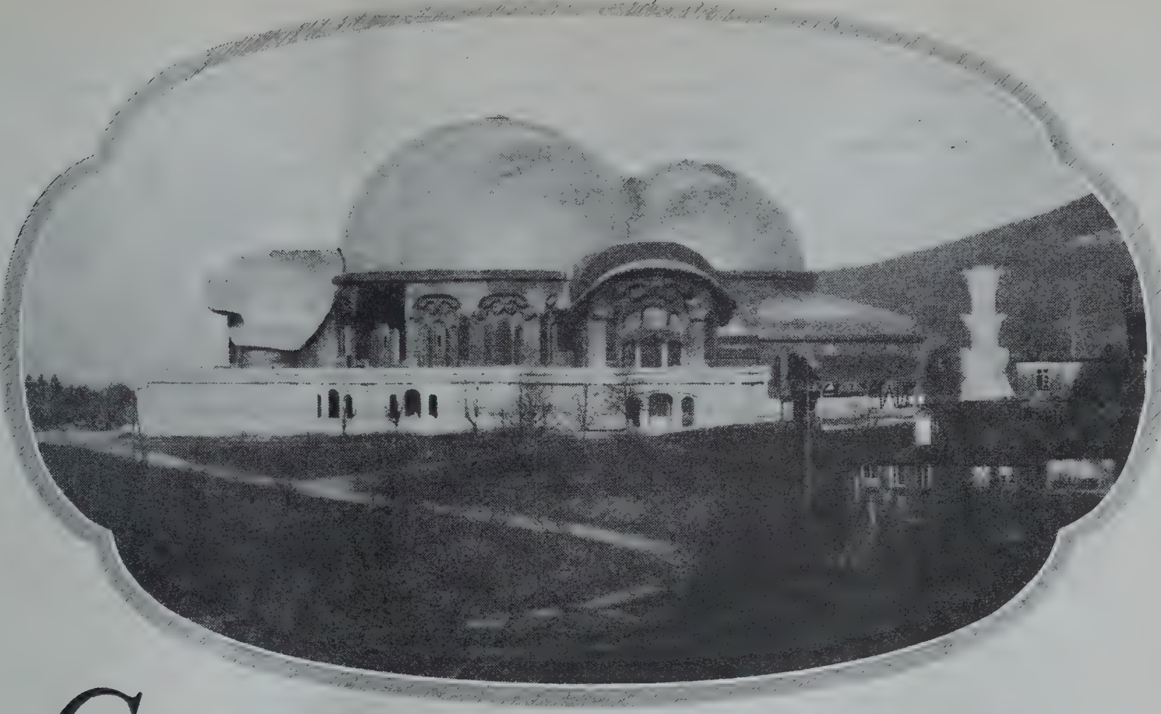
Yet Franklin's greatest offense seems to have been nothing more than refusal to resort to hypocrisy. His private life was not at all times saintly. It was marked by the characteristics of his times, just as the lives of the scriptural patriarchs were. But he acknowledged and recorded his errors and made amends openly for them.

It is hardly because of the 'errors' of his private life that the highly respectable have refused to accept Franklin except by a sort of disinfecting process. It may be largely because of those 'errors' that his memory keeps fresh in the minds and hearts of the common run of folk. They prove his humanness.

Some students believe that the subordination, so to speak, of Franklin has owed chiefly to his alleged religious scepticism. Unusual intelligence in religious thinking has always passed for scepticism. Franklin was the friend and supporter of churches and clergymen—among the last, George Whitfield, one of the founders of Methodism.

What probably has had most to do with keeping Benjamin Franklin from being celebrated with the pomp that attends anniversary and memorial honors paid to several other Americans is the philosopher's sense of humor.

For to the other several kinds of great man that Franklin was may be added that of humorist. It is impossible to conceive of a scientist's cracking jokes about his own discoveries, as Franklin often did, or of a statesman's finding provocation for humor in an occasion as solemn as the signing of the Declaration of Independence, celebrated by Franklin with his remark about our hanging together or all hanging separately.



The GOETHEANUM—A Building That Has Grown—

By O. HENRY FREDERICK

DEVELOPMENT of the natural sciences since Darwin published his *Origin of Species* has for the first time really made clear the difference between a living being and a mineral. People used to say that the difference between a plant and a stone is that the plant grows whereas a stone does not grow. But when the matter is stated in this fashion it does not quite correspond to the facts. For rocks in the interior of the earth, where they are undisturbed, do grow in size.

Every high school boy who has made the experiment of letting salt crystallize from solution knows that the crystals will grow in size the longer he lets the salt solution remain undisturbed. Accordingly, we do not say today, in an offhand way as people formerly did, that the difference between a plant and a rock is that a plant grows and a rock does not. We are careful to say that the difference between a plant and a rock is that the plant takes up its food into its own self, and then builds itself up from within—or, as the scientist says, the plant grows by intersusception. Whereas the rock grows by having layer upon layer added to itself from without—that is, it grows by accretion.

Everybody today knows this elementary distinction between an organism, whether plant or animal, and an inorganic body. That this fundamental distinction, which very few people knew one hundred years ago, is today a commonplace of knowledge, is due to the marvelous development of the natural sciences and to the teaching of our public schools.

But it is remarkable that the great discoveries of modern times have been made chiefly in the field of natural or physical science and have been applied to industrial and commercial life. In the arts we have no modern discoveries as yet. Therefore the arts are in a condition of stagnation. Many attempts have been made to lift the arts out of this condition of stagnation, as witness the movements known as futurism and cubism, but all have been without success. The arts are on dead center.

A dozen years ago prominent American architects pointed out the fact that the architecture of today consists in covering one material with a second to imitate a third which would not be desirable if it were real. And this condition of bosh and sham characterizes the state of affairs in the other arts as well. And we shall not get out of this condition until the men appear who are able to fructify the arts with discoveries in their field comparable to the discoveries that have been made in the natural sciences.

The first of these great discoveries for which the whole artistic world is impatiently waiting has already been made, in the opinion of many artists, in the Goetheanum—a building that Dr. Rudolf Steiner is erecting in Switzerland.

Forty years ago Doctor Steiner gave to the world a message somewhat after this fashion. When one considers the various styles of architecture that have been or that still exist, one finds that they all have a common principle. A Babylonian palace, an Egyptian pyramid, a Greek temple, a Gothic cathedral, all have a common principle of construction. We may term the principle of construction common to all these architectural forms and styles the geometric or crystalline principle.

Now if, tired of the old, we create a new 'style' in architecture, as is done today, by mixing up all these styles or by selecting particular features from two or more styles, we have merely done what the

SPAIN Under *the* DICTATOR

By OUR EUROPEAN CORRESPONDENT

ON THE surface, Spain is today the most prosperous country in Europe. The outward evidences of prosperity are numerous. The great cities of Barcelona, Valencia, Seville, and Madrid are building fine boulevards, expensive residential sections, and numerous modern office buildings. American automobiles are found in considerable number, together with a fair representation of the luxurious cars of European make. Well-dressed people throng the streets of the cities and the omnipresent cafés are crowded with patrons. The city stores make attractive display of high-priced goods. This apparent prosperity has induced a number of American manufacturers to engage in an active advertising campaign, believing the market prepared to receive American goods.

Indications are numerous that the prosperity of Spain is not as yet established upon conditions which make for permanence. From the American point of view, the sixty per cent of illiteracy indicates a vital weakness. In this land of high prices, the handworker receives a wage approximating two dollars a day; many receive less. The majority of artisans receive less than a dollar and eighty cents a day; while weavers, hat makers, and watchmakers get less than a dollar a day. In recent years the per capita consumption of meat and sugar has fallen off, indicating the lowered standard of living occasioned by the high prices of foodstuffs. Large numbers of beggars and the prevalence of the lotteries, which are run by the state, are symptoms of an unhealthy condition. An adverse trade balance continues and equals one-third the total of all goods exported.

The most serious obstacle to any real, continued prosperity in Spain is the exploitation of the worker by the industrialist and the merchant. Neither the industrialist nor the merchant is appreciative of the fact that producer and consumer are one and the same person. Prosperity for the producer will spell prosperity for the consumer.

The merchant has not the slightest comprehension of the fact that real prosperity is built upon large sales with a small margin of profit. He expects to receive two or three times what he pays for the article he sells. American cigarets are sold by the Spanish Government for about six times what it pays for them. Even at that, the number sold is restricted since their sale diminishes the number of Spanish cigarets sold, and these bring a profit of more than ten times the cost of production.

—H. Armstrong Roberts.

Spanish peasant leading his small herd to pasture in the Pyrenees region.

Cigaret smoking is national. Clerks and officials in banks smoke constantly during office hours. The same is true of the beggars, who smoke while plying their trade. On the other hand, women smoke in public very little as yet. This may be because it is only recently that women have been permitted to frequent the cafés.

In the exploitation of the worker by the merchant and in the exploitation of the buying public by the manufacturer, high tariff plays a leading rôle. America is commonly cited as a country with a high tariff barrier. Yet Spain receives approximately thirty-five per cent in customs duties upon all goods imported, while the United States receives but eleven per cent.

The Spanish tariff is most effective in raising prices, while with us internal competition largely nullifies the benefit which might accrue on account of the tariff. In Spain there are really only two producers of steel, and these two have a working agreement. Tobacco and sugar are monopolies. The textile plants are too few in number to give real competition. The result is that manufacturers are able to take full advantage of the tariff, raising prices far above what could be obtained in free competition with other European countries. For the most ordinary household commodities the Spaniard pays more than does the Frenchman.

Out of every four mercantile establishments in Spain, one is a bar, a café, or a confectionery-and-pastry shop. Coffee drinking is a national habit. From five to eight o'clock in the evening the cafés are crowded with people, taking almost invariably coffee with hot milk. These cafés and bars are not an asset. Every day you may see the same man or the same group of men sitting for hours in a café, doing nothing more serious than drinking coffee and visiting.

During the dictatorship of Primo de Rivera a serious effort has been made to modify the adverse trade balance of Spain. Importations amounting to about three billions of pesetas (500 millions of dollars) in 1924 have fallen off more than one-fourth while exportations have fallen off only one-tenth. However, it must be noted that a portion of the decrease in importations was due to the fall in prices.

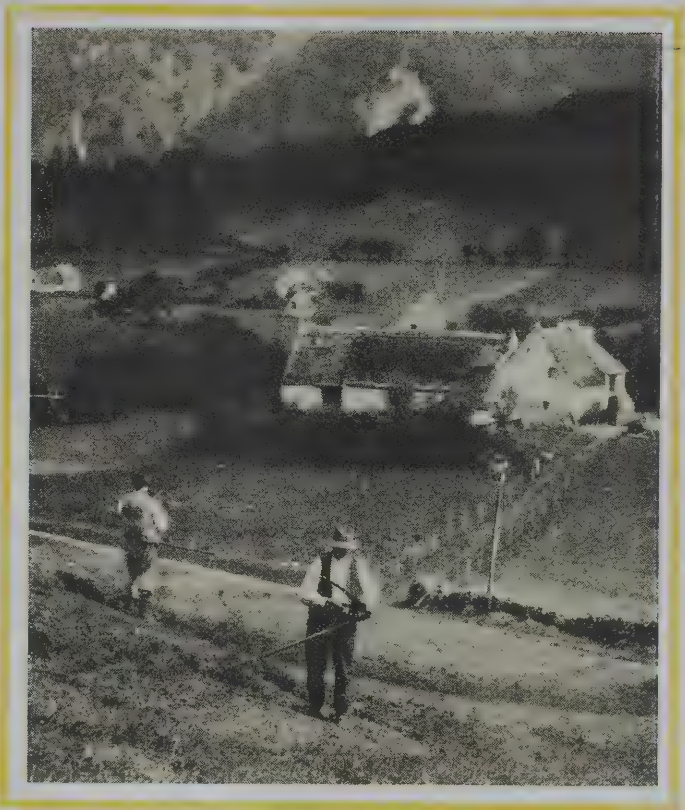
The quantity of goods imported has

fallen much less than the money total indicates. On the other hand, the quantity of goods exported has also dropped materially. The probability is that the adverse trade balance may continue for some time.

With the aid of the state, Seville put sixty millions into exposition buildings, intended primarily as a kind of gesture of love and affection to South America, hoping to revive in some measure the trade with that continent. The United States was invited as a kind of after-thought, in the hope that its participation would stimulate a greater interest on the part of the South Americans. However, while the South Americans are strong on speeches concerning love and affection for the mother country, when it comes to buying they seek the best market, without regard for sentiment.

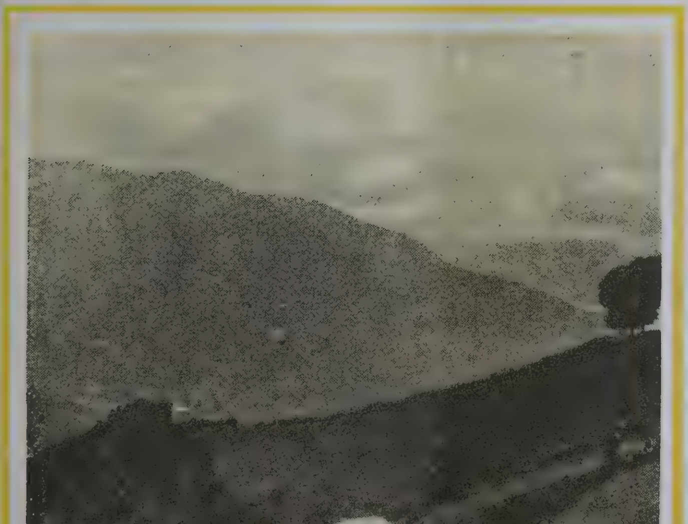
THE apparent prosperity of Spain is in large measure due to the wealth accumulated in three centuries of colonial exploitation. No statistician has been able to make any accepted estimate of the amount of gold and silver brought into Spain from the New World. This exploitation of the colonies, however, has enriched hundreds and even thousands of Spanish families. There is far more wealth in Spain than is on record. This wealth is limited to a comparatively small proportion of the population, with little tendency to descend to larger groups. The number of families that can afford to buy automobiles or other American luxuries is fairly stationary, far more stationary than in England or even in France.

In the next few years automobiles for pleasure driving are not likely to increase greatly in number in Spain. Small trucks will have more of a field. It is fairly evident even in Spain that time is money. The humble burro does his work well, but it is economically wasteful to wait upon him. Similarly it may seem picturesque to see a man carrying three steamer trunks on his shoulders, supported by a strap across his forehead, but there is a waste of human life in this. Trucks are coming in, and the picturesque burros are going out. Spain will be in a far more healthy condition when a truck is employed to move a sideboard, rather than the shoulders of a man.



—H. Armstrong Roberts Photos.

Farmers near Bagnere-de-Luchon in the Pyrenees. Improved farm machinery is not often seen here.



Spanish peasant plowing with team of oxen and homemade implement.

The prosperity of Spain is more apparent than real. Not before there are schools and school-teachers for all the children; not before the beggars are taken off the streets; and not before the workmen have some slight participation in the amenities of life, will real prosperity come to Spain.

Entirely aside from the facts outlined above another element of uncertainty is furnished by the dictatorship. While Primo de Rivera has given Spain the best government it has had for many generations, it is obvious, in the nature of the case, that the dictatorship must terminate. When it does, and however it does, there is likely to be a disturbance.

One cannot fail to be impressed by the simplicity and happiness of the poor folk of Spain. The rise and fall of government seems to be of small concern to them, so long as they can tread their dance or drink their coffee without interference. The veneer of civilization seems a long way off—they are today as yesterday, and just as contented.

From this viewpoint, one wonders whether after all the ignorant Spaniard, even such as are poor as church-mice, may not be prosperous in happiness and largeness of living. The ready smile of the Iberian underling is not that of a downtrodden, helpless individual; it is not the smirk of the Russian. It is rather the reflection of the easy nature of the Latin—Caesar, Mussolini or Primo de Rivera may dictate all they please, so long as the populace is happy and the games can go on.

It is unfortunate in some ways that a pleasant land like Spain should have any politics at all. It is unfortunate that the cares of a workaday world must intrude themselves, or that, while the sun shines today, we must think of a possible storm tomorrow. Trade balances are unpleasant things at best—full of dry statistics and meaningless figures which only get one all mixed up—entirely unnecessary and most regrettable when the skies are blue, the white clouds are floating like great ships above the clear-cut peaks; and the sun is, oh, so very friendly.

The Little Big VIOLA

By CLYDE WEIR

I WAS standing one evening in the office of a small hotel in a city in the Michigan Copper Country, waiting for my taxi. I had with me as usual my cello, the lower end of which was resting comfortably on the floor, while the upper end served as a rest for my hands. Suddenly a native walked up in front of me and, giving the cello a friendly kick in the back, called out to me: 'Hello, what are you doing with that old bull-fiddle? I used to play one at dances thirty years ago.'

It was well for my cello, which I would not have exchanged for the finest automobile in the world, that I had it encased in a stout sole-leather case, or today it might be wearing the scar of such a robust greeting. But the stranger evidently thought that such things were made to be treated roughly; for when I suggested that the instrument was made to be played and not to be kicked, he replied facetiously that his had stood up well under both treatments.

His was the general attitude of the public toward the most noble member of the violin family. It is large: therefore it may be roughly handled. Its very name expresses ridicule, or an ill-concealed contempt. It is an old bass, a dog house, a bull-fiddle—something grotesque and grim that fills, somehow, a need in the orchestra, but reflects little credit on the man who has to carry it around. Even Voltaire let his satire get the better of his appreciation when he said to Servais, the greatest cellist of his age: 'Sir, I now believe in miracles, for you have just made an ox sing like a nightingale.' For most of us it is merely an ox.

But in spite of the attitude of the public at large, the violoncello is second in importance to the violin alone; and for nobility of tone and the cry of humanity it actually surpasses the so-called king of instruments. Its very origin is analogous to that of the violin. For the violin came into being because its prototype, the viola, could not voice the upper range of the new music. Its voice was not for the heights. So the instrument makers came forward with the *little* viola, the violino, which is capable of soaring higher than the ear can follow.

Then the composers, who showed, even as now, little consideration for the players, after humiliating the violas, turned their attention to the basses, and wrote parts for them that on the huge unwieldy violones were impossible for any but a Dragonetti or a Koussevitzky to play. A second time the instrument makers came to the rescue, this time evolving the violoncello, or little *big viola.* The second venture was as successful as the first, and has provoked the building up of a technique that enables a virtuoso to enter into almost direct competition with the violinist on his own ground.

But the merits of the violoncello did not win it immediate success. It had a strong rival in the aristocratic viola da gamba that was not overcome in a day. The gamba belonged to the more primitive viol family; it had a flat back, sloping shoulders, an arched top, and sound holes shaped like the letter C; it was strung with five or more strings, and had a very characteristic penetrating nasal tone. In this contest the violoncello finally won, partly because of the quality of its tone, which is richer and more vocal than that of the gamba, and partly because of its power, which greatly surpasses that of the gamba; for in the evolution of musical instruments weak voices give place to strong, the survival of the fittest being the survival of the loudest.

In appearance the violoncello closely resembles the violin. The differences in its curves would be noted only by an expert who had given them critical attention. The most noteworthy difference is in the relatively greater depth of the sides. For although the body of the cello is in length but twice that of the violin, its sides are between four and five times as deep. The number of parts that make up the two instruments is the same, while the amount of care and skill required to produce a fine cello is as great if not greater than that expended on an equally fine violin.

THE vibrations of the cello are slower than those of the violin; they are, as it were, magnified, so that any inequality of tone is easily detected. And if inequality of tone is due to some carelessness or inexactitude in workmanship, the instrument becomes a noisy and insistent accuser of its maker. In addition to this extra care that is necessary in building the larger instrument, its builder has to expend upon it about four times as much work as he would have to expend in the production of a violin of similar grade.

The size of the violin early became standardized. Its body measures approximately fourteen inches in length, while its length of string from bridge to nut is approximately thirteen inches. If an old specimen is found to have an incorrect length of string, the fault is usually corrected by lengthening the neck or slightly changing the position of the bridge. But this is not the case with the cellos. They come in all shapes and sizes. Even Stradivari seems to have been undecided as to the ideal size. He made some quite large, while others he made smaller than the size that players today consider most desirable. The tendency of many of the great masters was to reduce the size as they became more experienced. Many of the large specimens left by great masters have suffered the irreparable misfortune of being cut down by fools who thought themselves wiser than the wisest. Even Carlo Bergonzi and Stradivari himself have been more than once thus insulted.

IN LENGTH of body cellos vary from twenty-seven to thirty-three inches, and in length of string from twenty-six to twenty-eight inches. Today the tendency of the best French makers seems to be to follow the larger dimensions, while that of the German and American is to favor a smaller model. Soloists seem to prefer an instrument that measures about thirty inches in length of body and 27.5 in length of string. Certain virtuosi, notably Casals, recommend a smaller model; but the market, except in the case of notable instruments, demands what is known as the full-sized model. The reason is partly taste, which is dominated by the dealers, and tone, which in large measure is a matter of the imagination.

But there are some differences that the careful student may notice. A short instrument is apt to give relatively finer tones on the *A* and *D* strings and poorer tones on the *C* and *G* strings; while in the case of longer instruments the opposite may be true. But many instruments break all theories and laws.

The range of the cello voice embraces the four singing voices of the vocal world. The *C* string represents the bass voice, the *G* the baritone, the *D* the tenor, and the *A* the lower and higher soprano voices. What differentiates the cello from other instruments as well as from the human voice is the thickness and rotundity of its tone. For example, an air played on the violin *G* string may be played on the cello *A* in about the same position on the finger board. That is, the highest string on the cello, when played open, is within one tone of being as low as the lowest string on the violin. But the quality of tone is very different indeed.

MOUNT PROSPECT *and* Historic Hagerstown

By WALTER CONOVER

ONE may observe a sign in the Pennsylvania Station, in New York, displaying the following notice: Trains for Philadelphia, Harrisburg, Hagerstown and the South.

Hagerstown has become in very truth the 'gateway to the South,' having risen from the obscurity of an inconspicuous outpost in the early days to its present place of the third largest city in the State of Maryland.

And Hagerstown is still growing rapidly. It is adjacent to the large coal and lumber fields in Maryland, Pennsylvania, Virginia, West Virginia, and the Carolinas. It is surrounded by a rich, highly productive agricultural country, the Cumberland Valley.

In the early days this section of the country was still inhabited by Indians. The Catawbas came up from the Carolinas every spring for their annual encounter with the Delawares who made the western part of what is now Maryland their home. Jonathan Hager, a pioneer, had founded a small settlement which was given the name of Hagerstown in his honor; these settlers probably banded together as a safeguard against the marauding Indians.

Homes in this period were made of strong, stout materials, and one of the most interesting to stand the test of time is 'Mount Prospect,' completed in 1789. It is situated on a high hill overlooking the city. This home was the property of Colonel Nathaniel Rochester, first president of the Hagerstown bank, and a close, personal friend of Henry Clay. Clay married a Hagerstown girl, Lucretia Hart, daughter of Thomas Hart, Colonel Rochester's business partner and an uncle of the great orator, Thomas H. Barton.

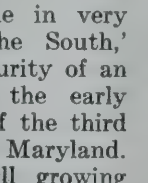
'Mount Prospect' was at one time in the suburbs of Hagerstown; today it is in the heart of the city, only one block from the business center. In Colonel Rochester's time, a home had to be more than a man's castle; it had to be an arsenal as well. There is still a centrally located gun closet, where all the guns were neatly stacked in racks, so that in case of sudden attack from Indians, each person should know where to go for firearms. The outside doors of the house are of double thickness, and have handmade hinges that run across the whole width of the door and are secured with wrought-iron nails. In addition to the regular heavy handmade locks, every door has a handmade bolt, and an iron bar that runs across its width. The window shutters have the same three fasteners of lock, bolt and bar, which, with the thick walls, make the house a fort against all attacks.

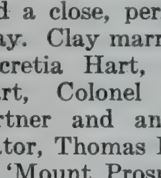
Colonel Rochester in 1810 trekked to the Genesee Valley, New York, where he founded the city of Rochester. During the time he lived in Hagerstown, he operated flour and nail mills. He was respected and beloved by all, and his departure caused sincere regret.

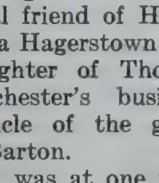
After Colonel Rochester left 'Mount Prospect,' the house came into the hands of Upton Lawrence, who married Elizabeth, the granddaughter of Jonathan Hager, and the only daughter of Jonathan Hager, Jr., and Mary Madeline Orndorff. Jonathan Hager, Jr., died when still a young man; his widow, a very attractive woman, was courted by General Horatio Gates of Revolutionary War fame, but she rejected him, together with several other suitors, and finally married Captain William Lewis, a prominent man in his time.

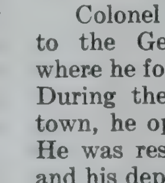
Upton Lawrence and his wife Elizabeth raised nine children; and some of their descendants, the Brents and the Keysers, are today living in Baltimore, prominent in social and financial circles.

'Mount Prospect' then passed into the hands of the Patterson (Continued on page 24)







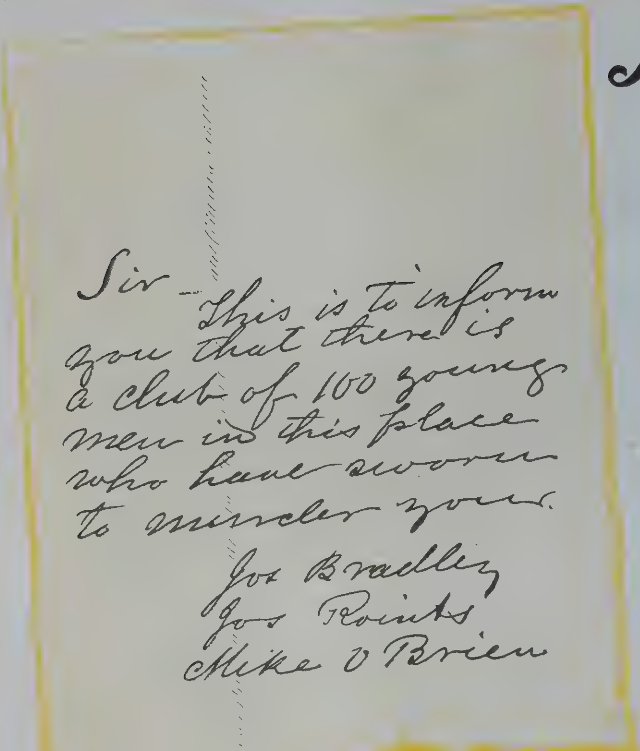


ABRAHAM LINCOLN

Some Hitherto Unpublished Correspondence

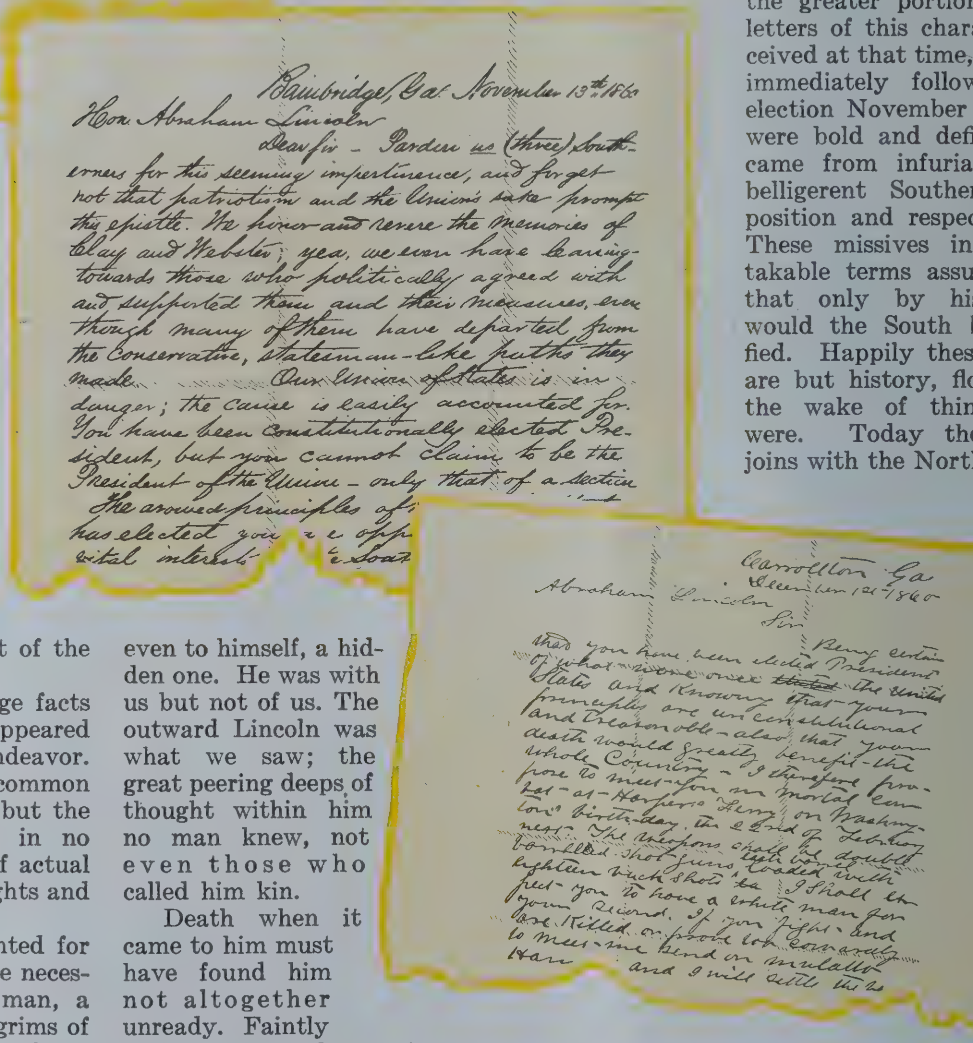
By DAVID HERRIOTT

Left—'Sir—This is to inform you that there is a club of 100 young men in this place who have sworn to murder you.'



Sir – This is to inform
you that there is
a club of 100 young
men in this place
who have sworn
to murder you.
Jos Bradley
Jos Roints
Mike O'Brien

Below—Beginnings of letters from Carrollton and Bainbridge, mentioned in this article.



Bainbridge, Ga. November 13th 1860
Hon. Abraham Lincoln
Dear Sir – Pardon us (three) South-
erners for this seeming impertinence, and forget
not that patriotism and the Union's sake prompt
this epistle. We honor and revere the memories of
Clay and Webster; yea, we even have leaning
towards those who politically agreed with
and supported them and their measures, even
though many of them have departed from
the Conservative, statesman-like paths they
made. Our Union of States is in
danger; the cause is easily accounted for.
You have been constitutionally elected Pre-
sident, but you cannot claim to be the
President of the Union – only that of a section
The avowed principles of
has elected you
vital interests

Carrollton Ga
December 12th 1860
Abraham Lincoln
Sir
Being certain
that you have been elected President
of what was once ~~stated~~ the United
States and Knowing that your
principles are unconstitutional
and treasonable – also that your
death would greatly benefit the
whole Country – I therefore pro-
pose to meet you in mortal com-
bat at Harpers Ferry on Washing-
tons birth-day the 22nd of February
next. The weapons shall be double
barrelled shot guns each barrel loaded with
eighteen buck shot &c I shall ex-
pect you to have a white man for
your second. If you fight and
are killed or prove too cowardly
to meet me send on mulatto
Ham and I will settle the

A peaceful life:—to hear the low
of pastured herds,
Or woodman's axe, that, blow
on blow,
Fell sweet as rhythmic
words.
And yet there stirred within
his breast
A fateful pulse that, like a
roll
Of drums, made high above his
rest
A tumult in his soul.
—*Riley.*

SIXTY-two years ago, April 15, last, the mighty soul of Lincoln escaped from its earthly material bounds, liberated by the bullet of the assassin.

Lincoln is one of the strange facts of history. Unheralded he appeared upon the horizon of human endeavor. Humble in origin, one of the common people, educated in no school but the school of experience, trained in no university but the university of actual life, he rose to the supreme heights and died a Nation's deliverer.

Lincoln can only be accounted for by a belief in destiny, inevitable necessity. A Power higher than man, a Power as yet unseen by us, pilgrims of the night, controlled and directed the life and all the acts of this man of men. The tang of earth was in him but around his head was a halo of glory.

In him always beat the 'fateful pulse that, like a roll of drums, made high above his rest a tumult in his soul.' Lincoln's life, his inner life, was, even to himself, a hidden one. He was with us but not of us. The outward Lincoln was what we saw; the great peering deeps of thought within him no man knew, not even those who called him kin.

Death when it came to him must have found him not altogether unready. Faintly with the surrender at Appomattox it must have come to him—as it must have come to his great prototype, Moses, when at last he stood on lonely Pisgah's height—that his work was nigh completion. And as to Moses was vouchsafed a glimpse of the greatness of the coming Israel, so to Lincoln was vouchsafed one short glimpse of peace and a reunited Nation.

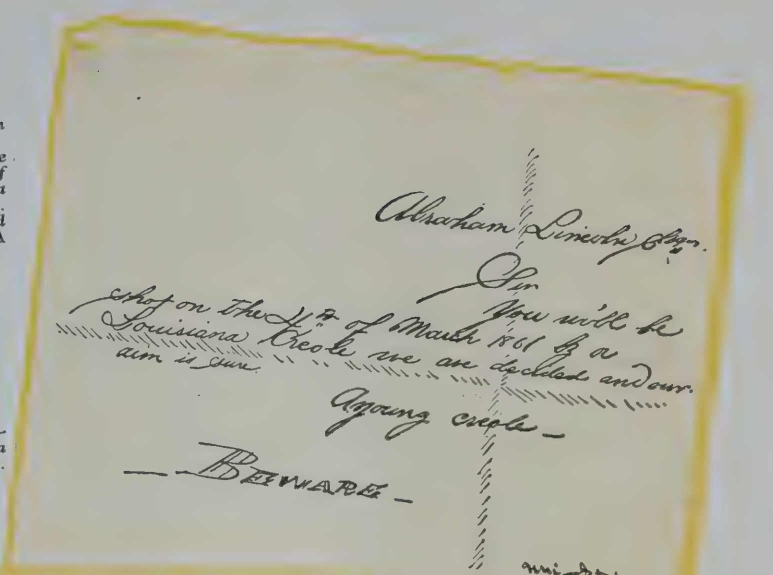
Long before Appomattox, however, Lincoln had had his thoughts directed toward the end. It is well known that even at the time of his first election, in 1860, his life had been repeatedly threatened. The tragedy of April 14, 1865, was simply casting its shadow before. These threats must have rhymed well with the dark forebodings and questionings which had always beset his life even from early manhood.

These threats were conveyed to him by means of many letters, some anonymous but others, and there were many, not so; in fact the greater portion of the letters of this character received at that time, namely, immediately following his election November 6, 1860, were bold and defiant and came from infuriated and belligerent Southerners of position and respectability. These missives in unmistakable terms assured him that only by his death would the South be satisfied. Happily these letters are but history, flotsam in the wake of things that were. Today the South joins with the North in revering the name of our Nation's Martyr President.

None of this correspondence has ever reached the light of publicity. The greater number of the letters was destroyed by Lincoln himself. Some of them he answered; this is made evident by his penciled notations made upon the few which escaped destruction, for oddly enough some half-dozen or so are still in existence, and it is the purpose of this article to speak of them and to furnish the actual text of several.

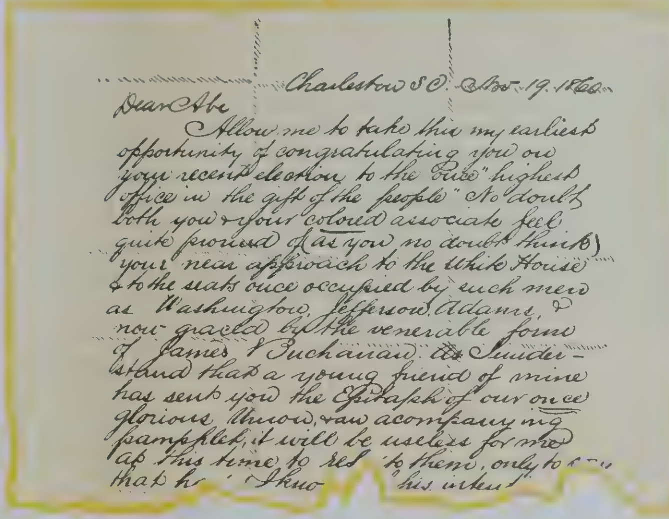
These letters fill a gap in American history, inasmuch as they clearly exhibit the close and individual contact the South had with Lincoln, the president-elect of 1860, thus covering an important stretch of the period leading up to the firing upon Fort Sumter a few months later. They are typical of the spirit which led to the four bloody years of warfare between the North and the South.

The history of these letters is curious and most interesting, furnishing a new story of Lincoln and one which portrays him characteristically and as we know him best.



Abraham Lincoln Esqr.
Sir
You will be
shot on the 4th of March 1861 by a
Louisiana Creole we are decided and our
aim is sure.
A young creole—
—Beware—

Right—'Abraham Lincoln, Esq. Sir—You will be shot on the 4th of March 1861 by a Louisiana Creole. We are decided and our aim is sure. A young Creole. Beware.



Charleston S.C. Nov. 19. 1860
Dear Abe

As I understand that a young friend of mine has sent you the Epitaph of our once glorious Union, & an accompanying pamphlet, it will be useless for me at this time to ref to them, only to
that h I kno his inten

Below—A stinging missive from a man in Charleston.

THE letters, which are privately owned, are veritable 'brands saved from the burning.' They were saved in this wise. Lincoln's law office as is well known was on the second floor of a building facing the public square in Springfield. Previous to his election it had been his wont to visit a carpenter shop in the basement of this building in quest of shavings with which to kindle the fire in his office stove. Shortly after the election these daily visits ceased, and, meeting Lincoln one day in front of the building, the carpenter asked him the reason. Lincoln replied that he no longer needed them and then added, 'I am using letters instead, letters from some of those Southern fellows, and they make fine kindling.' Interested, the carpenter next day took a bundle of shavings up to Lincoln and asked him if he wouldn't swap a handful of letters for them. Lincoln readily assented and the present letters are a portion of the handful.

The first letter is most courteous and eloquent in its statements and is signed jointly by 'Lew M. Griffin, I. I. C., Joseph Law and Alexr. N. Murphy.'

It reads verbatim as follows:

Bainbridge, Ga., November 13th, 1860.
Hon. Abraham Lincoln.

Dear Sir—Pardon us (three) Southerners for this seeming impertinence, and forget not that patriotism and the Union's sake prompt this epistle. We honor and revere the memories of Clay and Webster; yea, we even have leaning towards those who politically agreed with and supported them and their measures, even though many of them have departed from the conservative, statesman-like paths they made. Our Union of States is in danger; the cause is easily accounted for. You have been constitutionally elected President, but you cannot claim to be the President of the Union—only that of a section.

The avowed principles of the party that has elected you are opposed to the most vital interests of the Southern States. We of the South expect you as the representative of your party to act in furtherance of those measures as promulgated by Seward, Sumner, Wilson and others of like stamp. We have read their denunciations against us and our institutions. We have deemed their principles as impracticable; but no longer are their anti-slavery harangues a 'sounding brass and tinkling symbol [cymbal]'—they are reality—yea, operative in *our* midst. Can you blame the South for her opposition to you and your party's principles, when her very existence is threatened? *Can You*, Mr. Lincoln?

You know that this Union of States cost much gallant blood and goodly treasure. You know to what extent our common country has been an asylum to the distressed and oppressed of other nations—and now our and your country, with all its varied yet common interests, is overshadowed with gloom, financially, politically and commercially. The Union of late has been only in name, not in fact—and can we today even say it is a Union in name?

Mr. Lincoln—on the 6th inst. our Union in fact, in name and in common interest terminated its existence. Yet it seems to us there is yet a remedy that will restore all to wonted prosperity and the common weal of a great and glorious Republic! That remedy is: You refuse to act as President, and ask or request your Electoral friends throughout the Northern States, when they meet in the electoral college, to cast their votes for *John Bell* of Tenn. And *Edward Everett* of Mass. They are great, good and sound men, socially and politically. Such a course on your part will restore peace to our *now*-distracted country; drive Democracy from power; set up public virtue in place of vice; besides it would prove you a patriot and the friend of the Union and the Constitution; and further, it would show *you* respect the great interests of our country more than a four years' seat in the presidential chair.

We conjure you in the name of truth, in the name of patriotism, and in the name of all the trials which Washington and his Compatriots endured to secure the blessings of liberty we now enjoy; and in the name of the glory which bedecks our National escutcheon; yes, we conjure you for your own sake and ours to ponder seriously over this tedious and imperfect Epistle.

Meanwhile, hoping for a short reply and a copy of your speeches, the principles in which we hear you shall maintain as President, accompanying—We are your fellow-citizens and Henry Clay Whigs.

Yours Most Respectfully,
Lew M. Griffin, I. I. C.
Joseph Law.
Alexr. N. Murphy.

Upon the envelope which contained the preceding letter, and which was addressed, 'Hon. Abraham Lincoln, Springfield, Illinois (From Georgia),' were the following notations, 'Want Debates'—evidently in Lincoln's own handwriting—and 'Sent,' the latter not being in the same handwriting.

The next letter is of a different type. Its statements are entirely lacking in courtesy and its writer signs anonymously, using as a signature the abbreviation of his state, 'S. C.,' South Carolina. It clearly indicates even as early as November, 1860, the intention of the Southern States to secede.

Charleston, S. C., Nov. 19, 1860.
Dear Abe

Allow me to take this my earliest opportunity of congratulating you on your recent election to the once 'highest office in the gift of the people.'

Progress and the Moral Law

IT HAS been said on this Page that Progress tests the people. This idea is not doubted: indeed it is confirmed everywhere. But wherein does Progress test the people? Physically, in their muscles or their nerves? Mentally, in their brain power? These tests have been met and easily sustained—muscularly and nervously men are better equipped today, and brains are more than common, although a sustained and systematic use of them is not.

The records of the dooms that have overtaken progressive peoples do not indicate that they fell through physical or mental failure. They collapsed *morally*. 'Prosperity was too much for them,' as we sometimes say of individuals. Too much for them in what way? Too much for their moral balance; they could stand it physically, mentally, but they could not stand it morally. They went to pieces through their inability to permit the moral law to become constructively operative in their life, and the natural consequence was that it became destructively operative. That is one thing we know about the moral law: it operates *for* us if we will; *against* us if it must; but it operates.

> *THE right way is the only way, and the rightness of an attitude or method goes down through all its relations. Rightness in mechanics and rightness in morals are basically the same thing. Unless the parts of a machine are right, power cannot be delivered, service cannot be rendered. The only kind of precision that fits society together is that of morality, which is the science of right relations. We make no progress so long as we deny this. Our motive is not the attainment of some kind of goodness which is apart from life itself, but the attainment of inherent rightness so that this complex instrument which we call society may efficiently function.*

There exists in our day the pretense of a curious prejudice against any view of life that presupposes moral laws or values. It may be the word 'moral' that is objected to; it conveys a wrong meaning, and no wonder, so badly has it been misused. Like the word 'ideal,' the word 'moral' has been made to serve as the opposite of 'practical.' However, it is not the opposite of practical, for, until it is recognized as a basic element of the practical, what we call practical is of all things most impractical. For nothing 'works' unless it is right, whether it be a matter of machinery or of men. Unless the relations and proportions are right, they become ineffectual and self-destructive. Human relations are no exception to the rule.

The difficulty has been that so many people have thought that the term 'moral' meant something like 'trying to be good.' There is a very understandable and somewhat healthy protest against the idea of merely 'trying to be good.' Good for what?—that is the vital end of it. An average experience of men convinces us that there are many very good persons, undeniably good persons, who none the less are 'good for nothing.'

And again the term 'moral' carries with it a sense of sacrifice, as if the gain would be much larger or the opportunity more promising, if only one were not required to be so moral, so good. The ethical value is treated as if it diminishes the material value.

This is an entirely wrong view. Wrong, in the sense that it contradicts the facts. There are no material values where there are no ethical values. There was a word once spoken which throws light on this: 'Seek ye first the kingdom of heaven, and all these [material] things shall be added unto you.' That is in the Sermon on the Mount. It does not mean religiously trying to save one's soul and get it into heaven; it means what it says, the reign, the rule, the law, of the highest relations. Get that, work by that, and you have the world—a world without poverty, without injustice, without need.

Will the poverty and injustice and need of the world be a pressure to force us to adopt this law of the higher relations? If so, fortunate are we.

If not, it will be the ancient doom of those who failed to bring human interior progress up to a level with exterior progress. The human race is absolutely unnecessary to the existence of this planet, and unless experience enables us to progress in human relations and in the establishment of social systems which will 'work' in the equal service of all, the purpose of progress has failed.

So that when we speak of 'morality in progress' we mean the maintenance by man of his control of the situation, not his being overwhelmed by the situation. We mean that he shall mould progress to his highest concept of what is 'right' between man and man and of what will 'work' for the service of all; and not merely consent to be moulded out of moral shape by the pressure of progress upon him. Morality is doing the sound thing in the best way; it is the larger view and the longer view applied to life.

Nations and civilizations are destroyed, not because they do not see the need and place of the moral view of Progress, but because, having clearly seen it, they reject it. We have not yet done that. We are, on the whole, quite receptive of the moral implication of Progress, and we are waiting mostly for demonstrations of its workings. These demonstrations are more numerous now than they have ever been in all the ages of mankind. Whether we name the movement moral or not, morality is surely moving to practical recognition.

'Ford Ideals,' 452 pages, cloth bound, contains 98 of these articles. Postpaid $1.00.

EDITORIALS

OF THE DEARBORN INDEPENDENT

A Shrine, Not a Circus

A LESSON that this nation might well heed is given in France's action barring publicity seekers from the tomb of the Unknown Soldier in the Arc de Triomphe. The spot, sacred to the war dead of France, had become a veritable mecca for press agents before the order was issued. Actors, artists, authors, and others who sought to get their names and pictures into the newspapers were using the tomb in increasing numbers for personal advertising, some placing wreaths on it and some merely posing beside it in striking attitudes. Hereafter no person is to be allowed to decorate the tomb, no organizations will be permitted to march in the Champs Élysées and place flowers there, no speeches will be permitted, and music of all kinds is to be barred, except by special authorization.

The tomb of the American Unknown Soldier lies in Arlington Cemetery. Not long ago a tourist from the Middle West visited it. Perched on top was a girl busily chewing gum and swinging her feet against its side. Lolling alongside her was a gawky youth smoking a cigaret. Banana peels and other scraps were scattered nearby. New rules, possibly, are needed for the American tomb as well as for that in France.

Musical Sleigh Bells

THOSE who have ridden, warmly wrapped in furs and blankets, behind a spanking span of bays hooked to a set of bobs will recall the music of the sleigh bells. There was real music in a graduated set of the old bells. The larger ones gave off the mellow tones, the smaller ones the medium notes, while the tiny bells on the end of the string rang the highest soprano. It was an orchestra in itself.

A winter sleigh ride along a forest road was one to be remembered. The leafless maples stretched their fingers toward the heavens forming a lacework of topaz-pink crystal against the faint cold blue light of the early morning sky. Diamond-studded hedges flanked the farm roads, gateways were glistening jewelled entrances to fairy castles. The traveler was in a new world. Old familiar landmarks were submerged or disguised by the enveloping blanket of snow, and the journey to town seemed like an excursion of discovery.

The snow hides; it also reveals. The snow on the larger hills made them stand out more clearly because they reflected more light than ordinarily. The woodlands were alive with chickadees, blue jays, and songsters. Gray furry squirrels chattered from their safe retreats high above the ground. Startled partridge flew from roadside birches where they were eating the tender buds.

Boys and girls of an earlier day delighted to hitch their sleds behind the bobs. Sometimes the drivers were gruff and cross, with long whips and short tempers. They came in for a bombardment of snowballs. Others were ruddy rotund individuals who remembered their own childhood and the pleasures of those days. They were more lenient. It was considered great sport by some children to ride their sleds down the long logging road to the foot of the hill, and then tie on to home-bound bobsleds for the long trek back. It was not uncommon to ride so late that the wayside trees became gray with early twilight and mittened hands were reddened and chilled. Red mufflers helped, but it was a tired boy or girl who came into the home yard after darkness, well-nigh famished. Long into the night the tinkling sleigh bells continued, as home-going friends hurried on their way. We enjoy the comfort of luxurious sedans today but we miss the bells.

Revelry

'CHAIN voting' seems to be Pittsburgh's latest contribution to the science of beating an election. Several days were required to trace down this new idea and identify it; and even the special board of the Allegheny County Election Association was amazed at its cleverness, after it was explained recently.

The method is described as follows: Persons outside the polling places gain possession of a ballot marked for a favorite candidate. This is turned over to a voter about to enter the polling place, for him to deposit instead of the blank ballot which is handed him by the officials after he gets inside. The latter, still unmarked, is carried out by him, and turned over to the 'workers,' who then mark it and tender it to the next voter.

Intriguing as is this addition to the somewhat malodorous story of municipal politics, it does not much exceed the process of erasure. In some wards in Pittsburgh, it is claimed, 90 per cent of the votes cast in a recent election betrayed subsequent erasures, and apparently the same pencil had made the alterations!

The great State of Pennsylvania seems to have been particularly afflicted with the genus Politician —or it has made a greater effort to obstruct his manipulations and to uncover them. One is reminded, reading of Pittsburgh's latest developments wherein one hundred and sixty men and women were indicted for ballot frauds, of the so-called elections marking less democratic countries.

—Ewing Galloway.

The railroads of China have been impressed to render strenuous assistance to the war lords. This train of coal cars carries troops and tents.

CHINESE WAR LORDS and the RAILROADS

By

INEZ MARKS LOWDERMILK

IMAGINE the railways in the United States commandeered by two of our state dictators for private military ambitions, and no through traffic permitted for fifteen months out of twenty-three. Visualize, if possible, the inconvenience to business men and others; the loss in perishable commodities unable to be moved; the hunger and starvation caused by the impossibility of transporting necessary foodstuffs from one locality to another; the stagnation of all trade and the loss of hundreds of millions of dollars. Such is the condition on practically all of the railway lines in China today.

The fact that China with her dense population has about seven thousand miles of railways as against two hundred and sixty thousand miles in the United States, makes the operation of this limited mileage of even greater importance in the economic and commercial life of the country.

Shanghai, the New York harbor of China, and the financial and commercial capital as well, is the same distance from Peking, its political capital, as New York is from St. Louis or Boston is from Chicago. It must serve millions of people; but this means nothing to the military governors who have each seized a section and made it serve their own selfish greed for money and power, regardless of resulting misery to millions and the ruin of the country economically. This Peking-Shanghai line may be used as an example of all other lines to show the procedure of the rapacious military governors in China today.

It is as though some mythical dictator of New York should seize all of the engines and cars in the East and an Illinois dictator appropriate all of the rolling stock he could lay his hands on or maneuver into his territory, and although loudly professing friendship, neither trust the other sufficiently to allow any good car or engine to pass into the domain of the other, fully knowing that it would never be allowed to make the return trip. Yet this is exactly what has been happening on China's trunk lines.

A foreign engineer recently submitted figures, showing that through passenger, freight and mail service between Peking and Shanghai was suspended fifteen months out of the twenty-three months from September first, 1924, to July, 1926, and the road remained closed several months after this report was made. Thus more than two-thirds of the time the road was not available for through service and during the remaining time, the railway system has been in semi-disorder, and travel has often been most inconvenient.

Both the war lord of the Yangtze and the war lord of Shantung, in their desire for ready cash, ran a few local trains in their respective territories during this period. But they were laden as well as taxed to the limit, and generous bribes had to be given in order to get freight moved. Near the borders of their territories was the 'No Man's Land' through which neither would allow his good rolling stock to pass. Occasionally a wheezy old engine, slowly trailing some worn-out cattle cars, made the entire trip from Peking to Shanghai. No seats were provided. All sat on the floor or on their baggage.

Humane laws in the United States would not permit the crowding of cattle to the extent that the Chinese crowd into these trains. Details of the trip as related by an American family who made the trip in order to reach a summer resort, satisfied all desire of the listeners to travel over that section. Packed in the cattle car with Chinese of all classes, they were unable to change their positions for twenty-two hours. No one dared stand up or relax his aching muscles lest there should be no room to sit down again. Night came on, black darkness in the car, except for one flash light. Loud snores did not add to the comfort of those who could not sleep. Several Chinese rested weary heads against our American lady's shoulders. And all this over a line which, according to the China Year Book of 1923, yielded profits of fourteen million dollars.

American soldiers beside the international train operated by foreign powers in China when the regular railroads are not functioning.

The railways, which the military are using for their own private gains, although supposed to be government roads, do not, strictly speaking, belong to the Chinese. They were built with bonds bought by people in the United States and Europe who thought China's credit was good, and much of this debt has never been paid.

Five complete luxurious express trains were purchased from the United States for one line. Nothing was spared to insure comfort and beauty. America has not yet received payment for these trains; yet out of the original fifty-three passenger coaches, only twenty are left. The other thirty-three succumbed to the destructiveness of the war lords.

The beautiful oak woodwork was hacked off and used for kindling by soldiers who turned the cars into kitchens; the plush upholstering was torn off; nothing was left but the parts which could not be burned or stolen.

According to Silas Strawn, the amount which the militarists have looted from the government railways and telegraph lines up to the thirteenth year of the Republic amounts to between $180,000,000 and $250,000,000. In commenting, Mr. Strawn said, 'No railroad can be operated and no country prosper with such conditions as these.'

What is true of one line is true of all others in China.

A few examples known to the writer might serve to illustrate the treatment of Chinese Government railways by the militarists. One northern military officer commandeered a private car to go to Tientsin. Hearing that the price of coal was very high there, owing to the continuous wars, he penned off a small section for himself and retinue and filled with coal the remainder of the luxuriously upholstered American-made passenger coach. Upon his arrival in Tientsin, the coal was sold for $30 a ton and the official was supplied with extra money for pleasure or bribes during his visit.

Recently a shocking railway accident occurred near Tsingtao. A military official suddenly decided to use his private train to make a so-called important visit to his superior officer some distance away. He boarded the train and ordered the engineer to proceed at once. The engineer refused, explaining that another train was then due on the single track line. The officer, strutting with importance, had a gun leveled on the engineer and fireman and told them to proceed and make the local train back up to the station. They had only gone a short distance when the oncoming train swept around a curve at a good speed. There was no time politely to request it to back up by order of an officious little officer. The crash came. The engineer and thirty-five others were killed; two engines and several coaches wrecked, but alas, the official escaped unharmed and nothing was done.

Bandits supplement and complete the damage done by the militarists.

Last year some American mission-

—Ewing Galloway Photos.

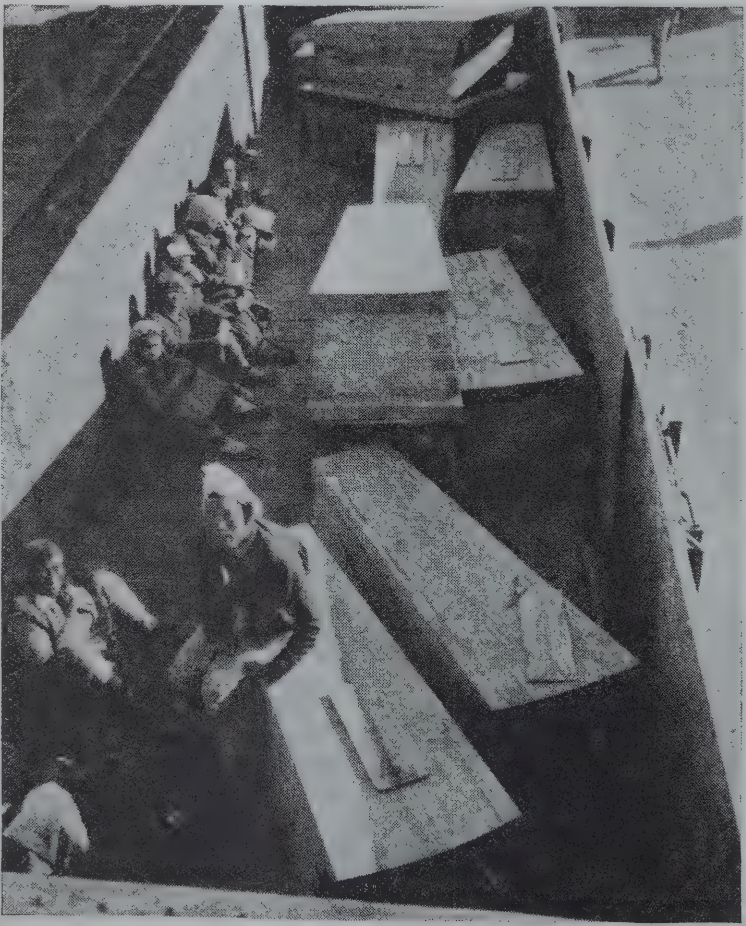
Chinese guards of a passenger train. Two men are assigned to each coach.

aries were traveling on a spur railway line. Suddenly they noticed the train take on speed at a terrifying rate. No stops were made and no whistles blown as the train raced through towns and villages and around curves. After some time, the speed decreased and the train slowly came to a standstill. Investigation revealed the throttle wide open and the engineer and fireman dead upon the engine floor. It seemed that two bandits had worked their way to the engine and attempted to stop the train at a certain spot where a bandit gang was waiting. The engineer in an attempt to save his heavily loaded train had pulled the throttle wide open. The bandits, seeing that they had failed to get the train stopped, shot and killed the two men and then jumped. Such are the events which can happen on railroads where militarists and bandits hold sway and helpless masses must suffer the consequences.

The resources of China are almost as rich and varied in everything that would go to make her people happy and prosperous as are the resources of the United States. With a stable government, no wars, and means of communication established, China would be happy and prosperous instead of being, as she now is, engaged in a desperate struggle with starvation.

The margin between what people create and what they consume is continually exhausted and dissipated by futile and purposeless wars. In practically all parts of China, taxes have been collected for several years in advance and in some places, as in Szechuen, West China, taxes have been extracted from the now poverty-stricken people up until 1944.

What has been the result of these struggles for power and pelf on the part of the military leaders? China is in greater chaos now than she has ever been since the revolution. Foreign lives and property in the interior are not protected. Every few days brings some new tale of ships looted, foreign property destroyed, or of foreigners' being robbed or carried off for ransom. Many of the government schools are closed for lack of funds and in others, the salaries are months in arrears. Extra 'educational taxes' have been levied on all railway tickets and these have amounted to immense sums; yet the schools remain closed while the militarists confiscate the last penny. It was simply a polite way of extracting a few extra millions from the public.



Transporting dead and wounded Chinese soldiers in the same car. The dead are accorded much consideration, but the wounded are treated as a great nuisance. —*Ewing Galloway.*

On ELEPHANT HUNTING

By A. BENKLEVSKY

IN THE lake region of Africa there are fields of grass taller than a man, and individual baobabs under which the whole of a caravan could bivouac, were it not for the numerous ants, permanent inhabitants of these trees, which not only are among the roots in the ground but form a continuous chain moving upward on the colossal trunk. It is a malarial zone, too, with its scattered copses of mimosas and palms and, close to the rivers, leafy forests of tropical luxuriance. It is a haunt of African big game.

Elephants usually live in the forest densities in groups of several families. Choosing one of these quiet forest meadows, difficult of access, they make it their home. From here they go away sometimes for quite long distances foraging for food, but they always return 'home' for the night, retracing their tracks. They prefer palm branches to anything else, as a good morsel; they break these with their trunks, pile them in certain portionments, and then 'dine,' after which they go to the nearest source of water to drink. And it is dangerous indeed to be found in the path of an elephant, though you may be safe a few steps to one side! The hunter who stands in an elephant's tracks must perish for sure . . .

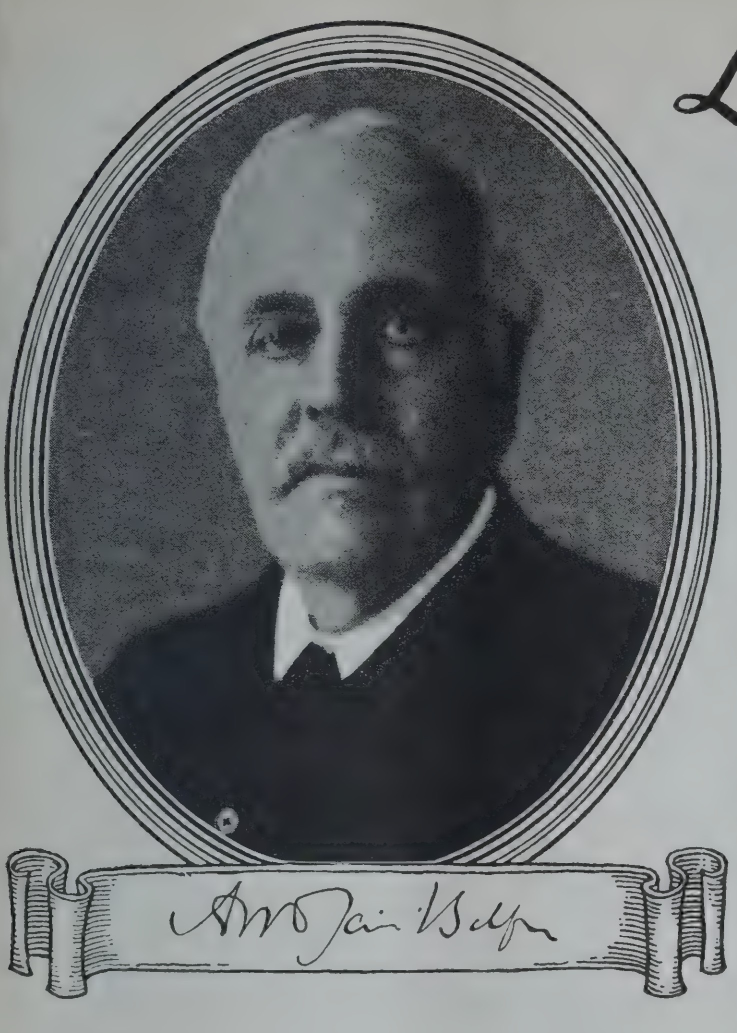
In spite of his solid weight and bulk, the elephant is quick. The ponderous foot will fell and crush a man, or the trunk, wrapped about his waist, will raise him gaping, only to dash him to the ground and crush him into a deformed mass . . . In view of the danger of being attacked by man, however, whose superiority he recognizes well, he may decide to turn aside. For this reason hunters choose places where the elephant's path is narrow and his direction limited—for instance, between a forest and a swamp.

In the Galla country there is a typical elephant trail, which is indicated by a succession of deep depressions the size of large plates, leading into the thick of a cactus grove. A half-hour's following of this trail leads to an ideal hunting ground, with a wall of cactuses on the left and the precipitous embankments of a deep river valley on the right. Between these two obstacles a long sandy stretch slopes at its far extremity to the river. Along the whole length of this field turns and twists the 'elephant path,' disappearing finally in the distance. It is their trail to the water.

Here the Galla hunters hide themselves and wait. For the location is strategic.

LORD BALFOUR *and His* Scottish Home

By R. A. L. BALFOUR



Lord Balfour occupies a unique position in British public life. Long one of the foremost figures in the political field, he has in recent years come to be regarded rather in the light of an Elder Statesman, one who in moments of national crisis or difficulty can be relied upon to advise calmly and dispassionately. Although now in his seventy-eighth year, he is still active in the field of politics, but, as years advance, he inclines more and more to seek the quiet and peace of his books and trees at Whittinghame, his beautiful estate in Scotland.

The writer of this article, R. A. L. Balfour, is Lord Balfour's nephew and heir and the manager of his estates.

WALKS, trees, views, and the old Tower of Whittinghame, to all who know them today, seem intimately associated with their owner. They are loved by him, and the more loved by others because linked with his personality.'

In the first draft of this article, the above formed my closing paragraph. I am taking it now, and placing it thus in the forefront, because it seems to me to sum up in few words what Whittinghame means to me. It would be easy enough merely to describe the house and its 'policies,' as we say in Scotland, to speak of its gardens and its trees, its exquisite vistas and wide mountain views. But thus to 'Baedekerize' would not be to convey the picture of Whittinghame as it really is. For Whittinghame cannot be separated from Lord Balfour any more than Hawarden could be, in his lifetime, from Gladstone, or Hughenden from Disraeli. I realized this, in a way, when I read over my first draft. I had just gone from point to point, much as a guide might have done, but at every point I found that, somehow, I had insensibly connected up the 'story of the Whittinghame' with the 'daily walk and conversation' of its much-loved owner.

This for instance—'Entering the house by the front door,' I had written, 'we face the music room, a pleasant, sunny, welcoming room. My uncle is passionately fond of music, and, for some years now, there has been installed here a piano player of very beautiful adjustment. It is an unending source of joy to the Master of Whittinghame, and he is always disappointed if the nightly game of bridge is too prolonged to allow of his hearing one or two selections. On Sunday evenings, however, after prayers which Lord Balfour reads to the whole household, those members of the party who are fond of music spend the rest of the evening listening to this instrument.'

* * *

Well, from here let me go on, or rather let us go on, and make a tour of the house. Leading off the music room, on one side, is the drawing-room, and on the other the library, which is the great family meeting place. This room has its walls entirely lined with books, among which are several first editions presented to Lord Balfour by their authors. Here, too, the visitors' book is kept, and a glance through its pages never fails to fill me with a special interest. So much history seems to be crowded into so small a space—David Lloyd George over against Stanley Baldwin, Birkenhead, Winston Churchill, Lord Roberts, Lord Salisbury, and so on, after the war and through the war and before the war!

On the same floor is the dining room. And this room will always be associated in my mind with one of those time-honored, well-loved family functions such as every family guards so jealously. The room is a beautiful one, with oak-paneled walls and moulded plastic ceiling, and here, at five o'clock on every New Year's Day, is a festive gathering. A large Christmas cake occupies the center of the table, and Lord Balfour and his sister sit facing it on opposite sides, while all around the board gathers 'the family,' near relations and far relations, who, every year, meet at Whittinghame for Christmas and New Year's. The minister of the parish is always there, with his family, and the reunion atmosphere is everywhere. After tea presents are distributed, and, after the presents, comes one of the great 'exercises' of the evening. The whole party forms a ring with crackers, and, on Lord Balfour's giving the word, all pull together. In every way, in the words of the traditional journalist of the American countryside, 'a pleasant time was had by all.'

At the opposite end of the house is my uncle's bedroom and sitting room. This room has

The Tower at Whittinghame.

The ORIGINAL WHEEL Around the HUB

By QUINCY KILBY

IN THE February, 1880, number of *Scribner's Magazine* appeared an article entitled, 'A Wheel Around the Hub,' which did more to foster the sport of wheeling in this country than anything previously written on the subject. Bicycling at that time was in its infancy. The Boston Bicycle Club, the first wheeling organization in America, had been founded in February, 1878, and its first club run had been held in March.

Scribner's fathered and financed the first overnight public cycling outing event in America, and members from several cycling organizations were invited to attend.

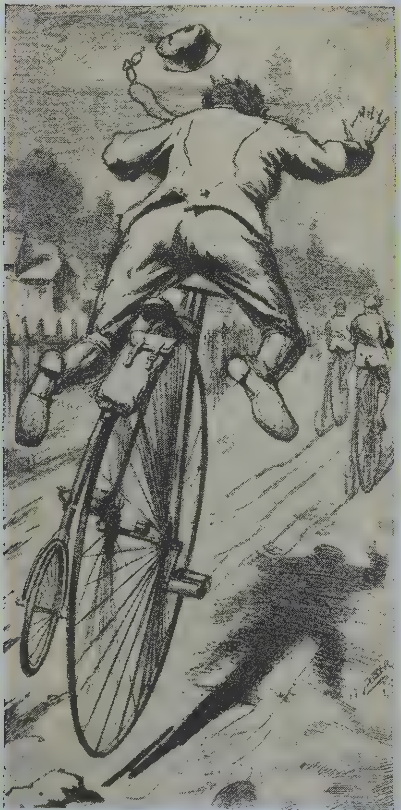
END OF FIRST DAY'S RUN

Illustrations, courtesy of Scribner's Magazine, *published in 1880.*



The start of an exciting tumble.

Forty men took part, more of them coming from the Boston Bicycle Club than from any other. In fact, the sport of wheeling had its most propitious start in the 'Hub.'

The true father of wheeling in this country was Frank W. Weston, familiarly known as 'Papa' Weston, an English-born American, who had his native land's love for sports of all sorts.

The fortunate forty, in varied uniforms, met at the corner of Warren Street and Walnut Avenue, Roxbury—a part of Boston some three or four miles from its center. All rode high wheels; there were none of the safety type at that time. In addition, a buggy was provided for the artist who accompanied the party, as well as a baggage truck for the impedimenta. Excitement became rife and the streets about the starting place were soon thronged with curious elders, envious youths, and irrepressible small boys.

The article relates at some length the experiences of the journey, and the illustrations faithfully chronicle the incidents and accidents which occurred. Up Walnut Avenue rode the forty, past what is now Franklin Park but what was then only a number of large estates, down steep Glen Road, across the then unelevated street car and railway tracks, through Green Street, across busy little Jamaica Plain, and so on, to Jamaica Pond where the first stop was made.

Here they had an amusing encounter with a policeman who tried to prevent their resting on a tempting lawn, not knowing that they had received permission from the owner himself to loaf there as long as they pleased. They left him smiling, however, and proceeded past the Arnold Arboretum through parts of old West Roxbury to Brook Farm, the scene of that ambitious

communistic experiment which had attracted such great minds as Ralph Waldo Emerson, Nathaniel Hawthorne, Henry D. Thoreau, William Ellery Channing, Charles A. Dana, George William Curtis, A. Bronson Olcott, Margaret Fuller, and many others.

The riders passed the church where Theodore Parker preached; this church has since been burned to the ground. Then onward they rode to the banks of the Charles River where now is the Caledonian Grove, across the stream, past the pre-Revolutionary powder house, over another bridge, and so to Dedham, where they saw the ancient Fairbanks House, built in 1639, the oldest wooden building in the country that has been used as a dwelling since its construction.

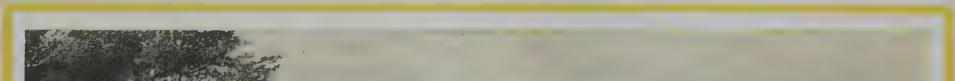
Farther on they came to a little wood, ever since known as the 'Grove of Pleasant Memories,' where a bountiful lunch was spread and eaten ravenously.

Next came a ride through Readville and a strenuous climb to the foot of the great Blue Hill where wheels were relinquished and a footpath was followed to the top. Blue Hill is 600 feet high and is the tallest hill adjacent to the coast from Maine to Florida. The view, could one believe the chronicler, embraced every hilltop, spire and lighthouse in New England, and the wonder is that he did not include Mount Ararat and the Leaning Tower of Pisa!

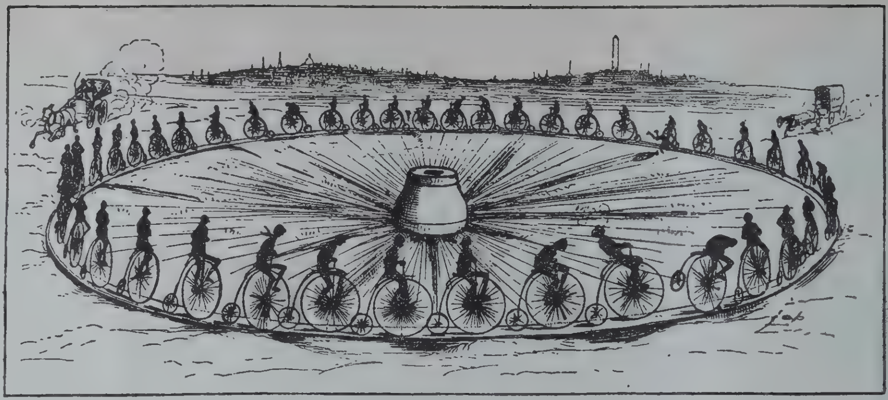
Remounting their wheels, the party coasted past Little Blue Hill, rode over Cherry Hill, down through Ponkapog Village and so through Canton to Cobb's Tavern, an 18th Century inn that was for many years the favorite breakfasting place for the members of the Cobb family, though out of commission as a hostelry. Every year on the 'Wheel About the Hub,' the club calls there, and a hearty welcome is always ready. (By the way, the club calls this event the 'Wheel About the Hub,' but I prefer the old title of 'Wheel Around the Hub.')

The riders then dined and spent the night at the Massapoag House on the shore of the lake of that name, and in the evening a dance was given in their honor in the spacious parlors, sufficient partners being found among the boarders and neighbors from the cottages. The distance covered that day had been thirty-five miles.

The next morning they were up betimes, for there was more mileage to be covered than had been covered the previous day. Riding back through Sharon and Canton to Cemetery Corners, they turned eastward over a rather rough road, past Ponkapoag Pond to South Braintree. They were soon coasting the long hill down to East Braintree and Weymouth Landing, where the Fore River was crossed. On they went up a steep hill, turning to the left and passing numerous Old Colony houses that suggested generations of occupancy and true New England neighborliness. In Hingham they saw the Old Ship Church with its compass painted on the belfry ceiling. They rode on leaving Hull and Nantasket Beach to the right, while they reveled in the beauties of the Jerusalem Road and lovely Cohasset, where at Kimball's Hotel dinner awaited them. Though it was not yet one o'clock, they had ridden thirty-two miles since breakfast



Some of the members of the bicycle clubs assembled for their first meet.



A wheel around the hub.

time. All posed for the artist as they lolled comfortably on a rocky headland jutting into the sea, with all Massachusetts Bay before them and Minot's Ledge light looming close at hand.

They made their way back through Hingham and North Weymouth, past Lovell's Grove and into Quincy, where they saw the church in which two presidents of the United States are buried, John Adams and his son John Quincy Adams.

Then a long climb over Milton Hill with its beautiful seaward view, the tricky descent on the other side into Lower Mills, with its pervading smell from the great chocolate factories, and so through Dorchester and Roxbury to the starting place! The entire mileage for the two days totaled one hundred, and an institution was established that shall exist, we hope, for many years to come.

FOR a period of eleven years from this first ride, the 'Wheel Around the Hub' was but a pleasant memory. Then the Boston Bicycle Club revived it and it became a joyous annual occurrence. Year after year the same fellow members met and pedaled over the same ground, making the original stops and reproducing the event as faithfully as possible. Innovations had been forced upon the riders, however; the old high wheels had retired in favor of safeties, the solid rubber tires were replaced by pneumatics, the hotel at Massapoag had burned, Kimball's had burned, and the 'Grove of Pleasant Memories' had given way to building lots. But new inns were found. The Fairbanks House in Dedham and Cobb's Tavern in Sharon still welcome the wheelmen every year. Indeed, in the yard of the former hostelry there stands a flourishing young elm tree planted by the club in 1919, which bids fair to carry its story down into the 22nd Century.

'Papa' Weston was for years secretary of the club, and not only could he write the most enticing circulars but, with the aid of a caterer member, Joe Hendrie, he used to devise unusual and inviting gastronomical innovations at unheard-of hours, such as the 'rinktumdiddy' at midnight at Kimball's. At six o'clock the next morning the white-robed Joe would appear at our bedside bearing generous tumblers of rum and milk, after drinking which we would roll over and indulge in a most delightful morning nap. Joe's 'boneless shad' was also luscious, and his 'haddock à la rabbit' was fit for the Olympian gods.

Being of comparatively ancient origin, the club has acquired certain songs and rites of its own. One of the most impressive of these is the silent toast, which is always given out-of-doors and under the trees. For many years the trysting place was beneath the Old Oak at Ponkapoag Pond. The toast is given below:

Gentlemen, the silent toast!
One by one our friends depart,
Lost to sight beyond the coast,
On the sea that knows no chart,
Sure of better things ahead.
Perfect peace and quiet rest,
In their haven of the Dead;
In their Place where all is best.

But they all are here today,
Round about us everywhere,
Up and down the well-known way,
In the woods, the fields, the air.
Gathered from the mystic shore,
Spirit, presence, shade, or ghost.
All are with us as before.
Gentlemen, the silent toast!

As the tribute to the absent ones is brought to a close, Charley Reed plays 'taps'; these are echoed by another bugle hidden from sight in the wood, and the effect is impressive in its solemnity. Mr. Reed is the greatest asset the club has, for he is the possessor of a Medal of Honor voted him by Congress for gallant action in the field at Gettysburg in July, 1863, when at the risk of his own life he rescued his wounded captain, though exposed to the fires of both sides. He was also at Appomattox and is one of the very few survivors who both saw and heard Lee surrender to Grant, on April 9, 1865.

Walter G. Kendall, club captain, having held that office for thirty-five years, received a gold medal from the Massachusetts Horticultural Society for his renown as a fruit grower. Another gold medal has been given him for being the first to introduce the Boston terrier breeding kennels. Mr. Kendall's home is a perfect museum of plate, vases, medals and tankards won in various sports and fruit and vegetable exhibitions. While most of the members now use the automobile to attend these runs there are a few still loyal to the bicycle.

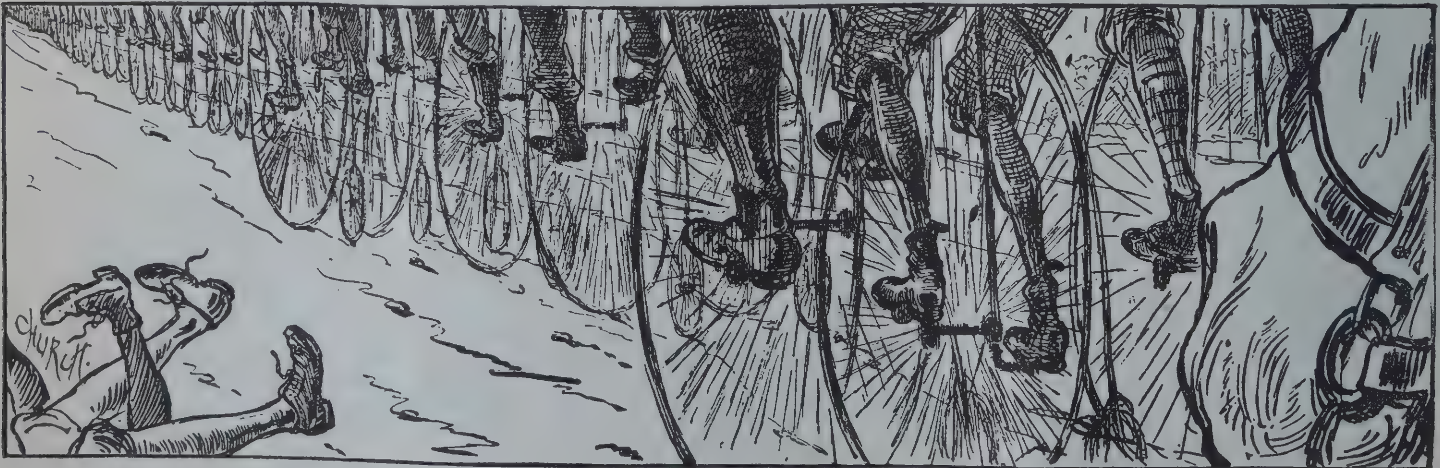
Perhaps a better idea of the event may be gained from the club circular, which is typical of its kind quoted in part:

BOSTON BICYCLE CLUB
Founded 11th February, 1878
Circular No. 662.

Again the loyal members of the club,
Dismissing business cares and matters weighty,
Foregather at the Wheel About the Hub,
As first they did way back in Eighteen-Eighty.

Every year the Wheel About the Hub grows better, or perhaps we grow more appreciative. Anyway, we like it better every year. There isn't anything just like it anywhere else. It is an institution, a Boston institution, a Boston Bicycle Club institution, and those who attend are truly lucky. The average age is well on toward seventy, but those two days find us boys again, calling each other by our first names, glad to see each other, joshing, guying and abusing each other shamefully, loving each other, and reminiscing, reminiscing, reminiscing.

Two days of reminiscence full and free;
Two days of gladness flavored with frivolity,
Of good old-time garrulity and glee,
These make enjoyment of the choicest quality.



Winners or losers by half a length.

Keeping *the* Small College Small

By **FLORENCE G. ROGERS**

IN CLAREMONT Colleges in Southern California is being tried the most recent adventure into higher education. The idea contemplates a group of small colleges located in the same city—Claremont—each of them individually endowed, organized, and administered, but having behind them a parent institution which holds certain facilities and equipment for the common use of all. There may also be an interchange of faculty members between the units.

Claremont Colleges represents an effort to reconcile the limitations of a small college with the unwieldy growth of the large institution. Each has its advantages and its disadvantages. The large institution loses the contacts between students and instructors so fructifying in individual thought and growth. A small institution cannot have the costly equipment and facilities that give to a larger institution its greater appeal. And, in the futile endeavor of numerous small colleges to measure up to the larger in equipment, there is costly duplication as well as waste.

The adventure was begun in October of this year when, at Claremont, the formal opening of Scripps College was marked. Another school, Pomona College, had already served in this same community for forty years; the two comprise the present units of Claremont Colleges.

At a glance one can see that the small colleges in such a group are uncluttered by hampering administrative detail and are therefore free to devote themselves to the vital purpose of their existence, scholarly and effective teaching. As much of the general administrative responsibility falls upon Claremont Colleges, the individuals in the group should be able to make experiments in educational methods which would be hazardous if undertaken in a large institution.

IT IS an adventure into an uncharted sea. Oxford has made soundings, but these are for British requirements. Claremont Colleges is essentially American, and only suggestive of Oxford.

Education in America has been and is going through a fire of analysis and criticism tending toward revision of old methods. Many colleges stand convicted of an overconcern with equipment and a total unconcern as to the living conditions of their students or the importance of providing close contacts with inspiring personalities. A carefully prepared environment of scholarship and character provides the best soil for the growth in mental grasp and spiritual insight of the student.

Time was when the college was looked to as the source of information on past and present affairs, and on theories concerning the future. Here was the storehouse of knowledge, the font of wisdom. The college made the most advanced contribution to an intelligent basis of life. But life has speeded up in the last fifty years. Information comes pinging out of the very air and hits us on all sides, whether we go to college or not. The very fundamentals of science have arrived at different concepts from those taught by the colleges even a decade ago. Furthermore, instead of stopping they continue to change, almost overnight. Knowledge is no longer dead. It is living, moving, transitional.

The modern college has a new function, that of leading the student into intellectual and spiritual adventures—spiritual in the sense that his ideals and deeper emotions are stirred. He is to follow hard that moving, ever-changing conception of values, principles, and facts—to create them for himself and his time. A college that turns out graduates lacking the power to do clear, fearless thinking is very close to failing of its purpose.

THIS outlook as contrasted with the college ideals of a hundred years ago is as though a door had suddenly opened and an invigorating current of new sunlit air were blowing through the musty, hidebound systems of the past. Not only has a new age of learning dawned with its demand for the modernization of old educational methods, but a new youth has arisen, a youth of vision and dream; yet a practical and assertive youth that knows what it wants and intends to have.

This is the youth which the modern college must serve, stimulating intellect, developing latent spiritual powers and evolving within the inner man a breadth of character and a richness of soul that will give a magic grace to living.

For this, intimate contacts with noble personalities are essential. The technicalities and formalities of the college curriculum alone cannot do it. Crowded hours, units, and examinations alone cannot do it. These have their part, unless education is to be unorganized, but they are not all. Instructors of vision and adequate intellectual and cultural equipment serving small groups of students will supply the high demand of the modern seeker of knowledge. That presupposes a small institution.

In so far as equipment and facilities are concerned, the small college cannot compete with the large institution. Furthermore, there is a deplorable waste in the multiplication of small colleges struggling with inadequate resources to duplicate the equipment and facilities of each other and to measure up to those of the large institution.

THE problem is to keep the small college small, and thus insure its distinctive service to its students and yet match the resources of the large university, not only in equipment and facilities, but in opportunities for creative work, in productive scholarship, and in high teaching standards.

Pomona College started in the sagebrush forty years ago in a boom hotel with thirty students. From its inception it has maintained an intellectual rigor, dignity, and thoroughness that has won it favor. From thirty students forty years ago, most of whom were in preparatory grades, it has grown until it has at the present time reached a worthy maturity as a small college. Ten years ago the trustees found it necessary to limit the enrollment to seven hundred and fifty undergraduates lest the college become subjected to the uncertain advantages of rapid expansion in curriculum, enrollment, and teaching staff. In recent years the ratio of rejected to accepted applicants in the case of girls has been as four to one.

This situation compelled the trustees to action. After a careful study of the situation, a plan was outlined by President James A. Blaisdell whereby necessary but costly equipment and facilities might be used in common by a group of affiliated small colleges. This was a scheme of collegiate federalism which was incorporated in 1925 as Claremont Colleges. Under this plan each college is to be independently endowed and organized, and self-administered, the governing body of the parent organization, Claremont Colleges, serving as a clearing house in matters affecting the mutual interests of all the institutions within the group. As has been previously stated, this plan will relieve the individual small colleges of many central administrative responsibilities, thus freeing them for their more vital task of teaching.

The central body plans to maintain a general library, science laboratories, auditoriums, museums, observatory, and other such facilities as are used in common by the individual colleges in the group. The summer school, the department of public education, graduate and research work, and certain like functions will be carried on in coöperation, and there will be an exchange of classroom privileges between the various affiliated colleges.

SEVERAL acres of land were obtained for the Claremont Colleges campus through the generosity of Miss Ellen Browning Scripps and other friends of the college; and the bequest of one million dollars of the late Seeley W. Mudd, who was elected the first chairman of its Board of Fellows of Claremont Colleges, laid a substantial foundation for the establishment of this great work.

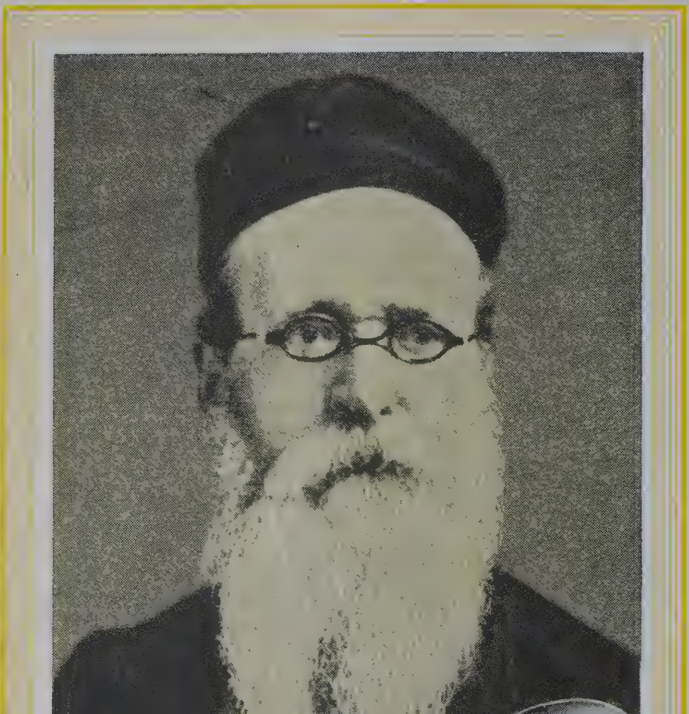
Now, Scripps College is entering into its activities with the avowed purpose of introducing students into the lifelong passion of thinking, reading, and intellectual adventuring. It will endeavor to interpret to them a modern conception of the purpose of college life and to give them an opportunity to discover and develop in themselves latent qualities of spiritual and intellectual insight and understanding which, when translated into terms of living, become the fabric of the highest type of civilization.

On October 14 Scripps College was formally opened with the dedication of its first dormitory and the inauguration of its first president, Dr. Ernest J. Jaqua, Ph.D., LL.D. On that occasion the Honorable Newton D. Baker, former Secretary of War, was the principal speaker, his subject being Education and the State. Delegates and guests from institutions of learning throughout the country took part in the ceremonies. The event was recognized by educators as having marked significance, and, while no one may presume to a prophetic vision of the new American college eventually to evolve from the fires of modernism, much may be said for the group plan in which Claremont is pioneer.

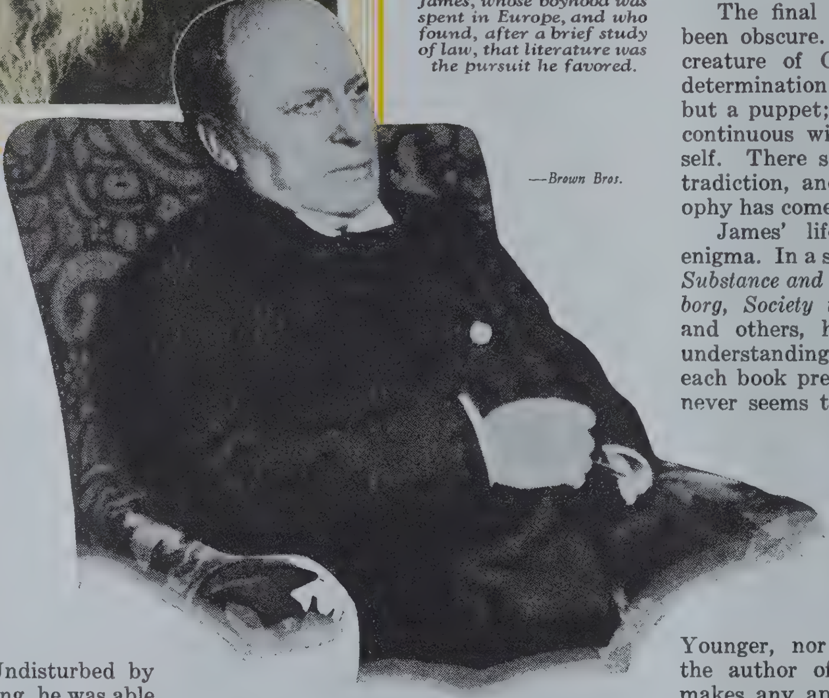
The JAMES FAMILY

By

JULIAN HAWTHORNE



Left—Henry James, the Swedenborgian theologian, father of Henry and William James.



Below—The well-known American author, Henry James, whose boyhood was spent in Europe, and who found, after a brief study of law, that literature was the pursuit he favored.

—Brown Bros.

AN IRISHMAN came to this country in the latter years of the 18th Century, made a fortune, and founded a family. His son, Henry James, grew to lusty manhood, married, and begot three sons and a daughter.

'Henry the Elder,' as we shall call him, was a man of the finest culture with a powerful and original mind. His leaning was toward religious philosophy; he studied profoundly and believed he was on the trail of a new interpretation of the Bible. The secrets of creation seemed opening to him. Undisturbed by the necessity of making a living, he was able to devote himself wholly to his pursuit. He possessed glowing health of body, a happy and indomitable disposition and a wife and children in whom he rejoiced.

He made excursions to England and to the Continent, met persons best worth meeting, roamed in the great libraries, delighted in social companionship, approaching, as he thought, ever nearer to the great revelation. Piles of manuscript lay on his desk, but he would publish nothing till he had been finally assured of his success. That hour of triumph seemed close at hand. It would mean not only distinction for himself but measureless benefit to all mankind.

One sunny afternoon in England he was sitting in his room after a good dinner, at peace with himself. The future had no clouds. He was almost prepared to announce his discovery to the world. He was in the prime of life: God had blessed him exceedingly, and he was duly conscious of the Divine favor and grateful for it.

There is a passage in one of his books, written many years later, describing with incomparable force and intensity the event which now occurred, unheralded and overwhelming. I have not the book at hand, but I recall that he became suddenly aware of 'a diabolic presence, squatting invisible in a corner of the room, raying out influences fatal to life.'

In a few minutes he felt himself ruined, body and soul, and the edifice which he had reared through so many eager and hopeful years had fallen in shapeless rubbish about him. To that pile of manuscript he never added another line, nor did he feel the smallest curiosity so much as to glance at it. His life had been wasted, nor did he entertain the slightest anticipation that it could be redeemed. The end of all things, for him, was at hand.

But he still believed in God. He must drag on his futile days to their end. He owed a debt to his beloved wife and children, and to the decencies of civilization. What final fate might await him he no longer ventured to imagine.

A few months after this episode, a charming English friend drew from him some hint as to his condition, and suggested to him the study of Swedenborg. The faint outline of Swedenborg's views, or philosophy, which she was able to afford him, aroused his interest, and he immediately procured one or two smaller books. 'I read, from the first, with palpitating eagerness,' he says. Thenceforward a new life and career opened to him, and he followed it to the end.

The final meaning of Swedenborg has been obscure. How could man, an abject creature of God, be endowed with self-determination? Without it, he would be but a puppet; yet with it would he not be continuous with God—that is, God Himself. There seems to be an inherent contradiction, and moral and religious philosophy has come to grief upon it.

James' life work was to solve this enigma. In a series of fascinating volumes—*Substance and Shadow, The Secret of Swedenborg, Society the Redeemed Form of Man,* and others, he has striven to make his understanding of the subject clear. But each book presents the same argument; he never seems to have satisfied himself with his exposition. But all the books are radiant with truth and sense, expressed in a style more masterly and vital than that of any other writer with whom I am acquainted.

Neither his famous son, the novelist, Henry the Younger, nor the better-known William, the author of the pragmatic philosophy, makes any approach to the power, charm and tremendous earnestness of the father's works. A rich sense of humor underlies them all, not of course expressed in jest or fancy, but belonging to a mind comprehending its theme in all its aspects and relations, and therefore handling it with lightness as well as power.

Once introduced to these books, one rereads them again and again, with ever-increasing delight and edification. Whether they are 'Swedenborg' has been questioned; they derive from him, but have an inpendence of their own. Neither Henry the Younger nor William was able to elucidate them, though William did his best to explore their inwardness, and in his biographical essay on his father he attempts to summarize his conclusions, while admitting that they are inadequate. Members of the orthodox Swedenborgian Church—the Church of the New Jerusalem, as they call themselves—do not, I believe, fully accept James' doctrines.

In 1862, Sanborn's School in Concord

was enriched by the coming of two young men bearing the name of James, and it was understood that their father had long been a close friend of Emerson. The elder of these boys was named Garth Wilkinson James; the other, Robertson. Henry James, Jr., their brother, afterward the novelist, made transient appearances in Concord, but never was a pupil of the school; the same was the case with William. The latter was the first born, Henry the next, Garth and Robertson following. Garth was known in the school as 'Wilkie,' and Robertson as 'Bob.'

These two were perfectly delightful characters, though of course unknown outside their circle of personal friends. Bob was a boy out and out, robust, impulsive, jolly, headlong, open, frank and generous; full of fun and laughter, pranks and audacities, but in all a perfect gentleman in purpose and practice. He was hugely popular in the school. In scholarship his standing was passable, never egregious.

As for Wilkie, he was incomparable. He was the best-dressed boy in the school, and in manners and talk the most engaging; his good humor was inexhaustible, and he was replete with amusing drolleries, never passing the bound of good taste. He was of middle height (about five feet nine inches), broad-shouldered and symmetrical, with a good head well set, and a smiling countenance. Peg-top trousers were in fashion then; Wilkie's were the widest and most enviable.

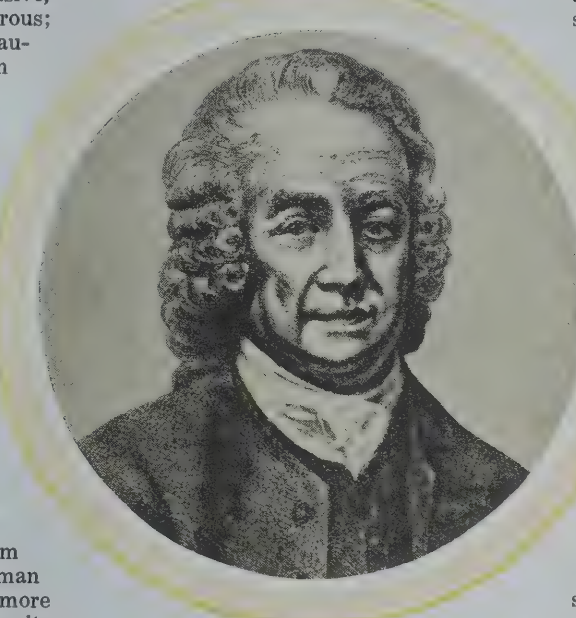
There was also in those days an item of neck embellishment known as the Roman scarf—a strip of heavy silk a yard or more long, with rainbow-hued stripes across its length which blended most delectably. The Beau Brummel would draw this decoration through the fold of his collar, compose a knot, round and smooth, and transfix it with a jewel-headed pin. Such was the ideal, but nobody except Wilkie attained it, and often as I watched him perform the rite, I never could fathom or imitate its mystery. I had the scarf, but a loose and uneven tie-up was all I could effect.

BUT Wilkie, once in his clothes, never bestowed a thought on them; he was wholly unconscious of his being well-dressed. He was sixteen years old when he came to us, but appeared older by two or three years, being self-possessed and having the bearing of a man of the world. In the company of ladies he was entirely at his ease, and devoted; they all loved him, and yet, such was his impartiality and moderation, none of them fell painfully in love with him. There was no corruption in him; nothing sinister or underhand. He had been brought up chiefly in Europe, spoke French like the French, and knew something about everything in the school curriculum, but was heedless in details.

On our school declamation days, he stood second to Edward Emerson in elocutionary and oratorical gifts; but while Edward was punctiliously faithful to the text, Wilkie was content with the general drift of the piece, substituting words and phrases of his own at a pinch. He had a fine tenor voice and sang admirably, but often without knowing the words of the song. As a dancer he was much in demand by the girls; he danced irreproachably but would rather sit out the last half of a waltz or schottische than dance it.

I had introduced the art of fencing with the smallsword and broadsword to Edward Emerson, Wilkie and a few others, and Wilkie was enthusiastic about it; but he never had the patience to learn the 'parades,' and we could cut or puncture him at will. Whatever he could not get by intuition or spontaneous absorption, he couldn't master at all, but he would make a bluff at it, and chuckle good-naturedly when he failed.

On the occasion of a school rowing regatta on Concord River, one Fourth of July, Wilkie was among the first to sign up for the contest, and talked of the refinements of oarsmanship with the assurance of a Thames waterman. He bought a really superb boat, which stood high out of the water, with bright brass trimmings and oarlocks, two thwarts and a stern seat, and finely turned oars to match.



Emanuel Swedenborg.

None of us had ever seen such a thing, so light, trim and capacious; it could easily have carried six persons; it looked a sure winner; and Sam Hoar, son of Judge Hoar and nephew of Senator Hoar, contemplated it grimly. Sam was regarded as Wilkie's most dangerous competitor; but the only boat he had was a rude flat-bottomed little skiff, lean and slender as a pickerel ('Pickerel' was the name he gave it, I think) which he had put together out of half a dozen planks with his own hands. Sam was about Wilkie's age, but didn't weigh so much by thirty pounds, and looked like a meager pirate from the Spanish Main, sunburned and bony. As the two waited side by side for the starting gun, the betting was all one way, Wilkie's.

As the race was more than sixty years ago, it can do no harm to reveal here that Wilkie had never before handled an oar. But he had no doubt that he could row as well as anybody. He dug his oars into the water valiantly; but the lovely barge, instead of advancing, began turning round and round, as if pivoting on a stake under water; the next moment Wilkie went over backward, having caught a crab, as they call it. The handle of one of the oars hit him in the stomach and knocked the wind out of him, and by the time he had picked himself up and wiped the sweat from his brow, Sam was far away, rowing with a long easy stroke, and chewing a toothpick.

WILKIE'S adventures thenceforward were exciting and diversified. He visited one side of the river and then the other, greatly to the delight of the spectators. When Sam had crossed the line and was receiving the plaudits of the judges and the pretty girls, Wilkie had not yet proceeded more than fifty yards from the starting point; he was crimson, his hands were blistered and his knuckles raw. But he was learning something of oarsmanship, and he arrived at the finish in the course of the afternoon, his good nature abated not a jot, eager to shake the hand of his sardonic conqueror.

Next year, our beloved Wilkie enlisted as a white officer in the Forty-fourth Massachusetts Volunteers, the first Negro regiment in the Civil War. They went into camp just outside Boston, and there I used to visit them. I found Wilkie tanned and soldierlike; he had picked up the drill rapidly, and was soon lieutenant and then major. On parade, his uniform was immaculate. He dramatized the situation, and enjoyed himself greatly. After some weeks the regiment went to the front, Wilkie saying his farewells to us stoutly; he was not the same Wilkie; we felt a change in him; he was a man, and would do a man's part. And in the sequel, he did.

In the assault on Fort Fisher he was one of the first at the foot of the ramparts; there he got a wound in the foot, shattering some of the bones, and crippling him for life. The wound was very troublesome, and he was never afterward free from pain. He bore it stoically, concealing it as much as he could, and always cheerful, courteous and good-humored, but with a gravity and steadiness that were new in him.

After the war he gave up civilization and fine raiment, and went down to Florida—on a Government grant no doubt. Bob, whose youth had saved him from the war, went with him. Of course they knew nothing about farming, but Wilkie believed he could be a farmer, and for several years the two brothers labored and went on scant rations, under that delusion. Could they have held out forty or fifty years longer, their holdings would have been worth millions.

As I said, Henry didn't attend Sanborn's School, and I saw but little of him during my schooldays. He didn't enter Harvard either, I believe on account, partly, of an injury to his spine, which occurred when he was helping to pump water at a fire. He was a reticent, grave and serious youth, and I heard that he had an ambition to be an author, and that he was contributing reviews to *The Nation*, which was then at its apogee in New York. He had articles in the *North American Review* also, of which Charles Norton, always a friend and intimate of the James family, was editor. And later a novel by him appeared in *The Atlantic Monthly.*

It was at about that time that Louisa

Alcott's *Little Women* was published, and immediately attained an enormous popularity. Henry sat beside her, at a dinner given in Boston in her honor, where speeches complimentary to her were made, while Henry sat silent. But in a pause of the jubilation he said to her, in a low voice, 'Louisa, my dear girl, you will meet many people, as you go on, who will tell you that you're a genius; but take my advice—don't believe them!'

The remark was kindly meant, but given with an air of authority, though Henry was some ten years Louisa's junior, and had never done anything to attract attention. Louisa had a big, genial nature, and always had a very modest opinion of her own abilities; she thanked him for his counsel, and when she got home to Concord she related the story to our select Wayside group, amid shouts of appreciation and joy.

Long afterward, when Henry, then a writer of high repute, was visiting me in Hastings, England, and we were walking on the esplanade, with the gray waves of the English Channel thundering against the sea wall, I asked him if he remembered the incident. After bethinking himself seriously, he could not recall it; but he remarked, after a pause, 'Well, as to her being a genius, of course, you know, she wasn't.'

I HAD the pleasure in later years of introducing him to the Pacific Ocean; we made the trip from Los Angeles to the coast in the trolley, and I contrived that the spectacle should burst upon him abruptly. He had fallen into talk on the way over with a young fellow of the mechanic class, who was voluble and kindly and abounding in local information.

'Well, ta-ta, old man,' said the fellow at parting; 'be good!'

Henry thanked him, arching an eyebrow at me. But as we approached the little elevation which I had selected to serve as the 'Peak in Darien' my companion fell silent. The expanse was blue and clear, with whitecaps tossing under the breeze, and great white clouds in the sky. James looked for a long time without moving or speaking, taking in the scene with the appetite of a sympathetic and practised observer.

Unlike Oscar Wilde with the Atlantic, he was not disappointed: and for the rest of that day, he strolled along the beach, and filled himself with the far-resounding splendor and immensity.

He lived in his work, and for it, either gathering material or using it. He lived in a pair of little rooms on a side street near Hyde Park, almost ascetically furnished; a large oblong table was covered with manuscripts in his large, careless handwriting. He was seldom satisfied with what he wrote, and he told me that he rewrote a great deal. His voice was gentle and low.

I last saw him standing in the great hall of the 42d Street railway station in New York, on his last visit to this country. He was then seventy years or more, and resembled a benign and rather bored bishop.

The world has a wide knowledge of William James. He was, in 1861, a pleasant, preoccupied young fellow, with a curly beard and keen eyes, seemingly a little annoyed at the largeness of his own leisure. He was a young lion seeking prey in any form of knowledge, and devoured what he found, but was not satisfied with it. He was more an artist than anything else at that moment, doing little sketches from nature and from casts on square bits of pasteboard, and throwing them impatiently aside when done. He was a good draftsman, making quick drawings with a pencil on scraps of paper, with remarkable mastery and sense of form. I kept several of both drawings and paintings, which he let me have, with a grunt to signify that they were not worth having.

He dressed carelessly in rough tweeds, and impressed the boy that I was as having left little to learn of the world and things in general. He went off before long, and it was not until several years later that he found his proper quarry in the human mind itself, and accepted a position in Harvard. What he wrote and accomplished needs no recounting.

But what a family it was—the Jameses! What a fruitful stem, with what strong branches full of sap and beneficent force! Henry the Younger never married; whether his younger brothers had children I know not. The vigor and beauty of the tribe seems to have exhausted itself in the men I knew. Henry James the Elder is probably all but unknown to this generation, and his books may be out of print; but some student may some day arise to revive knowledge of them. Henry the Younger is secure on the shelves of worth-while readers, and the brilliant essays of William are cornerstones of modern research in his subjects. The men themselves are gone, but they leave a sweet savor in the memory.

Saving *the* Indian *From* Himself

By JOHN SLOAN

A GREAT deal has been written—and little done—about saving the original Americans, the Indians, from the encroachments of white men, both on and off the reservations which the White Father has provided for his so-called 'children.' But out in the Northwest, where ten years of bitter Indian wars were fought some fifty years ago, there is a reservation on which a plan of safeguarding the Indian was worked out. There, the Indian has been protected from his own inexperience, his own childlike credulity, and his own lack of business ability; in short, from himself.

Chief Sumpkin, one of the last of the hereditary chieftains of the Indians of the American northwest.

There, too, the Indian has lived his own life, much as his forefathers lived it, to a far greater degree than on any other of the sections set apart for the various tribes of this country. There the Indian could spend all the summer, off the reservation, out in the mountains, with his family, his ponies, his tepee, and all the primitive equipment with which his ancestors preserved life in the wild. In the winter, he could come back to the reservation, contented to remain within the limits prescribed for him, because he had had all of the summer living life in his own untrammeled way.

The inception of this plan, and its carrying through to its success with nearly 2,000 Indians of the Cayuse, Walla Walla and Umatilla tribes, was due in large measure to the efforts of Major E. L. Swartzlander, who was in charge of this Umatilla Indian Reservation, in the outskirts of Pendleton, Oregon, for about fifteen years.

About one-half of the Indians on this reservation are full bloods of the three tribes mentioned; the remainder are mixed bloods. More of these Indians are crossed with the whites than with Indians of other tribes, though a number of the Cayuses, Walla Wallas and Umatillas have intermarried with the Nez Perces and the Yakimas. Tribal identity has been lost almost completely, though, curiously enough, each tribal group preserves its own shaman or medicine man, and to him the members of each group turn in times of illness. The agent in charge of the Indians, however, superseded, almost completely, the medicine man as an adviser in matters other than those of sickness and health.

All the Indians became self-supporting through the plan established by Major Swartzlander. Lands within the reservation were allocated, eighty acres to an individual, to every baby born on the reservation. These lands were leased to white farmers, at rentals which were profitable to the Indians, but within reasonable limits to the farmer, so that the majority of the leases were renewed from year to year, keeping a permanent and competent group of white agriculturists cropping and caring for these lands. On these rentals the Indians could live comfortably, some of them very prosperously.

One of them, Parsons Motanic, a full-blood Umatilla, himself farms 500 acres, following methods he has learned from the successful white farmers who leased lands on the reservation. Every applicant for a lease is examined not only as to his responsibility, but as to his ability as a farmer, his success as a producer, and his past record, both in agriculture and in his dealings with other men.

The result of this system has been that the Indians' land became very valuable, ranging from $150 to $200 an acre.

The Goetheanum—Building That Has Grown

(Continued from page 3)

kaleidoscope does. The result of such a process may be quite beautiful. The forms of a kaleidoscope are likewise beautiful. But a style that has come into existence in the way described does not embody *new* principles of structure any more than one kaleidoscopic picture embodies a different principle of structure from that of the next picture.

It is said that a kaleidoscope never repeats itself. Each picture is different from every other. But this difference has been brought about by a mere juggling of the glass forms. The same mechanical principle of structure that produces the one picture produces the next, and so on *ad infinitum.* No one thinks of calling the work of turning a kaleidoscope artistic endeavor or creative effort. It is mechanical manipulation, pure and simple. And this, in large measure, describes the treatment of architecture and the arts in the present day.

ONE sees new building forms springing up all around him, forms for the most part not at all ugly—really pleasing to the eye, many of them. These forms are not works of art any more than the forms of a kaleidoscope, though they be ever so beautiful in themselves, are works of art. Both are merely mechanical structures. Now what is the difference between a mechanical structure and a work of art? How does a work of art distinguish itself from a mere mechanical structure?

The most common way of answering the question is to say that art gives to matter a divine form. When material substance is clothed in divine garments, then we have a work of art. This is doubtless true.

But how is one to lay hold upon and seize the divine cloak in order to drape it about physical matter, since it is obviously impossible to see the divine with our eyes? Although we cannot observe the divine with our physical senses, we can by means of our thinking. For ideas are not abstractions that have no real connection with the outside world. Ideas, as Plato pointed out long ago, are living realities composed of the same substance as divinity itself.

He, therefore, who really experiences ideas thereby experiences divinity itself. One lays hold on the garments of the divine by means of imaginations, inspirations, intuitions. He who imaginatively, inspiratively, intuitively, receives his ideas is a beholder of divinity. And if a person is able not only thus to behold the divine but also to communicate his vision to others, either through harmonies of tone, in rhythmic or plastic words, or by giving color and form to matter, he is an *artist* in the realm of music or poetry or painting or sculpture or architecture. Not the giving of agreeable form to matter—a kaleidoscope can do that—but the giving of divine form to matter is the distinguishing accomplishment of the artist.

How is one to know whether a form is merely an agreeable form mechanically constructed, or really a divine form artistically created? One is able to distinguish a mechanical structure from a work of art because of the ability of the soul to vibrate sympathetically. A work of art can cause the soul of the beholder to vibrate in harmony with itself. And when the soul of the beholder is in such sympathetic vibration, the spirit of the beholder is able to catch the divine idea which the artist saw in his imagination, inspiration, or intuition, and according to which he formed and shaped the material in which he worked.

That is the test by which one determines whether an object is a work of art or not. One may gaze at the modern 'works of art' with a soul receptive of the least possible vibration, and one will go empty away. The cause of this is that the divine itself changes the form of its manifestation. This change in the form of the divine causes the evolution of man.

Now, of course, the constitution of present-day man, both physical and psychical, is quite different from that of the old Babylonians or Egyptians, or even of the Greeks. When the great artists of the Babylonians, the Egyptians, and the Greeks produced their works of art, these works were real revelations of the divine. And the people who lived then—formed as they were in the divine image—had a physical and psychical constitution able to vibrate in sympathy with the revelations of the divine which their artists had made.

Today the divine has assumed other forms of manifestation, and, impelled by this divine evolution, the human constitution has assumed a different physical and psychical character. And it is impossible, of course, that divine souls and bodies of today, new-formed in the image of God, should be able to vibrate in response to an old revelation of the divine. We are able to gaze in wonder and astonishment at the mechanical structure of an Egyptian pyramid, at the true harmony, balance, and proportion of a Greek temple, but these forms are no longer able to cause our souls to vibrate in sympathetic harmony such that our spirits can catch the *living* idea of these structures.

The only idea of these *ancient* works of art that we of today are able to catch is an abstract idea. This is a corpse. It has lost its life. All the clamor and wild striving for something 'new' in art is merely the natural and proper demand of man for a revelation of the divine that is able to move the soul to sympathetic vibration. But no amount of kaleidoscopic, cubistic gyrations can give us the art for which our souls yearn. This art for which the souls of men consciously or unconsciously hunger and cry must be a new revelation of the divine, a revelation especially for present-day humanity.

THE natural sciences have in many instances laid bare the organization of the world. And since the world as well as man is formed in the Divine Image, natural science has in a very real sense disclosed the divine. But these discoveries, great as they are, have really been achieved in a spirit of unchaste exposure. And truths that are laid bare or exposed are, in the nature of the situation, doomed to barrenness. They are unable to react fruitfully upon the human soul. It is therefore inevitable that the really great discoveries of the natural scientists are prostituted to a destruction of human culture.

The idealistic and artistic endeavor of today is barren of real life. This is proved by the fact that *idealism* and *idealist* are terms of reproach. And if no real life-giving impulse comes into our life, the world will be literally torn to pieces between the blind mechanical forces which are fed by discoveries in the natural sciences, and the idealistic forces which mean well but which in their blindness are invariably hoodwinked and used as a cat's-paw by selfish mechanical interests.

Deep, real thinking denies to neither science nor art its place of importance. But it demands that both science and art give life to their endeavor by an imaginative, inspirative, or intuitive connection with those divine forces that control and direct human life and progress. Science on the one hand must seek this vital connection by means of an intense development of *active* thinking. Art on the other hand must seek it by means of the development of *sympathetic* feeling. And in the middle, where the two fields border on each other, there will arise real human endeavor that will be productive of both art and science.

THIS is the message that Rudolf Steiner gave to the world forty years ago. Since then he has indefatigably worked for the inauguration of an endeavor in this middle field where science is perfect art and art the deepest science. Finally, in 1914, he had interested enough persons to begin the erection of the Goetheanum in Switzerland.

The war hampered its development; nevertheless it stands today a beacon light in the world, a really new and living impulse in architecture and the other fine arts. This building impresses the beholder as not having been built: it has grown. The living and active *idea* of the highest of organisms, man, was 'seen' by Steiner and given plastic form in this building.

All that the scientists have discovered about organic life in general and man in particular is to be seen in this building. But the mathematical, mechanical aspects of these truths, which alone seem to interest modern science, have been subordinated here to their living artistic expression. The fact that organic life is in constant metamorphosis, that the living idea of the plant causes a leaf to assume the form of a spine in the cactus of the desert, and a stem to assume a leaflike form in the smilax, impresses our very souls when we behold the architraves in this building.

These revelations do not speak primarily to our intellect, as does the scientific statement: 'Organisms grow by intersusception.' They are artistic creations and speak to our emotions and will. Our souls are gripped and impressed when we behold this building. And we catch revelations of the divine that give to our whole life active, living impulses. The humble Swiss peasant and the cosmopolitan student, the scientist and the man of business, are marvelously invigorated by this building. Each beholder leaves it with a feeling of satisfaction. His soul has at last found that for which it has so long consciously or unconsciously hungered.

Historic Hagerstown

(*Continued from page 7*)

family of Baltimore, who afterward sold it to William D. Bell, father of the late Edward Bell, who for many years was editor of the Hagerstown *Mail*.

The property was next acquired by Dr. Howard Kennedy, a descendant of General Howard Kennedy also of Revolutionary fame. Mrs. Anna Kennedy Findlay, widow of Judge James Findlay, occupied the house until 1921, when it was acquired by its present owner, Victor Cushwa.

Many distinguished persons have been entertained within the walls of 'Mount Prospect.'

The present owner relates a story connected with the place. During the Civil War, Captain Oliver Wendell Holmes, at present a justice in the Supreme Court of the United States, was brought to the house to recover from wounds received at the Battle of Antietam. With him was his cousin, Captain Stowe, son of Harriet Beecher Stowe. In *Pages from an Old Volume of Life*, Oliver Wendell Holmes, the author of the *Autocrat of the Breakfast Table* and father of Captain Holmes, gives a most interesting story of his effort to find his son, who, he had heard, was wounded on the battlefield. Holmes finally found his son through a telegram from Mrs. Kennedy, who stated he was at 'Mount Prospect' convalescing from wounds.

Concerning *the* French Academy

By LOUIS C. KARPINSKI

THE 'forty immortals' of France, constituting the French Academy, are supposed to be the forty greatest literary figures of the land. It has become the practice, however, to elect also scientists and military leaders. This leads to interesting situations. Foch and Joffre, for example, participate in the discussions of fine verbal distinctions, apropos of the great French historical dictionary being prepared by the Academy; their opinion on the validity of 'match' as a French word may be valuable, but, it must be a bore to listen to debates on etymological questions.

The procedure of election to the Academy rests upon a letter of application presented by the candidate. In many instances adequate assurance has been given of election to men of sufficient distinction who would not otherwise submit the necessary letter.

The complacency of the French with regard to the greatness of the 'forty immortals' is touching, almost amusing. In many instances history has not vindicated the elections. In many other instances election to the Academy has marked the end of a man's intellectual activity, although burial followed after a long interval.

No one can dispute the fact that in Europe as a whole intellectual achievement receives wider tribute than in America. The poets, the writers, the scientists, and the great actors are the national heroes. The names that are known and spoken of with respect are those of intellectual workers in the traditional lines.

The Methodist Book Concern

By JAMES CLYDE GILBERT

BEGINNING in 1789, on a borrowed capital of six hundred dollars, the Methodist Book Concern has become one of the largest publishing enterprises in the world. It now carries on a business amounting to nearly $5,000,000 a year and the value of its property in buildings, equipment, stock, and other assets totals more than $8,000,000.

THE Methodist Book Concern was organized by the Conference in May, 1789, in John Street Church, New York. At the time, the United States Government was only two years old, the Federal Constitution having been adopted in 1787. George Washington as President had been inaugurated but a few months before, and the entire population was but 3,000,000. The conference that organized the Concern consisted of twenty-five members.

The new enterprise was located in Philadelphia, as that was the point from which the itinerant system could best be carried out. John Dickins, pastor of the church in Philadelphia, was named book steward.

John Wesley in England had issued an abridgment of Thomas a Kempis' *Imitation of Christ*, to which he gave the title, *Christian's Pattern*. It was purely a devotional book and proved to be the cornerstone upon which the Book Concern was built. Mr. Dickins worked slowly and carefully in gathering and printing in the cheapest possible form the best of the literature of that period. Some of this consisted of tracts which were not given away but sold; for money had to be obtained to maintain the scheme. Mr. Dickins, in his travels, wore a tall hat in the crown of which he carried a small stock of his publications and while his hat was in his hands he had the habit of offering for sale its contents. In this way he built up considerable business.

A great scourge of yellow fever visited Philadelphia in 1798, and Government officials (the city was at that time the seat of government of the United States) left the city in panic. Two men remained side by side aiding the sick, burying the dead, and feeding the hungry. These were John Dickins, the Methodist book steward, and Alexander Hamilton, the Secretary of the Treasury of the United States. John Dickins fell ill with the fever, and within a week he was dead.

In 1804 the Book Concern moved to New York City where it was established in one small room on Gold Street. Ezekiel Cooper, the second book steward, served the church in Brooklyn as pastor, and the business of editing, publishing, selling, and packing was in one room on the corner of Church and White streets. In 1821 a bindery was opened in the basement of the old Wesleyan Academy Building which stood on Crosby Street.

There the combined printing and binding business was conducted until 1833, when the Book Concern was moved to 200 Mulberry Street, where it flourished until 1888 when it was transferred to a new building at 150 Fifth Avenue; and here it remained until 1927, when the vast publishing enterprise was relocated at Dobbs Ferry, New York, in a modern plant costing over a million and a quarter dollars.

The western house of the Concern was organized as a branch of the New York house in 1820, and was located in Cincinnati, but the entire business was united in the Methodist Book Concern in 1912.

Many critics advised against the investments in real estate, buildings, or machinery equipment for the Concern. They believed that the printing and binding should be let out on contract, and that all property should be rented and the business conducted on a strictly cash basis. Better judgment prevailed, however, and the prosperity of the Concern has largely been due to the wise investments made in the very things the critics railed against. Some of the property has doubled several times in value. None of it has decreased. The amount of capital stock is much larger than it would have been without real estate investments.

It would not be possible to operate the Book Concern at a profit if it printed and sold simply religious works. It is true that these must be the basis of the business; but history and the higher grades of literature, with certain forms of fiction, are recognized as a part of the legitimate business of the house.

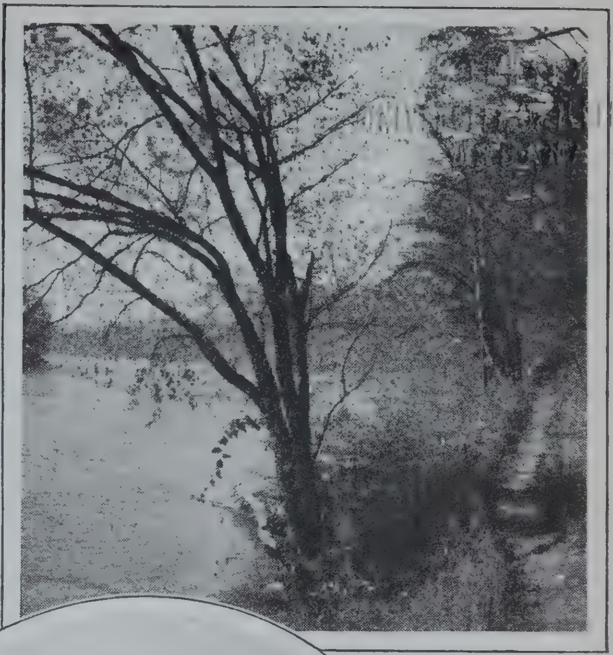
THE Methodist Book Concern is owned by the Methodist Episcopal Church. No person holds stock in it, although every minister of that church is an actual or prospective participant in its profits. Under the law of the church the produce of the Book Concern has 'to be applied for the benefit of the traveling, supernumerary and retired ministers, their wives, widows and children.' Every year an amount is set aside from the 'produce' for this purpose, the total of which has reached up to 1927 the very considerable sum of $7,454,908.

The same sound business sense that brought the Book Concern to where it now is conceived and inspired the erection of the skyscraper Methodist Episcopal Temple in the business center of Chicago's Loop district. This is sure to become a great asset to the church. Already it is proving a business success. This structure houses, besides the First Methodist Episcopal Church of Chicago, twenty floors of offices. The rental from the offices already leased is sufficient to meet current expenses. Eighty-one per cent of the offices are rented, and it is the remaining nineteen per cent which is counted on to bring in the profit which will aid other Methodist churches.

This magnificent edifice was built by the Chicago Methodist Episcopal Church Aid Society at a cost of $3,500,000 on property conservatively valued at $3,000,000. The property is a heritage of the Methodist Church from the early days of Chicago. The first church was built there in 1834 at a cost of $580. It was found necessary to rebuild the church four times to keep pace with the extraordinary growth of the city. The tower cross is 566 feet from the ground, a symbol of religious devotion in the busiest business section of a dynamic city.

On the Banks *of the* WABASH

By J. T. FARIS



—J. C. Allen Photos.

'Tecumseh's Trail' along the Wabash River in Indiana.

Oval—An Ohio River steamer.

IN 1819, when the first log house at Hindostan, Indiana, was built, few Indians were in the neighborhood.

The ingenuity of the people was taxed to supply their needs. Deer were plentiful, and the maple trees gave them sugar, but when they wanted something the land or the forest could not supply, they had to travel far to secure it. Soon they had their own store and the proprietor had the problem of securing supplies. He had a thriving trade, not only with the people nearby, but with the trappers and the scattered settlers for many miles around. The activities of the town were increased by crude mills for grinding corn and wheat, and for carding wool. The preparation for sale of the Hindostan oilstone, famous in the early days, added to the prosperity of the community. The stone was hauled from French Lick over a road constructed for the purpose.

Hindostan became known as the most thriving settlement in southern Indiana. General William Henry Harrison, governor of the Territory, became an enthusiastic partisan. Another visitor was William Faux, the English traveler who, when on the way to the English settlement across the Wabash in Illinois, paused long enough to write:

'Breakfasted in an important ville, Hindostan, on the Falls of White River, a broad, crystal stream running navigable to the Ohio (Wabash) on a bed of sand and stone, smooth and white as a floor of marble. The baby ville is flourishing, much building is in progress, and it promises to become a pleasant, healthy town before I see it again. The land, too, is rich and inviting.'

Word came one day from Corydon, where the Indiana legislature was in session, declaring navigable every stream in Indiana that could float a flatboat. The road supervisors of each district had to assemble all who were liable for road work in lieu of taxes, that they might clear the streams of logs and undergrowth and other hindrances to the free passage of the flatboats that would soon be floated from the branch stream into the Wabash and the Ohio. The legislators talked eagerly of the day when nearly every farmer would stock his flatboat with the surplus products from his lands, and would take them down to the Wabash, the Ohio, and perhaps the Mississippi!

Such a boat was strong enough to carry the great load of beef, pork, flour, meal, wheat and corn which was placed on board. When the spring floods raised the creeks, it was floated down to begin its long journey of perhaps a month to New Orleans. Neighbors with their flatboats were accustomed to get together for company and protection; sometimes eight or ten boats were in a fleet.

On reaching New Orleans, the cargo was sold, the boat was broken up and disposed of for nearly enough to pay its cost, and the owner was ready to take passage by steamer to Louisville. Many preferred to walk, however, for the fare was one hundred dollars or more. A few boats were poled up the river, but the labor was usually considered too great and the time too long.

In a single season 152 of these flatboats—which hailed from just such communities as Hindostan—passed Vincennes, bound down the Wabash. It was estimated that between 1820 and 1840 'nine-tenths of the surplus products of Indiana went to market on flatboats.'

Then came the season of Hindostan's tragedy.

A mysterious disease attacked the people. Perhaps its coming was due to the fact that the town was built in the valley. It may be that the opening up of much fresh soil had something to do with it. Possibly the scourge was smallpox, brought from New York and Philadelphia by the immigrants. Or was it yellow fever? In every house many were sick, and in nearly every house one or more died. There was no resident physician, and the disease, whatever it was, was allowed to run its course.

In 1824 only half the people remained. The burden of being the county seat became too great to be borne and the legislators were asked to give relief. Accordingly, in 1828, the county offices were removed to Mount Pleasant. One after another Hindostan residents left and houses fell into ruins.

Fifty years later a pioneer, in writing of the tragic history of the town, told how the sites of houses had become farm land. 'No man can find a street or a lot,' he wrote.

Some years after the passing of Hindostan, Pittsburg, Indiana, was to be the 'head of steam navigation on the Wabash.' Like Hindostan, Pittsburg flourished for a season. But hopes were never realized. The Pittsburg dam was destroyed, and the town silently dropped from sight.

Scene on the Wabash River in Tippecanoe County, Indiana.

Art Treasures *at* 'Bargain Sale'

By PAUL TYNER

CHRISTIE'S has been famous for a hundred years as the foremost auction room devoted to the disposal of books, pictures and what Mrs. Malaprop called articles of 'bigotry and virtue.'

In London this mart has come to be regarded as almost as much a national institution as the British Museum or the National Gallery. It occupies a dignified three-story granite building, aged to a bluish dark gray by more than a century of London smoke, which is situated in a little side street that runs two blocks from what Disraeli calls, in the opening paragraph of *Endymion*, 'that aristocratic eminence known as St. James's Street' to the very old-fashioned green oasis known as St. James's Square.

One might pass by Christie's without noticing the place, for the modest brass plates on each side bearing this name have to be looked for. From the entrance hall, one ascends a broad staircase to the large glass-domed gallery in which the auctions are held and from which open one or two long narrow rooms to accommodate the modest offices and rooms in which are stored pictures, bronzes or books awaiting their turn to come under the hammer. The house was originally the town mansion of a nobleman and the knightly armor with bronzes and pictures decking stairway, landing, and corners of the entrance hall, all suggest this character—except when a sale is in progress.

On such occasions the scene is not unlike the eager bustle and excitement of 'bargain day,' although the eagerness of the bargain hunters is possibly covered by a thin disguise of politeness and assumed indifference. Pictures are 'knocked down' to the bidder at the flickering of an eyelid, the raising of an eyebrow or the lifting of a catalog.

The whole place is suggestive of a 'hall of memories' of the sales that have made Christie's the clearing house for a century past of European art treasures and great libraries. Canvases that for generations have been the prized jewels of the stately homes of England, and libraries collected through many years from the gems of the world's private collections, sooner or later come here to be dispersed.

Among the buyers are representatives of millionaire collectors in Europe and America, of reigning monarchs and of princes, as well as of famous art dealers of Bond Street in London, Fifth Avenue, New York; Boylston Street, Boston, and the Rue de la Paix in Paris. Frequently, purchases are made for the great public galleries and libraries of the world, and so pass to the people of crowded cities in Great Britain or the United States.

At recent sales, so many of the great prizes have been captured for American collections, private and public, that wails are heard as to the devastation wrought by 'the American dollar,' which by a pet fiction among Britishers we are supposed to worship. The rejoinder to which is, of course, that if Americans loved their dollars better than art treasures they would not so freely offer to exchange them. If the Europeans loved their pictures and literary treasures more than our dollars they would not make the exchange.

Abraham Lincoln

(Continued from page 9)

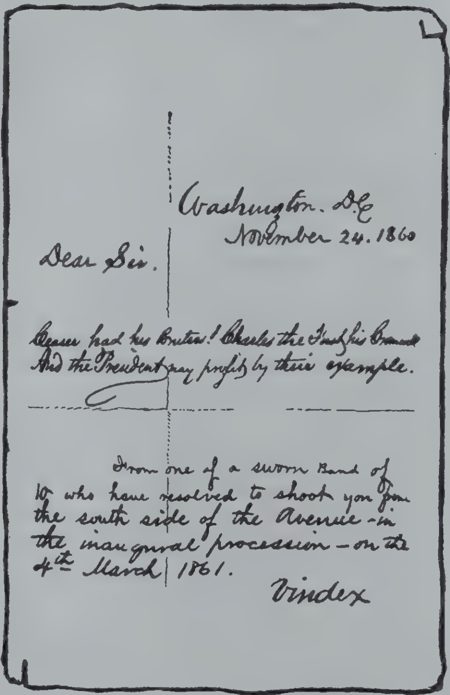
No doubt both you and your *colored* associate feel quite proud of (as you no doubt think) your near approach to the White House and to the seats once occupied by such men as Washington, Jefferson, Adams, and now graced by the venerable form of James Buchanan.

I understand that a young friend of mine has sent you the Epitaph of our ONCE glorious Union, and an accompanying pamphlet. It will be useless for me at this time to refer to them, only to say that had I known of his intention earlier, I would have advised him to send something simpler, in order that it might be appreciated by one of your *very* limited education.

Should you ever expect to rule over the free and educated people of So. Car., let me beg of you not to lay that flattering unction to your soul, for I am authorized to say that they will never have for their President

'A rail splitter.'

Remember me to your friend Hanibal (down South, we call *respectable* mulattoes, Daddy so-and-so, but as your colleague is not of that high order of individuals it would be improper for me to fix anything to his name except such as is generally prefixed to jail birds, such as rascals, thieves, or something of that sort) and tell him for me that the people of these United States will never consent to have a person so much inferior to a *white man* to occupy the chair now held by that true Southern gentleman, John C. Breckenridge.



Washington. D.C
November 24. 1860

Dear Sir.

Caesar had his Brutus! Charles the First his Cromwell
And the President may profit by their example.

From one of a sworn Band of 10 who have resolved to shoot you from the south side of the Avenue - in the inaugural procession - on the 4th March 1861.

Vindex

'Dear Sir: Caesar had his Brutus! Charles the First his Cromwell And the President may profit by their example. From one of a sworn band of men who have resolved to shoot you from the south side of the Avenue in the inaugural procession on the 4th March 1861. Vindex.'

Allow me in conclusion to say that before many days have passed over your head the sovereign State of South Carolina will in consequence of the triumph of a *sectional* candidate (one who did not receive a single vote in any of the Southern States, i. e., the *respectable* portion of the Union) declare herself to be an independent and separate Confederacy, thus placing herself in her original and true position.

Never expect to occupy the White House (when you get into it, it will be a Black House), for that is only intended for Southern Gentlemen and not for Black Republicans and mulatto scamps.

And so with the earnest wish that you will live to see the downfall of the northern portion of the confederacy, and the rapid rise of this Southern Confederacy I will leave you with your feelings (if you have any).

Respectfully,
S. C.

Here is another and the tone is vindictive.

Carrollton, Ga., December 1st, 1860.
Abraham Lincoln.

Sir:—Being certain that you have been elected President of what were once the United States and knowing that your principles are unconstitutional and treasonable—also that your death would greatly benefit the whole country—I therefore propose to meet you in mortal combat at Harper's Ferry on Washington's birthday, the 22nd of February next. The weapons shall be double barrelled shot guns, each barrel loaded with eighteen buck shots. I shall expect you to have a white man for your second. If you fight and are killed or prove too cowardly to meet me send on mulatto Hamlin and I will settle the business with him. Let me hear from you immediately . . .

If you do not accept I will publish you as a coward . . .

Rolbert Kemmeck.

Next is a direct but anonymous threat.

Washington, D. C., November 24, 1860.
Dear Sir:—

Caesar had his Brutus! Charles the First his Cromwell

And the President may profit by their example. From one of a sworn Band of 10 who have resolved to shoot you from the south side of the Avenue—in the inaugural procession—on the 4th March 1861.

Vindex.

And in conclusion—there is still one other letter of such a profane character as to be unfit for publication—here are two containing threats.

Abraham Lincoln, Esq.

Sir—You will be shot on the 4th of March, 1861 by a Louisiana Creole. We are decided and our aim is sure.

A young Creole.

—BEWARE— *United*

The other:

Sir—

This is to inform you that there is a Club of 100 young men in this place who have sworn to murder you.

Jos. Bradley
Jos. Roints
Mike O'Brien

These few letters, fortunately preserved for us, picture vividly in concrete form the intensely tense atmosphere, an atmosphere filled with the mists of doubt and the low mutterings of war, which hemmed in the spirit of him, that man of gentleness and fearlessness, Abraham Lincoln, as he stepped serenely forward to greet the task set before him by Almighty God. With soul erect, in patience and kindliness he completed that task. 'And he was not, for God took him!'

Lord Balfour and His Scottish Home

(*Continued from page 15*)

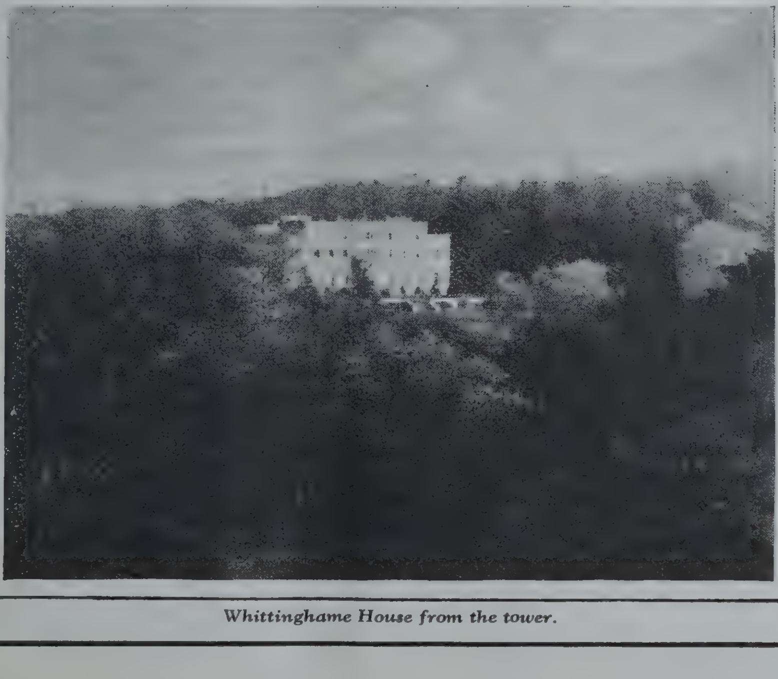
paneled oak bookshelves with carved oak pillars on each side of the mantelpiece, over which a beautiful copy of Raphael's 'Madonna and Child' is set in the paneling. On the left side of the fireplace is Lord Balfour's armchair; at his left hand is a set of the first edition of Kipling's works; at his right, a small table containing books which he may be reading at the moment or any papers on which he may be working. The bookshelves opposite are devoted principally to works of philosophy and dictionaries of reference. It was in this room that Lord Balfour wrote both sets of his famous *Gifford Lectures* and the *Foundations of Belief*. Parts of these works were, however, written in very different surroundings. A picnic to the seashore at Tyningchame is a favorite adventure with us at Whittinghame, in the summer and early autumn, and while other members of the party would be boiling the kettle or spreading the feast or strolling along the shore, my uncle would be writing—far away from the everyday world, but always ready to come back to it genially—when summoned.

As regards Lord Balfour's outdoor interests, he does not shoot neither does he hunt; yet he is an ardent lover of the country and country life. The management of the beautiful garden at Whittinghame he leaves chiefly to my aunt, although its every phase fills him with interest. His special hobby, however, lies in the direction of the preservation of old buildings, the care of the many beautiful trees with which Whittinghame is surrounded, and, above all, in the development of views.

Among the old buildings on the estate, my uncle is especially interested in the castle or tower built in the 14th Century by the family of Douglas. At the time of Mary Queen of Scots, it was owned by one Archibald Douglas, a man who played no small part in the political intrigues of the time. There is one room in this old tower which is specially worthy of note, on account of its Italian ceiling of moulded plaster of the time of Mary Queen of Scots. Its wonderful state of preservation is probably due to the fact that it was covered up by ordinary plaster at some remote period, and its existence forgotten. The way in which it was brought to light—quite recently—is interesting. The room had been lived in by an old mole catcher. After his death an unpleasant smell was noticed and was attributed to rats' having died above the ceiling. Workmen were called in to open up the plaster, and in doing so, in addition to the discovery of the dead bodies of several rats, they uncovered the beautiful moulded ceiling which has now been restored.

Entrance to Old Avenue, Whittinghame.

A few yards from this old tower stands the famous Whittinghame yew. It is about sixty feet high and the trunk has a girth of twelve feet, five feet from the ground. It is estimated to be nearly a thousand years old, and is particularly remarkable for the extraordinary spread of its lower branches. These droop right down to the ground so as to form a sort of room inside, with vaulted ceiling of interlaced branches.



Whittinghame House from the tower.

My uncle has a great affection for this yew and himself delights to show it to his guests. It was under this tree, so the story goes, that the murder of Darnley, husband of Mary Queen of Scots, was plotted by Archibald Douglas, Master of Whittinghame, and the Earls of Bothwell and Morton. Whether this tradition is true or not, we know for certain from Lord Morton's confession, a facsimile of which now hangs on the walls of the room in the tower, that he, Douglas and Bothwell met and discussed Lord Darnley's fate in the courtyard of Whittinghame Castle.

Illustrations have been given of my uncle's interest in old trees and old buildings. A word now about his love of cutting gaps in his woods to reveal a good view. Driving from the house in a southerly direction, one passes up a road thickly wooded on either side, but, on rounding the first corner, a judicious cutting away of the trees has revealed a wonderful view of the ancient Lammermuir Hills. In August, when these are clothed in their purple cloak of heather, or, in winter, when they gleam white with snow, they present a picture of rare beauty.

Turning to the north, the woods on that side have been opened to reveal another beautiful but very different view. A rich agricultural plain dotted with woodlands stretches out before one, bounded by the gray waters of the Forth, from which the Bass Rock rises like some sea monster. In the far distance, the coast of Fife can be seen, the county which is described as a 'beggar's cap with a rim of gold.'

Brief *for* Two Rascals

SCARCELY anybody has a good word for that blackamoor, the crow. Conservationists and sportsmen rejoice to fare forth and hunt him down. They make holiday of his slaughter. When a crow comes near the farmer, and there is a gun handy, you may depend on it that the unfortunate fowl either dies or is sped on his way. This has always been the common attitude toward crows—to kill a crow is to further the interests of mankind. But the United States Department of Agriculture vows that the crow isn't such a bad fellow, after all. The white grub which causes great damage to lawns and grain crops as an infant May beetle is one of the favorite items on the crow's menu.

Sometimes it is barely possible, as it was with Disko Troop of Kipling's *Captains Courageous,* that we may be 'mistook in our jedgments.' The English sparrow has been the target of every tongue and missile for a generation, but observant ornithologists are beginning to assert the helpfulness of this exile from the hedges of England. They say that the diet of English sparrows, and particularly the diet they provide their young, is largely comprised of harmful insects. And it is confidently asserted that the rowdy little ruffian stands between the eastern states and a serious recurrence of the seventeen-year-locust plague. In districts infested by periodic cicadas, the sparrows are observed to watch hopefully over the ground wherein the locusts are awakening from their larval slumber, and to consume the insects almost as rapidly as these emerge.

Genesis *a la* Eskimo

By THOMAS B. DRAYTON

WITH a vocabulary limited to a hundred guttural words or so, but supplemented with a boundless wealth of signs and gestures and inflections, the patriarchs of the Eskimo tribes of Alaska regale the members of their clan on long winter nights with stories of the Eskimo creation; the feats of an Eskimo Samson, who used his marvelous powers for good alone; the heroism of an Eskimo Jonah, who fulfilled the same fate as his Biblical prototype, but, unlike him, from a high sense of duty rather than from recreant disobedience.

The splendid friendship of a David and Jonathan, the pretty romance of a Ruth and Boaz, the untemptable quality of a Joseph, have almost exact counterparts in Eskimo legend, and are repeated to Eskimo auditors who hear them with an avidity unfortunately unknown to Sunday school workers among folk of a lighter hue.

According to these Eskimo legends the world, when first shaped and fashioned by Tongnuk the Creator, was soft and pliable, and where the great waters are, it was then, as now, in a liquid state. In time the land solidified and man was created, being first made double-faced and four-eyed so he could walk forward or backward with equal facility, and game could not escape him.

The state of nature then is expressed by the word *azeaktuk;* the Eskimo's one idiomatic term conveying a highly developed ethical conception, which may be rendered into English with approximate clearness by the phrase, perfected excellence.

THE sun shone brightly always; the temperature was delightful; seals for food and otter for pelts were in plenty at the very door of his igloo; flowers bloomed perpetually on the tundras; and during the hours of sleep kindly spirits hovered near and whispered stories of entrancing interest to slumbering consciousness. Tongnuk the Creator had bound him with but few commands or prohibitions, and these without exception would today commend themselves to the ethical favor of the most advanced of mankind.

In a baleful hour Toolookkahk, the raven, flew over the land carrying Tunrak the Evil One in his beak, and, true to his inherent instincts of malignancy, dropped him into this scene of unsullied loveliness. Tunrak, with his forked tongue, soon persuaded man that obedience to Tongnuk was both unwise and beneath his dignity, and thus precipitated the fall and ensuing unhappiness of the race of men to be.

When Tongnuk returned from the great walrus hunt in which he had been engaged, and discovered the disobedience, he was greatly enraged; he caused man to fall into a deep sleep and cut him in twain, so that he was no longer a double man but two distinct individuals, one of whom was a woman.

His anger satiated, and his pride enlivened by the outcome of his act, Tongnuk forgave them upon condition they would have no further speech with Tunrak, and went upon another far-distant hunt. Meanwhile Tunrak came again and told the man and woman many things they had not known; the man listening reluctantly, the woman with eager ears. When Tongnuk returned and discovered their repeated disobedience he drove the sun away to unknown regions, permitting it to return but briefly in the summer that the birds and beasts might rear their young.

Eskimo man and wife.

Meanwhile the world grew dark and cold; vegetation disappeared; the skin-searing snows came on the wings of bitter winds; the ice packs drove in from the frozen seas; life became a ceaseless struggle with the forces of Nature; and thus man turned to wickedness, and learned to steal and kill and be unclean.

Studies of the Eskimo are interesting. In their homeland at the mouth of the Mackenzie and north of the Yukon River they may be seen during the summer months.

They are not inaccessible. Once it required an Arctic expedition to penetrate to their district. Now trains and steamships take the traveler nearly to their villages. One has only to make his way to Vancouver and take passage on any of the Canadian National steamships northbound. At Skagway the White Pass and Yukon Railroad runs luxurious parlor cars to the interior where the traveler may board steamers on the Yukon River for the trip down north. Less than two hundred miles north of Fort Yukon is Eskimo territory. Early summer is the time to study this interesting people so replete with ancient folklore and beliefs.

The Little Big Viola

(*Continued from page 6*)

There is a fullness and roundness, a thickness and buoyancy, in the cello that is seldom heard in the violin; for the latter is apt to be nasal and asthmatic, and that particular string is very apt to rattle on the finger board when the bow is pressed down a little too hard.

The cello, which encompasses the entire range of the human voice, possesses most of the virtues of the human voice and many of its defects. Its tone is either nasal or muffled, or both. Not one in a hundred is just right. The same can be said of voices. No two cellos have the identical natural pitch. That is, if we tune two cellos to the same piano and play them in succession without accompaniment, they will give the impression of being played in different keys although we play the same notes on each. One will have a dark, somber quality, which will make it seem lower in pitch than the next, which may have a high-pitched voice that tends to float above all competition. Twenty years ago those somber, dark-toned instruments were much sought, but today they are not so popular as the airy, high-voiced cellos, because the high-pitched tone is more definite and penetrating than the darker tone.

The best playing of the Saint-Saens concerto that I have ever heard was done on a cello twelve years old. Cornelius Van Vliet was the player. I complimented him on his beautiful tone, and in his reply he bewailed the fact that he had no fine Italian instrument. When I told him that I had never heard the concerto played so well he replied that the instrument he was playing was satisfactory for that particular piece, but that it was incapable of changing its tone quality to suit the different kinds of music that he was in the habit of playing. I am not quite certain what he meant, for I have had Italian, French, and German cellos, no one of which ever seemed capable of changing its tone to meet the exigencies of the occasion. I presume that the quality of tone is somewhat colored by your attitude of mind toward your instrument. If your valuation of it is sentimental, it seems to do its work more efficiently than an instrument with a merely commercial meaning.

The selection of a satisfactory cello involves some interesting problems. More is made of the question of size than the facts seem to warrant. There is really no great difference in the reach or finger stretch on a large and a small cello. But in the matter of responsiveness there is a great difference, which, however, does not seem to depend on size. One will seem to try to do what you want done, while another will fight back at you all the way. One who prefers an easy, complaisant instrument should be very careful in his selection, or he may get one that is too complaisant. An instrument that plays easily when played alone is apt to offer too little resistance when played in company, and in a large hall it may get stage fright and lose its voice altogether.

CHATS WITH OFFICE CALLERS

UNIVERSITY OF ILLINOIS LIBRARY

'It has been found,' said the ***Optometrist,*** 'that one of the unsuspected factors in the nonsuccess in life of many persons is some form of color blindness. Eye tests of nearly seven hundred men entering an Eastern university disclosed the fact that many could not differentiate between certain colors; nearly one-half of them had defective vision, and thirty-two were unable to pass the color test. Some were slightly red-green blind, others markedly red-green blind; and one was slightly yellow-blue blind.

'Men were found who were backward in the departments of biology, art, and chemistry, not because they lacked the artistic skill or the mental equipment, but because they were unable to distinguish between certain colors. A chemistry student who could not identify copper sulphate was found to be almost totally green blind. In biology, students are handicapped by color blindness because they are confused by the red, green, and blue tissues used in laboratory experiments.'

* * *

'The eagerness and ignorance of those modern antique collectors who pay high prices for fakes were paralleled in ancient Rome more than two thousand years ago,' said the ***College Professor.***

'Martial, the cynical poet, once said of a rich Roman who boasted of his original paintings and real silver goblets that his friends were just as genuine as his collection. Martial also mentioned his disgust at constantly being forced to listen at table to "the smoke-begrimed genealogies" of the silverware.

'Collecting was just as fashionable then as it is today. Julius Caesar had a mania for collecting old statues. The bidding at auctions was furious. The earthen lamp of Epictetus brought 3,000 drachmas and the staff of Peregrinus Proteus a talent. Some of these Romans, like some moderns, went in for the incunabula of art, the "most coarse" works of the earliest periods.

'The technical excellence of the then living Greek artists facilitated faking. The Romans of this rich and gaudy period disdained to regard as "old masters" the works of artists later than the epoch of Alexander the Great.

'The passion for bronze works, especially of Corinthian bronze, the mixing of which was not to be a lost secret, was noteworthy. Horace derides those Romans who were always talking about "mixing of bronze," "contours," "shading," "proportions," and claiming to be able to recognize the genuine Corinthian article by the smell. Trilmachio, a certain amateur connoisseur, declared that he would not sell his artistic judgment at any price.

'The wily Greeks, however, found a ready market for pseudo-Corinthian bronze and contemporary sculpture inscribed with the names of Phidias and Praxiteles, polished silver with the mark of Myron and fakes of pictures by Pausias.

'Shops and private collectors exhibited numerous specimens of silver ascribed to Mentor, the Cellini of antiquity, although even then only four authentic pairs of his cups were actually known to exist.'

* * *

Said the ***Hotel Man:*** 'The old register or guest book of the famous 400-year-old "Three Moors" Hotel in the ancient town of Augsburg, Bavaria, was recently written full and supplanted by a new one. The old volume probably contains more famous signatures than any similar book in the world.

'There one can find the name of Robert R. Livingston, one of the drafters of the Declaration of Independence, who visited Augsburg in 1805; the book has two signatures of Napoleon I, and one of the Empress Josephine. Other noted signers of the book were the statesman Metternich; the Duke of Wellington; Goethe; Sir Walter Scott, and Czar Nicholas I, of Russia.'

* * *

'At Chinese ports, the American Army and Navy men are being loaded down with Oriental money and it is predicted that a flood of this peculiar coin will be brought home when the yellow man's war is over,' said the ***Man From Shanghai.*** 'Tokens constitute the money of the lower and the coolie classes.

'The cash token is of copper or brass and has a square hole in the center; a thousand of these units on a string are known as a tiao. Three thousand of these brass tiaos are exchanged for an American silver dollar.

'The poverty of China may be noted when workers earn and subsist on five to eight tokens daily. At one time there were seventeen mints in China working twenty-four hours a day.'

* * *

'Careless cigar and cigaret users cause an annual fire loss to this country of $50,000,000 to $60,000,000 a year, according to the Bureau of Standards, but it is difficult to convince the average smoker that he is contributing to this costly carelessness,' said the ***Insurance Man.*** 'While 550,000 matches, 160,000 cigarets, and 13,000 cigars are discarded, according to estimate, every minute of every day in the year, experiments conducted under the direction of S. H. Ingberg, chief of the Fire Resistance Section of the Bureau, have shown that only one out of every hundred thousand is likely to start a fire.

'It was found that the glow on a cigaret butt, fanned by a mild breeze of three to five miles an hour, would almost invariably cause combustion in a pad of dry grass. The Bureau is continuing its experiments with a view to seeing whether the hazard can be reduced by treating the ends of cigarets with noncombustible substances.'

* * *

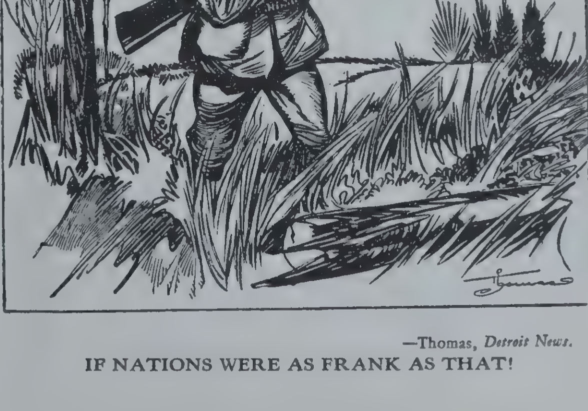
'Much smuggling of aliens is being done from Cuba into Florida, and the number of vessels engaged in the traffic is large,' said the ***Government Agent.*** 'Great risk accompanies the voyaging across the Florida Straits in diminutive craft, but the aliens who make it are oblivious of the danger in their eagerness to be landed in the United States. Not only do they assume a considerable risk but they pay well for their passage, the price ranging from $80 to $1,100 a head.

'It might seem that the aliens are objects of a certain sympathy in view of the way in which they are treated by the smugglers. A ruse worked many times by those in this traffic is to take on a cargo of aliens at some Cuban port, sail about in a circle for a day or two and then land the dupes on an uninhabited stretch of shore near the starting point.

'The average immigration inspector is hard in this respect. He has no sympathy for the alien who is seeking to get into this country through the back door. The inspector looks upon the alien as an outlaw who is seeking to obtain something by stealth to which he has no right.

'The belief exists that a well-organized and heavily financed smuggling ring with ramifications throughout this country and in foreign countries is operating chiefly through Florida, and that the long stretches of Florida coast with its numerous openings and opportunities for concealment have given landing and hiding place for many a valuable cargo.

'That scores if not hundreds of aliens get by undetected for each one apprehended seems probable. Less than twenty men are charged with the duty of keeping aliens from entering the back door of the nation, which is Florida. Because of its nearness to the Bahamas and the ease with which shelter is found along its more than three thousand miles of coast, it is no wonder that Florida has also been the landing place for immense quantities of liquors.'



I DECLARE WAR ON THE DEER BECAUSE I WANT TO EAT PART OF HIM AND PUT HIS ANTLERS OVER MY FIREPLACE.
Thomas

—Thomas, *Detroit News.*

IF NATIONS WERE AS FRANK AS THAT!

CAN YOU TELL ME?

Question. On what day in April, 1910, did the steamship United States *leave Oslo, Norway, and when did it arrive in New York City?*

Answer. According to the records of the United States Customs Service, Port of New York, the steamship *United States*, from Norway, did not arrive at that port during the month of April, 1910, but did make entry there on May 4, 1910. The customs records do not show the date of departure from the foreign port, but it can undoubtedly be obtained from the owners of the vessel, the Forenede Dampskibs, Kvasthusgade 7 & 9 b, Copenhagen K, Denmark.

Q. I should like some information regarding the formation of the Republican Party.

A. The event which determined the date of the birth of the Republican Party was the repeal by the Kansas-Nebraska Bill of 1854 of that provision of the Compromise of 1820 which excluded slavery from national territory north of the geographical line 36 degrees 30 minutes, and the formal substitution in that bill of 'squatter' for national sovereignty, in deciding the question of slavery in the territories. The immediate result of the agitation over the repeal was to convince a large number of the best citizens of the North, irrespective of party, that the restriction of slavery was essential to the well-being both of the North and of the Union as a whole. Everywhere large elements of the existing parties came together and agreed to unite in resisting the extension of slavery. Before the discussion of the repeal in Congress had reached its later stages, a mass meeting of Whigs, Democrats, and Free Soilers at Ripon, Wisconsin, resolved that, if the Kansas-Nebraska Bill should pass 'they would throw old party organizations to the winds and organize a new party on the sole issue of the nonextension of slavery.' The name Republican was formally adopted at a state convention of the new party held at Jackson, Michigan, on July 6, 1854, and at other western state conventions on the thirteenth of the same month. Before its advent to power, from 1854 to 1860, the Republican Party had three tasks: To propagate the doctrine of slavery restriction by congressional action; to oppose the extension of slavery under the operation of the doctrine of squatter sovereignty; to obtain control of the Federal Government. In each of these it was successful. Its first national platform, that of 1856, affirmed its adherence to the principles of Washington and Jefferson, denied the constitutional right of Congress or of a territory to establish slavery, and declared that it was 'both the right and duty of Congress to prohibit in the territories those twin relics of barbarism, polygamy and slavery.' The platform of 1860 was more comprehensive; it added to the planks of the first an arraignment of the administration and the Dred Scott decision, demands for a protective tariff, and a homestead act.

Q. Can you tell me about Edward Teach, known as 'Blackbeard the Pirate'?

A. Edward Teach, or Thatch, American pirate, was born in England and is supposed to have gone out to the West Indies during the War of the Spanish Succession, engaged as a privateer, and to have turned pirate in 1713 when the privateers refused to recognize the peace. He is first heard of in 1716, from which time he cruised among the West Indies and along the Spanish Main and the coasts of Virginia and Carolina in his sloop *Queen Anne's Revenge*, capturing numerous prizes and making his name a terror wherever known. In June, 1718, his sloop was wrecked off North Carolina, and Thatch with some thirty of his men surrendered to the king's proclamation. He made an ally of Governor Eden, who afterward countenanced his piracy in view of a certain share in the spoils; for a time he led a rollicking life, forcing the planters to supply his wants and exacting toll from all vessels which went up or down the river. The planters at length appealed to Colonel Alexander Spottiswood, lieutenant-governor of Virginia, who fitted out an expedition against the pirate. On November 22, 1718, the sloops moved up the river. Every man in the commander's boat was killed, and the captain slew Thatch in a hand-to-hand struggle.

* * *

Q. Can you tell me when the universities of Pavia, Oxford, Cambridge and Paris began?

A. The University of Pavia, Italy, was founded by Lothaire, grandson of Charlemagne, in 825 and celebrated its eleventh centenary on May 5, 1925. Its renaissance began in 1361 under Galeazzo II. The University of Oxford is said to have been founded by King Alfred in 872. The first college of the University of Cambridge was founded by Hugo, Bishop of Ely, in 1257. The University of Paris was founded by King Philip II about 1200.

* * *

Q. Will you please tell me something about the sending out of the time signals by the Naval Observatory at Washington? How is it done?

A. Many observatories send out time signals over telegraph lines, the wires being permanently run into the observatories for the purpose; the signals are generally sent automatically by a distributing clock which is kept as near the exact time as possible. An electric current passes through the clock and is broken or closed regularly by a toothed wheel on the second hand arbor of the clock. The signals from the Naval Observatory at Washington are sent out as follows: Three or four minutes before noon, whenever the telegraph companies switch in the loops to the observatory, the clock begins to send out make-circuit signals every second over the various lines, the minutes being indicated by the omission of the seconds 55, 56, 57, 58, and 59 in each, and the half-minutes by the omission of the 29th second of each. The click following such a one-second interval always indicates the beginning of a half-minute and the first following an interval of five seconds indicates the beginning of a minute, except at noon. Just before noon there is a gap of ten seconds and then exactly at noon the circuit closes and remains closed for a whole second, the beginning of the marks indicating noon. This particular signal is made to do a great many things at different places, such as the dropping of time balls. After the break at the close of the noon signal, the telegraph companies quickly switch out the loops to the observatory, whereupon the lines immediately resume their normal work. In the City of Washington this particular noon signal drops a time ball on the top of the State, War and Navy Building, and it also corrects automatically, by setting forward or backward exactly to 0 hours 0 minutes 0 seconds all the clocks in the department buildings of the Government.

NOTES · COMMENTS · CRITICISMS

MR. FORD'S Page this week discusses progress and the moral law.

* * *

Aaron Hardy Ulm has had an opportunity to observe the doings of the great during his period of service at Washington, D. C., as a special correspondent. His views on the greatness of Benjamin Franklin become doubly interesting when he places Poor Richard among the few greatest men of all time. (p. 1)

* * *

Four reasons given by Ulm for placing Franklin among the immortals are: The expression of his greatness did not depend on events beyond his control; he would have been a great man in any period of the world's history in any land; he would have been great even if his endeavors had been confined to one only of several lines of activity in which his achievements were of the highest rank; he would be a great man if he were living today.

* * *

While Science has been striding ahead with its marvelous discoveries, why has Art remained stagnant? Is it on a dead center? Cubism and futurism have failed, but in the Goetheanum in Switzerland is expressed a new idea in architecture. (p. 3)

* * *

Spain apparently is prosperous; the great cities are expanding with fine boulevards, modern office buildings and expensive homes. The reign of the dictator has given Spain the best government she has known for many generations. Yet, after Primo de Rivera steps down from the dais, disturbances may come. (p. 4)

* * *

Voltaire once said to Servais, the greatest cellist of his age, 'Sir, I now believe in miracles, for you have just made an ox sing like a nightingale.' He was referring to the violoncello, long the butt of humorists because of its great size. There are some music-lovers, and not a few, who deem this 'ox' of Voltaire's to be the very king of instruments. (p. 6)

* * *

One of the mansions of Hagerstown in 1789 was 'Mount Prospect,' located in the suburbs of that little Maryland community. Today it is one block from the business center of the third largest city in the state. In it one may still find the centrally located gun closet, where the guns, neatly stacked in racks, could be secured handily in case of an Indian attack. The outside doors are of double thickness and their hinges run across the whole width, secured with wrought-iron nails. (p. 7)

* * *

Hagerstown has an interesting history. Its first settlers gathered at the pioneer home of Jonathan Hager for protection against the marauding redskins. The first president of the bank was Colonel Nathaniel Rochester, who later gave his name to the busy city in western New York State. His partner was Thomas Hart, uncle of the great orator, Thomas H. Barton, and father of Lucretia Hart. She was the wife of Henry Clay, another statesman of his time.

'Lincoln can only be accounted for by a belief in destiny; a Power higher than man, a Power as yet unseen by us, controlled and directed the life and all the acts of this man of men. The tang of earth was in him, but around his head was a halo of glory. Lincoln's inner life was, even to himself, a hidden one. He was with us but not of us. The outward Lincoln was what we saw; the great peering depths within him no man knew, not even those who called him kin.' (p. 8)

* * *

Railroading in China is vastly different from railroading in this country. Up to the thirteenth year of the Republic the militarists had looted from them and from the telegraph companies more than two hundred million dollars. Each governor fortunate enough to control a railway line squeezes it dry, demands generous bribes to move freight, and the passengers are allowed to sit on the floor or on their baggage. (p. 12)

* * *

R. A. L. Balfour, nephew of the great Lord Balfour and manager of his estate, has prepared an entertaining description of the home life of the Scotsman. At Whittinghame, the laird may enjoy his books and trees; and on each New Year's Day a large Christmas cake is cut with all the family, near and far relations, present. The minister of the parish with his family is also there. After tea, gifts are distributed and then merriment prevails. (p. 15)

* * *

In the early days of the *Century* magazine, when it was still known as *Scribner's* (not the present-day magazine of this name) it published an article describing the first overnight bicycle run of history, as made by forty men of Boston. To this day the occasion is remembered each year; and the old route is still traveled, although the motor car has supplanted the two-wheeled vehicle. (p. 16)

* * *

During his boyhood, Julian Hawthorne attended school in Concord with two of the James boys, brothers of Henry and William. However, Julian knew both Henry and William, as well as the younger two with whom he studied. His reminiscences of the family are delightful. (p. 20)

REMARKS BY OUR READERS

Cripple Creek, Virginia.

The Great Basin is comprised of a vast desert and semidesert areas lying between the Rocky Mountains and the Sierra Nevada. It is cut off from the ocean by surrounding mountains and what little rain falls on these mountains flows toward the center of the basin and either sinks into the ground or into a salt-water lake where it evaporates.

The Great Salt Lake and Sevier Lake in Utah and Humboldt and Pyramid Lake in Nevada are examples of these, none having outlet to the sea. Evaporation is very rapid.

This Great Basin includes all of Nevada, western Utah, part of California and Oregon and a small corner of Idaho. It is about five hundred miles across.

Its average rainfall is about nine to sixteen inches; most of it is entirely desert with only vast sand dunes and scattered sagebrush. However, when it is irrigated this apparently worthless sand produces wonderful crops; in fact the largest known.

The streams are so small that at present only one acre out of a hundred can be watered. The State of Nevada though larger than several Atlantic States has a population of only about eighty thousand.

The Colorado River comes tumbling down out of the Rockies, and its waters are practically all wasted, for the lower end of the river is not good for navigation, while the upper is too full of canyons to make irrigation feasible.

The Colorado flows southwest along the eastern range of the Wasatch Mountains through the Great Colorado plateau, while just across the Wasatch to the west lies the Great Basin, dry and thirsty. Much of the Great Basin is around 3,800 feet above sea level with other parts 42 to 4,500 feet above—while at Moab in the Colorado River the elevation is 4,459 feet.

This actually means that water could flow by gravity from Moab to Salt Lake. With a 125-foot dam at Moab it could flow by gravity to Lake Sevier and desert in Utah.

Or if a large dam at Green River and Moab were made (say about seven hundred feet high) and if a tunnel were made through the Wasatch Mountains, the entire Colorado could be turned into Salt Lake and when the waters of the Salt Lake rise about seven hundred feet higher than at present it would discharge by way of the Snake River into the Columbia.

It is possible to create a vast inland sea comprising an area as large as our great lakes by diverting the waters of the Colorado into the Great Basin.

The lower lands would be fresh water lakes to take the place of the salt lakes; rain would fall in abundance on the 'islands' and on the surrounding country.

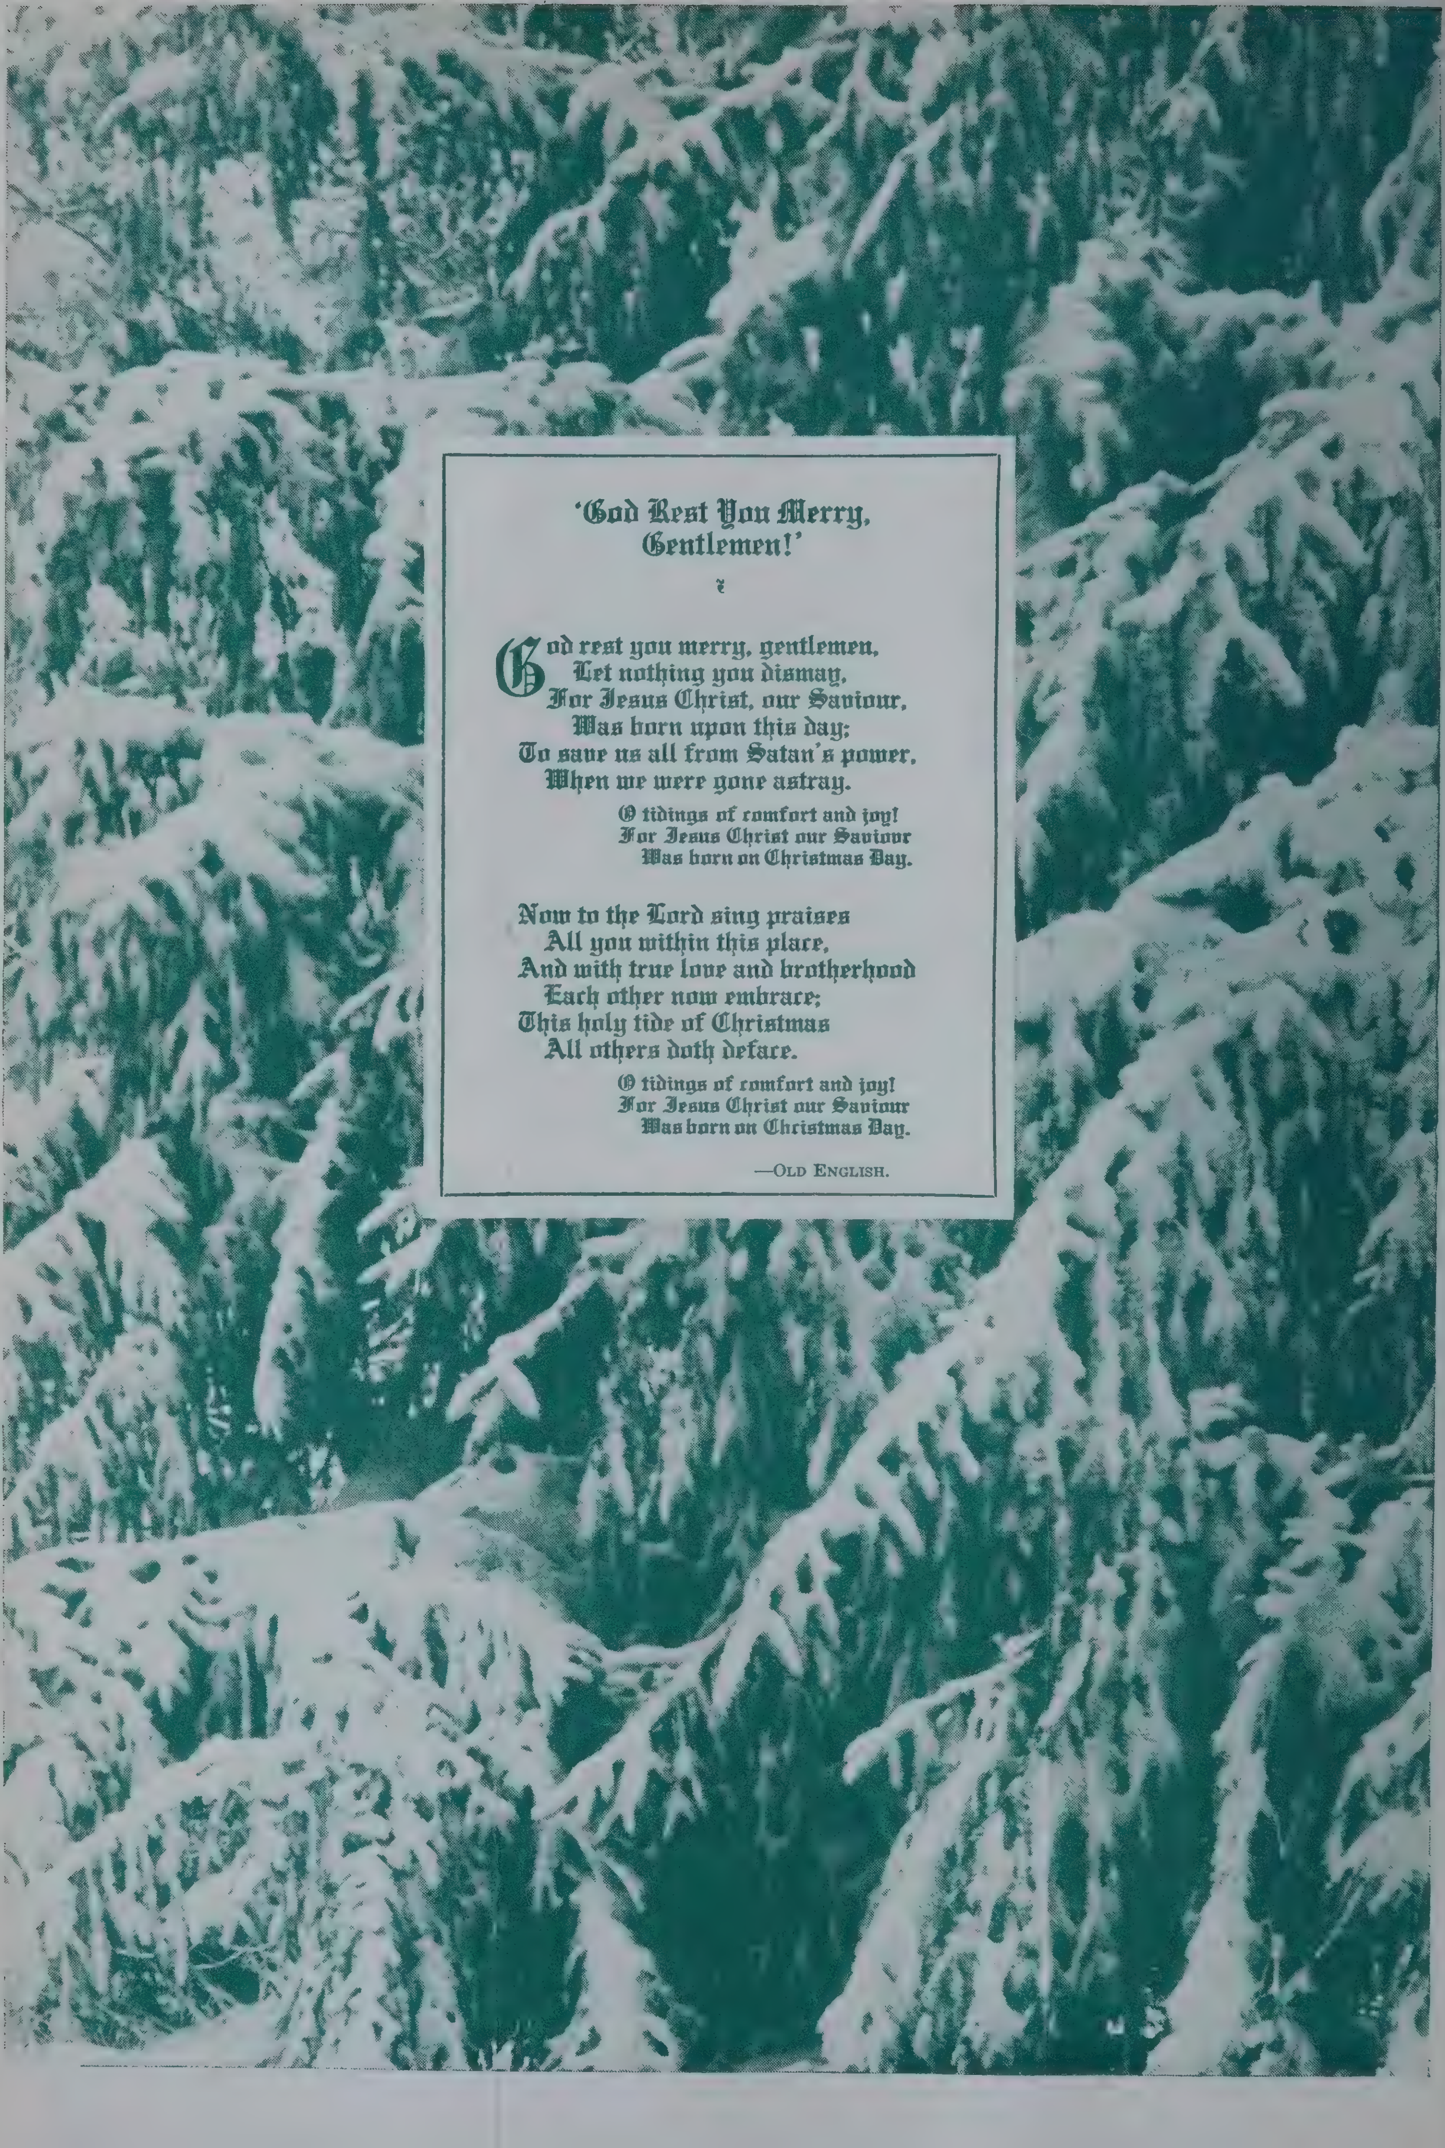
MERRY CHRISTMAS



'God Rest You Merry, Gentlemen!'

God rest you merry, gentlemen,
Let nothing you dismay,
For Jesus Christ, our Saviour,
Was born upon this day;
To save us all from Satan's power,
When we were gone astray.

O tidings of comfort and joy!
For Jesus Christ our Saviour
Was born on Christmas Day.

Now to the Lord sing praises
All you within this place,
And with true love and brotherhood
Each other now embrace;
This holy tide of Christmas
All others doth deface.

O tidings of comfort and joy!
For Jesus Christ our Saviour
Was born on Christmas Day.

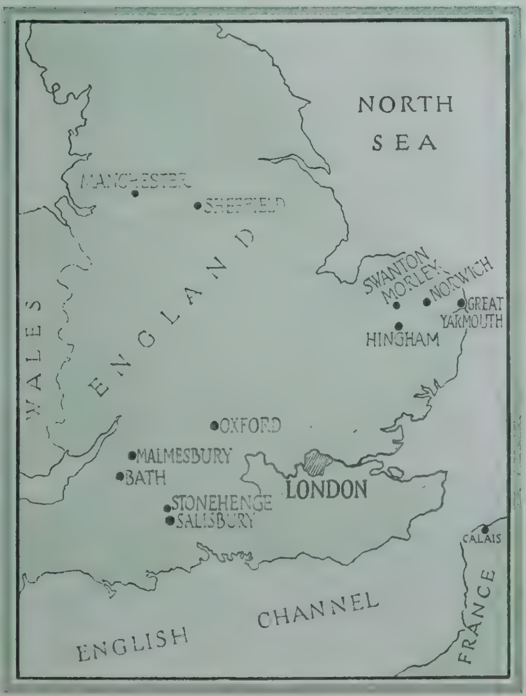
The English Home of the HANKSES

By WILLIAM E. BARTON

THE ancestral home of the Lincolns was in the very easternmost part of England. When the sun lights up Great Britain, the first object to be found is the tower of the old church at Great Yarmouth, and there in that old church and in the churches in Hingham, Norwich, and Swanton-Morley are Lincoln records. Record of the Hankses, however, was found in the southern and western part of England. One journeys from Norfolk to Wiltshire, and on the way is likely to see Bury St. Edmunds, Ely, Peterboro, Cambridge, Stratford on Avon, Royal Leamington Spa, Rugby, Coventry, the George Washington country, Oxford, Bath, Wells, Glastonbury, Stonehenge and Salisbury.

That is variety and very rich variety, and it means a week of very pleasant sight-seeing. It brings one to a place little known, which the railway reaches by a sort of miracle transportation, to little old Malmesbury, in Wiltshire, of which you may not have read very much. You will find that, as in east England the Lincolns have been in evidence since the Domesday Book, so in west England the Hankses have a record of something like a thousand years. If you are fortunate you may see that record.



The Hanks family were ancestors and blood relations of Abraham Lincoln through his mother. For about nine hundred years the name is of record here, and that is not the beginning of the family. It appears to have been a clannish tribe, and their right of land tenure was an encouragement to stay near Malmesbury. For the Hankses were usually burgesses. It was not a great office, but it was an honorable one, and the Hankses were held in such honor as Malmesbury had to bestow.

The Hanks family is still there, but will not be there long. Its present representatives are two maiden sisters, no longer young, whose quaint and attractive home overlooks one of the fords where the old monks preached and sang. They are intelligent women, and proud of the fact that if the Hanks name is to be lost to Malmesbury, it is preserved in America in association with the name of Abraham Lincoln.

The renowned South Porch of Malmesbury Abbey.

It is believed to have been from the neighborhood of Malmesbury that Benjamin Hanks and his wife Abigail migrated from England to Massachusetts in 1699; but those had no connection with the ancestors of Abraham Lincoln on this side of the water.

Literature based on the assumption that the Virginia Hankses were descendants of the Massachusetts Hankses is in error. The Virginia Hankses were there fifty years ahead of the Hankses of Massachusetts.

Thus far, no certain connection has been discovered between either the Massachusetts or Virginia families of Hanks and this Benjamin Hanks of Malmesbury. But I have made what may be a possible discovery in that connection.

President Lincoln was descended in direct line from Samuel Lincoln of Hingham, Massachusetts, and was of the seventh generation on American soil. The year of the arrival of the Lincoln family in Massachusetts was 1637.

On his mother's side the first ancestor was Thomas Hanks, who was in Virginia before 1653, evidently several years before. Abraham Lincoln was of the seventh generation in this line also.

There has not yet appeared a single strain of blood other than pure Anglo-Saxon anywhere in his lineage. I have found no intermarriage with Irish, Scotch, Welsh, Dutch, Huguenot or other ancestry; all on both sides were English so far as any trace appears.

THE departure of the original Hankses from England (probably from the vicinity of Malmesbury) was in the period of the English Civil War, which began in 1642 and ended in 1649. Malmesbury had its full share in it. Its people were divided in their sympathy, but it was in Wiltshire and neighboring counties that Sir William Waller was able to secure strong accessions of new strength in 1642, and the war began almost immediately to appear in that vicinity.

Among the soldiers that fought 'under Cromwell,' as they say (Cromwell at the time was fighting farther north and there is no record that he personally came to Malmesbury, but all the Parliamentary soldiers were in a sense under him), was one Thomas Hanks, who, so far as I can learn, disappeared in connection with one of several battles fought in and around Malmesbury in 1642 to 1645.

Did he leave voluntarily because of the unsettled and unsafe conditions of life in England at that time, or was he captured by the armies of King Charles and deported?

What we now know is that one Thomas Hanks was fighting against King Charles, and that a few years later one Thomas Hanks was buying land in Virginia. I am not now affirming that they were one and the same; I think it wholly possible that this was the case.

Perhaps you would be interested in some of the early history of Malmesbury.

It is a town of venerable traditions. After the Romans left Britain, the kingdom of West Saxony or Wessex was formed. That was about A. D. 519, fourteen centuries ago. In 687 the kingdom of Mercia came into being. Malmesbury was in Wessex, but on the borders of Mercia. Those little Saxon kingdoms were continually at war, and Malmesbury, which the Saxons called Ingelburn, was a military post of importance, for it was easily fortified and was on the border. About the middle of the Seventh Century a fort was established, and soon afterward Maeldulph, a learned monk, came from Ireland, then the home of piety and learning, and established a hermitage. After Maeldulph came Aldhelm, a distinguished pupil of Maeldulph's school, who became his successor as head of the monastery. He was created abbot in A. D. 675, and held office for thirty years.

THE monks were musical. People who came to Malmesbury had to ford a stream, and the monks placed themselves at the fords and sang the gospel story to travelers. Some heard as they crossed, and some sat down to rest and listen. From that time religion has had a seat at Malmesbury.

Music also became a feature of Malmesbury life. The first church organ in England was erected there and was played by Aldhelm. It is described as 'a mighty instrument, of innumerable tones, blown with bellows, and enclosed in a gilded case.' Two and a half centuries later a still more magnificent instrument was presented by Dunstan.

Learning had one of its earliest homes in Malmesbury. Aldhelm was the greatest Latin scholar of his day, and the first to teach that language in England. He was appointed bishop, but when he died in 709 he was brought back to Malmesbury for burial.

In 872 Alfred the Great faced an invasion of the country by the Danes. At first he was defeated, but in 878 he routed his enemies, and rewarded Malmesbury for its loyalty and courage by endowing its monastery.

But even better things were in store for this little town through royal favor. King Athelstan came to the throne of Britain, and he, too, had to fight the Danes, and again Malmesbury gave him effective help. In 930, in reward for loyalty in a battle fought at the outskirts of that town, he gave five hundred acres of land in perpetuity to the burgesses of the town, and this land has continued theirs to this day.

These burgesses hold title under a

charter granted by King Athelstan and renewed under William III. It is a curious old form of government with an alderman as mayor, twelve capital burgesses, and twenty-four commoners who constitute a 'house of lords' and a 'house of commons.' The old courthouse where the governing body does its work stands from the time of the Crusades when it was a hospital of the Knights of St. John, and the seating arrangement is curious. The alderman sits in an elevated chair, with twelve burgesses on benches on three sides, and the 'four-and-twenties' are in a cockpit all within a rail. The common folk are on the other side of the rail. Once a year, on the Tuesday after Trinity Sunday, the burgesses 'dine with King Athelstan.' This monarch died in 941; he also was brought to Malmesbury and buried there.

The center of interest is the old abbey. It is a venerable pile, impressive in its mild decay, and undergoing just now extensive and much needed restoration. But its towers will not be rebuilt for many a day, those towers from which the first flying machine was sailed. Here a monk named Oliver, who died in 1060, made a successful flight, marred by the fact that he fell and broke his legs, which misfortune discouraged him and others from further experiment in this field.

The glory of the abbey is its south porch, one of the finest recessed porches in England. It has twenty-eight Biblical scenes portraying the Creation carved in the stone of the first arch; twenty-seven in the second, treating of the Deluge, and twenty-three in the innermost arch describing the Nativity. Within the porch are carvings of Christ and the Apostles.

Certainly the town has enough of historic and literary interest to warrant a visit by any American, but Americans do not find their way thither.

To enter Malmesbury one must go down a hill and cross a bridge and then ascend a hill. The town lies between the branches of the Avon. These two streams honestly intended to meet above the town, but changed their minds and flowed around it and met below. Malmesbury is almost an island, and has a considerable elevation. The railway comes in through a tunnel and across a bridge. In due time, one is in Malmesbury.

One famous English writer who published his opinions on the civil wars of England was Thomas Hobbes, son of the vicar of St. Mary, Westport, one of the three parish churches in Malmesbury. He was born in Malmesbury, April 5, 1588. His book was entitled, *Behemoth, or the History of the Causes of the Civil Wars of England.* So far as I am aware, this book did not get him into serious trouble, but when he wrote two other books, *De Cive* and *Leviathan*, teaching that human nature is incapable of acting from any higher motive than an enlightened self-interest, his works were condemned by Parliament as pernicious and damnable. That condemnation would insure his books a great sale in this present day. Hobbes was a man of high character and great learning. He died in 1679, but not in Malmesbury. However, the little town has had its share of great men, and all of them were neighbors of the Hankses.

Malmesbury Abbey from the north.

CHARLES DICKENS *and* CHRISTMAS

THERE is a theory that Christmas was 'invented' by Charles Dickens.

Well, even the crustiest of curmudgeons will admit that it was a very good thing to have 'invented.'

Despite the increasing materialism of the age, Christmas still has its customs and traditions. Things alter, but the spirit of the festival is eternal. A Puritan Parliament tried hard to suppress it. The attempt, however, was an ignominous failure.

In the matter of celebrating Christmas, different countries have their own special customs. Yet, they all seem to have one custom in common. This is that in which a Christmas tree, loaded with gifts, bears an important part. Its origin, however, is Teutonic, for it was introduced into England by Prince Albert on his marriage with Queen Victoria. But it was the Romans who took it to Germany; and, as every schoolboy knows (or ought to know), there is an allusion to it in the second georgic of Vergil.

THE agreeable practice of giving 'Christmas boxes' is lost in the mists of antiquity. Such tokens of good will, however, were formerly presented on December 26, which was thus called 'Boxing Day.'

Christmas cards owe their popularity in England to the introduction of penny postage. While their sale is now said, compared with what it used to be, to have fallen off, it is still very substantial. The first card (with conventional holly and mistletoe on it) is understood to have been designed by a member of the Royal Academy, J. C. Horsley.

Long before there were Christmas cards there were Christmas carols. They date, indeed, from the dawn of Christianity itself. A very beautiful specimen was written about the year 1500, the first verse of which ran:

'When Christ was born of Mary free
  In Bethlehem, that fair city,
Angels did sing with mirth and glee
  In Excelsis Gloria!'

An ever memorable Christmas was that of 1843, when Charles Dickens, who has done more than anybody else to keep the spirit of the festival alive in our hearts, wrote his *Christmas Carol.* When he died, in 1870, a ragged little girl was heard to ask tearfully, 'Does that mean Father Christmas will die, too?'

Well, if the question is put to the children, they will certainly say 'No!'

Christmas in a snug cabin amid the evergreens. Snapping cold without. Within a cheerful fire, old books and congenial friends.

CHRISTMAS *in the* North Woods

By JAMES CLYDE GILBERT

ALTHOUGH it is early winter, the snow has drifted to the eaves of my log cabin. My woodpile is buried under three feet of white, but I know the wood is seasoned and dry, for it was cut early in the year.

Throughout all the plateau country north of Saginaw Bay on the east coast and Point Sable on the west coast of the lower peninsula of Michigan, there has come a magnificent transformation. In this upland country there have been displayed in panorama and in bas-relief, in reckless profusion, the grotesque and fanciful snow images, mountains, pyramids, and ghostly figures which are the legions of old King Winter, the northern invader. But we fortunate folk are patient and indulgent under this forced capitulation to the snow king. We laugh at his assumption of autocratic authority, knowing that his reign is short and benignant. When winter came tearing out of the northland on a stiff northwester, furious and dreadful where the gale found open sweep, he sealed every soft and tender thing with his Medusa glance, and left stone and marble where before were soft woods and watered meadows.

It was cold last night. Early this morning I heard the creak and crunch of frozen snow on the roadway a mile from my cabin. Voices of woodsmen drifted through the clear frosty air. The smoke from my chimney rose straight as the pines about me. Later, a light breeze swayed the smoke plume—not low enough to soil the canopy of snow on my roof.

Within the cabin the frosted windowpanes will repay inspection. Who would venture to assert that the dream pictures on the glass were not painted by fairy hands this blessed Christmas morning? The best time in which to watch them is when they are forming. Fine straight lines shoot in all directions. Many tiny stars appear. Trees and houses and mountains take form as you breath lightly on the glass.

My winter woods are full of mystery. While they seem to welcome me, they hide something behind a veil. All I can learn of this secret is that it is something kind and good. The green hardwood trees snap and crack like pistol shots in the quietness, and afar on the lake comes the deep thunderlike rumble of the ice cracking under the intense cold. On clear nights in this north country the dancing stars seem almost to snap and crackle in the tingling air.

In my walk along the river I see a small bunch of song sparrows taking to the ferny bush to escape the wind. Suddenly remembering a wild-rose tangle, they rush off seemingly with eager appetite. As I near the creek dam, snow begins to fall; with no wind, the flakes drift light as eider down, gray in the darkening swamp as the down that falls from wind-swept breasts of wild geese in their flight to or from Arctic seas. Densely and more densely it comes, soundless at first, but later with a faint rustling and whirring like the wings of moths. The effect of expectation in these northern woods is given largely by their breathless hush. The shrill scream of the blue jay or the rubbing contact of two hardwood trees startles the listener as a profanation, for these winter woods are temples of silence.

There is something about snow in the woods that is singularly enlivening, appealing. It makes life run higher in one who walks about in it. One feels an enthusiasm for snowbanks among dark hemlocks, as far into the woodland the trail extends. Winter has a sharp joy, a cheery animation that only the snowshoer feels. One must use snowshoes or ski in this country if one is to go about in the wilderness after Christmas: there is nothing better in life on a frosty morning with a sun bright enough to fill the woodland with entrancing shadows but not warm enough to soften the slight crust that has formed during the night. The crackle underneath snowshoes is the most gladsome sound in the open.

The only noise among the snow-cloaked trees is the soft plump of a white mass dropping from an overweighted branch. This plushy sound is almost loud against the background of primeval silence. Here are temples of bare columns waiting for the congregation of snowbirds. In a way, the stark hardwoods rising above the swamp on a knoll remind one of a giant pipe organ with clustered pipes and banks of keys. Only the north wind can play such an organ.

My walk takes me to a tiny trout stream, a tributary of the Au Sable. Down from the hillside this stream rushes amid snows of purity seldom if ever seen in more southern latitudes. A woodpecker pounds at an old pine stub near my trail. This brings down a miniature snowslide upon his head, but he goes on unconcernedly drilling for luscious grubs beneath the rotten bark. His chips and dust mix with the snow. Red squirrels frolic and chatter about on the sugary surface. Under the sheltering bank one may find the speckled trout. In fact, it is possible to reach in and touch the fish if one moves carefully. Here and there are telltale tracks of wild creatures. A buck has stopped here to quench his thirst; there two fawns have played about like calves in a pasture. A grouse, feathers ruffed to keep warm, walks sedately along the bank searching for food beneath the birches. Later on he will fly to the tops of these birches, where he will sit contentedly. Cattails stand like sentries along the river bed near where wild deer come to drink before entering the thick evergreens. A wolf howls lonesomely from distant forest depths. In the open it is chill; but the swamp is warm and cozy, a winter home for the wild things. There the snowshoe rabbit huddles beneath a brush heap awaiting the nighttime so that he may come forth to play in the frosty moonlight. At the shore of the lake we stop and gaze out across a flat white expanse where the water is hidden beneath three feet of snow and ice. The up-tilted eastern shore bristles with the brown shafts of tall Norway pines. The sun has broken through and its rays slant from a metallic-blue hole in the southwest. This ray turns like a giant searchlight full on the woodlands, changing the nearby crystals into minute multicolored flames. To our right a tangle of slim brown stems of alder suggests a Whistler etching. To our left a solitary white pine, dark-sketched against the snow-covered hills, droops its bushy arms beneath heaped crystals. A breath of wind would ease the load of snow.

Two pine grosbeaks are in the high branches of a Norway laden with seed-bearing cones. They flit about sending showers of 'chaff' earthward—chaff that has a grain at its center, as many birds know—a seedling core on its way to the soil for future foresting. The cedar keeps its real chaff or scales on the cones, and scatters the seeds to the wind. The seed-bereft cones will persist through the winter, blackening under rains and frosts. Squirrels never bother with these tiny fruits, the smallest cones of the (Continued on page 18)

The silvery sheen of snow creeps down to the water's edge.

A silent trance of snow broods over marsh and trout stream.

'For Unto You Is Born This Day in the City of David a Saviour'

The LAND of the First CHRISTMAS

By JANE L. HICKS

BEHIND the bustle and rush of Christmas as it has come to be celebrated today is a significant event. It is the birth of a Babe which took place one thousand nine hundred and twenty-seven years ago. His is the one birthday that has been celebrated down through the centuries.

This event took place in a land which has come to be known as the Holy Land, in a city which was anciently called the 'City of David.' To us it is a far-away land, and yet perhaps it is more widely known than any other one place. For all that, the Palestine of today merits consideration.

To forestall disappointment, we are warned by experienced travelers that this is an Oriental country and that its ways are not our ways. Sanitation has been sadly neglected; there is a widespread acceptance of filth and vermin; on every hand are poverty, blindness, disease, and shameless begging; primitive ways of living and working are still the order, and only recently and in small numbers have automobiles begun to take the burden from the backs of the donkey, the horse, and the camel. Yet Palestine is unique among countries; its position is maintained by sheer personality. Its spiritual significance must be borne in mind amid material and physical changes and incongruities.

Palestine is about the size of Vermont, a bit of hardly won oasis between the sea on one side and the encroaching desert on the other. There is widespread misconception about the size of this land, partly because Bible maps are apt to show Palestine large and central, with Egypt and Assyria trailing off the edges; partly because, with modern transportation, distance has come to mean so little, and we assume a place where so much has happened to be of large area. It is somewhat of a shock to learn that from Dan to Beersheba is only one hundred and fifty miles; that the length of Palestine may be traversed by automobile in a day; that the Mediterranean and the Dead Sea are only fifty miles apart; and that most of the Bible happenings took place in an area no larger than that of Connecticut.

The littleness of the land is accentuated by its brokenness and visibility. From Mount Nebo Moses could see the whole of the Promised Land. Mount Nebo is four thousand feet above the Dead Sea.

In the story of Ruth, Naomi and her family in time of famine went from

Bethlehem to Moab. As a matter of fact, Moab can be seen from Bethlehem. It is at a distance of thirty miles. Hannah lived at Ramah. She took her son Samuel to Shiloh and left him with Eli. Once a year she went to visit him; yet this distance is only fifteen miles. And when Christ, driven from Nazareth, went to Capernaum to make it the center of his ministry he walked only twenty miles across the hills. The Jordan rises in springs of the north as high as seventeen hundred feet above the sea in the snows of Hermon and Lebanon, passes through the waters of Merom and the Sea of Galilee, and empties into the Dead Sea at thirteen hundred feet below sea level, winding through its whole course like a corkscrew. Small wonder that it has been termed the 'downcomer' and that its valley has been known as the 'cellar of the world'! From the Dead Sea can be seen the snow-capped peak of Hermon, where the Jordan has its source.

The Sea of Galilee is a mere pond in comparison with Lake Michigan. It is only half the size of Lake Cayuga, at Ithaca, New York. The entire lake may be seen at one time. It is six miles wide at its widest part, and thirteen miles long from where the Jordan flows in at the north to where it empties in the south. Except where the Jordan enters and leaves, it is surrounded on all sides by hills, which in Christ's time were wooded, but today are for the most part bare. The fish in the lake are abundant, and are said to be different in taste and appearance from those elsewhere; the shores are fertile. But today, except for Tiberias, the towns Christ knew have vanished, the lake is empty of sails, and the shores for the most part lie idle and untenanted. Even today, however, it is a beautiful lake. The

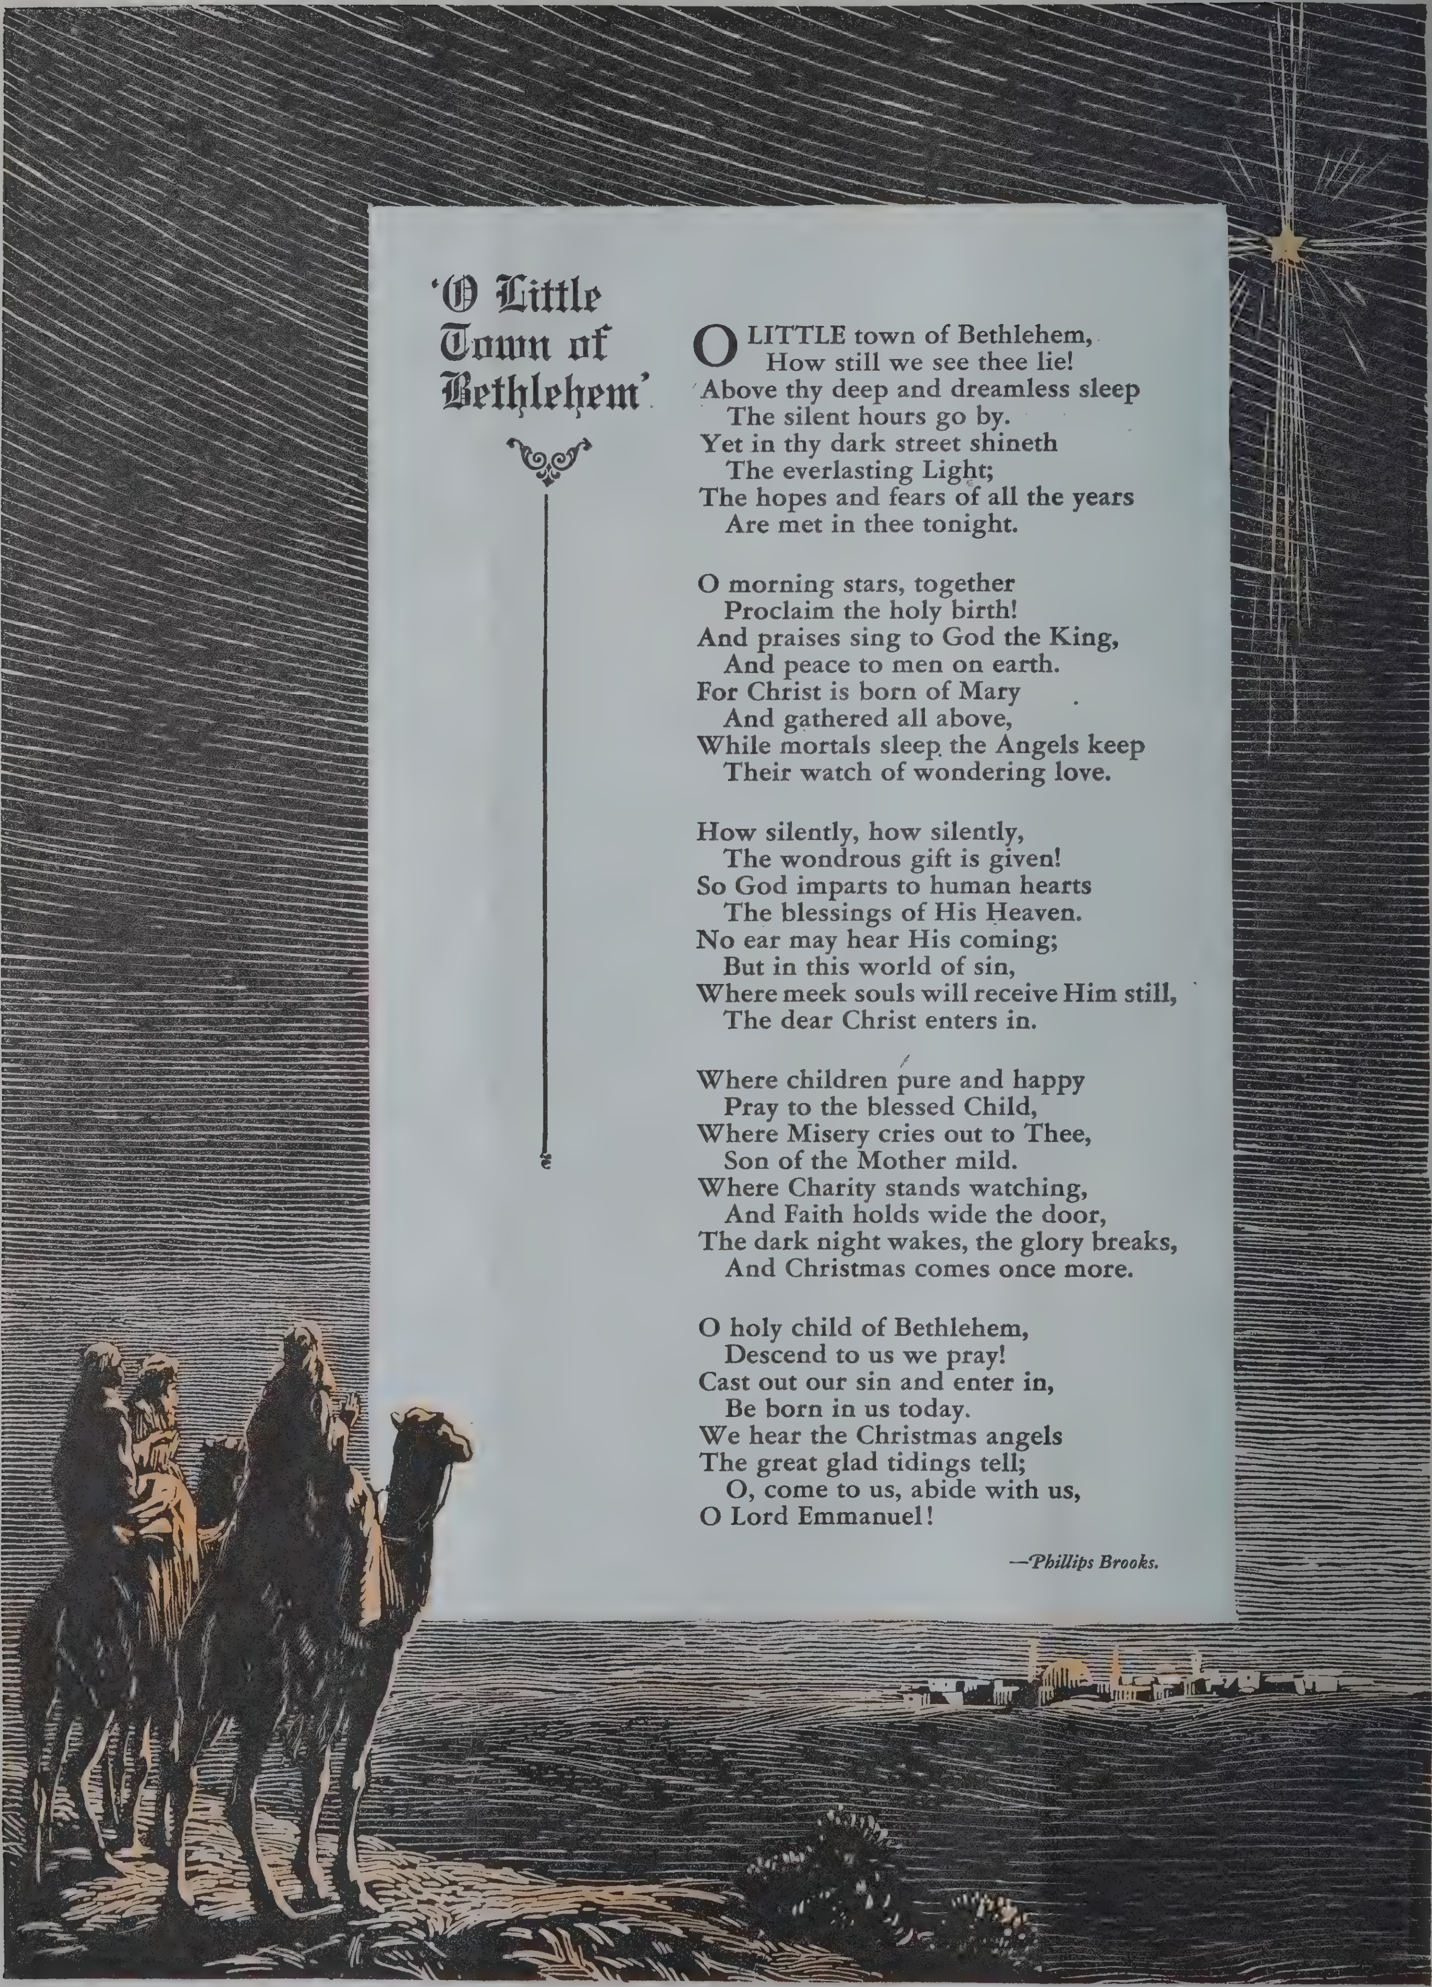
Fishing boat on the Sea of Galilee, near Capernaum. The waters swarm with fish. The region surrounding the lake has a number of hot springs, one being beneath the sea itself.



'O Little Town of Bethlehem'

O LITTLE town of Bethlehem,
How still we see thee lie!
Above thy deep and dreamless sleep
The silent hours go by.
Yet in thy dark street shineth
The everlasting Light;
The hopes and fears of all the years
Are met in thee tonight.

O morning stars, together
Proclaim the holy birth!
And praises sing to God the King,
And peace to men on earth.
For Christ is born of Mary
And gathered all above,
While mortals sleep the Angels keep
Their watch of wondering love.

How silently, how silently,
The wondrous gift is given!
So God imparts to human hearts
The blessings of His Heaven.
No ear may hear His coming;
But in this world of sin,
Where meek souls will receive Him still,
The dear Christ enters in.

Where children pure and happy
Pray to the blessed Child,
Where Misery cries out to Thee,
Son of the Mother mild.
Where Charity stands watching,
And Faith holds wide the door,
The dark night wakes, the glory breaks,
And Christmas comes once more.

O holy child of Bethlehem,
Descend to us we pray!
Cast out our sin and enter in,
Be born in us today.
We hear the Christmas angels
The great glad tidings tell;
O, come to us, abide with us,
O Lord Emmanuel!

The Duty of Conscious Allegiance

WE ARE on the very threshold of a new age. The dates are unimportant, for in the advance of the plan of the ages it is not the sharp-cut dates, but periods of time, that are important. Old things pass away in a fading-out process; new things gradually dawn. Only on looking backward do the people realize that 'a great thing took place back there.' Surprisingly few of the real turning points of the world come amid signs and wonders and people standing in awe of what is passing. In the minds of most, the War was *the* cataclysm, because it was noisy; but something greater than the War, though much less clamorous, is in passage now.

It is neither for man to help nor hinder, but to hold himself ready to do what is right, whatever may be the circumstances. When the age begins to turn, we are too late to stop it, for the causes thereof were set in motion long ago and are now invincible. Nor can we help the new age be born, because we are but creatures of months, and the new age is generations in process of formation. We can but will the Right, not for our particular race or religion or nationality, but the Universal Right, which harms none, and in which each finds its own fulfillment.

One of the principal human duties that devolve during periods of change is *the duty of conscious allegiance.* What do you, *as* a personality and *in* your personality, stand for? And are you standing for it by standing with others who are standing for it? These are questions which are pressing home from many directions today. The bugles of Time are blowing 'Assembly' and men are dividing themselves, each according to the moral note within.

It is not a question of allegiance to opinions or programs or philosophies; it is a question of allegiance to moralities. A man may be hopelessly wrong in all his opinions, but if he is morally right, he is of the stuff of the continuing order of life. On the other hand, a man may be perfectly correct in his opinions and knowledge, and yet everything he does may collapse and die because of moral anemia. In this time of change it is not a question of having the correct economic theory; it is a question of being loyal to the Right. Immoral or unmoral men never yet constructed an enduring social structure, nor enforced a single beneficial social change.

This coming to conscious allegiance is not always a pleasant experience. Especially in this day when everybody is obsessed more or less with the idea of wanting to be a 'good fellow,' and when the flabby philosophy of 'Boost' has reduced us to spongy masses of saccharine sweetness.

Men have been taught to put even their moral convictions in the background; indeed to possess no obtrusive moral convictions, in order that a false show of fellowship may be made.

This fellowship has now fallen apart. It was based on nothing enduring. It had no meaning except a desire to escape the penalty for being 'different,' which so many people fear.

It is a time now when conscious allegiance costs something, for it will mean division, and the very first division must be between those who will be loyal to moral conviction and those who will not. And this, quite apart from the consideration of persons or majorities.

The country has had considerable experience lately in the lining up of majorities on questions like Temperance, and because the majority of people always believe, as a matter of principle, in Temperance, it has been made to appear that moral allegiance is always just that easy. It is not. The line-up, impressive as it was, has not brought us Temperance; and no such easy, popular line-up ever will.

The majority of the people are naturally straddlers. They are not in the world to pioneer but to be as happy as possible. If pioneering in a cause brings discomfort, they would rather not be among the pioneers. If Truth and Error meet in combat before their gaze, they would rather wait and see which proves the stronger. They may have a lazy faith that Truth at last will win, but it may not be the time as yet, and they do not wish to lend a premature support.

And yet majorities are essential, not to the truth, but to the acknowledgment of the truth; and minorities are essential to the fructifying of majorities. The majority is the sodden dough, the minority the yeast; it is the yeast that changes the character of the dough to something better. Majorities are the position to be taken, as it were; and sometimes Truth takes it, and sometimes Error.

There are some opposites in the world that shall never be reconciled. There are some programs that shall never be harmonized. And that is what frightens some people. They want to be happy; they want to live and let live; they do not want to be bothered. They want leave to enjoy the world as it is, and if there are those who would improve the world, let them do so, but not in a way that interferes with the present schedule.

It is not hard or hardened men that the world needs, but men of moral hardiness who possess spiritual backbones. Men to whom the palliatory 'perhaps' comes too easily, who are so impressed with the idea of 'relativity' that they seek refuge in a near-vacuum, are men who are lacking in moral gristle. An Idea may be very valuable to them, but they are of no value to the Idea. And the world advances only as Ideas gather believing men about them.

The Futile Filibusters

THE decisive vote—58 to 21—by which the Senate reaffirmed the authority of the special campaign funds investigating committee, which is inquiring into the election of Messrs. Vare and Smith, leaves no doubt as to how it would have voted on the same matter nine months ago, had it been permitted to do so. It demonstrates further the charge made last March that the filibuster which prevented that vote was a flagrant and unwarranted attempt to thwart the will of a majority of senators. But it does even more: it shows the utter futility of that particular filibuster in accomplishing even the barest element of what it hoped to accomplish. It effected a nine months' postponement of the investigation of Mr. Vare's and Mr. Smith's campaign funds, nothing more. It did not end the investigation; it did not quiet public demand for its continuance; it did not even change the attitude of the Senate toward the matter. Indeed, the Senate in formally reaffirming the authority of the committee declared it had continued 'in full force and operation' during the recess of Congress. Thus all that was accomplished was a temporary frustration of the public will. But to do this the filibuster seriously disrupted many of the functions of the Government, through blocking passage of the Deficiency Appropriations Bill, and wrought genuine hardship among many of the nation's pensioners.

Meanwhile the difficulties of Messrs. Vare and Smith to obtain seats in the Senate continue. That body had been in session only a few days when it refused overwhelmingly to administer the oath of office, and referred the gentlemen from Pennsylvania and Illinois back to the committee which their partisans had sought to kill.

It is conceivable that Vare and Smith are much maligned. It may be that after due and proper investigation the Senate will clear the names of both gentlemen, and vote to seat them. But if that happy time ever comes, it will be in spite of rather than because of such tactics as the filibuster of last March.

Governor-General Stimson

THE choice of Henry L. Stimson as Governor-General of the Philippines seems singularly apt. The desire for a civilian administrator is a logical one which casts no reflection upon the late Major General Leonard Wood. The psychology of the Filipinos at this time demands a non-military governor. In Mr. Stimson such a man is found, admirably fitted for the task ahead. A close friend of General Wood and familiar with his policies, Mr. Stimson will at the same time assume his new duties with a thoroughly open mind. His official record as Secretary of War under President Taft and as a leader in various civic enterprises gives him prestige that will be of high value. His ability is almost universally recognized. And in addition Mr. Stimson has made a study of scientific colonial government, and of the needs of the Philippines in particular. His selection is one to inspire confidence.

The Madness, Sadness and Gladness of Christmas

IT IS a commonplace that Easter has become the feast of the milliners; Thanksgiving the festival of the gourmands; and Christmas the jubilee of the merchants.

Christmas is Christian, though much has been done to make it pagan. Christmas is spiritual, though often it is overstuffed with the material. Christmas is the anniversary of an Eternal Fact; it has been made the gesture of a passing phase.

Perhaps we have erred a little in making Christmas only 'merry,' for it has its sadness too. As the day of the children it is a day of gay surprise and wonder, but as we go up the ranks of years it becomes more and more a day of tender memories touched with sadness. Not only Christmas, but every day, should be 'merry' for the children, for they are at the merry time of life. But we cannot shut out the mature or the aged. The First Christmas was a day of adults, the adulthood of the fields and the heavens and the homes of Bethlehem dominating the scene. The children always say 'this Christmas' or 'next Christmas'; but with adults it is always some last Christmas, maybe many Christmases ago.

Christmas tells us, for one thing, that goodness is always being born into the world, that in the cradles of the world the hope of the world is dawning. Christmas tells us that earth is not a lone planet swinging wide in a void of law and matter, but is near enough the Throne of Spirit to catch the music and reflect the light. Christmas tells us that the beginning of joy was a Gift, and that not of ourselves, but from another plane to this. If we know this message of Christmas, we are then free of the slavery of Things.

Joy is free to come from its only source, from above us, not below; and Peace comes upon us, the mother-spirit of Good Will to Men. And from Good Will come the best gifts of all—those which carry with them the heart of the giver.

The PECKSNIFFS and CHUZZLEWITS Ride Together

From
'MARTIN CHUZZLEWIT'

By
CHARLES DICKENS

WHEN Mr. Pecksniff and the two young ladies got into the heavy coach at the end of the lane, they found it empty, which was a great comfort; particularly as the outside was quite full and the passengers looked very frosty. For as Mr. Pecksniff just observed—when he and his daughters had burrowed their feet deep in the straw, wrapped themselves to the chin, and pulled up both windows—it is always satisfactory to feel, in keen weather, that many other people are not as warm as you are. And this, he said, was quite natural, and a very beautiful arrangement; not confined to coaches, but extending itself into many social ramifications. 'For (he observed), if every one were warm and well fed, we should lose the satisfaction of admiring the fortitude with which certain conditions of men bear cold and hunger. And if we were no better off than anybody else, what would become of our sense of gratitude; which,' said Mr. Pecksniff with tears in his eyes, as he shook his fist at a beggar who wanted to get up behind, 'is one of the holiest feelings of our common nature.'

His children heard with becoming reverence these moral precepts from the lips of their father, and signified their acquiescence in the same by smiles. That he might the better feed and cherish that sacred flame of gratitude in his breast, Mr. Pecksniff remarked that he would trouble his eldest daughter, even in this early stage of their journey, for the brandy bottle. And from the narrow neck of that stone vessel, he imbibed a copious refreshment.

'What are we?' said Mr. Pecksniff, 'but coaches? Some of us are slow coaches—'

'Goodness, pa!' cried Charity.

'Some of us, I say,' returned her parent with increased emphasis, 'are slow coaches; some of us are fast coaches. Our passions are the horses; and rampant animals too!—'

'Really, pa!' cried both the daughters at once. 'How very unpleasant.'

'And rampant animals, too!' repeated Mr. Pecksniff, with so much determination, that he may be said to have exhibited, at the moment, a sort of moral rampancy himself: 'and Virtue is the drag. We start from The Mother's Arms, and we run to The Dust Shovel.'

When he said this, Mr. Pecksniff, being exhausted, took some further refreshment. When he had done that, he corked the bottle tight, with the air of a man who had effectually corked the subject also; and went to sleep for three stages.

The tendency of mankind when it falls asleep in coaches is to wake up cross; to find its legs in its way; and its corns an aggravation. Mr. Pecksniff not being exempt from the common lot of humanity found himself, at the end of his nap, so decidedly the victim of these infirmities that he had an irresistible inclination to visit them upon his daughters; which he had already begun to do in the shape of divers random kicks, and other unexpected motions of his shoes, when the coach stopped, and, after a short delay, the door was opened.

'Now mind,' said a thin sharp voice in the dark. 'I and my son go inside, because the roof is full, but you agree only to charge us outside prices. It's quite understood that we won't pay more. Is it?'

'All right, sir,' replied the guard.

'Is there anybody inside now?' inquired the voice.

'Three passengers,' returned the guard.

'Then I ask the three passengers to witness this bargain, if they will be so good,' said the voice. 'My boy, I think we may safely get in.'

In pursuance of which opinion, two people took their seats in the vehicle, which was solemnly licensed by Act of Parliament to carry any six persons who could be got in at the door.

'That was lucky,' whispered the old man, when they moved on again. 'And a great stroke of policy in you to observe it. He, he, he! We couldn't have gone outside. I should have died of the rheumatism!'

Whether it occurred to the dutiful son that he had in some degree overreached himself by contributing to the prolongation of his father's days, or whether the cold had affected his temper, is doubtful. But he gave his father such a nudge in reply that that good old gentleman was taken with a cough which lasted for full five minutes, without intermission, and goaded Mr. Pecksniff to that pitch of irritation that he said at last, and very suddenly:

'There is no room! There is really no room in this coach for any gentleman with a cold in his head!'

'Mine,' said the old man, after a moment's pause, 'is upon my chest, Pecksniff.'

The voice and manner together now that he spoke out; the composure of the speaker; the presence of his son; and his knowledge of Mr. Pecksniff; afforded a clue to his identity which it was impossible to mistake.

'Hem! I thought,' said Mr. Pecksniff, returning to his usual mildness, 'that I addressed a

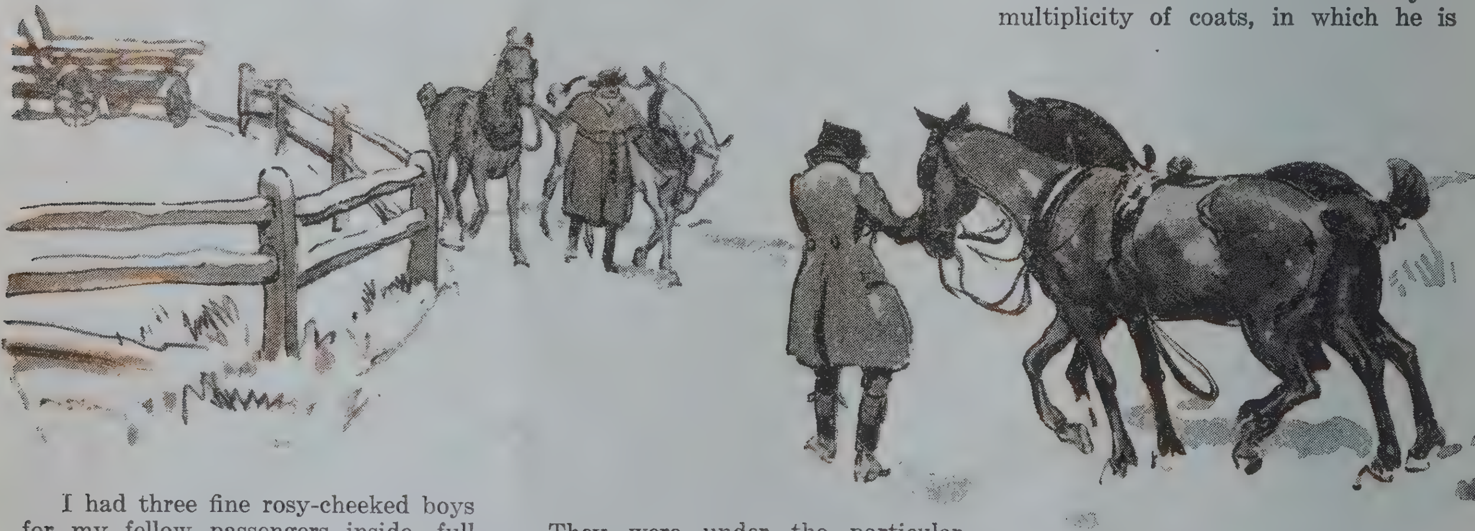
The STAGE COACH

From
THE SKETCH-BOOK

By
WASHINGTON IRVING

Omne bene
Sine Poena
Tempus est ludendi
Venit hora
Absque mora
Libros deponendi.
—Old Holiday School Song.

IN THE course of a December tour in Yorkshire, I rode for a long distance in one of the public coaches, on the day preceding Christmas. The coach was crowded both inside and out with passengers, who by their talk seemed principally bound to the mansions of relations or friends to eat the Christmas dinner. It was loaded also with hampers of game, and baskets and boxes of delicacies; and hares hung dangling their long ears about the coachman's box, presents from distant friends for the impending feast.



I had three fine rosy-cheeked boys for my fellow passengers inside, full of the buxom health and manly spirit which I have observed in the children of this country. They were returning home for the holidays in high glee, and promising themselves a world of enjoyment. It was delightful to hear the gigantic plans of the little rogues, and the impracticable feats they were to perform during their six-weeks' emancipation from the abhorred thralldom of book, birch, and pedagogue.

They were full of anticipations of the meeting with the family and household, down to the very cat and dog; and of the joy they were to give their little sisters by the presents with which their pockets were crammed: but the meeting to which they seemed to look forward with the greatest impatience was with Bantam, which I found to be a pony, and according to their talk, possessed of more virtues than any steed since the days of Bucephalus. How he could trot! how he could run! and then such leaps as he would take! there was not a hedge in the whole country that he could not clear.

They were under the particular guardianship of the coachman, to whom whenever an opportunity presented they addressed a host of questions, and pronounced him one of the best fellows in the world. Indeed, I could not but notice the more than ordinary air of bustle and importance of the coachman, who wore his hat a little on one side, and had a large bunch of Christmas greens stuck in the buttonhole of his coat. He is always a personage full of mighty care and business; but he is particularly so during this season, having so many commissions to execute in consequence of the great interchange of presents.

And here perhaps it may not be unacceptable to my untraveled readers to have a sketch that may serve as a general representation of this very numerous and important class of functionaries, who have a dress, a manner, a language, an air, peculiar to themselves and prevalent throughout the fraternity.

He has commonly a broad full face, curiously mottled with red, as if the blood had been forced by hard feeding into every vessel of the skin; he is swelled into jolly dimensions by frequent potations of malt liquors, and his bulk is still further increased by a multiplicity of coats, in which he is buried like a cauliflower, the upper one reaching to his heels. He wears a broad-brimmed low-crowned hat, a huge roll of colored handkerchief about his neck, knowingly knotted and tucked in at the bosom; and has in summertime a large bouquet of flowers in his buttonhole, the present most probably of some enamored country lass. His waistcoat is commonly of some bright color, striped, and his smallclothes extend far below the knees, to meet a pair of jockey boots which reach about halfway up his legs.

ALL this costume is maintained with much precision; he has a pride in having his clothes of excellent materials, and notwithstanding the seeming grossness of his appearance, there is still discernible that neatness and propriety of person which is almost inherent in an Englishman. He enjoys great consequence and consideration along the road; has frequent conferences with the village housewives, who look upon him as a man of great trust and dependence; and he seems to have a good understanding with every bright-eyed country lass.

The moment he arrives where the horses are to be changed, he throws down the reins with something of an air and abandons the cattle to the care of the hostler, his duty being merely to drive from one stage to another. When off the box his hands are thrust into the pockets of his great coat, and he rolls about the innyard with an air of the most absolute lordliness. Here he is generally surrounded by an admiring throng of hostlers, stable-boys, shoeblacks, and those nameless hangers-on that infest inns and taverns, and run errands, and do all kind of odd jobs for the privilege of battening on the drippings of the kitchen and the leakage of the taproom. These all look up to him as to an oracle; treasure up his cant phrases; echo his opinions about horses and other topics of jockey lore; and above all, endeavor to imitate his air and carriage. Every ragamuffin that has a coat to his back thrusts his hands in the pockets, rolls in his gait, talks slang, and is an embryo Coachey.

Perhaps it might be owing to the pleasing serenity that reigned in my own mind, that I fancied I saw cheerfulness in every countenance throughout the journey. A stagecoach, however, carries animation always with it, and puts the world in motion as it whirls along. The horn sounded at the entrance of a village produces a general bustle. Some hasten forth to meet friends; some with bundles and bandboxes to secure places, and in the hurry of the moment can hardly take leave of the group that accompanies them.

In the meantime the coachman has a world of small commissions to execute. Sometimes he delivers a hare or pheasant; sometimes jerks a small parcel or newspaper to the door of a public house; and sometimes, with knowing leer and words of sly import, hands to some half-blushing, half-laughing housemaid an odd-shaped billet-doux from some rustic admirer. As the coach rattles through the village every one runs to the window, and you have glances on every side of fresh country faces and blooming, giggling girls.

At the corners are assembled juntos of village idlers and wise men, who take their stations there for the important purpose of seeing company pass; but the sagest knot is generally at the blacksmith's, to whom the passing of the coach is an event fruitful of much speculation. The smith, with the horse's heel in his lap, pauses as the vehicle whirls by; the cyclops round the anvil suspend their ringing hammers and suffer the iron to grow cool; and the sooty specter in brown-paper cap laboring at the bellows leans on the handle for a moment, and permits the asthmatic engine to heave a long-drawn sigh, while he glares through the murky smoke and sulphureous gleams of the smithy.

PERHAPS the impending holiday might have given a more than usual animation to the country; for it seemed to me as if everybody was in good looks and good spirits. Game, poultry, and other luxuries of the table were in brisk circulation in the villages; the grocers', butchers', and fruiterers' shops were thronged with customers. The housewives were stirring briskly about, putting their dwellings in order; and the glossy branches of holly with their bright-red berries began to appear at the windows.

The scene brought to mind an old writer's account of Christmas preparations:

'Now capons and hens, besides turkeys, geese, and ducks, with beef and mutton, must all die—for in twelve days a multitude of people will not be fed with a little. Now plums and spice, sugar and honey, square it among pies and broth. Now or never must music be in tune, for the youth must dance and sing to get them a heat, while the aged sit by the fire. The country maid leaves half her market, and must be sent again if she

HE WROTE for the CHILDREN

By
FRANCES HIGGINS

PEOPLE should be labeled and indexed library fashion. That is, some people. How was I to know that the gray-haired, gracious gentleman of the old school in the newspaper room of the Denver Public Library knew more about the subject of my research than all the dusty files he was piling on the table before me? I wasn't—until much later, when the fates relented and revealed his identity.

Then to my intense surprise and gratification I learned that he who had assisted in my research was one of the characters in the scenes which I was to write out. He had played his part—and that an important one—in the comedy of adolescent Denver, in the transition from the picturesque gold camp of the fifty-niners and their successors to the railroad and political center known as the 'Queen City of the Plains.' He is Joseph G. Brown, member of the famous Denver *Tribune* staff of the early eighties, friend and associate of Eugene Field.

Joseph Brown was a reporter on Denver's leading daily when Field—a care-free, warm-hearted, open-handed, reckless adventurer of thirty-one—arrived to become its managing editor; and he was promoted to the position of city editor—a city editor who kept his own reportorial beat and set his own type—if need be—during the Field régime. For two years he worked and played with the boyish, irresistible Gene.

They occupied neighboring offices on the second floor of the Tribune Building. And Joe, as Brown was called by his self-styled 'superior officer,' though sedate and serious enough for his years and position, was not too overburdened with responsibility to note what was going on in the barren little sanctum of the M. E. In fact he couldn't well escape it. A burst of laughter or even a sly chuckle was sufficient to inform him that the irrepressible Field was at his pranks again.

Perhaps a caller, friendly or otherwise, had had his attention directed to the inhospitable motto above the desk of the M. E.—the original 'This is my busy day.' Perhaps the caller had taken a seat—the only one available—in the bottomless old black walnut chair, thus necessitating profuse apologies when the pile of innocent-looking exchanges gave way beneath him.

If the events of a 'busy day' brought no unsuspicious caller to serve as victim to Field's humor, then the *Tribune* staff—Joe Brown or another—might expect to suffer. The jocular young editor would spend hours in perpetrating some simple, schoolboy prank upon his associates. He would often attach a string to the gas jet above the desk of the only woman member of the staff, and then proceed to regulate the light to his own fancy the whole of the afternoon or evening, or until discovered. Whatever the joke, it was sure to be received in the spirit in which it was given. It was impossible for those who knew him not to love the whimsical Field.

The *Tribune* staff was accustomed to report at 1:30 p. m. in those more leisurely days of journalism. If some sudden whim or fancy did not intervene to send Field and Brown and other boon companions to gather news in the thriving western city, the M. E. would establish himself at once in his barren little office. He would first remove his shoes, and then in slippered ease begin the day's routine. The work was sometimes wearisome, but never too much so for Eugene Field.

He planned and directed the activities of his staff in a fashion eminently satisfactory to his employer, his readers, and himself. In addition to all this he turned out a prodigious amount of copy when the mood was favorable. His column of clever squibs and spicy comment, soon called the 'Odd Gossip' column, won him a place among the noted paragraphers of the day. The Denver *Tribune* became most popular to its home readers with the whole city guessing what next it had in store for them. Furthermore, readers all over the country quoted and clipped from its columns.

All this Field accomplished in the midst of his pranks. He was just a great overgrown boy. For instance, a piercing yell close to midnight warned those about that it was not an Indian attack upon the *Tribune* with the scalping of the M. E., but the approach of the lunch man in the alley. Field would hear the creaking pushcart wheels and be ready to join the rest of the force in a noisy assault upon the sandwiches and coffee. It was an occasion which they all enjoyed even down to the printer's devil. Field in his poem, 'The Lunch Man in the Alley,' describes the situation with rare humor. The poem now reposes in state in the dusty *Tribune* files of the Colorado State Museum.

IT WAS his custom in those early days, after he had turned in his copy for the night and taken his hour of recreation around the corner at Ed Perrin's or elsewhere, to settle down to the composition of poetry in the 'wee, sma' hours' before going home. With slippered feet thrust high on desk or chair, lapboard on knee, and pen in hand he would court the muse. Some gem of wit, humor, or pathos for the adornment of the *Tribune* pages was very apt to be the result. More often than not, the poem was completed in time for the printers to get it into the forms that night.

There was never any serious objection to waiting for it. Gene and the boys were on the best of terms. There were no labor troubles in that shop—far from it! At what well might be called the printer's zero hour, when all things cuddle down and even the best of men get sleepy, the indefatigable M. E. would break forth into a favorite song and all the boys in the composing room would join in the chorus. It might be 'Ben Bolt,' 'Bonnie Doon,' 'Seein' Nellie Home,' 'The Gal That Winked at Me,' or some other selection. But the city editor remembers best 'The Old Oaken Bucket,' 'John Brown's Body,' and 'Van Amburg's Show' with its ridiculous animal chorus in which Gene exulted.

And so passed the days and the nights in the old office on Sixteenth Street, with Joe Brown taking careful note of all. He wasn't at Ed Perrin's—it merely happened so—the night the bar bill was presented by a rather irate barkeeper seeking to shame the negligent young man. But Joe had the story later from Ed, or from his brother Wesley. And he still has a guilty feeling, for he was one of the boys whom Gene was always enticing to 'Let's have a glass; let's go into Ed's.'

Once within those doors Gene was host. Let someone else suggest another drink to follow the first, and that one would be silenced instantly with, 'You're my guests, boys. Nobody can pay but me. Ed, repeat that order.'

So it went not only with Joe and the boon companions of the *Tribune* staff, but with a great many Toms, Dicks, and Harrys of Denver's streets contributing their number to swell the bill, and Gene himself ignoring payment, as only he knew how. Ed was growing impatient. The convivial young editor was robbing him of his paying customers by refusing to let them settle their own accounts. He considered it the proper time for Gene to attend to these, or to mend his ways, and he proceeded to lecture him.

—Brown Brothers.

Eugene Field.

But the irate barkeeper did not foresee the strategy of the incorrigible young man who stood before him hemming and hawing and obstinately refusing to understand what it was all about. Aware that words and arguments were futile, Ed concluded his lecture with, 'I don't care to dispute it with you, Gene. I'll make you a present of the bill.'

Gene accepted all too quickly, and shortly was pacing the floor with the receipted bill in his pocket in the manner of a customer who had just paid in full. Closing time came and the young man continued to pace the floor, meditatively, hands in pockets. Ed unsuspectingly inquired the cause.

'Great Scott, Ed,' cried Gene, 'it's always customary when a man pays his bar bill to set up the drinks!'

Of course, the drinks were set up for the crowd at midnight at Perrin's on Lawrence Street to the chagrin of the barkeeper and the delight of the participants.

A banquet in honor of the talented young actress, Miss Minnie Maddern, was another occasion Joe Brown missed—by accident. But he knows all about it: how Field issued the invitations to the actress and her friends through the pages of the *Tribune*, keeping the place of meeting a secret until the last; how Miss Maddern's admirers assembled in the rathskeller of a popular café at the close of her engagement, to feast on wieners, cheese, and beer; how General E. K. Stimpson made the presentation speech, drawing from his pocket a wonderful, sparkling necklace, with diamonds as large as hickory nuts. It had cost Field all of seventy-five cents and much secret laughter, says Joe Brown, who vouches he has talked over this humorous occasion with Mrs. Fiske herself.

There were times, of course, when the city editor himself was the victim of the pranks and whims of his 'superior officer.' It could hardly be otherwise. Arriving at the office promptly at 1:30 Field would accost him with a hearty, 'Where are you going today, Joe?'

'To the courts,' would be the truthful reply.

'Let 'em go—come with me,' Gene would coax, at the same time commanding Hal Gaylord, the young cashier, thus, 'Throw us out ten dollars—Joe and I are going to have a time this afternoon.'

SO OFF they would go, these two gay young journalists. If it brought them to the rude and shedlike structure of the White Elephant Tenpin Alley on Market Street, where the only rule was that the loser set up the beer and cigars, they were then gay indeed. Gene could not stop—oh, no!—until the last cent of his recently acquired ten dollars was gone. He cared not a whit what the pleasures of the afternoon cost his companion, who would lose occasionally, too. But then Joe did not care either, and so they were well paired.

Back at the office the two would make up the lost afternoon after their own fashion. And doubtless the *Tribune* readers were rewarded next day with some extra laughs in the 'Odd Gossip' column, or a touching poem attributed to the governor of the state. Field was as generous—or as reckless—with his poems as he was with his cash. Officials of city and state, men and women of prominence, were frequently surprised by the

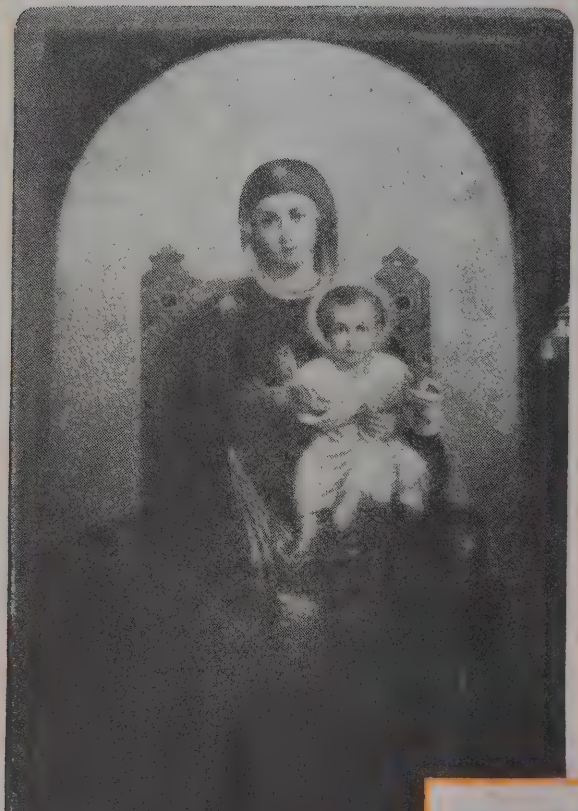
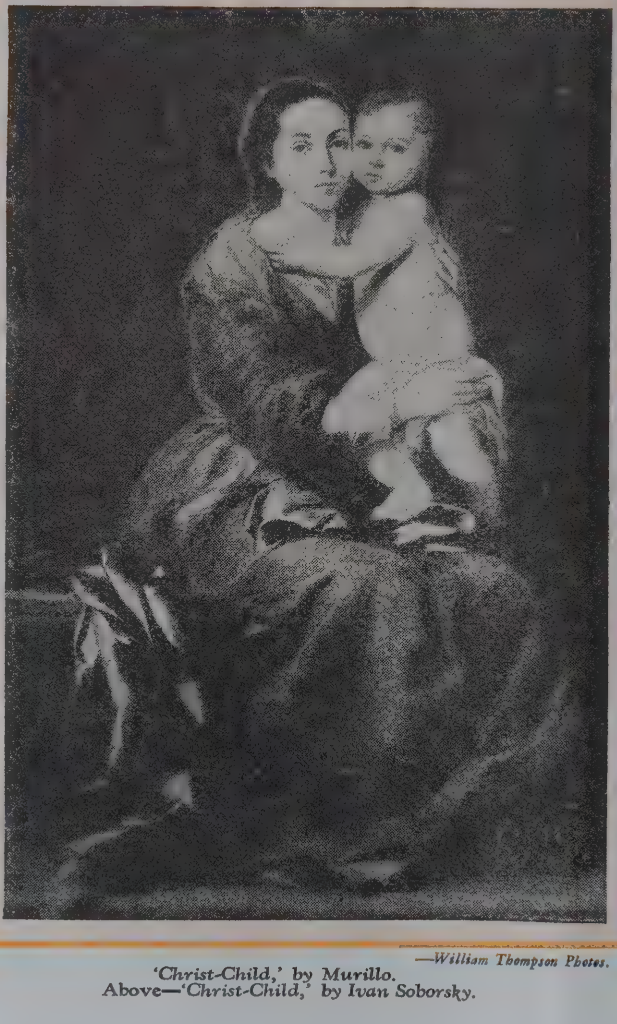
The CHRIST-CHILD *in* ART

By A. W. McNEIL *and* WILLIAM THOMPSON, F.R.G.S.





—*William Thompson Photos.*

'Christ-Child,' by Murillo.
Above—'Christ-Child,' by Ivan Soborsky.

THE highest form of art is the conception of the Christ, both as child and as man. Artists who have painted the great religious canvases of the world are said to have been men of singularly pure character who have overcome most of the common faults of humanity. Many a story is told of inspiration that failed because the wielder of the brush had enmity in his heart toward someone who had done him a real or a fancied wrong. Not until he had learned to forgive and to see the worth instead of the weakness of his brother, was he able to impart expression and beauty to the Master's face.

No subject is so appealing as the holy Babe. To attempt to portray the infant with its natural innocence and sweetness and further to suggest the attributes of the divine, requires skill that belongs only to genius.

With but few exceptions each artist has made the Child a type of his own native land. He is variously pictured through all the gradations of color in eyes and hair, from the darkest to the fairest. He is seldom alone. Not more than six world-known paintings show him between infancy and manhood. One of these by the great devotional artist Murillo, portrays him, perhaps six years old, with rapt upturned face, receiving the baptism of the Holy Spirit. Another, by Hoffman, pictures the twelve-year-old Boy in the Temple. The bright, animated countenance and the pleasing personality make this one of the most popular paintings of the modern religious school.

An outstanding painting of the world is the 'Sistine Madonna' of the Dresden Gallery. Painted by Raphael for a monastery in Italy, it was sold by the monks in
1794 to Augustus III of Saxony. An
of five million dollars has been refuse
it. Raphael indeed 'caught the an
vision' in this masterpiece. The V
stands on a mass of billowy clouds,
ing the Child. Outlines of coun
cherub heads are visible in the effulg
about them. At the bottom of the ca
are Saint Barbara and Saint Sixtu
adoration, the picture receiving its
from the latter. Two little angels, loo
up, have enough childish playfulnes
their faces and their attitudes to give
human element. The angels were mod
from two small boys who were in the
of climbing the balustrade ou
Raphael's studio and watching him a
work in open-mouthed wonder and
miration.

The 'Children of the Shell,' by Mu
hangs in the Prado Gallery at Ma

ht be immortalized for having
ed him in his hour of need.
tree was eventually cut down
made into wine casks. Mary
ame the model for this sur-
singly sweet Madonna, and the
er of one of the oaken casks was
surface on which the figures
e sketched.

A most unusual painting by
Olivier Merson is a scene
n the flight into Egypt. It was
exhibited in a Paris salon, where it
ieved instant fame for its unknown
st. The Sahara in moonlight is the
ctive background. Mary and the
be are between the broad sheltering
vs of the Sphinx. Joseph is on the
ds nearby. A faint column of smoke
s from the dying fire. This, too, is a symbolical picture, the Sphinx representing the mystery of the ancient Egyptian religion, the Holy Family typifying the mystery of Christianity.

The sleeping Jesus in the Borghese Gallery, Rome, is a marvelous group by Lavinia Fontana. The Virgin Mother is in the act of lifting a filmy veil from the sleeping Child, the better to reveal him to some unseen person who has come to adore him. Little Saint John with his finger on his lip enjoins silence. Two little cherubs are pulling aside the canopy of the couch. Saint John's mother, her age in contrast to the fresh young beauty of Mary, stands on one side and Saint Joseph on the other.

A lovely painting by Rubens, in the Pitti Gallery, Florence, depicts the same group of five in a realistic setting. The infant Christ has waked from sleep to see little Saint John in the act of adoration. With dimpled hand he pats the cheek of the older lad, while the three adults in the background survey the pretty scene with mingled delight and worship.

An exquisite Madonna painted by Baron Grosse, a leading artist of Europe in the last century, is in the possession of the Rothschild family. The Madonna is seated on a ruined wall over which wild roses are clambering in profusion. The Child reaches out to grasp a flower, but the mother holds it beyond his reach, so that the thorns will not hurt him. This symbolizes her wish to protect him from pain and sorrow.

To single out so few of the religious masterpieces seems almost unjust to their creators, but their number is legion.

Visitors to the galleries, gazing upon the Mother and Child, experience a sense of the exaltation that came to the artist.

The Stage Coach

(*Continued from page 13*)

forgets a pack of cares on Christmas eve. Great is the contention of Holly and Ivy, whether master or dame wears the breeches. Dice and cards benefit the butler; and if the cook do not lack wit, he will sweetly lick his fingers.'

I was roused from this fit of luxurious meditation by a shout from my little traveling companions. They had been looking out of the coach windows for the last few miles, recognizing every tree and cottage as they approached home; and now there was a general burst of joy—'There's John! and there's old Carlo! and there's Bantam!' cried the happy little rogues clapping their hands.

At the end of a lane there was an old sober-looking servant in livery looking for them; he was accompanied by a superannuated pointer, and by the redoubtable Bantam, a little old rat of a pony with a shaggy mane and long rusty tail, who stood dozing quietly by the roadside, little dreaming of the bustling times that awaited him.

I was pleased to see the fondness with which the little fellows leaped about the steady old footman, and hugged the pointer, who wriggled his whole body for joy. But Bantam was the great object of interest; all wanted to mount at once, and it was with some difficulty that John arranged that they should ride by turns, and the eldest should ride first.

OFF THEY set at last; one on the pony with the dog bounding and barking before him, and the others holding John's hands; both talking at once, and overpowering him with questions and school anecdotes.

We stopped a few moments afterwards to water the horses; and on resuming our route, a turn of the road brought us in sight of a neat countryseat. I could just distinguish the forms of a lady and two young girls in the portico; and I saw my little comrades with Bantam, Carlo, and old John, trooping along the carriage road. I leaned out of the coach window in hopes of witnessing the happy meeting, but a grove of trees shut it from my sight.

In the evening we reached a village where I had determined to pass the night. As we drove into the great gateway of the inn, I saw on one side the light of a rousing kitchen fire beaming through a window. I entered, and admired for the hundredth time that picture of convenience, neatness, and broad honest enjoyment, the kitchen of an English inn. It was of spacious dimensions, hung round with copper and tin vessels highly polished, and decorated here and there with a Christmas green.

A well-scoured deal table extended along one side of the kitchen, with a cold round of beef and other hearty viands upon it, over which two foaming tankards of ale seemed mounting guard. Travelers of inferior order were preparing to attack this stout repast, whilst others sat smoking and gossiping over their ale on two high-backed oaken settles beside the fire. Trim housemaids were hurrying backwards and forwards, under the directions of a fresh bustling landlady; but still seizing an occasional moment to exchange a flippant word, and have a rallying laugh with the group round the fire.

Christmas in the North Woods

(*Continued from page 5*)

hemlock are larger and are not so clustered on the trees, nor will they shed their seeds before the new year.

I know that beneath my feet the soil is not frozen, so quickly and heavily did the first snow fall come. Beneath me lie crushed in loving embrace the fragrant sweet fern and the brown bracken. I visualize all the faded beauty buried there so snugly.

In all my observation I have never seen an unkempt bird or other animal in the woods. They may be hungry and thin but all are spruce and smart in appearance. In the dark twilights of the northern woods great owls flit softly in search of northern hares, or jack rabbits. On noiseless wings they swoop. A squeal, a scuffle, and all is over!

There are deer tracks on the drifts, sketched lightly, dropping hoof marks into covered brush. A buck has passed this way bound for the old runway between the lower lake and the north branch of the Au Sable. A woodpecker flits by on a food mission. He pounds at a dead pine leaning over the creek. Bark, grubs, and insects drop into the river, a welcome surprise feast for winter trout. A little farther on, a mink slips across the stream with only his head showing and dives into a hole in the bank. He frightens a jack rabbit, which hops swiftly through the snow underbrush, his broad, hairy hind pads passing grotesquely ahead of his forefeet. He is thoroughly frightened and his leaps are eight feet long.

It is noticeable that the snow country is at its best only while snow is falling or immediately after the fall has ceased. It is then an ephemeral fairyland, with frost electricity in the air and dry snow on the ground. Now one is apt to see game and live creatures along streams in the swamplands where there is no wind. One may travel far in the higher hardwood lands and see little evidence of wild life except a few birds. But entering a swamp and sitting quietly near some cold, spring-fed creek that does not freeze in winter, one will not be disappointed.

To the city dweller the woodland trail in winter spells freedom of soul and open spaciousness and a hungry man's appetite for wholesome food. There is no more delicious trail food than a thick meaty sandwich with homemade bread, washed down with hot tea brewed in an old pail over an open fire. In the old days, before game laws were in effect, one could broil a fresh trout over the same fire: those were days of plenty when no one penetrated these remote fastnesses except with horse and wagon or pack a-back.

A bonfire in the woods at Christmas is a beautiful thing. It is an experience of joy to forgo the rich repast of the usual Christmas and to eat bacon and bread and drink strong tea or coffee amid dark evergreens by a stream side. For those who feast elaborately in crowded cities do not know what it is to be hungry, to have real zest. And then there is pleasure in the roundabout homeward route following little unexplored streams and ponds.

And when you pull the latch of the snug cabin amid evergreens, it is good to sit by the snapping fireplace with a friend and watch the flames leap and flicker. For we shall have visitors. Neighbors are not far away.

In the twilight of evening they will come to our cabin. We have a haunch of venison and other good Christmas fare to share with them. There is cider in the barrel and abundance of good things. We have old wood to burn, old books to read.

It is good, too, to lie here in a bunk whose mattress is stuffed with sweet fern and fragrant balsam and covered with a well-tanned deer hide. Truly the ways of our ancestors were goodly ways.

So replete is a Christmas in the north woods with its own pursuits, its own individual charm, that one finds no time for hankering after the splendor of city ways. Who would say there is dearth? Not we, who find fullness in the unfolding beauty of lavish Nature.

The shrouded ghosts of the woodland, the advance scouts of King Winter.

The Pecksniffs and Chuzzlewits

(*Continued from page 11*)

stranger. I find that I address a relative. Mr. Anthony Chuzzlewit and his son Mr. Jonas—for they, my dear children, are our travelling companions—will excuse me for an apparently harsh remark. It is not my desire to wound the feelings of any person with whom I am connected in family bonds. I may be a Hypocrite,' said Mr. Pecksniff, cuttingly, 'but I am not a Brute.'

'Are you travelling to London, Mr. Pecksniff?' asked the son.

'Yes, Mr. Jonas, we are travelling to London. We shall have the pleasure of your company all the way, I trust?'

'Well, cousin!' said Mr. Jonas to one of the girls, 'Because we are cousins, you know, a few times removed: so you're going to London?'

Miss Mercy replied in the affirmative, pinching her sister's arm at the same time, and giggling excessively.

'Lots of beaux in London, cousin!' said Mr. Jonas, slightly advancing his elbow.

'Indeed, sir!' cried the young lady. 'They won't hurt us, sir, I dare say.' And having given him this answer with great demureness, she was so overcome by her own humor, that she was fain to stifle her merriment in her sister's shawl.

'Merry,' cried that more prudent damsel, 'really I am ashamed of you. How can you go on so? You wild thing!' At which Miss Merry only laughed the more, of course.

'Don't mind crowding me,' cried Mr. Jonas. 'I like to be crowded by gals. Come a little closer, cousin.'

'No, thank you, sir,' said Charity.

'There's that other one a-laughing again,' said Mr. Jonas; 'she's a-laughing at my father, I shouldn't wonder. If he puts on that old flannel nightcap of his, I don't know what she'll do! Is that my father a-snoring, Pecksniff?'

'Yes, Mr. Jonas.'

'Tread upon his foot, will you be so good?' said the young gentleman. 'The foot next you's the gouty one.'

Mr. Pecksniff hesitating to perform this friendly office, Mr. Jonas did it himself, at the same time crying—

'Come, wake up, father, or you'll be having the nightmare, and screeching out, I know.—Do you ever have the nightmare, cousin?' he asked his neighbor, with characteristic gallantry, as he dropped his voice again.

'Sometimes,' answered Charity. 'Not often.'

'The other one,' said Mr. Jonas, after a pause. 'Does she ever have the nightmare?'

'I don't know,' replied Charity. 'You had better ask her.'

'She laughs so,' said Jonas; 'there's no talking to her. Only hark how she's a-going on now! You're the sensible one, cousin!'

'Tut, tut!' cried Charity.

'Oh! But you are! You know you are!'

'Mercy is a little giddy,' said Miss Charity. 'But she'll sober down in time.'

'It'll be a very long time, then, if she does at all,' rejoined her cousin. 'Take a little more room.'

'I am afraid of crowding you,' said Charity. But she took it notwithstanding; and after one or two remarks on the extreme heaviness of the coach, and the number of places it stopped at, they fell into a silence which remained unbroken by any member of the party until supper time.

Although Mr. Jonas conducted Charity to the hotel and sat himself beside her at the board, it was pretty clear that he had an eye to 'the other one' also, for he often glanced across at Mercy, and seemed to draw comparisons between the personal appearance of the two, which were not unfavourable to the superior plumpness of the younger sister. He allowed himself no great leisure for this kind of observation, however, being busily engaged with the supper, which, as he whispered in his fair companion's ear, was a contract business, and therefore the more she ate, the better the bargain was. His father and Mr. Pecksniff, probably acting on the same wise principle, demolished everything that came within their reach, and by that means acquired a greasy expression of countenance, indicating contentment, if not repletion, which it was very pleasant to contemplate.

When they could eat no more, Mr. Pecksniff and Mr. Jonas subscribed for two sixpennyworths of hot brandy and water, which the latter gentleman considered a more politic order than one shilling's-worth; there being a chance of their getting more spirit out of the innkeeper under this arrangement than if it were all in one glass. Having swallowed his share of the enlivening fluid, Mr. Pecksniff, under pretense of going to see if the coach were ready, went secretly to the bar, and had his own little bottle filled, in order that he might refresh himself at leisure in the dark coach without being observed.

These arrangements concluded, and the coach being ready, they got into their old places and jogged on again. But before he composed himself for a nap, Mr. Pecksniff delivered a kind of grace after meat, in these words—

'The process of indigestion, as I have been informed by anatomical friends, is one of the most wonderful works of nature. I do not know how it may be with others, but it is a great satisfaction to me to know, when regaling on my humble fare, that I am putting in motion the most beautiful machinery with which we have any acquaintance. I really feel at such times as if I was doing a public service. When I have wound myself up, if I may employ such a term,' said Mr. Pecksniff with exquisite tenderness, 'and know that I am Going, I feel that in the lesson afforded by the works within me, I am a Benefactor to my Kind!'

As nothing could be added to this, nothing was said; and Mr. Pecksniff, exulting, it may be presumed, in his moral utility, went to sleep again.

The rest of the night wore away in the usual manner. Mr. Pecksniff and Old Anthony kept tumbling against each other and waking up much terrified, or crushed their heads in opposite corners of the coach and strangely tattooed the surface of their faces—Heaven knows how—in their sleep. The coach stopped and went on, and went on and stopped, time out of number. Passengers got up and passengers got down, and fresh horses came and went and came again, with scarcely any interval between each team as it seemed to those who were dozing, and with a gap of a whole night between every one as it seemed to those who were broad-awake. At length they began to jolt and rumble over horribly uneven stones, and Mr. Pecksniff looking out of window said it was tomorrow morning, and they were there.

Very soon afterwards the coach stopped at the office in the City, and the street in which it was situated was already in a bustle, that fully bore out Mr. Pecksniff's words about its being morning, though for any signs of day yet appearing in the sky it might have been midnight. There was a thick crust upon the pavement like oil cake: which, one of the outsides (mad, no doubt) said to another (his keeper, of course), was Snow!

Scrubwoman

CARL SANDBURG

AND you, old woman, are carrying scrub
buckets tonight,
Just like last year, just like the year before,
Every Saturday night you come gripping the handles,
Throwing the suds, cleaning this room's floor.
They call you 'Mrs. Swanson,' your hair is thin
and grey,
It is a lean little wiry frame you move in.
In your eyes you are ready for whatever comes next.
Your sons have scrubbed ship decks, an uncle
somewhere
Stood at a wheel in a Baltic storm—why must there be
Some rag of romance, some slant of a scarlet star
Over and around your scrub buckets?

A New and

TRUE RELATION,

Of a little Girl in the County of *Hartford*, at *Salmon-Brook* in *Simsbury* who acted in a *Strange* Manner, ſuppoſed to be bewitch d, in *March* 1763.

HARK! hark! come liſten to my theme,
'Tis really true, it is no dream;
In *Simſbury* famous town doth dwell,
A gentleman who's known full well.
To tell his name I ſhall forbear,
In writ from me you ſhall not hear;
This man he hath a little daughter,
As by my Song you'll know hereafter.
Alas! alas! we well may fear,
To write the news of her we hear;
She to her parents is moſt dear,
No doubt of her they take good care.
'Twas in the year ſeventeen hundred ſixty three,
As you may know if you'll b'lieve me;
And in the boiſt'rous month of March,
When cold Boreas doth all nature ſearch.
O then, alas! this pretty child ſo dear,
Was ſeiz'd with frantic fits we hear;
Which did her parents doubtleſs grieve,
While nothing could her pain reliev
Some neighbours they are apt
This child's bewich'd both ni y;
Sometimes ſhe'll roar and ſ
And then lie down to reſ
Sometim

Come Mars and Jupiter and Venus too,
Tell what of all this rout you know,
They cry alas! and make their voices ring,
We like great heroes, ſerve our king.
And if we name them all around,
Among them all there can't be found,
No ſuch matters as we ſee,
For it with nature can't agree
Alas! where ſhall we find the cauſe,
Since it's not writ in nature's laws,
Nor founded in the deep below?
Alas! who does the cauſe well know?
Some neighbours they alas! do cry,
e is bewich'd. alas! ſhe'll die;
They pity do this child moſt dear,
And ſay it is ſome neighbour near
Some others they are bold to ſay,
And tell it round from day to day;
By which it may ſpread thro' the nation,
Before it is ſome near relation.
But who it is I cannot tell,
And you don't know I b'lieve full well,
Therefore forbear to tell the name,
And you'll be clear from any blame.
And now to you her n dear,
unto God, now

THE invention of printing by Gutenberg about 1450 made possible an intelligent democratic form of society. As long as a single book involved the whole attention of one man for a year, more or less, it was possible only for the wealthy or the elect to have books. But the printing press introduced quantity production, and in a very real sense modern democracy, an intelligent public, had its beginning at that time.

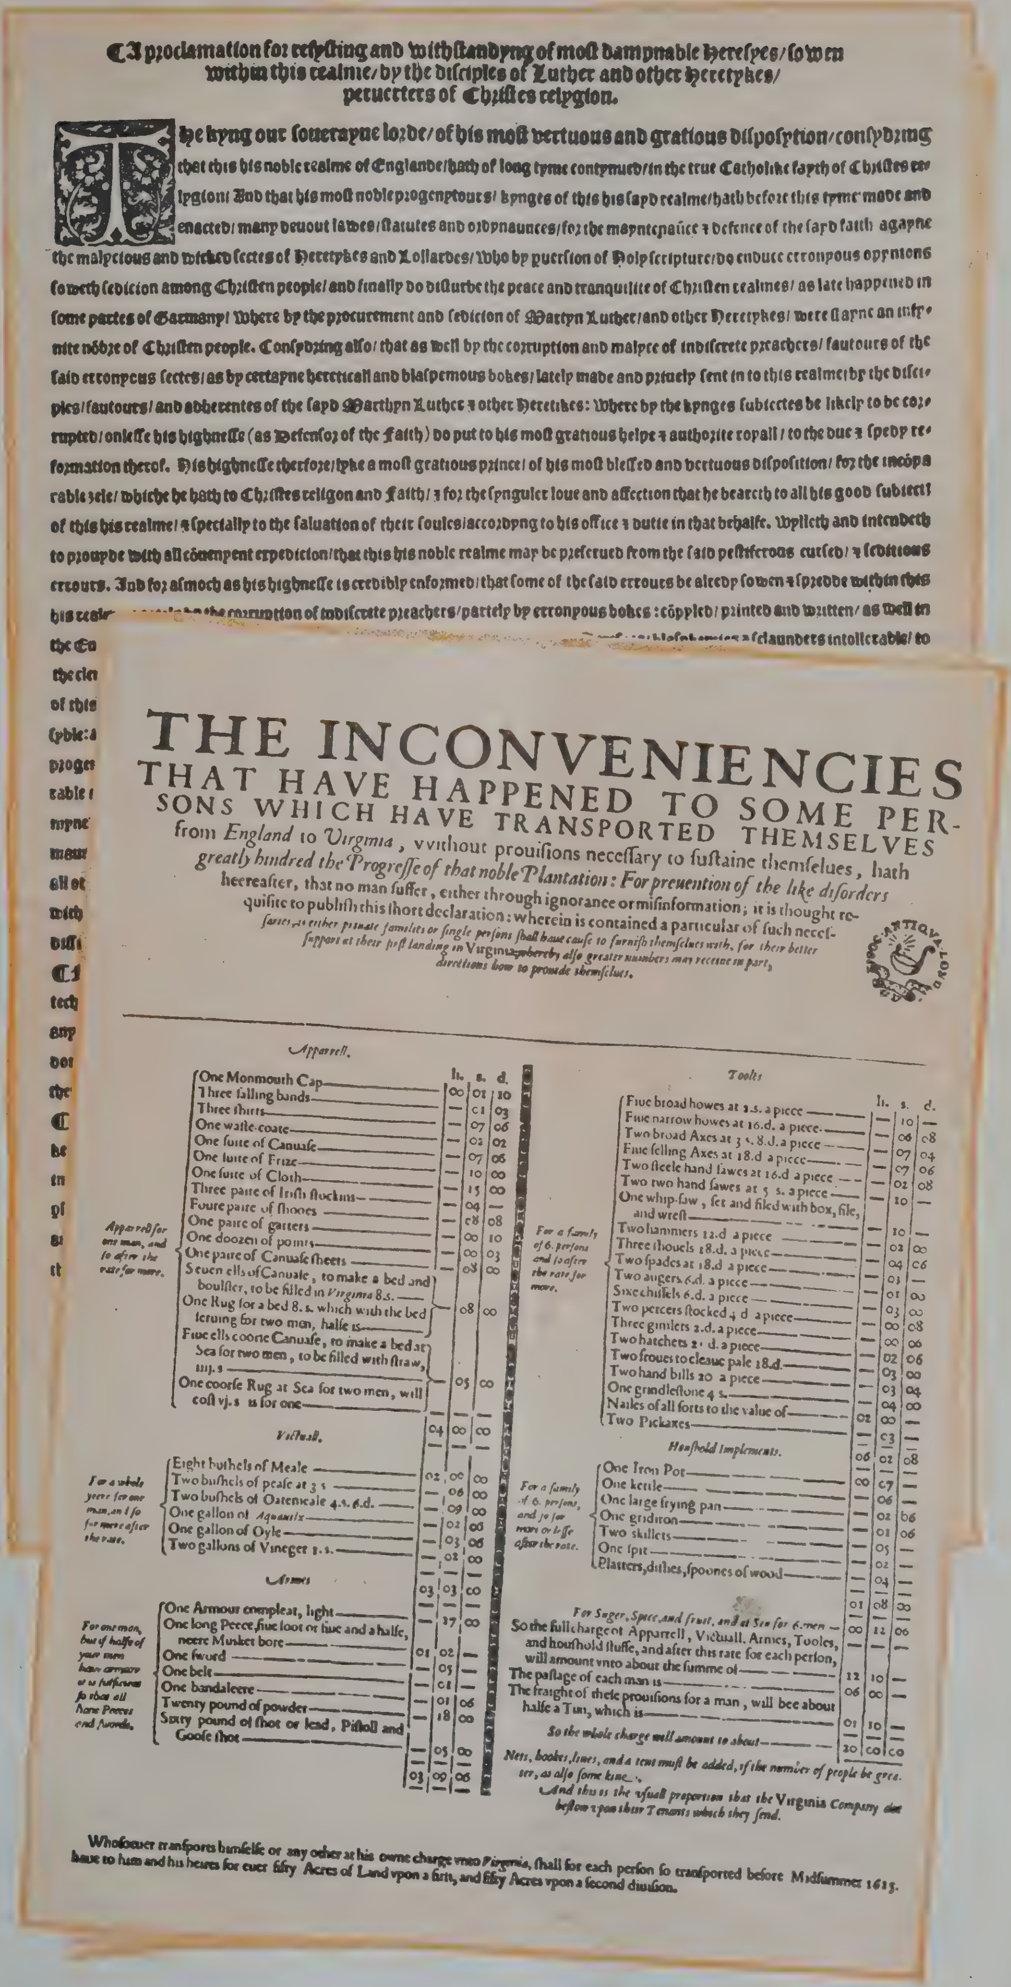
A popular form of printing was the single leaf, called broadside, intended to be posted in public places for the information of the public. In a measure, the broadside replaced the town crier.

On the Continent of Europe the broadside appeared almost with the invention of the printing art. However, specimens of those early single sheets today are very rare, as their use subjected them to immediate destruction. Further, the content of the document did not suggest its preservation. Frequently the broadside served the same purpose as a newspaper and its existence was as uncertain and hazardous.

In England thousands of these single sheets were issued during the 16th and 17th centuries. In many instances the possibility of secret production and distribution led to the abuse of the instrument as a means of private slander or ridicule for political purposes.

In English America the first printed document is known to be the Freeman's Oath, a single page printed at Cambridge, Massachusetts, in 1639. No copy is preserved, but the signal appropriateness of the title is worthy of note. This broadside inaugurated in America a long series of such broadsides, far more numerous than one would suspect.

Dr. Worthington Ford, the learned secretary of the Massachusetts Historical Society, published in 1922 as Volume 75 of the collections of that society a list of more than thirty-four hundred such broadsides issued in Massachusetts between 1639 and 1800. And quite recently in the American Antiquarian Society there were found three volumes of ballads, collected by Isaiah Thomas, fine printer, patriot and antiquarian of the highest type. In this collection were included a fairly large number not found in any other library, and not contained in Dr. Ford's preceding list. Ballads were about the most popular form of broadsides; the sale of ballads on the street continued actively in England and America up to the beginning of the present century.



Right—*English broadside, supposedly of 1529, directed against Luther. It is headed, 'A proclamation for resisting and withstanding of most damnable heresies, sown within this realm by the disciples of Luther and other heretics, perverters of Christ's religion.'*
Below—*Poster printed in London in 1622 to stimulate emigration to Virginia.*

¶ A proclamation for reſyſting and withſtandyng of moſt dampnable Hereſyes/ ſowen within this realme/ by the diſciples of Luther and other Heretykes/ peruerters of Chriſtes relygion.

The kyng our ſoueraygne lorde/ of his moſt vertuous and gratious diſpoſytion/ conſydring that this his noble realme of Englande/ hath of long tyme contynued/ in the true Catholike fayth of Chriſtes relygion/ And that his moſt noble progenytours/ kynges of this his ſayd realme/ hath before this tyme made and enacted/ many deuout lawes/ ſtatutes and ordynaunces/ for the mayntenaũce ⁊ defence of the ſayd faith agaynſt the malycious and wicked ſectes of Heretykes and Lollardes/ Who by peruerſion of Holy ſcripture/ do enduce erronyous opynions ſoweth ſedicion among Chriſten people/ and finally do diſturbe the peace and tranquilite of Chriſten realmes/ as late happened in ſome partes of Garmany/ Where by the procurement and ſedicion of Martyn Luther/ and other Heretykes/ were ſlayne an infynite nombre of Chriſten people. Conſydring alſo/ that as well by the corruption and malyce of indiſcrete preachers/ fautours of the ſaid erronyous ſectes/ as by certayne hereticall and blaſphemous bokes/ lately made and priuely ſent in to this realme/ by the diſciples/ fautours/ and adherentes of the ſayd Marthyn Luther ⁊ other Heretikes: Where by the kynges ſubiectes be likely to be corrupted/ onleſſe his highneſſe (as Defenſor of the Faith) do put to his moſt gratious helpe ⁊ authorite royall/ to the due ⁊ ſpedy reformation therof. His highneſſe therfore/ lyke a moſt gratious prince/ of his moſt bleſſed and vertuous diſpoſition/ for the incõparable zele/ whiche he hath to Chriſtes religon and Faith/ ⁊ for the ſynguler loue and affection that he beareth to all his good ſubiects of this his realme/ ⁊ ſpecially to the ſaluation of their ſoules/ accordyng to his office ⁊ dutie in that behalfe. Wylleth and intendeth to prouyde with all cõuenyent expedicion/ that this his noble realme may be preſerued from the ſaid peſtiferous curſed/ ⁊ ſeditious errours. And for aſmoch as his highneſſe is credibly enformed/ that ſome of the ſaid errours be alredy ſowen ⁊ ſpredde within this his realm the corruption of indiſcrete preachers/ partely by erronyous bokes: cõpyled/ printed and written/ as well in the En blaſphemies ⁊ ſlaunders intollerable/ to the cle

For Suger, Spice, and fruit, and at Sea for 6. men	00	12	06
So the full charge of Apparrell, Victuall, Armes, Tooles, and houſhold ſtuffe, and after this rate for each perſon, will amount vnto about the ſumme of	12	10	—
The paſſage of each man is	06	00	—
The fraight of theſe prouiſions for a man, will bee about halfe a Tun, which is	01	10	—
So the whole charge will amount to about	20	00	00

Nets, bookes, lines, and a tent muſt be added, if the number of people be greater, as alſo ſome kine.

And this is the vſuall proportion that the Virginia *Company doe beſtow vpon their Tenants which they ſend.*

Whoſoeuer tranſports himſelfe or any other at his owne charge vnto *Virginia*, ſhall for each perſon ſo tranſported before Midſummer 1625. haue to him and his heires for euer fifty Acres of Land vpon a firſt, and fifty Acres vpon a ſecond diuiſion.

In Spanish America the broadside was not widely used. Apparently many of the Spanish colonists did not read them; the native Indians played a much larger and more active part in the life of the Spanish cities of the New World.

Dr. Ford lists some 244 broadsides up to 1700. In that same period there were published in English America approximately one thousand volumes, so that the broadsides constituted about one-quarter in number of all the publications. Up to the outbreak of the Revolutionary War there were roughly fifteen thousand volumes published in America and of these the broadsides totaled approximately one-tenth. The appearance of the newspapers in that time doubtless accounts for the relative falling off of broadsides.

A most strange double broadside is preserved in the New York Historical Society which harbors many great treasures of American history. This is a broadside printed in 1748 or 1749 by Thomas Fleet of Boston upon the reverse of a papal indulgence granted in a broadside by Pope Urban VIII. Such Spanish indulgences were shipped in quantity to Mexico and were there sold. An English cruiser captured a Spanish vessel in 1748 which had on board several bales of indulgences.

'Fleet purchased a large quantity, some of which he used to print ballads on the back. Others he offered for sale by the single Bull, Quire, or Ream, at a much cheaper Rate than they can be purchased by the French or Spanish Priests, and yet will be warranted to be of the same Advantage to the Possessors.'

The English ballad on the reverse is entitled, 'The Great Honor of a valiant London Prentice, Being an Account of his Matchless Manhood and brave Adventures done in Turkey, and how he came to marry the King's Daughter, to the tune of: "All you that love Good fellows." ' During the Revolutionary War hundreds of proclamations were posted in public places, in part occasioned by the fact that many patriotic newspapers were compelled to cease publication and in part because the proclamation afforded a way of spreading news, without attaching responsibility to the publisher. In England, too, a strong pro-American party found this instrument well adapted to their purposes and many a note favorable to the American cause was posted on public bulletin boards in London.

He Wrote for the Children

(Continued from page 15)

publication of a *Tribune* poem attributed to them in those happy days of the long ago.

As has been said, Joe Brown took note of these things. He knew the serious side of the boyish Field as well as any one in Denver.

He is the one, perhaps the only one, who after all the years can identify the early unsigned *Tribune* articles and poems of Field. And he has compiled and prefaced a volume of those early poems as a tribute to his pal of forty years ago.

A Little Book of Tribune Verse contains, as he believes, all the poetical efforts of Field during his two years' sojourn in Denver; in fact all the verses contributed by him to the *Tribune*. Most of these appeared in the nonpareil type of the 'Odd Gossip' column; a few were found in other departments of the paper. Although the troubadour-journalist had not then begun to take his gift of song seriously, his work covers the same wide range of subjects characteristic of his mature years, and includes a few gems which he later acknowledged and revised.

'Christmas Treasures,' revised and published by Field in *A Little Book of Western Verse* and said to be the first of his poems deemed worthy of such preservation by him, appears in the *Tribune* collection under date of December 25, 1881, his first Christmas in Denver. It was written earlier than this—during his *Journal* days in St. Louis.

But the important thing is that the two versions differ by no more than a half-dozen slight changes in words and capitalization. The poet was very near the surface of things that matter in those harum-scarum days, nearer than anyone except Joe Brown himself and the close associates of the *Tribune* staff realized.

Happily Mr. Brown's little volume reveals the very Field he knew and loved. The poems of childhood occupy a prominent place in the collection of *Tribune* verse and easily forecast the day when their author would be known through all the land as 'the children's poet.' Surely if anyone in Denver suspected that day would come, it must have been Joe Brown. It was Joe whom the devoted father of 'Trotty,' and Melvin, and 'Pinny,' and 'Daisy' Field at times coerced into taking his family for long carriage drives through the city at the expense of editorial duties.

Here and there among the poems of childhood and the poems of the people occurs a simple verse in primer style, which suggests the *Tribune Primer* being published serially at the time. This clever take-off on the *First Readers* of the day became Field's first published book and incidentally the rarest of American first editions.

HERE and there, too, are references to the stage folk whom Field welcomed to Denver in his roguish way—Christine Nilsson, for instance, who failed to appreciate his poker joke until she met 'Meestair Field—zee—T-r-ee-bune' himself; Emma Abbott who assisted in dedicating the Tabor Grand Opera House in September, '81, and in whose honor an entire series of poems appeared in the *Tribune*. 'Emma Abbott's Baby,' which never was on land or sea, appears under the date of September 8, 1881, and, of course, was attributed to W. H. Bush.

Very interesting are the parodies 'Maude Muller,' 'We Are Seven,' 'I Cannot Sing the Old Songs,' 'Lost Chords,' 'Ode to the Passions,' all forecasting the ballads and lullabies of later years. And there is also the 'Ode to Maecenas' disputing the fact that Field's acquaintance with Horace was limited to his Chicago period on the staff of the *Daily News*. Altogether it is a valuable little volume filled with precious memories for Mr. Brown—and others.

Field's two years with the *Tribune* passed all too quickly; the care-free, warm-hearted, open-handed, reckless adventurer had left Denver behind him and gone on to other things. Joe Brown bought the desk which Field had used in the *Tribune* office and made use of it himself during his stay with the Colorado *Sun*. The desk was burned during his absence from the city in 1894.

The famous old *Tribune* deteriorated rapidly and soon passed into the hands of its rival across the lunch man's alley—the Denver *Republican*.

In REINDEER *Haunts*

By E. R. GAMMAGE

THE cameraman who wishes to capture an elk as his prize must possess nerve, endurance and ingenuity, for the elk is one of the swiftest and shyest of the deer family. The photographer who was fortunate enough to secure the accompanying picture, however, happily discovered the early morning playground of these animals and waited patiently for them there. He lay concealed behind some large trees, and snapped them as they came speeding through the woods. You will notice that the big male is leading the way and the females are following closely behind. This 'traveling formation' is characteristic of these animals.

The elk is the largest species of the deer family and is common in the northern regions to both the Old and New World. In the New World, it is found principally in northern Maine and British North America.

It has long legs, stands about six feet high, and has a large head with broad muzzle and large nostrils. The elk can be distinguished from other deer by the horns or antlers of the male, each of which is in two parts like a broad hand with the palm curved and held upward. Around the margins are prongs or snags.

An average full-grown pair of these antlers, together with the skull, weighs seventy pounds. They grow very gradually during the early part of the animal's life; the first year they are only knobs an inch high, the second year they grow to about a foot in length, and the third year develop into their matured palm shape. It is at this stage that a most curious phenomenon occurs—the fully formed horns are shed in December, sprout again immediately, and are completely renewed within the short period of four months. This same procedure takes place every year, the rapid growth of the horn material serving to render the animal weak and listless during the season of the year when the does are rearing their young, which would be defenseless against the angry attacks of the males if these latter were provided with their warlike antlers.

The great speed of the elk, its keen sense of hearing and smell, combine to make the animal very difficult to hunt. In the wintertime, the animals herd together in groups for protection.

There are thousands of elk in the mountains of British Columbia. The section penetrated by the Canadian National Railroad contains many herds which feed unmolested owing to the scarcity of population in their native haunts. The elk are gregarious and polygamous, associating in moderate-sized herds, the strongest buck acting as leader of the does.

Elk caught in action by the author's camera.

A LETTER About a GOOSE

Mr. Miner feeding a wild Canada goose.

—Photos, R. D. Sloane.

JACK MINER was but a boy when he 'took to the woods as naturally as a rabbit.' From that he graduated and established at Kingsville, Ontario, a bird sanctuary that is the wonder of two countries. He maintains this sanctuary for wild ducks and geese. In the autumn he catches them and tags them with aluminum tags on which are stamped Bible references and a request that the finder of the tag return it to him with a communication describing the circumstances under which the bird fell. He has tags from nearly every state in the Union and many from Canadian provinces. Fully 40 per cent of the birds which Miner tags in the autumn return with the soft breezes of early spring. It took several years to bring them to the point where they looked upon him as a friend and not an enemy. He feeds them thousands of bushels of corn and maintains a rigid guard over their sanctuary. He receives letters written on embossed game club stationery and couched in the choicest of English. He receives other missives, carrying just as important messages, written in a cramped hand on wrapping paper with lead pencil. They each carry a note of regret that the bird was killed. Usually the circumstances of the kill are given as well as the locality and the conditions surrounding the kill. Here is an unexpurgated example of the type of letter received daily during the late autumn by the Miners. Spelling and punctuation remain unchanged. We have too much respect for the innate intelligence and humanity of the writer to 'doll up' his letter. We asked Jack Miner's permission to print it because we consider it a human document of high quality:

Engelhard, N. C.
Nov 2nd 1927

Dear Sir or Madam
Kingsville Ont Canada

I had the good fourtune of meeting one of your neighbors yesterday on the first day of the hunting season and think he was the most remarkable goose I have ever seen. a flock of 25 or more geese lit to my decoys just out of gun shot of which he was the leader and as the flock started in he seemed to realize there was danger near my decoy geese and tryed hard to keep them back. he swam to and fro between the flock and the decoys fighting at the flock trying to drive them away and when they persisted to come in he would fly off and circle around hollering as hard as he could and when he saw the flock was coming in anyway in spite of his warning he came and lit between them and the decoys as much as to say if it must be done take me and let these children go. he being the largest goose in the flock I took him first. the others got away and after the excitement was over and I brought him in the blind and saw his tag and realized how nobly he laid down his life for his friends my concience hurt me. My companion and myself talked about the splendid traits of character the goose had shown and we imagined him some pet that a little boy or girl had found and raised until he was grown and carried and put with other geese to choose a mate and fly away to the safe, sunny south to spend the winter. Many will and go back. But this Brave gander was the first to fall. But in falling displayed such nobility as to convince me of the sin of killing game just for the sport of it and if ever I go again it will be because I want a goose to eat and not to shoot them down just to see them die On the tag besides the address was Ps 37-3 Trust in the Lord which is the first line of the third verse of the 37 Psalms 27 I suppose was the year. there was an S off to its self and I imagine the gander was named Sam.

One of Mr. Miner's ponds.

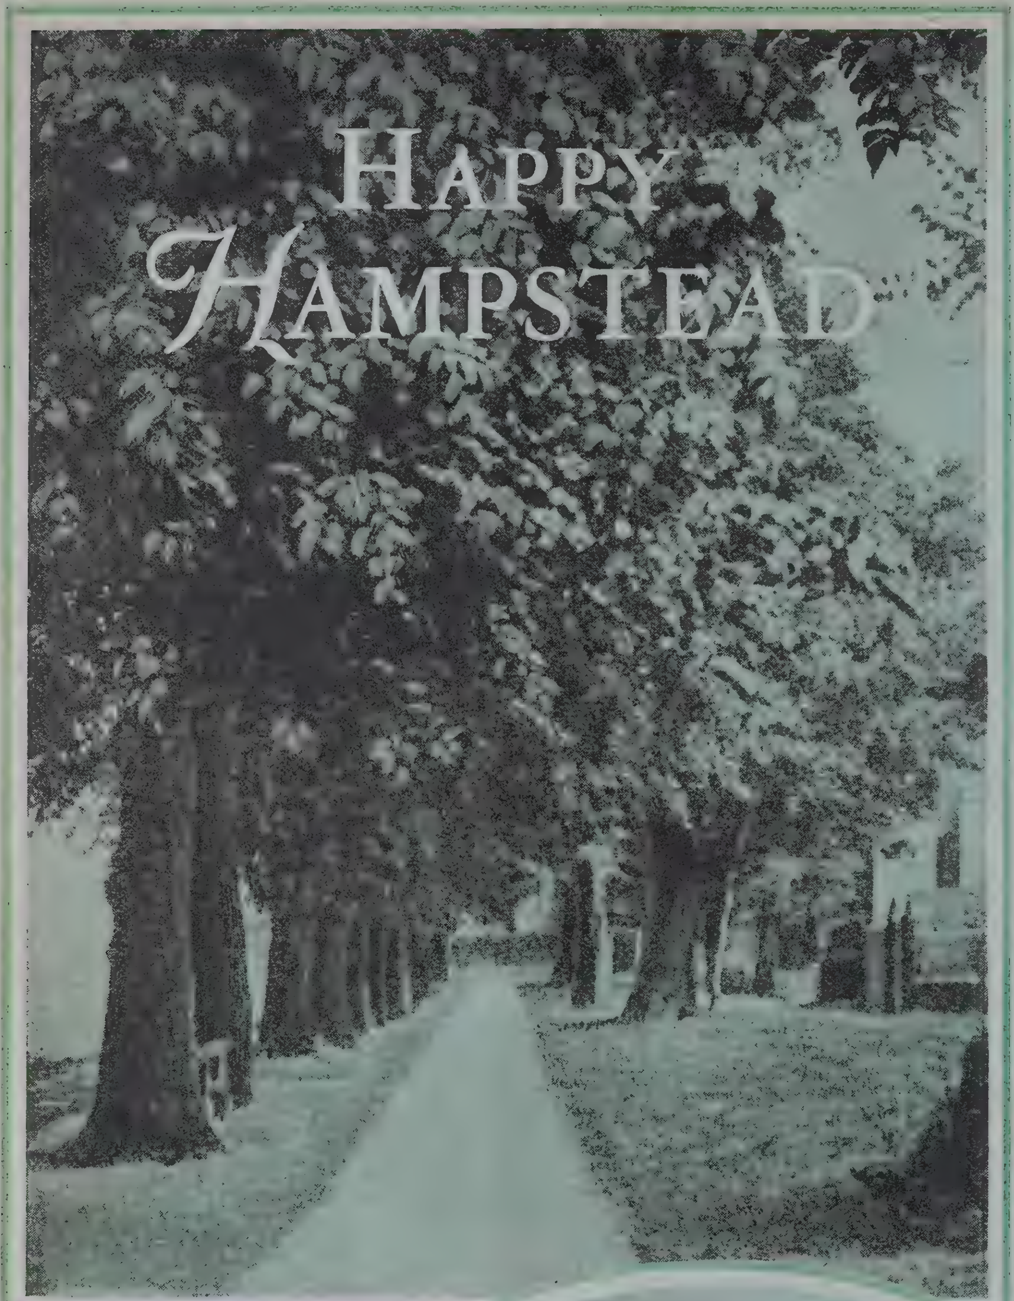
Any way Sam or Sallie my wife is puting dinner on the table now and I can smell the baked goose and the sweet potatoes collards cranberry sauce with oyster dressing. so I am just now consoleing my self with that passage of scripture When the Lord said Arise Peter slay and eat I really wish I could have killed an untagged goose and let old Sam go back home. I feel like you will look for him and miss him when the others come north again. I wish you would write me tell me your name and how you and old Sam became friends

Yours Very truly
Billy Harris

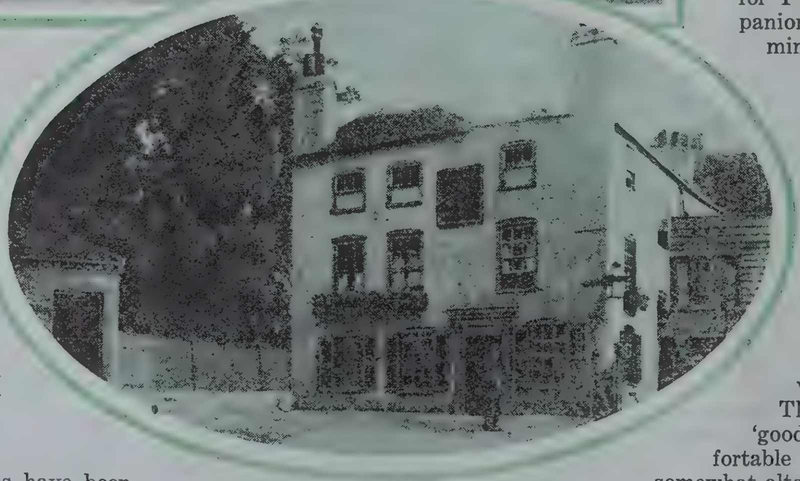
Do you wonder that Jack Miner feels as he does regarding his birds? He goes about the country giving lectures. The money he receives for these lectures goes to buy corn to feed his birds. Let him tell of his experiences along conservation lines.

'If you are privileged to live in the country, you can make your home into a little earthly heaven by "interfering with the balance of Nature," as you call it—but I term it, "assisting Nature"—for you can get seedling trees from our government forestry departments free of charge. If you will plant five hundred of them in the proper place and formation around your home, cultivating them the same as you would hills of corn for the first five summers, which will not take you over one day a year, in ten years' time these trees will be from twelve to fifteen feet high and will break the wind around your home and, on a cold wintry day, will reduce your fuel bill; and, if you can be big enough to ignore the criticism of men and take God's promise as a guide, your assistance will double and treble the quantity and quality of the birds at your home every year.

'My Scotch pines, planted on a sticky clay field in the spring of 1914, have now grown into a fine little forest; the lower limbs are now bent by the weight of three to five thousand mourning doves that have roosted there during August, September and October of the last few summers.'



HAPPY HAMPSTEAD



A bit of Hampstead Heath and, in oval, 'The Spaniards' at Hampstead Heath.

Two Famous Dickens Taverns

By W. TEIGNMOUTH SHORE

MANY English taverns have been immortalized by Charles Dickens. In the spirit, I have been to many of them with him. Jolly company he always is! The other morning I walked with him to Hampstead Heath, that glorious open space on a hilltop north of London; breezy—almost always; clad in spring in golden gorse, green grass, and bright field flowers; decked with many a shade tree, and bounded by fine houses, some old, some new, most of them standing in sumptuous gardens.

Dickens loved Hampstead Heath, and so do all right-minded Londoners. A pleasing volume might be written on the literary connections of the Heath. It is redolent with memories of Keats, Coleridge, Shelley, and other big men of the pen. Fanny Burney's pretty Evelina paid a visit to one of the tea gardens here in the year 1778; and does not Clarissa Harlowe say: 'I own that Hampstead Heath affords a very pretty and very extensive prospect'? It still does.

Standing atop the hill, looking one way, you see London spread before you:

'This is the Heath of Hampstead,
There is the dome of Saint Paul's;
Beneath, on the serried housetops,
A chequered lustre falls.'

There scarcely can be a more wonderful and impressive view than this, straight across the vast mass of the town, brooding, smoke-clad, beneath a checkered April sky, here flooded with sunshine, there gray under lowering clouds, elsewhere blurred with rain.

In the other direction you look out over wide stretches of red-roofed suburbs; beyond them to the open country, a conspicuous landmark being Harrow-on-the-Hill, whereon is the famous school where Byron dreamed his youthful dreams of greatness and love.

' 'Appy 'Ampstead,' cockneys call it who resort there on fine holidays in thousands, mostly from the East End quarters of London, where the costers and their 'donahs' dwell. They come to dance, to ride with joyous shrieks upon the roundabouts and in the swing boats. It is an amazingly merry scene.

But the heath was quiet and well-nigh deserted on the morn I visited it; and I was glad that it was so, for I sought not present-day companions. I was thinking, and in my mind's eye I saw Charles Dickens and his faithful henchman John Forster striding up the hilly road.

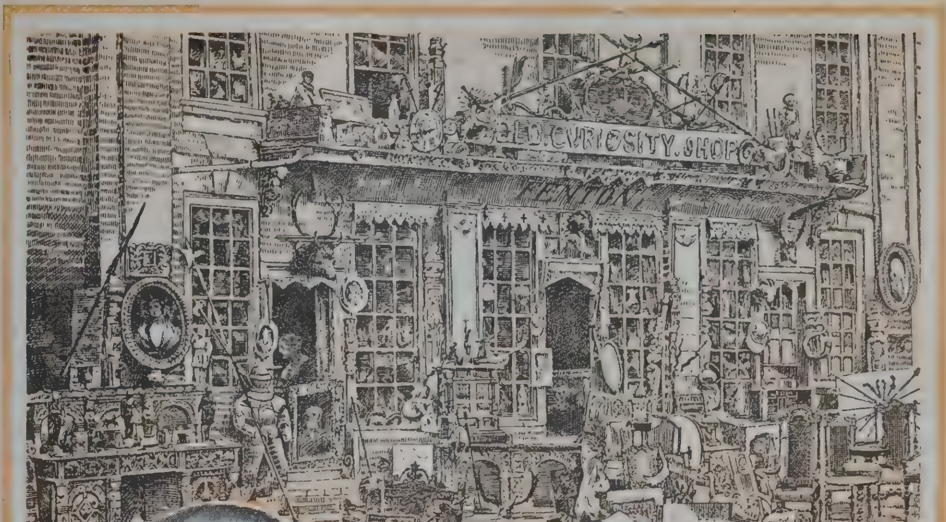
Whither away? The answer is provided in a note from the former to the latter, asking how about 'a good brisk walk over Hampstead Heath? I know a good 'ous there where we can have a red-hot chop for dinner, and a glass of good wine.'

There in front of me was the 'good 'ous,' a comely and comfortable tavern, though its face is somewhat altered since Dickens last visited it. 'Jack Straw's Castle!' As English taverns go, not a very ancient place of entertainment for man and beast. Why is it called 'Jack Straw's Castle'? I don't know and nobody knows—and after all what's in a name? So long as the thing itself is goodly? There was an old earthwork here, or fort, called the 'Castle,' and it is quite likely that in the year 1381 Jack Straw, the ranting lieutenant of rebellious Wat Tyler, encamped here with his ragged followers.

We have other records of visits by Charles Dickens. When the *Old Curiosity Shop* was under way Dickens here read to Forster and Maclise, the artist, one of the later chapters of that famous story. Would that you and I had been of that fellowship or, at least, had listened at the keyhole!

In 1844, when *Chuzzlewit* was being written, the same company plus Stanfield forgathered there, and dinner was 'on the table at four.' And there again they met and dined and wined and talked and chaffed and laughed a month or so later. Those were merry hours!

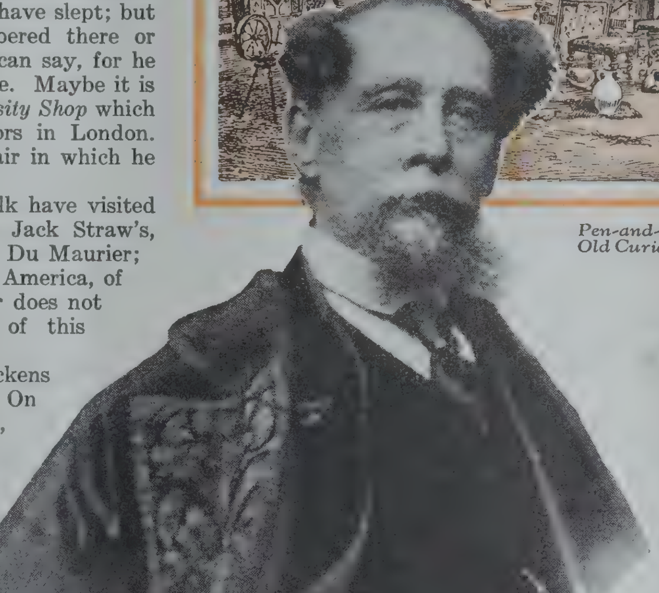
You can have merry times there now if the spirit so moves you—can dispose of a red-hot chop, and put away a capital cup of tea. You pays your money and you takes your choice! You can see a bedroom in which Dickens is said to have slept; but why he should have slumbered there or that he really did so, none can say, for he lived within walking distance. Maybe it is as fictitious as the *Old Curiosity Shop* which is shown to innocent visitors in London. And you may sit in the chair in which he may have sat, or didn't.



Pen-and-ink sketch, from an old photograph, showing the Old Curiosity Shop as operated by George Fenton, a collector of almost everything.

Other famous literary folk have visited and slaked their thirsts at Jack Straw's, among them Thackeray and Du Maurier; and a charming writer from America, of whom you have heard! For does not Washington Irving speak of this place in *The Sketch Book?*

There is a less direct Dickens connection with this tavern. On the slope of the hill behind it, upon Sunday morning, February 17, 1856, was discovered the body of John Sadleir, member of Parliament for Sligo, a fraudulent person, a swindler and promoter of bogus stock, who, when exposure was imminent, killed himself with a dose of essential oil of almonds, which he drank out of a silver cream jug, found lying by his side. From this incident Dickens secured the local color and material for another bit of fiction.



—Brown Brothers.

Charles Dickens, from a portrait made in 1867.

Left—An English coach on a run in Christmas season.

In *Little Dorrit*, Dickens says: 'I shaped Mr. Merdle himself out of that precious rascality.'

In the *Miscellaneous Papers*, in the one on 'Nobody, Somebody, and Everybody,' we read:

'And this brings me back to Nobody; to the great irresponsible, guilty, wicked, blind giant of this time. Oh friends, countrymen, and lovers, look at that carcase smelling strong of prussic acid (drunk out of a silver milkpot, which was a part of the plunder, or as the less pernicious thieves call it, the swag), cumbering Hampstead Heath by London town!'

With such memories of the *Old Curiosity Shop*, *Chuzzlewit*, and the happy hours spent here, one can understand the reason this tavern is forever associated with Charles Dickens.

Walking a little way beneath splendid elms, I came to another renowned hostelry, 'The Spaniards,' which is aged, dating back to 1630. A quaint, old-fashioned house, filled with memories of highwaymen days, or rather nights. Did not Dick Turpin rest and refresh himself here after his labors and between his exploits?

Often have I partaken of tea here on summer afternoons—bread and butter, jam, radishes, fresh lettuces, and a battered pot of tea all to myself—in the old tea garden, with its arbors, its lawn and its flower beds.

And whom do you think I once had as company at the next table? Mrs. Bardell and her son Thomas, Mrs. Sanders, Mrs. Cluppins, Mrs. Rogers, Mrs. Raddle and her long-suffering spouse. I heard them drive up in the Hampstead stagecoach and through the lattice watched them disembark and parade into the garden.

They stared haughtily at me as they came, all except poor Mr. Raddle, who looked as if he envied my being alone. Mrs. Bardell was unanimously voted to the chair. Mr. Raddle's very first deed gave check to the harmony, for did he not order tea for seven when six portions would have sufficed? For 'what could have been easier than for Tommy to have drunk out of anybody's cup—or everybody's, if that was all—when the waiter wasn't looking?'

That tea party, like an April day, was mixed showers and sunshine; it ended in gloom. Hark! Is not that the sound of approaching wheels? Who can it be? A hackney coach draws up at the garden gate. The myrmidons of the law! Mrs. Bardell is borne away to the Fleet Prison, where she meets with her victim, Mr. Samuel Pickwick. 'It's a sad, mad, bad world!' as somebody said.

The Gordon rioters also paid 'The Spaniards' a visit on their way from London to wreck Lord Mansfield's country house, hard by. Mine host greeted them at the door and craftily invited them to drink their fill; he meanwhile sent a messenger to fetch the troops, who came and sent the rioters empty away. Does Dickens make no mention whatever of this happening in *Barnaby Rudge?* He must have had full knowledge of it and he also knew this tavern well.

The Land of the First Christmas

(Continued from page 7)

—Ewing Galloway.
American tourists rowing on the River Jordan.

Dead Sea, on the other hand, has been said to resemble skimmed milk in a bowl of brown. It is saltier than any other water on earth, and so bitter and poisonous that no living thing can exist in it.

Ancient Hebrews termed Palestine the 'land of milk and honey.' It must be borne in mind, however, that these Hebrews were nomads of the desert. Compared with wilderness stretches, it was indeed a 'land of milk and honey'; but to Western eyes it seems a treeless, stony, barren, and uninviting country. Its fruitfulness and beauty are purely relative. According to earliest tradition, God cursed the ground and said to man: 'In the sweat of thy face shalt thou eat bread.' So it is in the Holy Land. There are some copious wells and fountains, and some naturally fertile places, but generally there is a scarcity of water and a small proportion of tillable land. The soil is fought for by terracing the hills and conserving every inch of arable space.

As one traveler remarked: 'The uplands look as if they had been stoned to death.' The Arabs have a legend that when God made the world he put all the stones to cover it into two bags and gave them to an angel. As the angel was flying over Palestine, one bag broke.

The stoniness of the country doubtless accounts for the many Biblical references to stones, their cheapness, troublesomeness, and commonness. For example, the 'King made silver to be in Jerusalem as stones'; dashing one's foot against a stone symbolized trouble; a stony heart was used as a figure of speech for impenitence; Christ pictured an unreliable life as stony ground, and as an example of a denied request cited giving a child a stone when he asked for bread.

The Arabs say the noses of the sheep have to be filed to a point for the animals to get grass between the rocks on the uplands.

The trees have suffered lamentably during the centuries, principally from the ravages of repeated wars and from the plague of locusts. Goats have even been seen to climb mature olive trees and crop the leaves; so a tree lover easily appreciates the symbol of the sheep and goats.

A real effort is being made now, however, to restore the beauty of trees to these hillsides.

Fuel is so scarce that it is rarely used except for cooking, and much cooking is done on one common stove.

Olive trees are being cut down. The wood is hard as apple and more knotty and gnarly.

It is heavy and is sold by the ton, being brought to Jerusalem on the backs of donkeys and camels. Each stick is taxed before it enters the city.

The common fuel is charcoal made of olive wood, chiefly at Hebron, twenty-three miles south of Jerusalem, where there are large orchards of olives, almonds, and apples. Brush and dead wood are used for charcoal. Coal is practically prohibitive in price, since it must be imported and the railways charge the same price for carrying it as for carrying silk. What there is, is in briquettes.

An impression of the slow, meditative spirit of the Holy City.

A wide diversity of climate and landscape is found in the Holy Land. At the Dead Sea the heat is torrid, while Hermon is snow-crowned. The spinal ridge of Palestine borders on the fiery desert and ends among the pines and the snows of Anti-Lebanon. It is only a day's trip from the parched wilderness to the temperate climate of Jerusalem, where rains fall in spring and snow is sometimes deep in winter. From Jerusalem one can view the blazing barren gorge of the Dead Sea on one side, and on the other the wheat fields of Shephelah and the citron groves and palm trees of the hot Philistine plain. To the north one looks over smiling country—the green valleys, the fig trees, and the olive groves of Ephraim, across the plain of Esdraelon, through Galilee with its oaks and sycamores, to the north mountains with their pines and cedars.

Numberless pigeonholes along the central ridge separate Palestine into pockets which sheltered the different tribes and made unity difficult. It was in the arid waste, amid weird desolation, that Christ was tempted; in the wilderness between Jerusalem and Jericho the victim of the parable fell among thieves. It is reported that even today jackals and hyenas roam here, and there are a number of places where it is not safe to venture unarmed because of the type of man to be met on the roads.

From the Philistine plain over Jerusalem ridge to the Judean wilderness is thirty-five miles, but the plain is like southern California in verdant fertility. The oranges are unsurpassed and the grain fields fruitful. Yet in the wilderness from Jordan to the ridge were the wild beasts that, as Mark records, tempted Christ; lions and bears lived in these copses. Such wild life was known even in the Christian Era; lions are heard of in the narratives of the Crusades.

Historic Jerusalem has been fourteen times destroyed, but it exists today on the same ground as the previous cities. Excavations often reveal relics of the older cities. The city is built on two hills, with great gorges about it, a strategic and picturesque site. A thirty-foot wall surrounds this plateau, inclosing the Old Jerusalem. The slope to the east faces the sunrise and the desert, ravines hem it in on east, south, and west, while the north is more open and the city tends to sprawl in this direction. For today the old gray-walled city of minarets, towers, and flat roofs is being encompassed by a New Jerusalem, in striking contrast; the valleys, however, keep modern encroachments at a respectful distance.

The population outside the walls today about equals that within.

The matter of sanitation is being given attention under the British, and it is a knotty problem in a land where there is barely enough water to drink. Jerusalem, for example, finds its most important supply of water in the Virgin's Fountain, known in the Bible as Gihon; it is the only considerable fountain near Jerusalem and its water flows copiously in an intermittent spring. Arab women still come to this fountain with their empty receptacles and leave with them filled and perched high on their heads; but the scene is less picturesque, as the homemade jars are coming to be replaced by American-made tins.

THE Jebusite city that David came to seize was built upon a steep hill above this fountain. Relics may still be found of the shaft which was run down into this pool from within the city to enable the inhabitants to withstand siege. As the desert encroaches on this ground, the elaborate system of aqueducts and cisterns is essential to the life of the city. It is consequently a place of wells and pools. In many cases the roofs of houses in Jerusalem drain into cisterns placed in courts. Water is sold in the dry season, sometimes at high prices. The man who has a spare cistern often reaps a rich harvest from his surplus water.

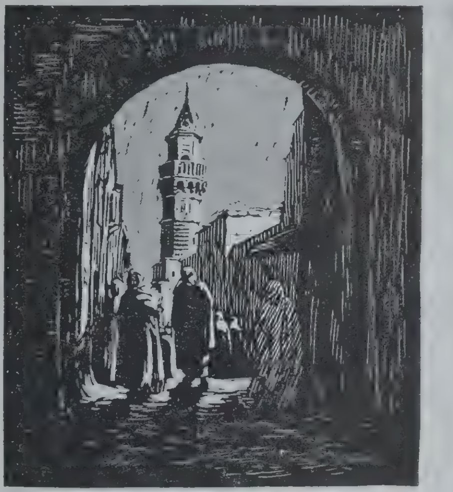
The Pools of Solomon, cut out of solid rock on highlands between Bethlehem and Hebron, and connected with Jerusalem, were planned to supply the city with water. But those aqueducts are now in ruins, and the four-inch pipe which comes in near the Dung Gate and runs from there to the temple platform supplies only the Dome of the Rock and the fountains of the city, which are permitted to play only occasionally. The Pool of Siloam, where Christ sent the blind man to wash, is in the Valley of Jehoshaphat, outside the walls.

In striking contrast with Western lands are the animals to be found in the Holy City. Horses, donkeys, and camels are still the favored and common means of transportation, though occasionally American automobiles are seen. Donkeys laden with alfalfa, veritable haystacks on legs, are common sights. And because the fear of the evil eye prevails, blue beads are frequently seen as necklaces on horse, donkey and camel; even on radiator or steering wheel. This is believed efficacious in warding off the 'spell.' Crowded as the city is, practically every house has also its sheep. The animals are cared for by shepherds, and arrangements are made whereby one man takes charge of the sheep of a number of families. Many a cloud of dust on Jerusalem roads proves to be a shepherd leading his flock to or from pasture.

Complaint has also been made by Westerners of the ever-present and numerous descendants of the cock that roused St. Peter's conscience. They start with the first crack of dawn and continue till the setting of the sun; then the 'symphony' is taken up and continued through the night by the braying of donkeys and the grumbling of camels. As modern machinery has not penetrated this land, it is a common sight to see blindfolded camels turning wheels for water supply or for grain grinding.

In physical appearance Jerusalem has been likened to a honeycomb; for there are no chimneys, and the stone roofs either are practically flat, or have small domes in the center. Little wood is used in the construction of the houses, most of them being of yellow limestone, with walls, floors, and steps of cold white rock. In places Jerusalem gives the appearance of a city of cave dwellers, for many stores and houses are little more than holes in rocks. Sometimes the only sign of modernity in them is an English lamp burning American kerosene. One recent innovation is noteworthy in contrast with ancient customs. Five-gallon gasoline tins are being used for roofs, lanterns, milk cans, plant stands, fences, coffee containers and dust pans.

The streets are narrow and winding, and some are built over, so that to go through them is like passing through tunnels or subterranean caves. Many are paved with brick or stone, presenting often an uneven surface, over which a staff or stick helps one very acceptably. Probably the most famed street in the world is also in Jerusalem, the Via Dolorosa, where Christ rested when he was carrying the cross to Calvary and where now pilgrims stop to pray.



The principal fruit market is at the base of the citadel along the moat. There may be found oranges from Jaffa, grapes from Hebron, apricots from Bethlehem and Beit Jala, bananas from Jericho, and watermelons from the coast near Caesarea; also the pride of Jerusalem, fine cauliflowers which grow in the Valley of Silwan, by 'Siloam's shady rill.' Women may here be seen walking gracefully, each with a dozen or more in a basket on her head, umbrellalike. The Sultan's Pool, once a great reservoir, is now the site of a cattle and sheep market, and at Damascus Gate is the grain market for wheat and barley from the Plain of Sharon, the Jordan valley, and the hills of Transjordania.

On the streets are seen people of all nationalities, a blending of the Orient and the Occident. On the whole it is an interesting and colorful group: The Moslem women cover their faces with veils according to their religion; Arab women wear no covering on their faces, but their dress is colorful and interesting; many carry burdens on their heads, and oftentimes children on their backs in addition. Their favorite colors are red and blue, which add picturesqueness to the interesting setting.

The 'small loaves' of the Bible still persist. The wafflelike Arab loaf serves as wallet, feast, and napkin. In it are carried olives and cheese; it is spoon for dipping up gravy or curdled milk; and the last bite, before being eaten, is often used to wipe the mouth.

Mohammed said that Jerusalem was the holiest place in the world, and that one prayer there was worth a thousand elsewhere. So in Jerusalem we find one of the finest Moslem temples, an outstanding example of Byzantine architecture, the magnificent Dome of the Rock, more commonly known as the Mosque of Omar. This Dome of the Rock occupies the site of Solomon's Temple, the summit of Mount Moriah, where it is said Abraham, at the command of the Lord, was about to sacrifice Isaac.

According to the geology of the rocks, Mount Moriah and Mount Sinai are the two oldest parts of the world. The parts of the earth which first solidified from the nebulous state were the summit of Mount Sinai and the rock now standing inside the mosque atop Moriah.

Mount Moriah is on the eastern edge of Jerusalem proper, opposite the Mount of Olives, above the Garden of Gethsemane, across the Valley of Jehoshaphat. The great flat rock at the summit was the ancient threshing floor of Ornan the Jebusite. David purchased it as an offering to the Lord that he might free the people from the terrible pestilence then raging in Jerusalem. 'This is the house of the Lord God,' he said, 'and this is the altar of burnt offering for Israel.' He began preparations for the temple, actually built on the spot by his son Solomon.

Under the plateau of Solomon's Temple, now the Dome of the Rock, is a great catacomb, once part of the Jerusalem of the past. It is a wilderness of vaults with roofs upheld by pillars and arches of stone and by enormous stone blocks, beautifully laid. The pillars are four feet square, and some have holes through the corners. It is said that the vaults were constructed by Solomon for stables and that the holes were tying places. This, however, has never been proved.

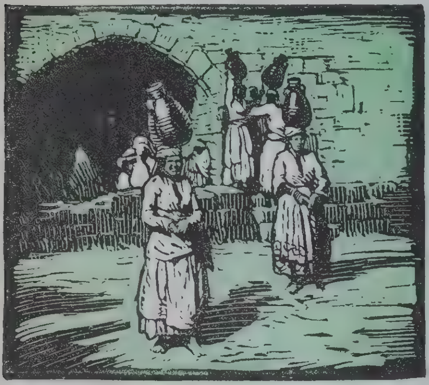
Not a stone of Solomon's Temple remains that can be recognized, but there is this ancient sacred rock on which rested the altar of the burnt sacrifice and the cavern into which the blood flowed.

This temple of Solomon stood for four centuries. It was wiped out in 586 B. C.

TWO generations later exiles erected a second temple, called the Temple of the Exiles, infinitely inferior to the first. That stood until Herod the Great erected his splendid edifice, wherein one thousand trained priests worked eighteen months to put up the temple proper. The only stone of this temple that remains is in the Imperial Museum at Constantinople. It is a sign warning all Gentiles, on pain of death, against entering the temple's inner court. It was this temple that Christ knew; this sign he doubtless read many times; and it was in this temple that he talked with the doctors when he was twelve, and from its court that he drove the money changers.

Titus destroyed the temple A. D. 70, and a fresh Jewish rebellion brought Hadrian on the city in awful rage in 134. The town was razed, and the name Jerusalem outlawed and Aelia Capitolina substituted. Jews were forbidden to come near the site. On the spot where for centuries Jehovah had been worshiped rose a temple to Jupiter. It was this Roman temple that the earliest Christian pilgrims found.

Early in the Fourth Century the Jews were permitted to come once a year to weep here for the ruined city. When Caliph Omar and his Moslems came, they redeemed the site and made it their most sacred shrine next to Mecca. Creating the tradition that Mohammed had prayed there, they built over the ancient cavern the beautiful mosque, the Dome of the Rock, chaste and lovely, with mosaics mellowed by time, stained glass, excellent proportions, and an atmosphere subdued and reverent. Christians must now get official permission to visit the mosque, and none of them may enter on Friday when the Moslems worship there. No Orthodox Jew comes into it for fear he may walk above the sacred hiding place of the Ark, or perhaps tread on the Holy of Holies itself. So the Dome of the Rock has been termed a holy shrine to the Moslem, a wistful memory to the Christian, and a desperate hope to the Jew. For the city is the capital of a land of three faiths, and it maintains its preëminence by its religious significance. The wailing place is outside the walls of the Dome of the Rock, or the Mosque of Omar. Here the Jews come to sorrow over the loss of Jerusalem and to pray God to give back the land to the Chosen People.



WHEN Helena, the mother of Constantine the Great, came to find holy relics, she was interested, not in where the Jewish Temple stood, but in where Christ had died and risen. So her name is associated with the Church of the Holy Sepulcher, not with the Dome of the Rock.

It was Constantine who built the Church of the Holy Sepulcher, for which the Crusaders fought, and before which all Christendom bows. It is of yellow limestone. At one side is a dome somewhat smaller than the capitol at Washington. The chapel rises above other parts to a second story, and the whole stands on a rock high above the ground. The rock is believed to be Calvary, on which stood the cross of Christ. Under the dome, inclosed in an ivory-white marble chapel in the center of the rotunda, is what is alleged to be the tomb of the Saviour. The door is so low that one must stoop to enter; this inner chamber is six feet square, and is lighted only by candles. The tomb is marble covered with glass to prevent the kisses of pilgrims from wearing the stone.

The front of the church is covered with carvings, some from ancient temples, and over the doors are bas-reliefs of scenes from the Bible. Outside the church are candle sellers, rosary peddlers, and hawkers of relics. The setting is not beautiful, for it is in the heart of Jerusalem, surrounded by bazaars, convents, monasteries, and hotels. Around the rotunda extends a series of buildings and elaborately decorated churches and chapels of different denominations.

The house of Pontius Pilate, where he examined Christ, is lower than the city. A church now stands over its Roman mosaic floor.

Outside the walls of Jerusalem is the Mount of Olives. This mount is rapidly changing. The slopes are now being cultivated, the rocks are being picked up and made into stone fences, and the cleared spots planted to crops and orchards. The soil here is fertile and the crops are good. The mount is spotted with churches and chapels, monasteries and convents. There are a great Russian church and several hospices, including a huge sanitarium built in honor of Augusta, Empress of Germany. The Russian hospice covers ten acres, hemmed about by a wall, and is a veritable slice of the land of the White Bear dropped into the Holy Land. There are probably more pilgrims from Russia than from any other land, and so in this hospice the customs and costumes of Russia prevail. On the spot where tradition says Christ taught the Lord's Prayer to the disciples stands a Carmelite nunnery. The church is called the Church of the Lord's Prayer. In the court are tablets inscribed with the Lord's Prayer in thirty-two languages. There the nuns divide their time so that one is always kneeling in prayer behind a screen. It is said to be one of the quietest and most solemn spots in the Holy Land.

At the foot of the Mount of Olives, just off the Jericho Road, is the Garden of Gethsemane. It is surrounded by a wall of yellow limestone twelve feet high and four feet thick. Outside this wall, even today, lepers beg alms from passers-by. The garden extends up the side of the mountain. It is almost a square covering not quite two acres, and is cut into flower beds. The flowers are lovely, and the eight olive trees and numerous dark cypresses lend added charm. The garden belongs to Franciscan monks and must be entered through a mere hole in the wall, where again one must stoop to get through. Back of the entrance is a limestone ledge where the disciples are said to have slept during the night of agony, and one hundred feet farther, a column where tradition says Judas betrayed Christ with a kiss. It is worn smooth by the kisses of pilgrims. A Russian church also stands in the Garden.

Five miles from Jerusalem is the City of David. From a high point both cities may be seen, Jerusalem a gray city and Bethlehem a shiny white, for Bethlehem has been called the shiniest city in the Orient. The walls are painted and the doorsteps scrubbed; the shops are tidy and open-faced, and even the babies are clean. Incidentally, a returned traveler has remarked that Bethlehem has entirely recovered from the Slaughter of the Innocents. The infant population seems large.

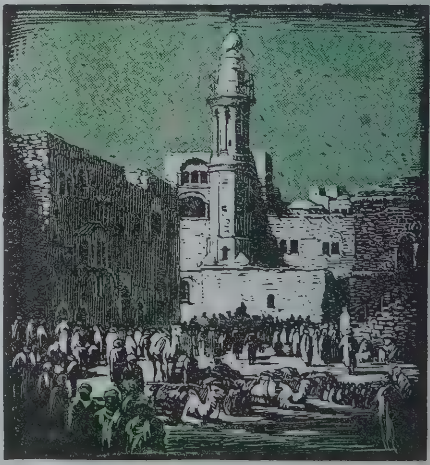
The town of Bethlehem is a maze of boxlike one-, two-, and three-story limestone houses. Its winding streets are occasionally arched over to shut out the glaring sun. It is ten times as large as when Christ was born, and its fifteen thousand inhabitants are engaged chiefly in the making of rosaries, crosses, and articles of wood and mother-of-pearl to sell to tourists.

Bethlehem is said to be religious in the spirit of the joyous merrymaking of the Greek Christian. A man in Bethlehem may spend his life rimming a circle or polishing a bead, but garbed in a purple robe and a yellow turban on feast days, he is another person, transfigured in his pictorial splendor. The women on feast days add to the general picturesqueness, with their brass coin ornaments, billowy headdress, and exquisite white linen.

THE grotto, or cave, in which Christ was born is in the very heart of Bethlehem today. The open square is surrounded by stores and schools, and over it stands the Church of the Nativity. Pictorially this church is disappointing; the walls are grim and fortlike. The roof commands a view of the ancient town, with its white walls, and crimson roof lines. It has been the scene of most unseemly religious dispute, and even today is divided among the various sects. The Greeks, strongest Eastern Christians, hold the main auditorium, the ancient building; the Latins, being the richest, possess the newer and handsomer addition, and the Armenians, neither powerful nor wealthy, cling to a carefully guarded corner over which no Greek nor Latin may tread. Neutral Mohammedan guards keep peace among the worshipers.

The stable is under the church. A winding staircase leads down to a cave floored by marble. It is twelve feet wide and forty feet long; thirty-two lamps burn there day and night. In the marble pavement is a star over which is the inscription: 'Mary here gave birth to Jesus.' At one side of the cave is a recess, the Chapel of the Manger, where it is said Christ was laid after his birth. The manger is of brown and white marble, and a wax doll lies in it. The Latins allege that the original manger is in a cathedral in Rome, where it is shown every Christmas. Travelers report that a better idea of the manger may be gained from actual stables in Palestine today.

By special permission, American and English residents sing carols in the Greek church on Christmas. It is the Christmas custom in Bethlehem to sing old-time carols in Shepherd's Field and then to go up to the grotto of the nativity and worship. So, throughout the Christian world, voices will go up with those in Bethlehem as hymns are sung in divers languages, with the one purpose, to rejoice in the gift to the world of a Babe born in a manger in Bethlehem, the City of David, nineteen hundred and twenty-seven years ago.



CHATS WITH OFFICE CALLERS

'We think nothing of seeing young women eating luncheon in the hotels of Detroit unescorted,' said the ***Hotel Manager,*** as he paused to survey the diners in the Palm Room.

'Back in New York forty years ago hotels and restaurants were closed to women, if they were not accompanied by men. There is a story told of two brilliant sisters, whose wealth and social prestige were unquestioned, having been refused luncheon at Delmonico's, because they were not accompanied by gentlemen.

'They had dined there often in the past, in company with their father or men friends, and the head waiter had always treated them with the most servile politeness. On this occasion, however, they sat long without receiving any attention. Finally the elder of the two demanded of the waiter why they were not served. On hearing his somewhat hesitating but entirely respectful answer that ladies could not be served if not escorted by gentlemen, she went to the door and imperiously demanded her footman, who was waiting in the carriage outside, to enter and sit beside her and her sister at the table.

'Then, turning to the waiter, she ordered their luncheon.'

'Don't hurry,' said the ***Examining Physician*** to a nervous patient who came tearing into the office out of breath. He proceeded to lecture:

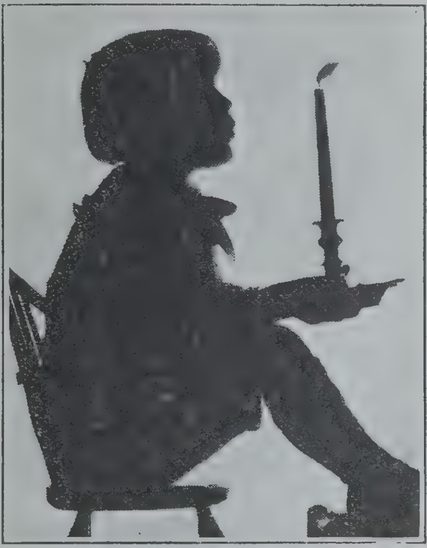
'The man of large affairs, the physician of ability, the inventor with an idea, and the artist with a dream, these workers do not hurry. Hustle and bustle are characteristic of smaller minds and small activities. The large things of life must be done with thought.

'Go to an able physician to be examined. With an office full of patients waiting to be examined he will calmly chat with you about your family, about your sports, about a dozen and one things that seem to you irrelevant. However, the physician knows that before he can make any worth-while examination you must be calm and he must be able to see your normal reactions.

'Go to a good photographer. He does not hustle you into a chair, rush to the camera and snap your likeness. No! a good likeness is not made that way. The photographer that is an artist must see you in an unhurried mood. You must forget that you are being photographed, that your visage is to be reproduced for the so-called benefit of your friends. When the photographer hurries it is apparent in the result that no artist did the work.

'If you have a portrait painted, you must go to the artist in person. Not even a Chase, a Sargent, or a Whistler could make a good portrait of you from a photograph. No! a good portrait requires the unhurried attention of the artist and his subject. Half a dozen sittings of an hour or more are essential, so that the artist may become acquainted with the subject in a natural manner.

'Don't hurry. The big things of life are done with thought. The inventor spends hundreds of hours in thought upon his device. Isaac Watts sat before the fireplace and learned how to put steam to work. Isaac Watts thought. The thinking was the important part of the operation and that was done calmly. Many people sit before the fireplace *without thinking* and naturally nothing happens. The essential point is the thinking and there is no such thing as hurry in thought.'



—H. Armstrong Roberts.

''T WAS THE NIGHT BEFORE CHRISTMAS.'

'A married woman's rights are far different today from what they were fifty years ago,' said the ***Social Worker,*** as she settled back in her Pullman seat.

'We read of Elizabeth Cady Stanton's childhood and of how one afternoon, while playing in her father's study, she heard the story told by a helpless, unhappy old lady who came for advice. Her father was a judge and an authority in his neighborhood.

'Weeping, the old lady told her story. She had been the only child of a well-to-do farmer, and upon her marriage all of her property had gone to her husband; at his death it had passed in turn to her son. Now the son had married and his wife had refused to keep the old mother any longer. Turned out, she had no place to go but the poorhouse, and yet all the property had once been hers.

'With pitying kindness, the lawyer told the old lady that nothing could be done for her. Such was the property law from which there was no appeal. She went out, weeping more bitterly than before.

'The little girl by the window had watched and listened attentively. Leaving her storybook, she went to her father's side, and putting her hand in his inquired: "Father, why did you make that poor woman so sad?" In reply the father opened a great book upon his study table and pointed to the paragraph on property rights, the paragraph which said that a married woman had no rights save those of her husband; that even her very clothing and the body of her unborn child could be willed away by her husband as he saw fit.

'The child's big eyes took it all in, but in the still hours of the night, when all the household was asleep, she crept down the stairway from her room, entered her father's study, and found the wicked book of Blackstone; she turned to the page which held the cruel law and with her little scissors cut it out. She returned to bed and slept peacefully, thinking that thus she had removed this hardship from women. In later years she did, indeed, help to do this. Susan B. Anthony found her most powerful ally in Elizabeth Cady Stanton and for fifty years these two remarkable women worked constantly together for the enfranchisement of their sex.'

* * *

'Many people, particularly Northerners, have written and spoken at length on the various disadvantages, real or imaginary, of the Southern Negro, but few have discussed the remarkable progress he has made during the last sixty years in the great Southland where he once was held in bondage,' said the ***Southern Planter,*** as he drove his Northern visitor into the outlying Negro section of one of our great southern cities.

'Nearly nine million Negroes live south of Mason and Dixon's line. With but few exceptions they are the progeny of grandparents who were born in slavery. The Negro emerged from the darkness of servitude without land, capital or credit. Within the sixty years that have followed emancipation he has come into possession of twenty-two million acres of land, an area greater than that of South Carolina. Negroes of the South are proprietors of businesses of every description. Approximately forty thousand enterprises, some of which are national in scope, are owned and operated by them. There are nearly seventy Negro banks, three Negro life insurance companies, real estate firms, hotels, factories, drug and department stores. Colored lawyers, doctors, dentists, undertakers and artisans of every degree of skill practice their profession and ply their trade in every part of the Negro's native section. In sixty years the Southern Negro has acquired these for himself.

'Negroes of the nation own one billion dollars' worth of property and their holdings are increasing at the rate of fifty million dollars a year. Their most important investments and greatest enterprises are in the South, for that is the section they have known for generations, and the one in which, best authorities say, they will find their greatest success.

'Were the Southerner not the friend of the Negro it would have been impossible for the Negro to have attained the degree of success with which he has been blessed. The late Andrew Carnegie and the late Lord Bryce agreed that the progress of the American Negro, after emancipation, was the most remarkable racial accomplishment in the history of the world. The Southerner claims his part of the glory for this achievement, for he is the Negro's teacher.'

CAN YOU TELL ME?

Question. I should like some information regarding the Panama Canal. Did we not pay for its construction, and if we lease it what is the rental paid Panama?

Answer. The actual total cost of construction borne by the United States, including general expenses but excluding sanitation, has been $305,148,000, to which must be added the money expended for sanitation, $20,053,000; $40,000,000 paid to the old Panama Canal Company for its property and franchises; $10,000,000 paid to the Republic of Panama in gold for the concessions, and $250,000 to be paid annually to the Republic of Panama beginning nine years after the exchange of ratifications. The United States leases the Panama Canal Zone in perpetuity.

Q. Will you please give me a list of the commemorative and memorial coins which have been issued by the United States mints?

A. The following commemorative and memorial coins have been made, but they are not obtainable at the mints nor at the Treasury; they were distributed (usually at a premium) by the organizations having charge of the pertinent activities: The Columbian silver half-dollar and the Isabella silver quarter-dollar for the World's Columbian Exposition held in Chicago in 1893; the Lafayette silver dollar for the unveiling of the Lafayette memorial during the exposition in Paris in 1900; special gold dollars for the Louisiana Purchase Exposition held at St. Louis, Missouri, in 1903; the Lewis and Clark Exposition gold dollar in 1904 and 1905; special gold and silver pieces for the Panama Pacific Exposition Company in 1915; the McKinley gold dollar in 1916 and 1917 for the McKinley Memorial Association; the Illinois Centennial silver half-dollar in 1918; the Maine Centennial silver half-dollar in 1920; the Alabama Centennial silver half-dollar in 1921; the Pilgrim Tercentenary silver half-dollar in 1920 and 1921; the Missouri Centennial silver half-dollar in 1921; the Grant Memorial coins, gold dollar and silver half-dollar, in 1922; the Monroe Doctrine Centennial silver half-dollar in 1923; the Walloon-Huguenot silver half-dollar in 1924; the Stone Mountain Commemorative silver half-dollar in 1925; the Lexington-Concord silver half-dollar in 1925; the Bennington silver half-dollar in 1927; the California silver half-dollar in 1925; the Fort Vancouver Centennial silver half-dollar in 1925; the Sesquicentennial silver half-dollar and gold $2.50 piece in 1926; the Oregon Trial silver half-dollar in 1926.

Q. I should like to know something about George Meade.

A. George Meade, merchant, was born in Philadelphia, Pennsylvania, on February 29, 1741. He was one of the original opponents of the 'Stamp Act,' and one of the signers of the nonimportation resolutions of 1765. At the outbreak of the Revolution he had already amassed a considerable fortune in trade, and he ungrudgingly contributed large sums from his substance toward the furtherance of the patriot cause. He gave his services also as a member of the Third Philadelphia Battalion in 1775-76. In the trying winter of 1780, when the army was suffering from the rigorous winter and from lack of food, Mr. Meade promptly subscribed two thousand dollars to the relief fund. When the independence of the United States became a fact, he identified himself conspicuously with the progress of Philadelphia. He was the father of Richard Worsam Meade, to whom Spain awarded nearly half a million dollars by a certificate of debt; Congress, however, for some reason declined to sanction his acceptance of the amount; hence the celebrated 'Meade Claim,' pressed in vain by such lawyers as Webster, Clay, and Choate. General George Gordon Meade, who won distinction in the Civil War, was the grandson of George Meade. George Meade died in Philadelphia on November 9, 1808.

'MERRY CHRISTMAS!'

* * *

Q. What was the family name of the late German Kaiser? From what royal house did the family originate?

A. The first historical mention of the name 'Hohenzollern' is in the Chronicon of a certain Berthold (d. 1088) who refers to Burkhard and Wezil, or Weiner, of Zollern, or Zolorin. These men appear to have been counts of Zollern, and to have met their death in 1061. The family of Wezil died out in 1194, and the existing branches of the Hohenzollerns are descended from Burkhard and his son Frederick.

In this department we shall do our best to answer questions concerning Government and other matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

Q. Will you please tell me something about Marshal Ney?

A. Michel Ney was one of Napoleon's most celebrated marshals. He was born at Saarlouis in 1769, the son of a poor cooper. In 1788 he joined a hussar regiment at Metz and soon distinguished himself by his energy and cool intrepidity. In 1796 he was made brigadier general for his services in storming the citadel of Würzburg and in 1799, general of division for his capture of Mannheim. In September of the same year he was placed in temporary command of the army of the Rhine and carried on a skilful game of strategy against Archduke Charles of Austria whom he prevented from uniting with Suvarov against Masséna. He fought subsequently under Lecourbe and Moreau at Engen, Mooskirch and Hohenlinden. In 1803 he received command of the Sixth Corps of the Grand Army raised for the invasion of England, but soon to be turned against Austria. In 1804 he was made a marshal of the Empire. In the following year he defeated the Austrians at Günzburg and by his successful assault on the intrenchments of Elchingen brought about the capitulation of Ulm and gained for himself the ducal title. He fought at Jena in 1806 and reduced the cities of Erfurt, Magdeburg, and Thorn. On June 14, 1807, Ney took the village of Friedland from the Russians and thus decided the outcome of the battle. He now became the idol of the army and Napoleon bestowed on him the title of *Brave des Braves.* In 1808 he campaigned in Spain and in 1810 in Portugal. In the Russian campaign of 1812 he held command of the Third Corps. He distinguished himself at Smolensk and commanded the center at Borodino where his efforts achieved the victory, his services being rewarded with the title of Prince of the Moskva. He commanded the rear guard on the retreat from Moscow and saved the remnants of the Grand Army from utter disorganization. In the campaign of 1813 he won a victory over the Allies at Weissenfels but was defeated by Bülow at Dennewitz. He held the left of the French line in the battles around Leipzig and was with Napoleon in the defensive campaign of 1814 in France. After the taking of Paris by the Allies he insisted on Napoleon's abdication and hastened to offer his services to the Bourbons. He was made a peer of France and a member of the council of war, and was placed in charge of the Sixth Military Division. On news of Napoleon's return from Elba he was ordered to Besançon to resist the Emperor's advance, but on the night of March 13 he went over to Napoleon, summoning his troops to follow him. At the head of the First and Second Corps of the new army raised by Napoleon, he fought on June 16 at Quatre-Bras, and led the last charge of the Old Guard at Waterloo. After the battle he returned to Paris and advocated the recall of the Bourbons, but was arrested and, on December 6, 1815, was found guilty of treason by the House of Peers and condemned to death. He was shot the following day in the gardens of Luxembourg.

BRIEFLY TOLD

The pads of water lilies growing in a St. Louis park are strong enough to hold the weight of a man standing on a single pad.

When the King of Spain is in England, one of his favorite pastimes is to mount a bus-top incognito and ride about the town.

MR. FORD'S PAGE this week discusses the Duty of Conscious Allegiance.

* * *

Thomas Hanks, a soldier, fought 'under Cromwell' until he disappeared from the record sometime between 1642 and 1645. A few years later—prior to 1653—a Thomas Hanks appears in American history buying land in Virginia. Were they the same individual? That is one of the fascinating conjectures found in Doctor Barton's new researches into the ancestors of Abraham Lincoln. (p. 1)

* * *

The name of Hanks in England is as honorable as is that of Lincoln. It runs back for nine hundred years and appears to have been a clannish tribe. The Hankses were usually burgesses.

* * *

'My winter woods are full of mystery . . . The green hardwood trees snap and crack like pistol shots in the quietness, and afar on the lake comes the deep thunderlike rumble of the ice cracking under the intense cold . . . On clear nights in this north country the dancing stars seem almost to snap and crackle in the tingling air . . . ' (p. 4)

* * *

James Clyde Gilbert, who writes in this issue on Christmas in the north woods, struck a popular chord with his articles on the Yukon country which have appeared recently in THE DEARBORN INDEPENDENT. Mr. Gilbert's descriptions of wild life are most realistic.

* * *

The Holy Land today may disappoint one because it is so unbelievably small. Its length may be traversed in a day; the Sea of Galilee is only half as large as Cayuga Lake in New York State. Jerusalem and Bethlehem may be viewed from a single eminence, so closely are they situated. Despite all this, one is conscious of a profound thrill at visiting the Church of the Holy Sepulcher, or of the Nativity. (p. 6)

* * *

Palestine was described as flowing with 'milk and honey,' and so it must have seemed to the Arabs after their long journeying over the desert sands. But to an American tourist familiar with some of the world's beauty spots, it would hardly seem quite so alluring as the description implies.

* * *

Charles Dickens' description of the stagecoach ride of the Pecksniffs with their Chuzzlewit cousins is rich in humor and full of intimate touches of life such as only Dickens could portray. The giggling girls, the debonair Jonas, the elder Chuzzlewit, and Pecksniff himself with his hip flask, must have been frequent passengers on overland journeys in those times. (p. 11)

* * *

Christmas may not have had its birth in England, but it surely attained its majority in that land. There it has been more than a rite or ceremony, more than a day of feasting or of gift-giving. Washington Irving's *Sketch-Book* paints the holiday atmosphere which even in that early day ushered in the spirit of Yuletide. (p. 12)

* * *

While Frances Higgins of Denver was conducting her research into the days when Eugene Field was managing editor of the old Denver *Tribune*, she was assisted at a public library by an attendant named Joseph Brown. Great was her surprise when she learned that Brown had been Field's city editor. (p. 14)

* * *

Christmas and the event of the Saviour's birth have furnished art with one of its most precious subjects. The Christ-child as well as the Madonna have been placed on canvas by the earth's greatest masters, and among the many interpretations are a few that are recognized today as inspired masterpieces. (p. 16)

* * *

Shortly after the invention of printing, the broadside, a form of poster, replaced the town crier. It antedated the newspaper, and was designed to be posted in public places for the information of the public. The many great happenings of succeeding years which were heralded or chronicled by broadsides were undoubtedly influenced by the manner and rapidity with which the news was spread. (p. 20)

* * *

There are two taverns in Hampstead Heath which Dickens has immortalized—one of them a 'good 'ous where we can have a red-hot chop for dinner and a glass of good wine.' When both the *Old Curiosity Shop* and *Martin Chuzzlewit* were under way, Dickens read chapters from them to his friends as they dined here. Thackeray and Washington Irving visited this same 'Jack Straw's Castle.' (p. 24)

Remarks by Our Readers

Ogden, Utah.

Please publish a correction in your next issue, of an error that appeared in the issue of November 19, 1927. On page 13, third column, second paragraph, in a story entitled 'California in Pioneer Days' by Frances Holbrook Pfeiffer, a statement is made that the rails of the first transcontinental railroad met at Promontory, *Nevada*. Promontory is in *Utah*, Box Elder County, and is a hundred miles from the Nevada line.

MAURICE HOWE.

* * *

Broadway, Virginia.

While under the spell of your wonderful editorial on 'Indian Summer,' allow me to express my appreciation to you for this matchless description. In reading it one lives through this wonderful season and at the end turns his coat collar up and gets ready to shake hands with Winter who is just around the corner.

(REV.) SCOTT CLAY HUTTON.

* * *

Beaumont, Texas.

The article appearing in a recent issue on David Crockett, written by Zella Armstrong, does violence not only to the history of the events described, but to the character of the men who defended the Alamo. They determined never to surrender or retreat. They kept their word, died to a man, each fighting to the last, one hundred and eighty-one against four thousand Mexicans.

'Thermopylae had her messenger of defeat; the Alamo had none.' A man named Rose accepted the offer of the commander, Travis, to 'release everyone who wanted to risk escaping.' He made good his escape. This is true, regardless of the Encyclopedia Britannica. Also, the Alamo is in the center of the city of San Antonio, not 'near it.'

Three women, two children and a negro servant, six persons—were spared; but not an American man.

U. S. S. DANIEL.

CHRISTMASTIDE

Childhood's Day *of* Days

Above—

Symbol of Christmas, the glittering Christmas tree is the object of fondest anticipations for the child and of happiest memories for the grown-up. Its heathen origin is forgotten. —Ewing Galloway.

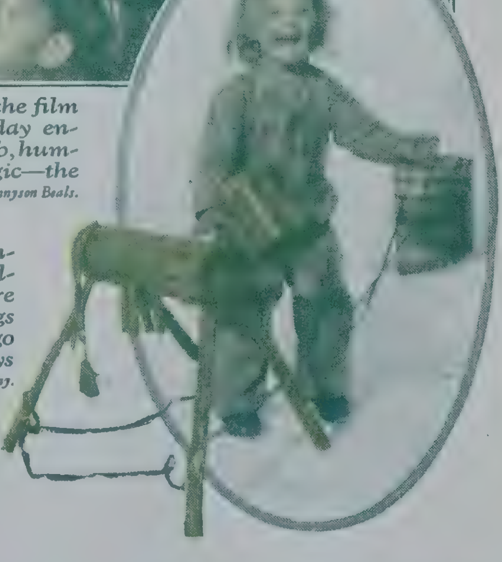
Above, right—

Early Christmas morning—this tot, stealing downstairs to see what Santa has left, typifies happy childhood at this season. —Ewing Galloway

Seeing the Christmas story on the film releases children from everyday environment and brings into drab, humdrum lives a touch that is magic—the alchemy of happiness. —A. Tennyson Beals.

Left—

Visions of Santa and his reindeer brighten the faces of children as they gaze into the fire on Christmas Eve, after stockings are hung to receive their cargo of nuts, fruits, candy and toys from the jolly saint. —Ewing Galloway.



Right—

Santa often shows ingenuity—for instance, this youngster found on Christmas morning his hobby-horse, a sturdy steed.

UNA

Their First Child

By JULIAN HAWTHORNE

AFTER Sophie and Nathaniel Hawthorne had been married two years they had a daughter, and they named her Una. Una was the Lady of the Red Cross Knight in Edmund Spenser's *Faerie Queen* and represented the highest and purest type of virgin womanhood.

Una was born March 3, 1844, in the quiet of the Old Manse at Concord. New England, though new in years, had already acquired a sort of ancientness in this place; it was sequestered, not lonely. The silent river moved in a deeper silence beneath its windows. In March, snow lay on the north side of the piled-stone fences, trees were bare, and crocuses and snowdrops had not yet broken through the chill of the soil. Hawthorne still sawed and split his logs, and piled them in the wide fireplace. The fire of *The Scarlet Letter* would not burn for six years yet. The writer's fingers that held the quill pen of *The Mosses* might sometimes be numb, as he sat in his study upstairs; but his beloved Sophie had become a mother, and the harshness of winter melted in the sunshine of such felicity.

The baby rested in an atmosphere of tranquillity and beauty. Sophie was an artist, and her impulse was to create beauty in her surroundings. Works of high art, Greek, Roman and Medieval, were close by; a bust of a Greek god stood in the living room; the copy of the Sleeping Endymion which she had made hung on the wall; her tracings from Flaxman's famous outlines were in the big portfolio; her simple rooms were lovely in bland colors and graceful forms; a sheaf of cardinal flowers brought from the river by her husband flamed in a corner, and water lilies bloomed in a basin.

All reports agree that little Una was really beautiful. Her head, covered with soft Titian hair, was well-proportioned; the lashes of her gray eyes were long and up-curving, her nose and lips were exquisite. When Franklin Pierce, stern soldier and statesman, saw her smile, tears came to his eyes. In the warm spring and summer days, visitors attended her innocent receptions on the green turf beneath the shadows of the trees. They were hushed by her unconscious charm.

As Una grew, her mother's motherly preoccupations increased, and her father looked forward to the time when Una 'and three or four or five other children were grown up and married off,' and Sophie might have a little leisure, and could 'paint that Grecian picture which used to haunt your fancy.' Meanwhile, the gates of the Old Manse paradise must be closed, and Hawthorne must revert to Salem in quest of a livelihood which mere literature could not give him. In the summer of 1846, Una became the sister of a brother, and her path took a new turn. But the Grecian picture was never to glow from any earthly canvas. 'After a woman becomes a mother,' meditated the father, 'she may find rest in Heaven, but nowhere else.'

Una took to her sisterhood cordially. It is a mystery of the female nature that understanding of domestic relations seems to be innate in woman; a congenital foresight and wisdom. Una, though already in her third or fourth year, a person of strong self-determination, was strong in ethics, too, and would admonish her father at the dinner table: 'Be tareful not to spill the water, papa, because it is not proper to spill water on the cloth, papa.'

When the new baby came, she easily united sisterly with maternal attentions and guidance. She revealed talent as an imaginative artist in fiction, and once related to her family how a little girl became naughtier and naughtier, till, as a culmination of wickedness, 'she struck God!' Not that the child was invited to religious speculations, still less to sectarian views; but the mystery of sin, for so many past generations haunting her Puritan ancestry, seemed to stir spontaneously in her depths, though not going deeper than curiosity. Her mother would read to her passages from the Bible, but left them to the child's own interpretations.

The house in Salem had a large yard or garden in the rear, which afforded Una air, trees, grass, flowers, and in winter the miracle of snow. Her father's tale of *The Snow Image* belongs to this period—a delicately spiritualized study of the creative power of childish faith and love of beauty. A different side of life appeared in Una's contact with her grandmother Hawthorne, who occupied a room in the house, and died there in the winter of 1850, when *The Scarlet Letter* was being written. Una was then in her sixth year, and possessed a childish poise and maturity which in no degree interfered with her childly nature. The children would be permitted occasional glimpses into the chamber where the old lady lay awaiting the end; the awe and sympathy aroused in them abated nothing of their cheerful curiosity, and of that dramatizing instinct common to all healthy children.

In their playroom above, where they were within hearing and sight of their father, laboring on his romance, the two little creatures, under Una's direction, would stage the solemn scene with a fidelity to fact at once tragic and comic to the beholder. In the midst of the most poignant crisis, if the actors happened to meet the father's eye, they would smile up at him gleefully out of the shadow, as it were, of the grave. 'Una's sensibilities,' Hawthorne remarked, 'seem more readily awakened by fiction than by realities.'

* * *

Happily, after the Salem years, the arena was to be changed to the breezy hills and the lakes, brooks and forests of Berkshire: a paradise for children! Hawthorne, yielding to a fortunate and natural impulse, turned from the shadows of the romance of sin and sorrow to the pure sunshine of Grecian fable. He was free from the shackles of time and place and abounded in the freedom of idealities. But he had become a father, and entered into the children's point of view. There are in the little introductions to the tales of *The Wonder-book* portrayals of a child audience, in which a girl called 'Primrose' is prominent; she was somewhat older than Una at that time, and only slightly sketched, but of Una's type. Una had not only betrayed a sense of humor thus early, but she was often witty; both these qualities accompanied her through life, and they enhanced her subtle resemblance to her father.

In other respects, however, the two were widely diverse. Una's personal letters to her family and friends were lovely and fascinating; glowing in description, clear in thought, warm and pure in sentiment, and often sparkling in comment: but she never seemed able to frame an artistic fiction. She lacked a sense of constructive balance and proportion; she felt character, but could not draw it. She was like her father in inability to compose poetry, full of poetry though her nature was; in one instance only (which I will quote by and by) did she succeed in a metrical composition. Neither was she proficient in drawing and painting, though art in all its forms impressed her; and once more, though she loved music and practised the piano assiduously for years, she was never a musician. The gates of personal expression in art were closed to her. She was her own critic, and a just one of others.

* * *

The Hawthorne children, now increased by a third member, Rose, left Lenox in Berkshire for Concord, Massachusetts, in 1851-52, pausing for a few months at an unbeautiful Boston suburb called West Newton, where Mary Mann, Sophie's sister, married to Horace Mann the educator, had taken up her abode with three children of her own. The six little persons were therefore brought into cousinly contact with one another, but the only noticeable result, for the moment, was to make the Hawthorne group desire to be better strangers with the Manns. Una, too, had in her baby sister a new field for her maternal instincts; but in fact she and her brother were increasingly thrown together, and they established an intimacy which time strengthened and deepened to the end. They were widely apart in temperament and quality, but their interweaving was therefore the more complete.

Una and her mother were always close as bud to stem, or as the heart of a flower to its petals. But there now began a new degree in her companionship with her father, an affinity of minds. Genius commonly involves a measure of solitude, but in Una was revealed to her father a feminine rebirth of his own nature, not an imitation or repetition, but a spiritual response. They conversed intuitively, without words, the only way open to kindred spirits; and that she was youth and he age, rendered the union more perfect. The creative faculty was not active in her as in him, but he, knowing the fallibility of the products of human art, may have esteemed her potency above his own performance, as indicating a superior endowment. It was given to him to shadow forth secrets of life, but she received his messages and completed their scope. The two were father and daughter in a special sense. But her mother's traits were also rooted in the child; and she had her personal gifts from her Creator. It was a complex web.

Children of mature parents often arrive quickly at a sort of mental maturity, independent of actual experience. Una and I played together as children, but I was always aware of a superior stature in thought and perception in her; it did not alienate us, but made our bond firmer.

The four years of Hawthorne's Liverpool consulship now loomed so near that no attempt to settle down in Concord could be

(Continued on page 22)

A COMMONWEALTH *for* BOYS

By PIERCE CUMINGS

JERRY isn't his name; so we will call him Jerry. A few years ago his name didn't matter anyhow. He was just another of those aimless little waifs who never attract attention until they get into trouble, and then are sent to some penal institution where the chances are their names become numbers and they become hardened criminals. But today Jerry's name means a great deal. Jerry is proud of it. So are those who know him. For Jerry is a senior at one of the great middle western universities and he's making good. His classmates like him and look up to him. He is an outstanding athlete, a leader in college activities, a brilliant student. If his companions ever think of his past they think of it, no doubt, as similar to their own. They would very likely doubt your word, should you tell them he was once headed as straight for state prison as any boy ever was. But that is just where Jerry was headed. Until—

Well, until a great stroke of good fortune landed him in the Starr Commonwealth for Boys and gave him a new lease on life and boyhood.

Jerry lived in a rural community in northern Michigan. He was active in mind and body, too active for the peace of mind of his neighbors. Home conditions were poor; he had no playmates nor friends, and no one taught him the difference between right and wrong. So he sought amusement in his own way.

Jerry's career of misdeeds reached its peak with the burning of a barn. Prior to that he had lashed the cows and horses into a frenzy, cut the harness hanging nearby, and had tossed what hens and chickens he could lay his hands on into the river. The horrified community demanded swift retribution. He was too dangerous to be permitted at large—so his neighbors said. It was decided to send him away. But where? He was too young for a penal institution. No school wanted or would admit him. His parents were too poor and too indifferent to defray his expenses anywhere. And then someone thought of the Starr Commonwealth.

Floyd Starr was consulted.

'Here's a boy that no one wants,' he was told.

'We want him,' was the response. So Jerry journeyed to the Commonwealth.

His first day there was a complete surprise to him. He was treated as though he amounted to something, as though he were really someone after all. No one told him how bad he was; no one whipped him; no one gave him a long list of *don'ts*. He was given the best suit of clothes he had ever had. The other youngsters didn't shun him as youngsters had in the past (and this was the biggest surprise of all). Instead they went out of their way to be nice to him, he being a stranger and lonely. They included him in their games, they showed him around the Commonwealth grounds with pardonable pride, they helped him with his lessons. Jerry didn't know that food could be so good as that served at mealtimes—and there was more than enough for everyone! And that night, for the first time in his life, Jerry slept between cool, clean sheets in a comfortable bed.

It didn't take long to work the change in Jerry. Having the respect of others, he soon began to have respect for himself. His old belligerency dropped from him like a cloak. His driving energy was turned into useful channels. The job was done as soon as he was convinced that someone cared. And *someone does care* for every boy who makes his way into the Starr Commonwealth.

It is difficult to describe the Starr Commonwealth for Boys. A visitor once remarked that it was 'a very nice institution indeed.' Her youthful guide promptly responded politely but indignantly, 'If this is an institution, it's the un-institutionest institution you ever saw.' So it cannot well be described as an institution. Nor can it be called a school. Nor a home. It is something more than either of these.

PROBABLY the only term that properly describes it is the title, *a commonwealth for boys*. That is surely what the Starr Commonwealth is, a commonwealth—'a body of persons united in common interest and viewed as equals in authority.' Comrades, friends, equals. These things the boys are. And they are united not only in common interest but in love and faith and the knowledge that the world isn't such a bad place after all.

The Starr Commonwealth is the outgrowth of an idea. Fourteen years ago Floyd Starr ended a search and began an experiment. The search was for an ideal location. He found it on the shores of a beautiful little lake, forty acres of gently sloping land three miles west of Albion, Michigan. The experiment was to reclaim misdirected youths.

The idea dated from the time when, as a boy of four, Floyd Starr heard his parents praising a friend who was helping unfortunate children. He said little, but the thought dominated his formative years. In college his studies were shaped to the same end. And after college came the opportunity. Or, more accurately, after college Floyd Starr created his own opportunity. He had a little money of his own. When he found the site he wanted he bought it. Three youths had been placed in his care. With this trio, on an evening in early September, 1913, he moved to the farm. That night they all slept in a barn.

A MONTH later the first building was finished, built likewise with Starr's own money. Visioning the future, he called it Gladsome Cottage. It still remains his personal residence, though many costlier buildings have been constructed since.

In December the Starr Commonwealth for Boys was officially incorporated under the laws of Michigan. The land and buildings were deeded to it. Through his gift Floyd Starr had made himself as poor as some of the boys in his care. But that bothered him not a whit. The experiment had officially started. How successful that experiment has been cannot be told in words alone. It must be told in the lives of the boys themselves. Floyd Starr has never had a failure.

There was Tim, who was eight when he went to the Commonwealth. His father was in prison, his mother declared unfit, and Tim himself was a gang leader. The boy had initiative, plenty of it. And nerve. He led his gang into all manner of scrapes and succeeded in landing himself in the Detention Home. Then he jumped for freedom—from a second-story window. The judge before whom he was finally brought (for a boy of eight cannot long elude the police) sent for Floyd Starr.

'Of course we'll take him,' Starr said. And take him he did. Tim is now a credit to the Commonwealth. He is intelligent, a willing worker and someday will be a useful citizen. What he might have been otherwise one hesitates to predict.

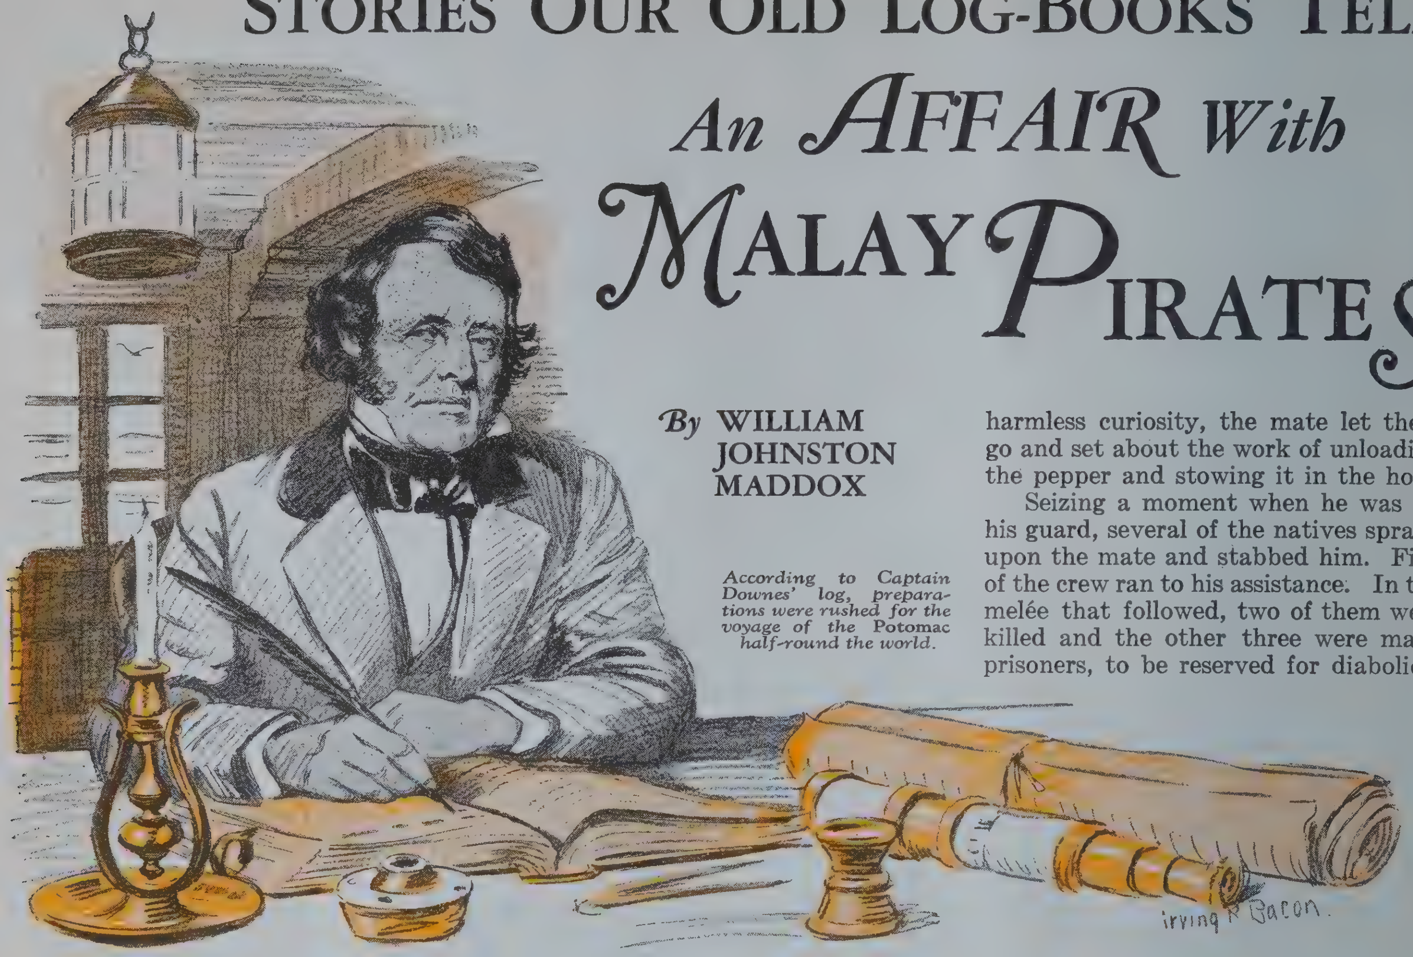
Johnny (all these names are fictitious, of course) came shivering to Gladsome Cottage several years ago. It took lengthy persuasion before he would finally clamber into bed the first night.

(*Continued on page 24*)

STORIES OUR OLD LOG-BOOKS TELL

An AFFAIR With MALAY PIRATES

By WILLIAM JOHNSTON MADDOX



According to Captain Downes' log, preparations were rushed for the voyage of the Potomac half-round the world.

ONE scorching hot day in February, 1831, an American merchantman, the *Friendship* of Salem, Massachusetts, lay off Quallah Battoo, a Malay town on the northwestern coast of Sumatra, loading pepper. There being no harbor, the cargo was brought out to the vessel over the half-mile of open sea by natives in small boats. They were a treacherous lot, but this was a task that had to be intrusted to them because of the extremely hazardous surf. It would have been foolhardy for anyone but them to attempt it. As it was, the natives had to take advantage of the break caused by a turbulent mountain stream, which ran through the town and emptied itself into the ocean.

A short distance up the stream just beyond Quallah Battoo was the trading station, where the little boats took on their freight. And here Mr. Endicott, the master of the *Friendship*, and John Barry, his second mate, with four of the crew had come ashore to weigh the pepper and see that it was tucked away carefully in the boats. The first mate had remained on board the vessel with the nine other members of the crew to receive the cargo and stow it away in the hold.

It was a hazy day. The shore was just dimly visible from the vessel. For this reason, Mr. Endicott, knowing the tricky nature of the men he had to deal with, kept a keen eye on the first boat as it dropped swiftly down the stream on its journey to the ship. As it reached the mouth, instead of continuing directly out to sea, the boat turned into the shore and a number of other natives clambered aboard.

This was unusual. But Endicott's misgivings were allayed by the thought that they had found the surf heavier than they expected and had been obliged to take on extra help. So he went ahead with the loading of the second boat. In the meantime the first one had resumed its journey. Endicott detailed two of his men to watch its movements.

As the boat drew alongside the *Friendship*, the first mate noticed the unusual number of natives required to man it. But like Mr. Endicott he attributed this to the heavy surf. What had really occurred was that the original crew had given up their places in the boat to double their number of warriors, who, having concealed their short knives, now swarmed over the side of the *Friendship*, pretending not to understand the mate's orders for them to keep off. They were cunning enough not to disclose their purpose at once, but scattered over the ship, making a show of admiring her equipment. Deciding that their forwardness was just harmless curiosity, the mate let them go and set about the work of unloading the pepper and stowing it in the hold.

Seizing a moment when he was off his guard, several of the natives sprang upon the mate and stabbed him. Five of the crew ran to his assistance. In the melée that followed, two of them were killed and the other three were made prisoners, to be reserved for diabolical deaths. The rest of the crew, four in number, jumped into the sea, further resistance being futile.

The conspiracy was widespread. The beach was alive with black figures, dancing and brandishing their weapons. The four men in the water, therefore, headed for a promontory several miles down the shore, where it would be difficult for pursuers to reach them.

Having got control of the *Friendship*, the captors made signals to their comrades on shore, and several boats put out for the ship to join them. A thorough plundering of the American merchantman ensued, even to the copper bolts in her timbers. When this had been completed, they cut the cables, intending to beach her and take out her iron.

Meanwhile, at the trading station, Endicott's two lookouts had reported the commotion on board the *Friendship*. Divining the situation instantly, he ordered all hands into the second boat, which was just ready to start. They acted none too soon. As they pulled frantically down the stream a rain of missiles from both banks fell about them. But the natives were not their only concern. Ahead were the breakers that under less urgent circumstances they would not have dared to breast. As they approached the mouth of the stream, a dusky figure ran down the bank, leaped into the water, and swimming to them climbed aboard. It was a friendly native named Po Adam, who was rajah of the neighboring tribe of Pulu Kio. He had come to Quallah Battoo in his coasting schooner, and seeing the uprising against the Americans feared a like attack. He had abandoned his ship and was seeking safety himself.

Their ally brought them skilfully through the surf, when a boatload of warriors set upon them. In their haste the Americans had left their firearms at the trading station. But Po Adam put up a show of resistance that turned the attackers back.

Endicott could now see how things stood on board the *Friendship* and proceeded down shore, picking up the four seamen. He made for Muckie, a small town twenty miles southward. There he found three American merchantmen. It was late at night. But hearing of the treacherous murder of their fellow countrymen, the three skippers got under way without delay, and the next day appeared off Quallah Battoo.

FORMAL demand was made for the *Friendship*, to which the rajah of the town replied, 'Come and take her if you can.' Whereupon the Americans ran inshore as close as they could and opened a brisk fire with the ships' guns. The Malays answered with the battery of the *Friendship* and also several large cannon in their fort on shore.

A boat attack on the captured vessel was decided upon, and several boatloads of seamen were put over by the merchantmen. The natives met their advance with an ill-directed fire and became panic-stricken when they saw its ineffectual result. A general exodus over the side ensued, and the *Friendship* was regained.

About all that Endicott had, though, was a floating hull. The ship had been so thoroughly rifled that he was obliged to give up the voyage.

When news of the outrage reached the United States a clamor for punishment for the perpetrators went up. The *Potomac*, a 44-gun frigate, commanded by Captain John Downes, lay in New York Harbor about to sail for England with our newly appointed minister, Martin Van Buren. Instead, President Jackson ordered her to proceed immediately for Sumatra and give the Malays a lesson in how the long arm of the United States protected American merchantmen.

According to Captain Downes' log, the Van Buren furniture, much of which had been brought aboard the *Potomac*, was hurriedly put ashore and preparations were rushed for the voyage half-round the world. On Friday, August 26, less than seven months after the affair, the frigate put to sea. October 16 she dropped anchor in the harbor of Rio de Janeiro, and having been provisioned got under way again early in November. Cape Good Hope was made a month later. Here Captain Downes stopped long enough to get more information about Sumatra and that part of the world. American warships had never been there before. Even a trustworthy chart of the coast, which is lined with dangerous reefs and shoals, could not be obtained. Concerning the people, however, he had heard enough to know that only stern measures would be effective. Although owing no allegiance to any power, the Quallah Battooans paid tribute to the King of Acheen. But they were too lawless for him, and he disclaimed any responsibility for their acts. They were divided into clans, each headed by a rajah, and were very warlike, with considerable courage and military skill. They possessed a number of forts, which with the natural difficulties of the coast and the jungles made them very hard to attack.

Two months later, February 5, the *Potomac* hove to off Quallah Battoo. In appearance she was just an ordinary Indiaman. All marks of the man-of-war had been concealed upon approaching Sumatra, for Downes did not wish the Malays to know of his coming. The guns had been run in and the ports closed and her sails given a slipshod set.

DOWNES had decided that it would be useless to prolong matters by discussions. Deeds, not words, were needed, and he lost no time in setting about his mission. In his log for the afternoon of his arrival he says bluntly:

'At 2.15 sent the whale boat ashore with Lieut. Irvine Shubrick, 1st Lieut. of Marines Alvin Edson, Lieuts. R. R. Pinkham, H. Hoff, and I. Ingersoll, acting Sailing Master B. J. Totten, and Passed Midshipman H. Tolley to reconnoitre Quallah Battoo, preparatory to the attack.'

All were disguised in keeping with their character of Indiamen, 'the first officer named to represent the captain of the ship, the second the supercargo, and the residue, in sailor's costume, to represent the boat's crew.'

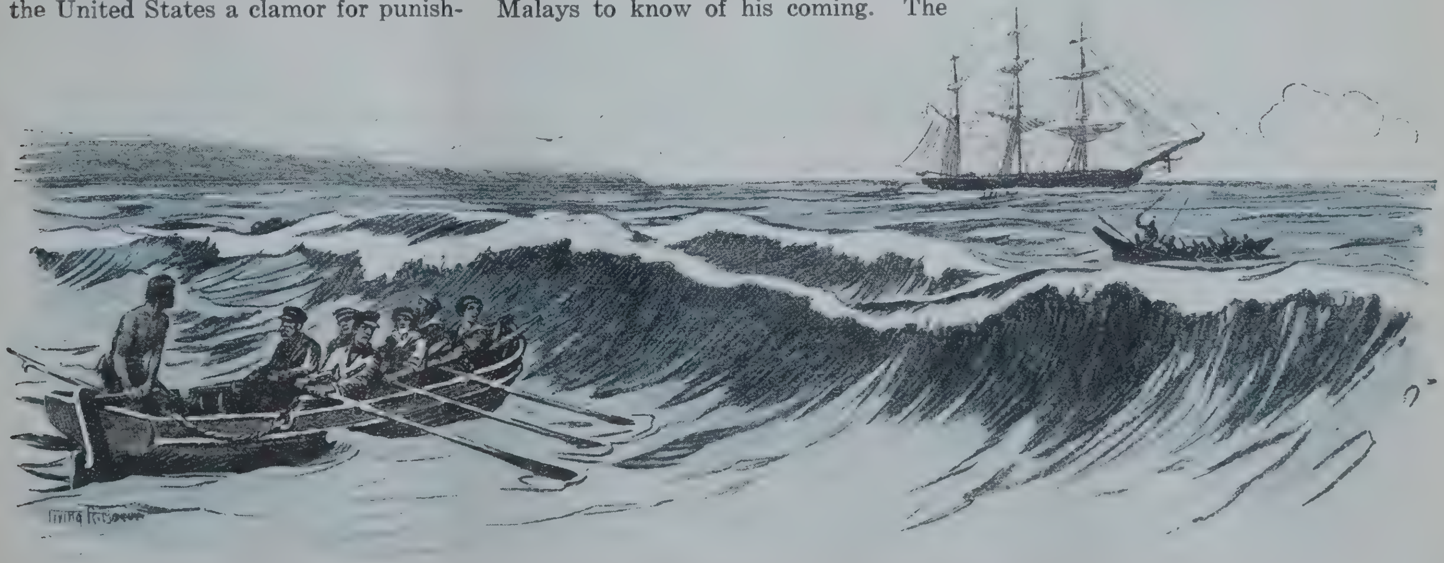
'At 2.30,' the log continues, 'sent Lieut. Wilson in the life boat to sound around the ship, who found a coral shoal of 5 fathoms water. At 2.45 saw a small boat standing for the ship. At 4 the boat came alongside; secured the crew, consisting of four natives.'

They were of a friendly tribe, but Downes was taking no chances, and detained them.

'At 5 the reconnoitring party returned to the ship, who saw on shore a considerable display of armed men. 6 to 8 got out all the boats and prepared them for the attack . . . Midnight to 4 a. m. clear and pleasant; at 2.15 the expedition . . . under command of Lieut. Shubrick embarked.'

In all, the landing force consisted of 250 sailors and marines, divided into detachments. John Barry, the second mate of the *Friendship*, acted as guide. He knew the position of the forts and had a good idea of the lay of the land.

Despite the (*Continued on page 28*)



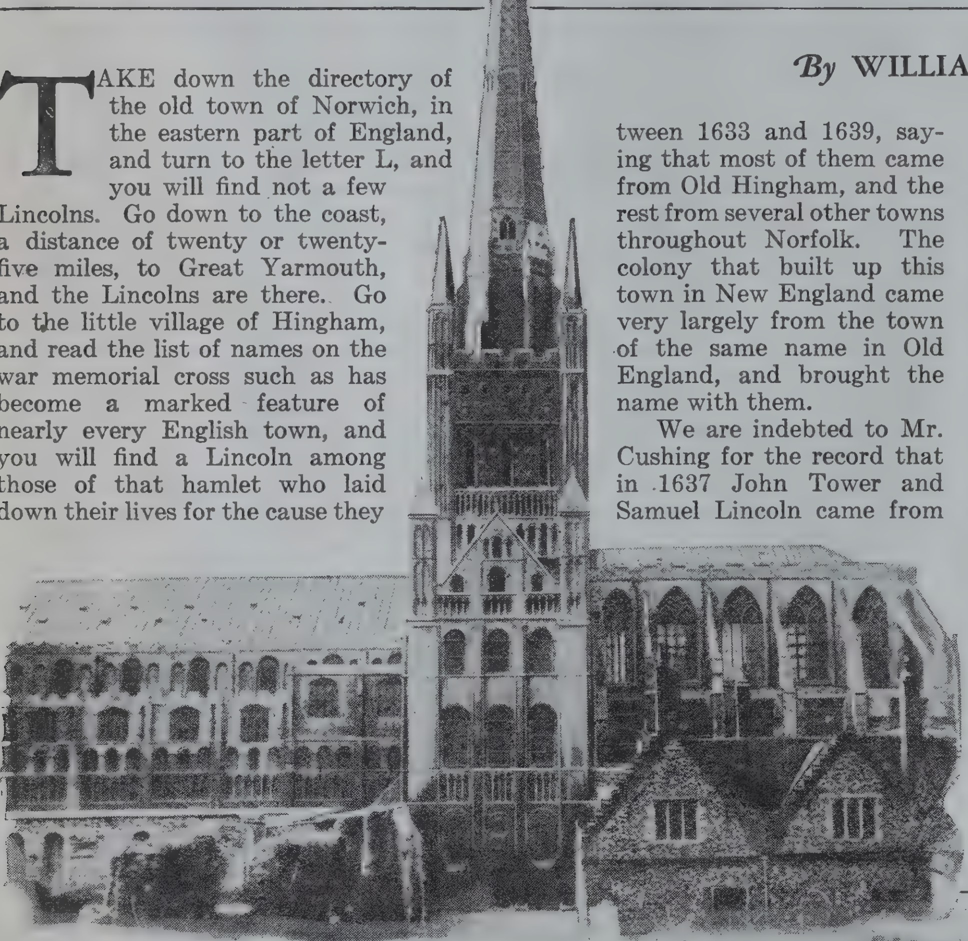
A friendly native, Po Adam, brought them skilfully through the surf, when a boatload of warriors set upon them.

The LINCOLNS in Their ENGLISH HOME

Top—Part of the closely knitted little village of Hingham, England.

By WILLIAM E. BARTON

TAKE down the directory of the old town of Norwich, in the eastern part of England, and turn to the letter L, and you will find not a few Lincolns. Go down to the coast, a distance of twenty or twenty-five miles, to Great Yarmouth, and the Lincolns are there. Go to the little village of Hingham, and read the list of names on the war memorial cross such as has become a marked feature of nearly every English town, and you will find a Lincoln among those of that hamlet who laid down their lives for the cause they believed to be right. There are Lincolns there today, and there have been Lincolns there for centuries.



—International Newsreel.

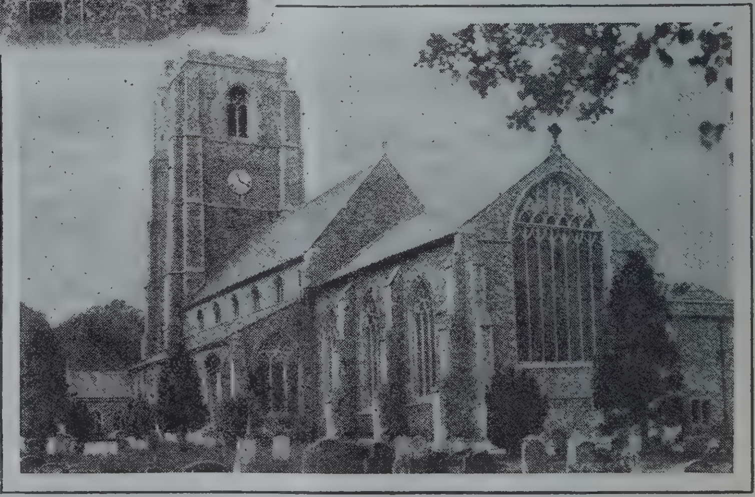
Above—Cathedral at Norwich, England.

Daniel Cushing died in Hingham, Massachusetts, on December 3, 1700. He was born in Hingham in Old England, and was baptized there on April 20, 1619. He was the third town clerk of the New England Hingham, having been elected in 1669; he held that office till his death. His father, Matthew Cushing, migrated to New England in 1638. Daniel Cushing recorded the names of 206 residents of the New England Hingham who came over between 1633 and 1639, saying that most of them came from Old Hingham, and the rest from several other towns throughout Norfolk. The colony that built up this town in New England came very largely from the town of the same name in Old England, and brought the name with them.

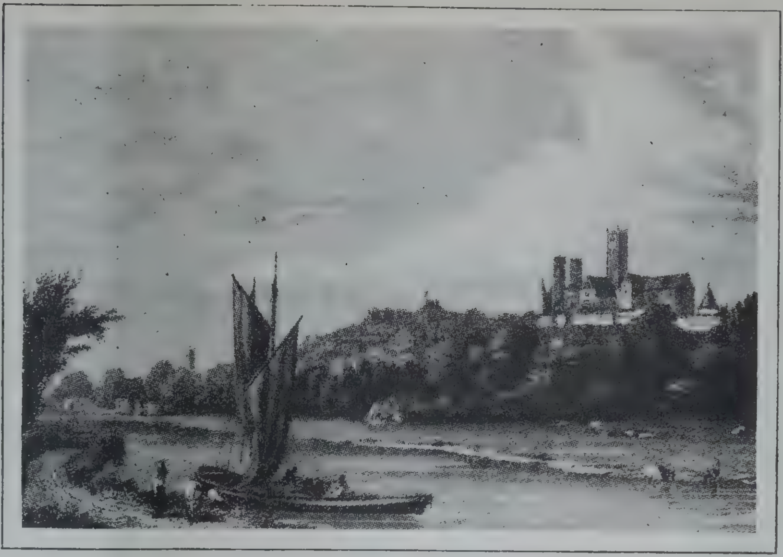
We are indebted to Mr. Cushing for the record that in 1637 John Tower and Samuel Lincoln came from Old Hingham and settled in New Hingham, Samuel Lincoln first living for some time at Salem. We also credit Daniel Cushing with the information that 'old Sam. Lincoln died of small pox,' on May 26, 1690, at the age of 71 years. His widow, Martha, died on April 10, 1693. This couple had eleven children, of whom eight survived them. They are the American ancestors of Abraham Lincoln.

We know that Samuel Lincoln was apprentice to Francis Lawes of Norwich, and that Francis with his wife and family and two servants, one of them Samuel Lincoln, crossed in either the *John and Dorothy* of Ipswich or the *Rose* of Yarmouth. These two vessels, commanded by father and son (each William Andrews by name), sailed from Yarmouth in 1637.

There is an unfortunate discrepancy in the records, which defies all ingenuity of explanation, on account of the age given by Samuel Lincoln at the time of his migration. He said he was eighteen, while accord-



Right—Church at Hingham, which was attended by Abraham Lincoln's ancestors.



City of Lincoln from the southwest.

ing to the baptismal records he should have been only fifteen. If we could assume a little lie told for the sake of getting his freedom earlier, that would be a simple explanation; unfortunately, the discrepancy goes deeper. But we have good reason to believe that Cushing was right about Samuel Lincoln's coming from old Hingham. Possibly he was baptized in another church. But one Samuel Lincoln, son of Edward Lincoln, was baptized at Hingham on August 24, 1622, and it is generally believed that this is the baptismal record of Abraham Lincoln's ancestor Samuel, though we wish the date were 1619. That would make everything consistent. Still, we cannot alter these old records. What we know is that here at Hingham, in Norfolk County, England, the ancestors of Lincoln lived, and that before they lived in Hingham, their home was in Swanton-Morley, not far away.

Last summer I visited these places again, after an absence of two years. I wanted especially to converse with the local historian Walter Rye, now eighty-five years old and writing his 120th book of local history. He has been sending me the results of all his Lincoln researches; and no man knows so much about the old families of that region as he. Into the details of what I learned from him and from others, I need not now go; but I should like to share some knowledge that has come to me concerning the English home of the Lincolns with my readers and to show them a few pictures.

Lincoln was the name of a place first and then of persons born or residing in that place. The city of Lincoln, the capital of Lincolnshire, England, has a population of perhaps fifty thousand and is the site of a notable cathedral. The name is very old, going back to the days of Roman occupation. Lindum was a Roman colony established about A. D. 86. Lindum-colonia, Lindum-colony, Lindcoln, come in time by successive modifications to Lincoln. The Venerable Bede called the place Lindicaollium. The name shares with that of Cologne on the Rhine the honor of preserving in northern Europe the Latin abbreviation for 'colonia' or colony. Through its modifications it has preserved, rather remarkably, the silent letter *l*.

Originating, apparently, as a prehistoric British settlement or stronghold on the northern extremity of the great fen district, Lincoln, under the name of Lindum, became one of the nine coloniae of Romanized Britain, and here was built the important town toward which Roman roads were made to converge. At the time of the Norman Conquest it was evidently a considerable town, for we are told that the Conqueror destroyed 166 houses in order to complete the outworks of a castle. The building of the cathedral was begun by Remigius, the first Norman bishop, in the 11th Century; but the splendid fane that now dominates the city and the country for miles around was the work of several centuries. The view obtained of it by the traveler as the train approaches the station is one of the finest presented by any of the English cathedrals.

Lincolnshire is a district of seashore, fen, and wold. The fens are spacious, almost like prairies. They were once swamps, but have been drained to make meadows and fertile fields. The wolds rise from 'islands' of higher land in the fens and become fairly prominent hills. The seashore is now very largely given over to the gayeties of the summer season. On the shore to the north (*Continued on page 31*)

PHANTOMS come out of the ghostly Recollet Gate of misty Ville-Marie and dance among the colored tissue streamers on the waxed floors. They come from St. Amable Street, the fashionable quarter of the French régime. They come from the market place which was once the terraced rose garden and the château of the Marquis de Vaudreuil. You can hear the rustle of the silken Louis XIV costumes of the beaux and dames with powdered wigs.

You can see the spotless guard of honor in blue and white; the courtly Marquis de Vaudreuil and the stately young Louis Joseph Marquis de Montcalm-Gozon; and there is the gay De Ramezay from his long, low villa just above De Vaudreuil's rose gardens.

And back of them comes the eager face of Paul de Maisonneuve still guarding the city he won for France; Champlain, dauntless and daring with his swagger of plum-color, his cocked mustache and tufted chin; and Jacques Cartier whose eyes saw far and whose cool courage brought the French tongue among the Iroquois four centuries ago.

Montreal . . . Mount Royal! the throne of old France across the seas, the shrine of gentle blood and courage that is good to remember, the grave of a glory that is past and the rampart of a romance that is ever instinct with life and the whisper of love in the old gray-walled gardens.

New Year's Night . . . the old and the new! the heart of the English and the soul of the French, the hour when you turn to whoever is nearest and wish them a Happy New Year, the night the bells ring out and with the dawn, a promise—a promise of new and richer things, but somehow—we love the old things still.

—Courtesy, Canadian Pacific.

Shooting Lachine Rapids.

Far down overlooking the river there stands the Virgin with outstretched hands atop the old Bonsecours Church, blessing all outgoing *voyageurs*. For two and a half centuries and more she has watched over all who leave Montreal.

Commerce cannot rob Montreal of its romance.

Would you know the thrill the stars give to those who dwell in the heavens? Then stand on Victoria Bridge, with the sparkling lights stretching past you, mile on mile, along the dark St. Lawrence. The night sky of Montreal is not a brassy flare, like that of most cities. Instead it is black velvet—a perfect setting for the myriad diamonds that are lights. And the reason for this is strange.

Above the city, pouring their torrent of water in a pell-mell, two-mile race, lie the Lachine Rapids: *a la Chine* once—to China!—pointing the way, so the early voyageurs hoped, to the Northwest Passage and the fabled Orient. And the rapids are like some restless monster blowing great breaths of vapor into the air, to bathe the city with distilled effervescence. Small wonder the lights glow as they do nowhere else in the world.

René Robert Cavelier, the famed Sieur de la Salle, passed that way, as did his brother, a priest of St. Sulpice, who in 1666 built the little stone house which may be seen there today. Purple iris grow beside

(Continued on page 29)

NEW YEAR'S EVE

By PAVEL BOULIGIN

PIERRE was late on his way to welcome the New Year at the home of an aviation colonel living with his wife at a mill by the Akaki River.

His fast 'Blitz' would carry him speedily along the deserted, moonlit road well known to both of them.

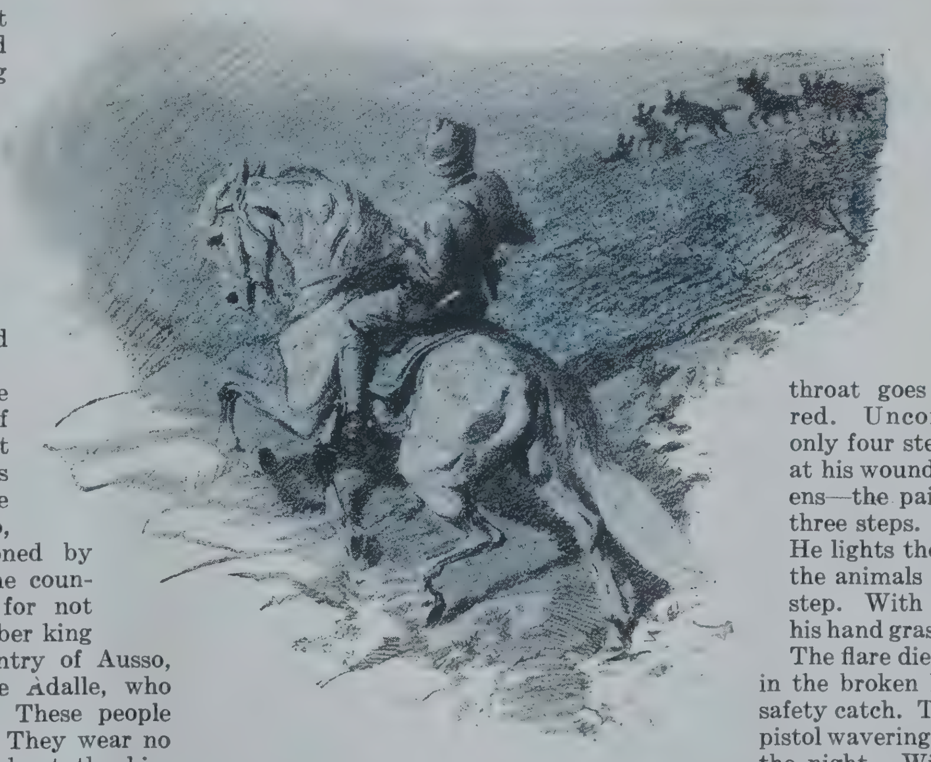
But what were these shadows? One, three, five . . . hyenas! About one hundred steps to his side, with clumsy motion, gray shadows were jumping. Well, they were nothing to fear. Hyenas never attack a man and are dangerous only to one weak from sickness or strong drink. Blitz was tugging for more rein, and he sniffed sometimes. It was not at them, however, as the Abyssinian horse does not fear hyenas. But he is timid of the moonlight and the emptiness of the quiet night . . . he gallops. Goodby hyenas!

Blitz bounded away. The torn air whistled in the ears and the rider's young heart pulsated strongly and freely. How enchanting to gallop in the night! 'Enough, Blitz, take your breath!' At the second ravine, the hyenas were certainly left behind. They descended on the walk. The rise ahead was long and gentle.

Far downward to the left lay a white town of tents and camp fires. It was the bivouac of Ras Cabada, viceroy of the distant province of Wollo, who had been summoned by Tafari, the regent of the country, to be discharged for not having whipped the robber king of the neighboring country of Ausso, inhabited by the brave Adalle, who often attacked Wollo. These people are wild and nomadic. They wear no dress but a dirty rag about the hip. They carry marvelous weapons in silver cases and possess herds of cows and sheep. Unacquainted with bread or corn, they do not cultivate the ground, but eat meat and drink milk; on holidays they quaff blood from the throats of bulls pierced with lances.

Suddenly something dark jumped from the sweetbrier bush under Blitz's feet. The horse reared, turned, stumbled, and fell head over heels to the bottom of the hollow. The horse caught itself soon, jumped to its feet, trembling and snorting, but the rider continued to roll followed by dust and small pebbles, his motion gradually slowing until he stopped at a large stone.

Half an hour passed. The moon rose upon the edge of the hollow and looked down with curious eye. Blitz stood quietly browsing the dry grass between stones. Pierre lay silent. Over the moonlit ridges of the hollow passed some dark shadows. Blitz snorted and galloped down the slope to the right, stumbling and clanging the stirrups. The hyenas ran. More time passed. The moon shone on the figure of a man lying with bleeding forehead and a leg bent under. Gray shadows appeared again. Three, five, eight, more—and more. They looked like the stones come to life. They came nearer and nearer. Suddenly they rushed off in different directions: the man moved and groaned, he was still alive.



About one hundred steps to Pierre's side, gray shadows were jumping.

Pierre became conscious. What ailed him? Where was he? Pain-racked body. Blood. Remembrance. Trying to rise, he fell back from unbearable pain in the broken left limb. What to do? A semicircle of hyenas had their beast's eyes upon him. He grabbed for his pistol. There was none, but where was it? Torn away when he fell? It was nowhere near. Might it be down the hill? Painfully he turned, and very slowly. No, it could not be seen at the bottom. He turned again laboriously to the right. There it was! About ten steps off in the grass shone the steel handle ring and the brass case button. Thank God! Resting first, he attempted to move toward the revolver. He shifted the broken limb with his hands, and then shifted his body—and groaned!

Setting his jaws, he started to creep. Sharp unbearable pain overcame his senses. But consciousness returned. Where was he? What was it? 'Ho! Ho!' he shouted, crying from fright. Only seven steps away, but it was dangerous to try, as consciousness might be swept away, and then . . . but it was more dangerous not to try.

* * *

The hyenas keep closing in . . . God! What can he do? Matches . . . He lights one; they are frightened and move slightly away . . . They stand and wait. Another step. Minutes pass. Only six steps left. They approach—one laughs. Pierre lights a second match. Another step. Only five now. He shouts . . . They stop . . . He is exhausted . . . but he must go on. Another step. His throat goes dry, his eyes see red. Unconsciousness—and only four steps left. They tear at his wounded foot. He awakens—the pain spurs him on—three steps. Two steps. God! He lights the box of matches—the animals crowd back. One step. With an herculean effort his hand grasps the steel handle. The flare dies away. Pain again in the broken leg. He finds the safety catch. The hand points the pistol waveringly. The flame stabs the night. With the roar, there is a scurrying of frightened shadows. Thank God! He can hold out now.

* * *

Came the first light of morning. A caravan of merchants passed noisily, apparently having camped nearby. They spied the form of a man. They trailed down the slope with cries and groans. 'Ferengi' (European). As they lifted him, he sank into merciful unconsciousness.

But they could not extract the pistol from his hand.

The Advance of the World

REVIEWS and forecasts are equally futile unless there is a principle to be guided by in making them or a principle to be discovered by making them. A year is but a block of days and weeks and months, marked principally by four seasons, the same now as for ages, ever to remain the same in its basic rhythm; and thus there is nothing to mark this year from last or from next unless it is a change or advance in human progress or principle.

The natural year is, of course, a factor in man's action and his growth. If day were constant and never fell on night; if seedtime, cultivation, and harvest did not draw man out by their several compulsions; if seasons did not change, now driving him afield, now driving him to shelter; if time were changeless, endless, man would be deprived of that outer pressure which is his first stimulus to action and the contrivance of means to ends. The natural year has that use; even the changes of the weather, heat and cold, flood and drought, have that use. But these remain. The only gain is in the human result.

> *WE ARE living in a great time. We are a bridge generation. Upon our backs, upon our labors, upon our steadfastness to principle, the generations are passing over from a less good to a better time. The complaints that we hear concerning the slowness of it all are mostly from people who would rather be the crossing throng than the bridge that carries them across. But that is not within our choice. We must do the job that destiny has given us, for if we fail the next generation will not get across to a better footing. We may go forward confidently, in the fullest faith that what we thus build those who come after will find most fitted for their use.*

It would probably be agreed that one of the greatest gains of the civilized world in the last ten years is a realization of its basic ignorance in so apparently simple a matter as living together. It is not so long ago that the wise men of the world were congratulating themselves that they had at last struck the cosmic gait, that they were building a structure that would resist all change, that they had found the secret of progress. When they awoke, the whole business was in ruins about them.

Yet it was not the war, but the impossibility of restoring conditions to what they were before the war, that gave men the first inkling of the lesson they were to learn. They would have accepted the war as an accident, as a mistake, as a casual aggression, had they not been made to see that the war was but the symptom of a deeper malady, the outworking of a principle that was profounder than anything of political or governmental nature.

They learned this by failure to restore the conditions that caused the war. The old tricks failed. The old wisdom proved foolishness. The old motives were ineffective. The old enthusiasms lacked power. Nothing of the old seemed to remain except the old counsels, which had been labeled impractical. They stood. The 'impractical' things were seen to be the things that had survived.

If losing a false wisdom and finding a new beginning of learning is progress, then we may say that the world has progressed. Its cocksureness is gone. Its old principles are disproved by experience. It sits amid the wreck of all its falsities. And no time is more full of hope than the time that knows the wreck of falsities. That marks a stage in advance.

Not that all the falsities have fallen as yet. Progress is not so clean cut as to admit of that. Everything false does not fail at a given moment, and everything less false arrive.

On the whole, however, the corner of progress has been turned. A great distrust of the old method of selfishness has been sown broadcast through the world, and a greater trust that somewhere the basic principle exists is regnant. That marks a phase of progress that will be felt in every field, for what transpires in mind soon makes its influence felt in matter.

The note of impatience was heard—would that this change could move more swiftly! And yet how swift it has been! Measure the past twenty years against the last three centuries; have we been moving swiftly? Surface and bowels of the earth; depths of the air; time and motion and power; chemical mysteries; secrets hidden from the ages—these are the conquests of the past two decades. Where once it took centuries to disseminate an idea, it is planted now in days. Communication is instantaneous; the world thinks simultaneously.

So the fact is, we are moving swiftly, much more so than we realize. And the new era is coming to pass much more actually than we see. It is as yet so much confused with the passing débris of the old that sometimes the impression is one of chaos. Nevertheless the new order is pressing up through the confusion to take its place, even to force its place, wherever the old has been sufficiently forced out.

Economically the new year will be a good year. But all years should be that. It is but the natural result of honest life. All the years would have been prosperous had men realized, as they are beginning now to realize, that the Laws of life cannot be broken.

EDITORIALS

OF THE DEARBORN INDEPENDENT

The New Year

A NEW YEAR is here, but there will be an astonishing number of old things about it. Its newness is undeniable, but its familiar lines are unmistakable. One would find it not an easy task to separate the newness from the oldness each year.

Yet the Year itself is new. Every experience that shall befall us during its fifty-two weeks will be new. It may be familiar, but it will still be new. Life is made up of a repetition of similar experiences, with now and then an unfamiliar one to stand out as a landmark.

It is a new cycle of time. A new breadth, as it were, woven in the Loom, raw material of which to make what we will. That—the time cycle—at least so far as we are concerned—is new. But it is raw material. The fully made-up year is the finished product. What it may be like we have just had the opportunity to see. A made-up year has just passed out of the Time-factory to take its place among the others of this era. If it is not a particularly flattering product, we know where the blame must be placed.

The human race has not been long in the business of Year-Making. There are only 1,927 credited to the production record of the Christian Era, and that is a comparatively small number.

The years run on, they come out precisely at the end of December on their schedule time, but they do not show on their human side the marks of unity and mastery. The year is after all but a small bit in the mosaic of the Age, and perhaps we shall be better able to judge it from a perspective which enables us to see the whole pattern.

The Year-Making of our generation is in our hands. Inevitably, next December, we shall have to deliver to the Builder of the Age another year. It is natural to wonder what it may turn out to be.

What have we new about the year? Very little except the time. That has never been used before, and never will be used again.

But the old things that troop into the New Year are very numerous. It is almost like the same old family moving into a new house; very little is changed after all. It is the same old Earth for one thing. And that is a genuine benefit. We know what we can absolutely depend on it to do.

That is a great saving of time, for, if this year the human race had to begin all over again and by careful and costly experiment find out the powers of the Earth, the year would be almost empty. But we know that the soil will radiate the sun's warmth in spring, that moisture and heat will create chemical conditions out of which man's food will come; we know that the earth will produce lumber and ores and material for clothing.

And so we enter the New Year with solid foundation under us. The New Year will have to conform to some very old rules which will continue because they are good rules. But that is no reason why the New Year should put up with old mistakes and abuses.

In the Day's News

ITEMS stand out in the day's news: The acquittal of George Remus, who shot his wife to death on the street, and the atrocious murder of a little Los Angeles girl with the subsequent arrest of the suspect, Hickman. Remus through his trial became a sort of hero to a certain class of citizens.

'He wasn't happy last Christmas; let's make him happy this one,' said one juror to his fellows. So they voted him not guilty of murder. One wonders whether a similar Christmas present will be voted Hickman next year.

Hickman under arrest displays a curious complacency over his career of misdeeds. He reveals a long list of crimes, and boasts of the 'write-ups' in the daily press, much as an actor proudly displays newspaper clippings about his ability. Editors who claim that the printing of crime news is a deterrent to crime will find this interesting.

Britons Never Will Be Slaves

THERE is at times a vigor and a virility about the English that cannot but command respect. From Melton Mowbray comes the story of the Prince of Wales and the irate farmer, in which the Prince for all his position and his charming personality came off second best. Galloping after a fox behind the Dourn hounds, the Prince jumped his horse over a high hedge and started across a field of growing wheat. Following him were the other riders of the hunt in the full glory of their costumes and their rank.

But once in the field they encountered the angry farmer. Brandishing a heavy stick and swearing feelingly, the farmer advanced on the huntsmen. The huntsmen, including the Prince, retreated hastily, leaving the wheat untrampled. Much has been written of late about the decline and fall of the British spirit.

A people can scarcely be held decadent, however, who consider a growing wheat field more important than a Prince's fox hunt.

MIDSUMMER on the YUKON

By JAMES CLYDE GILBERT

JIMMIE and I emerged from the cool interior of the Adams theater in Detroit. Frenzied crowds rushed up Woodward Avenue. Taxies careened about corners. Sirens screeched. The raucous cries of newsboys filled the air. Hotels and office buildings towered above us. Through it all the soft spring sunshine beat down on Grand Circus Park. The fountain played silvery in the golden rays.

'Dad, did you see the way those fellows shot fish in Alaska with bow and arrow?' queried my son.

'Yes, they did well, didn't they?' I replied.

'Do you think you could kill a grizzly with bow and arrow like they did in the picture, Dad?' asked Jim.

'Not without much practice, and I'd want a good rifle to back me up,' I replied.

'Gee! I wish I was in Alaska right now,' Jim sighed. 'I'd climb mountains, fish in rivers and lakes, and see icebergs and glaciers just like those fellows did in the picture.'

We moved over to a park bench. The fountain splashed in its basin. The green foliage of the trees swayed in the spring wind. There was a mellow brightness about the thin spray from the fountain which, ere it dropped from its height, was blown about nonchalantly by the wind, splashing first upon one and then upon another of the sloping base stones. Jim talked on of the wonders of Alaska as they had been visioned on the screen. The breeze lulled the senses. The fountain resolved into a mighty cascade dashing out of a mountain cleft. The roar of the city streets became the wind in coast forests. Those piles about the park were not hotels. They were part of the St. Elias Range in southern Alaska. The surging crowd on the Avenue became a turbulent river; the roar of traffic was the roar of mighty glacial waters rushing between canyon walls. Salmon leaped in the pool of the fountain.

'Dad, let's go to Alaska on our vacation this summer,' said Jim.

My reverie was broken. I snapped back to civilization and all its troubles. Gone were the placid mountain pools, the music of the mountain streams. The fountain was again only a fountain and the crowds spelled worry and fret for us before we could make our way home. Then and there I resolved to take the trip to Alaska and the Yukon. 'We'll do it, Jim,' I answered.

Six weeks later we were embarking at Prince Rupert, British Columbia, northbound on the Canadian National Steamship, *Prince George*.

The Inside Passage is one of the most awe-inspiring waterways in existence. Day after day, as in a dream, we steamed northward between timber-crowned islets, submerged peaks of volcanic mountains, larger islands with forests covering all. The sea here was placid as an inland lake. Bald eagles soared above the ship as she steamed steadily toward the midnight sun. As we bore northward it became perceptibly cooler. One morning we

saw floating ice. We steamed through the fascinating winding pine-bordered Wrangell Narrows to the Taku Inlet, and the marvelous Taku glacier. Taku hints of the hundreds of miles of ice that lie behind in the interior. It dips its jade and blue splendor into the dark waters of Taku Inlet. The air blows clean and fresh across this mass, which inch by inch feeds itself into the ocean. Mighty chunks of ice break off and go floating out with the ebb tide. One beautiful morning we slid up Lynn Canal past dashing and foaming torrents. Ahead lay Skagway, the gateway to the interior. Jim was in raptures. Here were the fabled mountains of which we had dreamed. So clear was the air one could almost reach out and touch a lofty peak. The clouds were tinted by the rising sun. They became purple-edged with gold, royal colors indeed, a fitting drop curtain to the gateway of the Golden Yukon.

* * *

Our cabin was perched high on the rocky slope of a mountain near the canyon. Only a few stunted spruce live at this altitude. On all sides of the cabin mountains rise with snow-capped summits. Frazier, Bernard and Shallow lakes lie below in a long valley like three green beads strung at the throat of the mountain. Their waters are bluish green, and invariably rough, for the sea winds from Lynn Canal at Skagway rush up through the pass continuously.

The central point of interest in this gorgeous alpine wilderness is the First Portage. Glacial streams flow past our cabin to join the Yukon, forever talking as they lave the rocks. They present many different phases which arrest one in different ways: There are the rush and tear of the large stream dropping sheer from the lip of the cliff high above us; the mist wraith that so often haunts the falls; the crooning note of the springlike stream that flows by our cabin door. The night song of this mountain brook stands alone and admits of no classification. We heard it with drowsy ears, singing outside our bedroom window. It has a peculiar charm, a lulling, somniferous effect, most effective, after a hard day of fishing.

From this spring came a brown beaver, dripping wet, his glossy fur shining in the afternoon sunlight. Jimmie chased him down the woodland trail to a pond where he 'ker-plopped' out of sight. Jim had never seen a beaver before. He described him as 'an animal like a dog, with a tail shaped like the blade of a canoe paddle and his hair slicked back pompadour.' Next day he told in breathless excitement of seeing 'a large black dog high up the mountain side.' The 'dog' would shuffle along slowly and then sit down and raise its muzzle high

in the air as it sniffed the four winds. It was a black bear, as we later proved by the tracks about that rock. We even found its bed in the fragrant undergrowth beneath a stunted spruce.

One day as we climbed the mountain back of our cabin, the sun lifted the clouds, and there before us lay the entire upper reach of the Yukon valley. The pass lay to the south. Lake Bennett could be seen downstream. Frazier lay below us, and to the north stretched range after range of high mountain peaks, snow-capped for the most part. This region is a paradise for the botanist, the lover of animal life, the seeker after mountain air, the amateur photographer, the camper and hiker.

We spent many happy hours by the bold rocks of the Yukon canyon at First Portage. When the days were cool there was little change in the level of the river. When the sun poured its rays on the glaciers high above, the flow of water increased. Sometimes the volume was so tremendous as to hide every rock in the canyon bed. On such occasions it presented an alluring spectacle: the water would spume wildly through the confines of the canyon with such force as to create a mist at the lower end.

Through it all the Arctic grayling forges its way seeking food. We found better fishing when the water was falling; for on the rise there are many insects, on which the fish surfeit themselves. They do not shrink from the roaring current. Instead they face it and hold their own. When caught in the current, a good-sized grayling tests the best of tackle, for they weigh as much as two and a half pounds in the Yukon and its tributaries. It is always advisable to lead a hooked grayling into quieter waters to play him if possible.

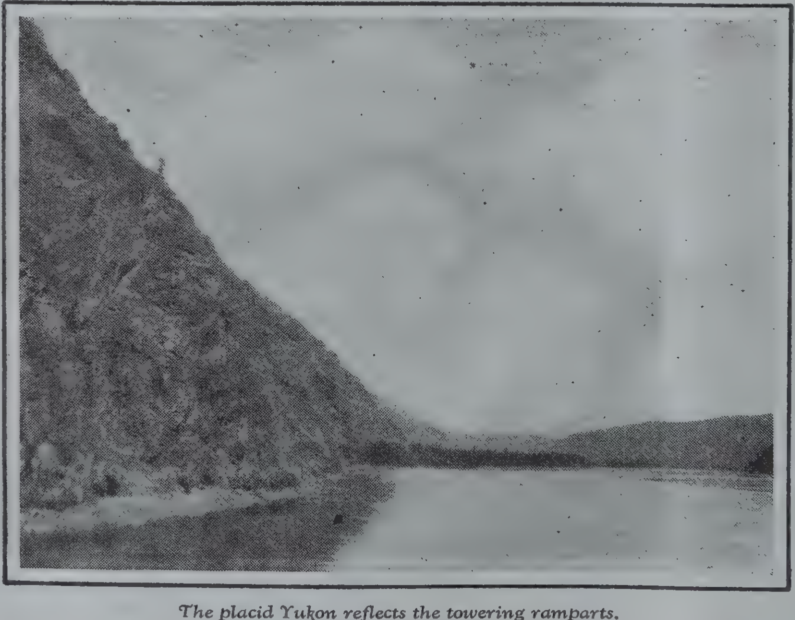
In a certain place, between canyon walls, the river rests in a deep pool. At the west side of the stream are flat, worn rocks, some lifted above the surface, some at hip depth. Just off these rocks it is deep and there is more current than one would imagine. On the south side is a beach of smaller rocks and pebbles from which one may wade out into the river, for the slope is gradual. But be careful. That ceaseless roar is the voice of the Yukon, as, strengthened by its respite in the pool, it leaps in a seething torrent ten feet down, and so is on its way north again. There are always grayling in this pool, resting like the river itself. They rise readily to the fly at certain times of day. They strike best when the lavender glow on the mountains has faded to brown, and the amber has darkened in the western sky.

Jim had one favorite pool just below the canyon. Here he would make a long curving cast that dropped the white miller or brown hackle far out. The fly would leap, dance, and be borne away. Then from the depths of the whirlpool would rise a titan. He would leap clear of the water in his attempt to drown the fly. Again he would leap, this time to strike so mightily as to bend the pliant rod to the river's surface. Jim would give him the butt like a veteran, and the great dorsal fin would cut the surface tentatively. Then would begin a pretty fight. Down deep the grayling would dive, seeking the swiftest water in an effort to dislodge the stinging barb from the sensitive mouth.

The Arctic grayling never breaks water once he is hooked. But he knows where every razorlike rock lies and he is adept at cutting leaders and lines. We lost several new lines in the canyon. The reel would spin. Jim would seek to stop it, and his knuckles would be rapped by the flying reel handle. But he would thumb it down and reel in rod after rod of hard-fought line. Then the great blue body would come to the surface in its death throes, ready for the net.

There was one great monolith near the canyon mouth about the base of which the water

(Continued on page 19)



The placid Yukon reflects the towering ramparts.

GREAT FIGURES *in* FICTION

Sidonia *and* Jean Valjean

LEWIS WORTHINGTON SMITH

DISRAELI'S novels have in them something of the fustian of Bulwer-Lytton, without the romantic passion that we find, for instance, in *The Lady of Lyons.* The political disquisitions with which they are overloaded are vaporous and hard to follow. As actuating motives, the political principles ascribed to the characters seem detached and insubstantial. The men and women are not bloodless, but they seem rather figures used illustratively than creatures meeting exigencies of life with the responsive ardor of beating wills.

Victor Hugo.

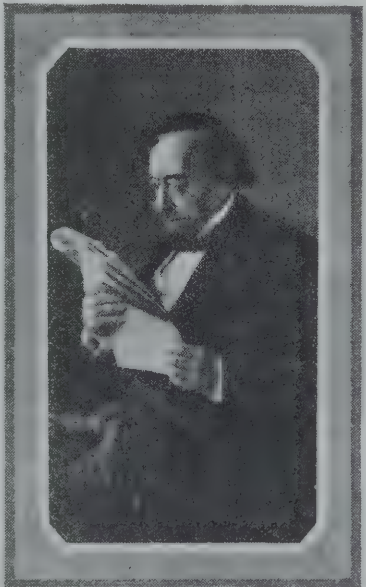
It seems to be the critical opinion of those who know, that *Coningsby* is Disraeli's most important novel. The titular character is at times overshadowed by Lord Monmouth, painted, it is understood, from the profligate English noble who furnished the model for Thackeray's Lord Steyne. But neither of the two really arouses Disraeli's enthusiasm so much as the man Sidonia. It has been said that Sidonia is the author's portrait of himself, but the revised key of 1845 declares the original to be Baron Alfred de Rothschild of Naples. In either case, Sidonia would appear to be Disraeli's conception of what constitutes a man of the highest and most admirable sort.

Disraeli goes to great length in his treatment of Sidonia. He seems more to be indicating what gifts and distinctions are desirable than to be revealing what may be allotted to or attained by a single man. The catalog is complete.

'Sidonia had exhausted all the sources of human knowledge; he was master of the learning of every nation, of all tongues, dead or living, of every literature, Western and Oriental. He had pursued the speculations of science to their last term, and had himself illustrated them by observation and experiment. He had lived in all orders of society, had viewed every combination of Nature and of Art, and had observed man under every phasis of civilization. He had even studied him in the wilderness. The influence of creeds and laws, manners, customs, traditions in all their diversities, had been subjected to his personal scrutiny.

'He brought to the study of this vast aggregate of knowledge a penetrative intellect, that matured by long meditation . . . permitted Sidonia to fathom as it were by intuition the depth of questions apparently the most difficult and profound . . .

'The only human quality that interested Sidonia was intellect. He cared not whence it came; where it was to be found: creed, country, class, character, in this respect, were alike indifferent to him. The author, the artist, the man of science, never appealed to him in vain. Often he anticipated their wants and wishes. He encouraged their society; was as frank in his conversation as he was generous in his contributions; but the instant they ceased to be authors, artists, or philosophers, and their communications arose from anything but the intellectual quality which had interested him, the moment they were rash enough to approach intimacy and appealed to the sympathizing man instead of the congenial intelligence, he saw them no more.'



Lord Beaconsfield.

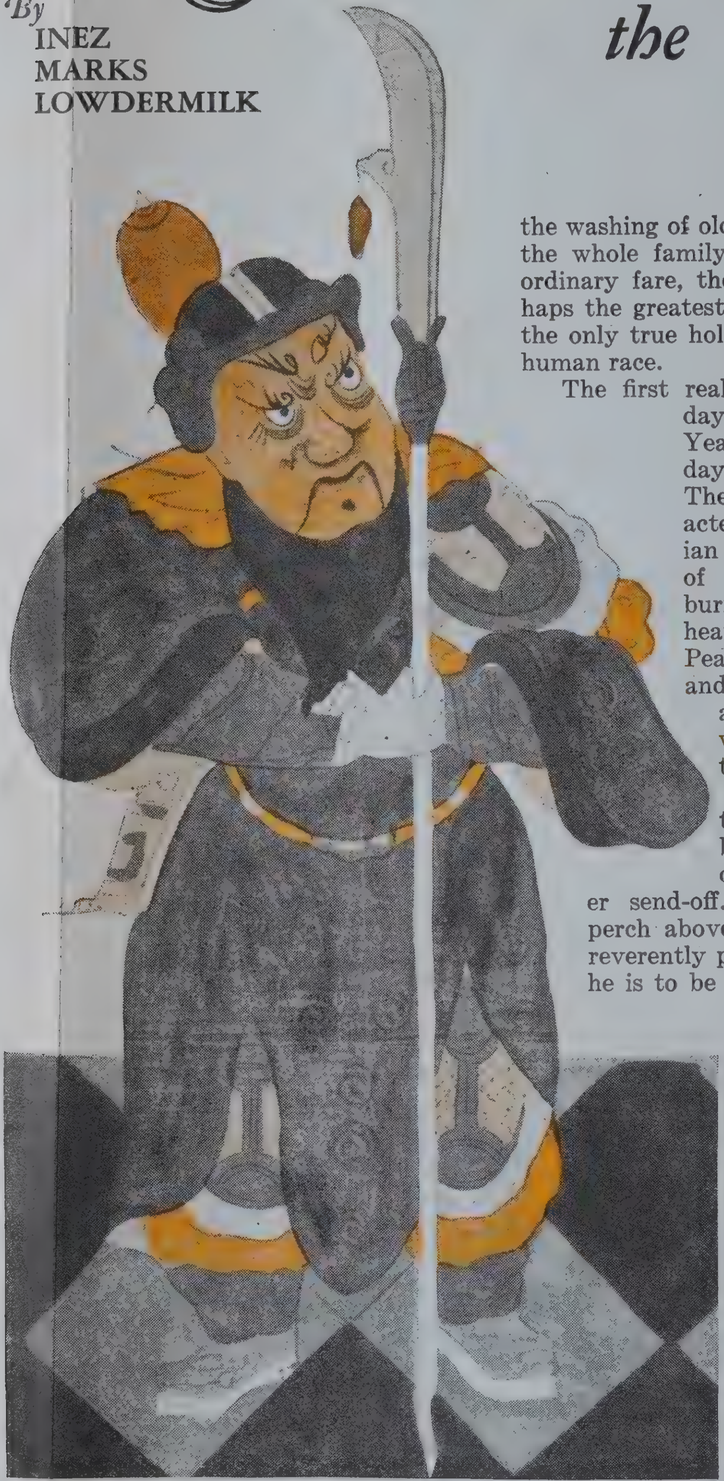
Sidonia walks through the action with the cloak of his indifference about him. The constructive programs of individual men and of peoples are not a little at the mercy of his bank account; and his own relation to those programs is primarily that of a bank account, not that of a man. A man initiates things, wills them, plans ways and means of bringing them about, urges their realization. Sidonia merely watches opportunities. When they appear he takes advantage of them with as diplomatic a cunning as distinguished Disraeli himself in the office of prime minister of England. If Russia and Turkey must bring difficulties between them to the arbitrament of the sword, it is interesting to him chiefly because it may work to his profit. He is quite willing to let others set the ball rolling, while he sits in the grand stand betting on the game.

It was shortly after the publication of *Coningsby* that Victor Hugo wrote *Les Miserables.* The sufferings of Sidonia, as far as Disraeli's literary art brings them to our notice, are at a less appealing level than those of Hugo's Jean Valjean, Fantine, Cosette, Marius. Hugo's great figure, Jean Valjean, is the antithesis of Sidonia. From the hour when, as an escaped convict, he has stolen the bishop's silver plate and has been forgiven and cared for by the bishop, his life has been dominated by generous and self-sacrificing impulses. The first offense was a trivial one to which he was driven by the hard necessities of an impoverished existence.

For that fault (*Continued on page 24*)

CHINATOWN Celebrates the NEW YEAR

By
INEZ
MARKS
LOWDERMILK



This god on a colorful poster acts as policeman at the front gate of Chinese homes.

AMONG all national holidays the Chinese New Year is undoubtedly unique. It involves gods; ancestors; a payment of all past debts, even though the wherewithal must be borrowed at ruinous rates of interest. It means a complete cessation of all industry and a reversal, for at least two weeks, of all that one has been doing for the past year. There is a yearly house cleaning, with new clothes for everyone, the washing of old clothes, and a bath for the whole family. After the Sahara of ordinary fare, the dietetic aspect is perhaps the greatest attraction of all. It is the only true holiday for a fourth of the human race.

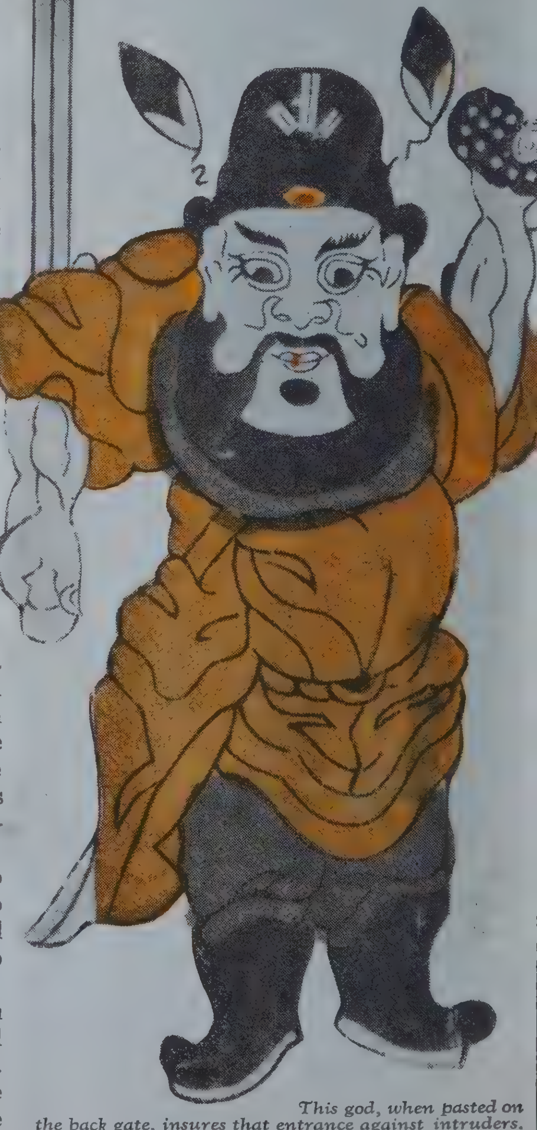
The first real event takes place six days before the Chinese New Year on the twenty-fourth day of the twelfth month. The kitchen god, who has acted as policeman or guardian of the domestic life of the family, must be burned and thus sent up to heaven to report to the Pearly Emperor on the good and bad deeds of the family, and whether it has been wasteful of food during the past year.

A farewell dinner is tendered him by all members of the household, in order to give him a proper send-off. He is torn from his perch above the kitchen stove and reverently placed on the spot where he is to be cremated. Paper sedan chairs and carriers or a paper horse provided with straw and water is burned with him in order that he may make the journey from earth to heaven in comfort. There are now modern tendencies among the gods, for it is becoming quite common to burn a paper automobile with a god to enable him to reach heaven more quickly and to create a sensation among his brother souls by arriving in a limousine.

Before starting the kitchen god to heaven, the family spreads sugar or sirup on his lips in order that he may 'feel sweet' and not be able or inclined to report anything but good.

After the departure of the kitchen god, the family has no superintendent and may work and act with greater freedom. This is the time for the yearly house cleaning. Cobwebs are torn down, the year's accumulation is cleaned out, furniture is moved and dusted, clothes are washed, finishing stitches are put on the new clothes, children are bathed, provisions are laid in for two weeks; sweets, dumplings, and fried cakes are made in round balls to signify unity and the reuniting of all members of the family. Everyone is working with feverish haste so that Chinese New Year may find all things in readiness for two weeks of leisure and feasting.

All debts for the year *must* be paid before the sun rises on New Year's morning. The year's business is transacted on the basis that one may evade paying one's debts until the New Year. Practically everyone in China owes some one else, and it is not a Chinese trait to pay a bill until one has been requested to do so at least twice.



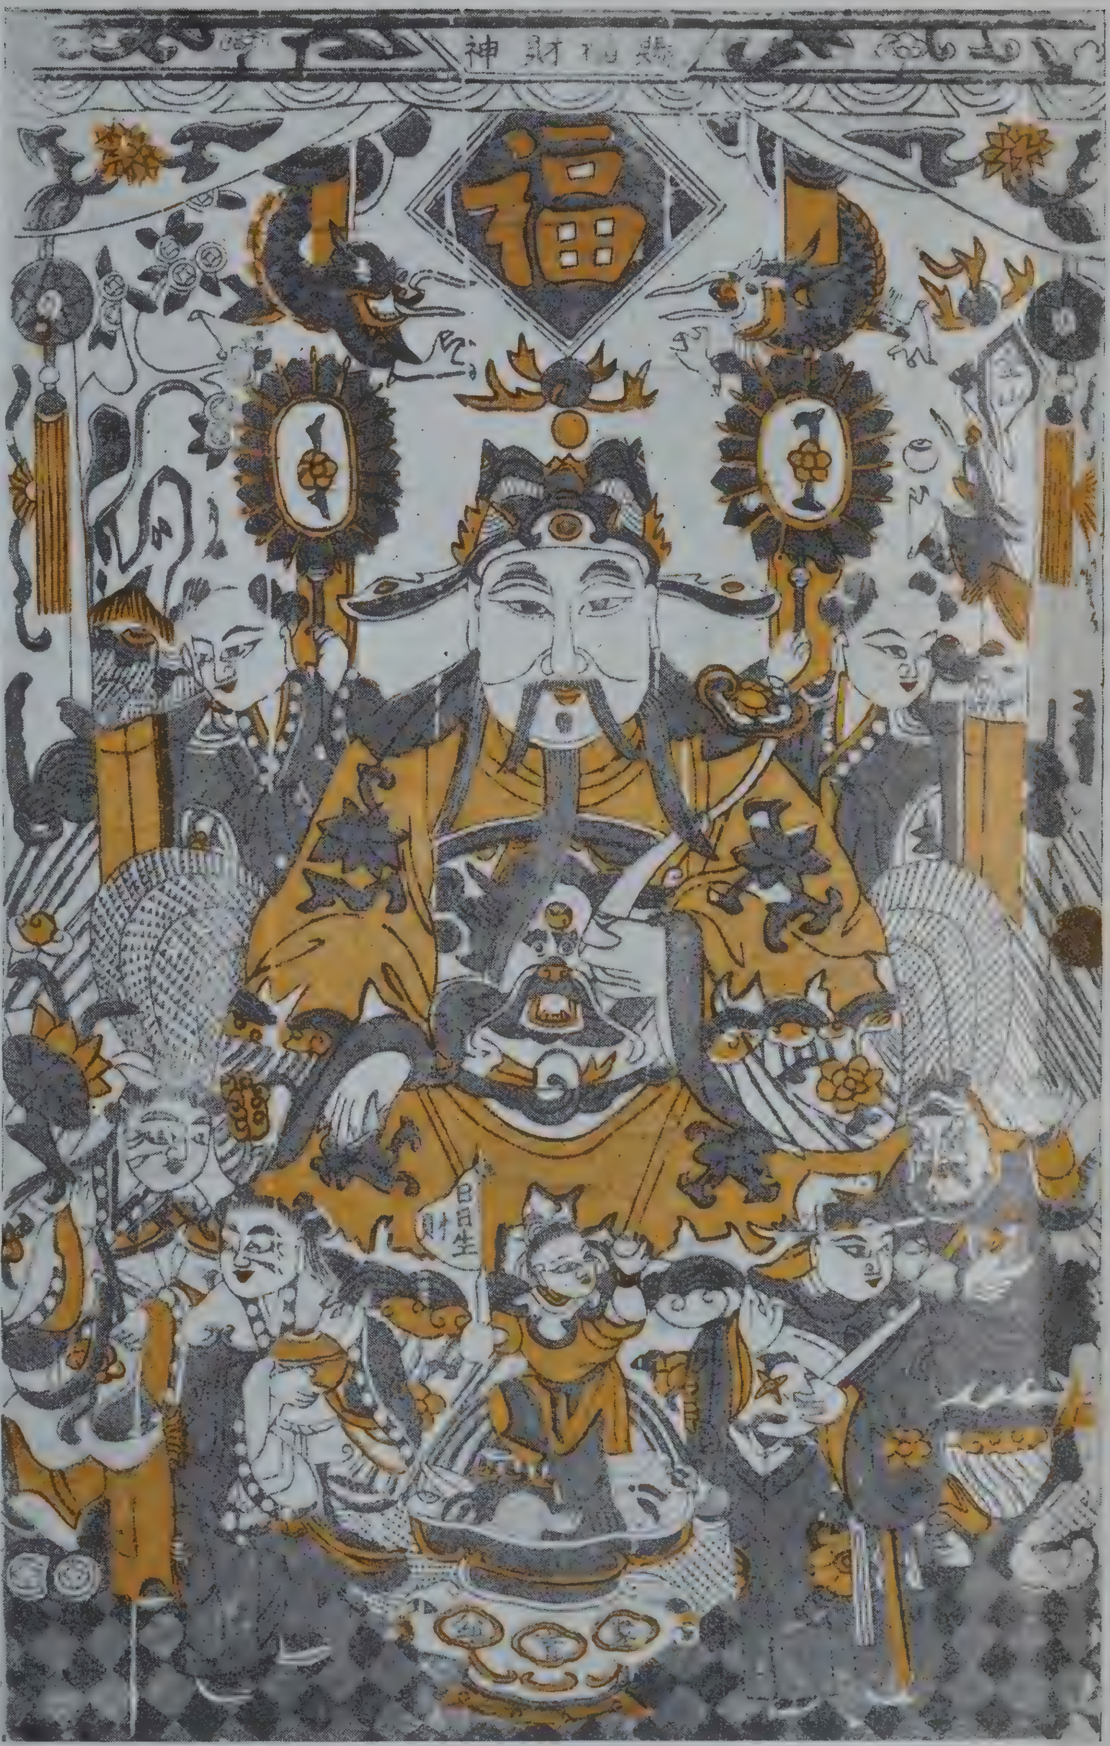
This god, when pasted on the back gate, insures that entrance against intruders.

This accounts for the frantic haste in which the men rush here and there, trying to collect debts and equally anxious to avoid creditors until collections are made.

If one cannot meet his financial obligations, he must secure a new loan from another person, and as there is no law, he may be forced to pay as high as 50 per cent or more per annum. To dun a debtor on New Year's Day is not good form; it is not uncommon in parts of China to see an anxious creditor carrying a lantern in broad daylight, seeking to find his debtor, on the assumption that, because of his carrying a light, it is still the night before, and he may with propriety extract payment if he can locate the debtor.

Happy is the man with debts who can outwit his creditor during those last precious hours, for he can then sail along in peaceful, undisturbed waters for another year. Many a sympathetic newcomer to China has had his heart and pocketbook touched by the tragic tale of the death of a father or a mother of one of the family servants. Money must be had for the casket and the proper burial ceremonies. Later, it dawns upon the foreigner that Chinese New Year is approaching and money for debts is imperative. The writer has a gardener who was formerly employed by two other Americans. This boy's father has thrice died a tragic death just before Chinese New Year, the writer, though a resident in China for many years, being one of the three foreigners to be thus hoodwinked.

The night before New Year's finds the house swept and garnished with red mottoes and 'happiness' placards and banners and pictures of gods. The members of the family are all dressed in new clothes or clean ones. New gate gods for protection have been pasted on the gate and the doors sealed with 'good luck' papers. The family very ceremoniously places a new kitchen god above the stove to preside over the household for another year. Though the ensuing feast is to the god, the members of the family noisily and rapidly eat the delicacies.



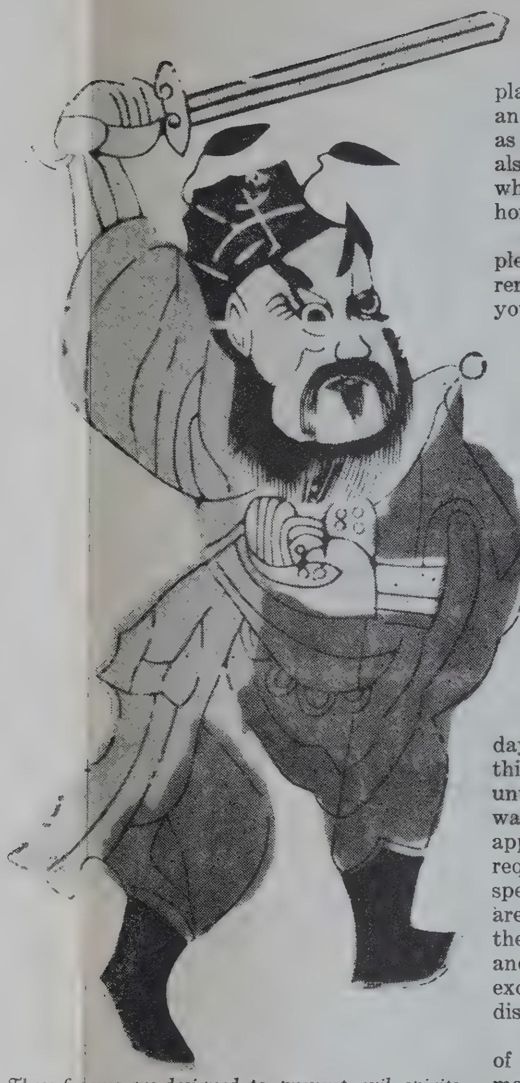
'Tsai Sen,' god of Wealth, is displayed on New Year's Day in nearly every home in China, with the hope that this deity will bestow prosperity and even sons.

There are certain very important customs to be observed.

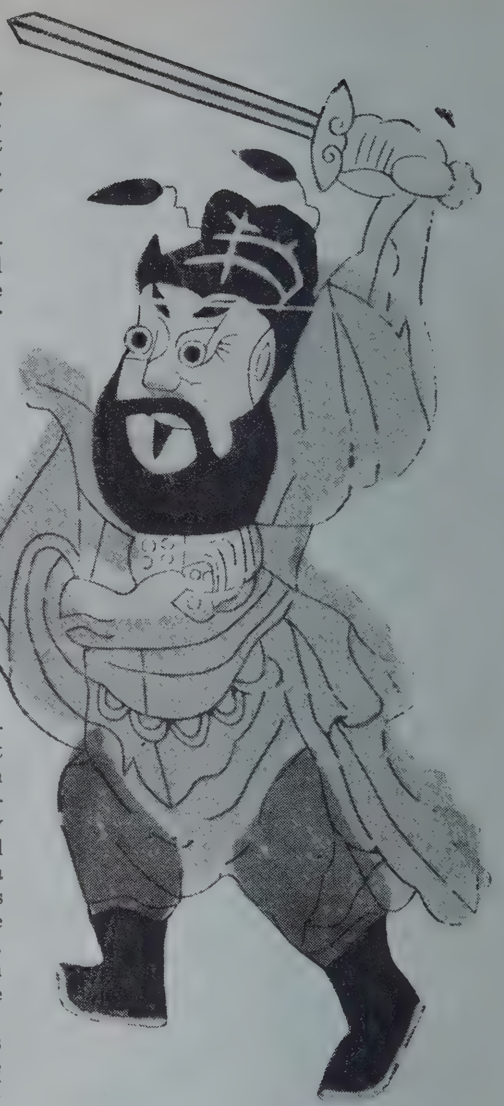
Great care must be exercised, for if, anything is broken on this night, a great misfortune will befall the family. Also one may not use scissors or sweep floors, for the good luck of the family would be cut off or swept away.

The New Year arrives with a bang. Everyone from richest to poorest must set off firecrackers. Tucked under one's covers, one can easily imagine that a decisive battle is raging through the streets of the city. On this day and for at least two weeks, nothing in the form of work is done that can be left undone. All industry absolutely ceases. Every shop is closed. There is a complete cessation of all business.

Only amusement places are open.



These figures are designed to prevent evil spirits from dropping down from the sky into the courtyard.



One tries in vain to secure labor. It simply cannot be had. The whole Chinese people as a unit stops to take a long breath after eleven and a half months of monotonous industry and labor for seven days a week.

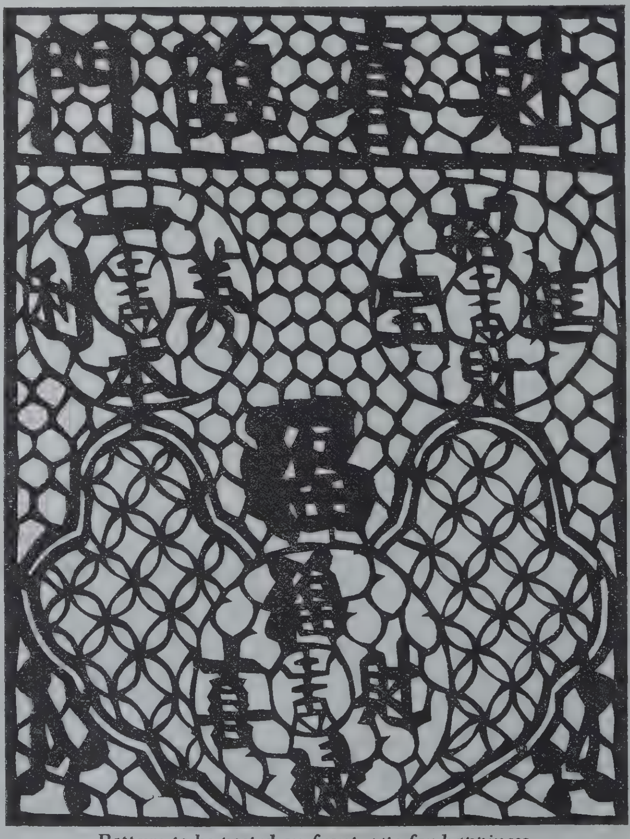
All the excitement of a Christmas morning prevails. It is a true family reunion, for custom demands that, unless it is absolutely impossible, every male member of the family *must* return to the home of his father to perform his obligations to his ancestors and parents. All exchange New Year Greetings. The children dance round in gay new clothes and pop firecrackers.

Early in the morning the children perform their filial obligations by bowing to the floor three times before their parents, who give them the proverbial *Ya Swei Chien,* or good luck money, and usually some words of advice. The male members of the family perform their obligations to their ancestors. It can be truly said that in China the dead rule the living in thought and custom. At Chinese New Year the dead require special attentions. It is thought that at this time the ancestors return again to earth to be at the family reunion and to eat a good home meal. The ancestral tablet is therefore taken out and placed on a table. Incense is kept burning and special food is placed upon the table, as well as plenty of rice wine. Incense must also be placed upon the ancestor's graves, which are usually on or near the family homestead.

After the family obligations are completed, the elder members of the household remain at home to receive guests, while the younger male members, whether father or son, set out to make calls upon all those who position or custom decrees should receive this social token of respect. No people are such sticklers for proper form as the Chinese. Bows and greetings are exchanged, refreshments are served, old friendships are renewed and new ones made. These obligatory calls are not without other good results, for often these visits heal, in early stages, alienations which might otherwise develop seriously. Two whole weeks are allowed for this round of visits.

The god of wealth celebrates his birthday on the fifth of the first month. At this time he is supposed to be in an unusually magnanimous frame of mind toward people on earth, and, if properly approached, is sure to grant personal requests. Shopkeepers, therefore, give a special birthday dinner to which the clerks are all invited. Incense is burned before the picture or image of the god of wealth, and all are required to bow before him except those whose services are to be dispensed with for the coming year.

This is the time for notifying employes of change. The Chinese have many polite methods of imparting this unpleasant news. If the master serves one a chicken head or invites one to sit in a position of honor, it informs him that his services are no longer needed.



Pattern to be posted on front gate for happiness.

The final celebration is the 'Lantern Festival,' on the fifteenth of the first month. Innumerable paper lanterns, made in the forms of birds, rabbits, beasts, or fish, are prepared beforehand. When night falls, all shops are bewildering in a maze of waving lanterns. Every pedestrian also carries a lighted lantern as he threads his way through the crowded streets.

The effect is enchanting. A long dragon made of cloth and tinsel and spangles, each section of which is supported by a strong and healthy young man, invisible except from the knees down, writhes and prances its way through the crowds. The children are hilarious; firecrackers are popping here, there, and everywhere.

But as the night advances, the lights begin to flicker and die; the crowds reluctantly disperse, and one-fourth of the human race again settles down to ceaseless toil for seven days a week in a land where vast numbers subsist on one and two meals of coarse food a day.

On the Yukon

(*Continued from page 14*)

played white and furious. The cold frosts of thousands of winters had split this rock in twain; and here is room for a man to stand out of the wind while he casts. In swift water like this it takes more skill to land such a beauty; for the strength of this fish is amazing as it fights to the death. But when the great gasping blue body comes to the net, there is little fight left. When you attempt to take it from the hook, however, it muscles up in your hand, squirming like a snake or an eel, as it attempts to free itself.

Cold, strong, and vigorous, the grayling thrives in the icy waters of glacier streams. As a food fish it surpasses all others in my opinion. The delicate flavor, the ease with which the bones are disposed of, make it a counterpart of the trout in that respect. We cooked them in rich yellow butter and ate great quantities. One day we built a small fire at the edge of the canyon. After heating the skillet, we perched on stones and began fishing. As fast as Jim tossed me a catch fresh from the stream, I cleaned it and placed it, still quivering, in the pan of melted butter. The result was gratifying. Browned to a crisp and eaten with wholesome bread in the open high above timber line, they were relished beyond compare. Tea brewed from the icy waters of the Yukon completed the feast.

Early in the morning the summit of the mountain above our cabin would slumber in a drapery of silver mist. Below, in the ravines, everything would be obliterated by a mass of floating cloud—the whole world seemed to float in gray opaque vapor. Stormless, silent, monstrous though light, filling the Yukon valley without disturbing a twig, winding and closing, turning with a wisp of breeze, sliding noiselessly down a creek bed, a cloud cascade possesses solemn grandeur. As the day advanced, the rugged, barren ranges would loom cold in the distance. Peak after peak would glitter dazzlingly in sunrise tints, until light flooded the entire chain, gliding slowly to the wooded gorges and flat lands at its base.

We always walked after the evening meal, Jim with his small shotgun and a pocketful of Remington shells. On a rocky peninsula near the camp we found many things of interest. The rock ran sheer into the water at an abrupt angle. It was high and barren, except for moss and lichen and a very scrubby form of spruce at the base. A thick growth of juniper covers the ground of this peninsula around the rocky hill. Among these stand some of the most grotesque figures that one can imagine. It is goblin world. There are tree trunks a foot in diameter and only eighteen inches tall, ugly dwarfs!

At the edge of the water we found a rotted net with a two-inch mesh. Someone had sought to ensnare grayling at a time when they refused to bite. The net cord was brownish yellow and slimy. It fell apart as we lifted the pole to which it was attached. Wild ducks whistled overhead. Ptarmigan, those lovers of the high places, whirred out from under our feet like partridge. The young were beginning to turn white, but the old bird remained brown. She stood her ground until all had fled, and then she ran into the low bushes uttering peculiar turkeylike cries in an attempt to lure us after her. We tried hard to locate wild sheep and goats on the high alpine meadows but were unsuccessful. We did hear coyotes howl, though, and Jim saw one, nose to ground, chasing something on the high bench back of camp.

January

KATHERINE GARVIN

IN THE FIELDS I was circled by a ring
Of ground-mist hallowed by the sun's gold light.
Above me domed the heavens, all their height
Pale, like a wet pearl shell, and quivering
With atmospheric life. The smell of spring
Was in the air. Though trees were sparkling white,
Rigid with frost and dazzling to my sight,
Above and all about I heard birds sing.

From shining, misted, round eternity
They sang, and all life bubbled at their throats;
While youth so met with age in January
That death and birth could harmonize their notes.
So some sang 'Weep,' and others sang 'Rejoice,'
But from two ends rang out one final voice.

After the evening walk we would return and light the camp fire in front of the cabin. There is real magic in a camp fire, that affects everyone. Even the middle-aged city man, heavy and self-satisfied, to whose nature the atmosphere of commonplace is as necessary as ice water to a grayling, feels sometimes, and instantly crushes back, a strange impulse to go out to the woods and start a fire. Even his life of dull and sordid routine has not quite repressed the savage in him. I wonder whether our oldest racial memory may not be that of fire? I wonder whether any other odor takes us farther down our ancestral past than the smell of cedar burning.

Jim and I have built many camp fires. Always we seek out the cedar if possible. The stinging sweet smell of burning cedar holds a cherished place in the memories of thousands of the brethren of the open road. The real woodsman guards his damp-proof match box more carefully than his purse. All the gold in the world will not save a man in an Arctic blizzard. But a little half-match may bring him through. The scout is proud of his craft in igniting a spark from friction, but he much prefers a match, particularly in wet or windy weather.

Life in the Yukon is simple. Needs are few. We rise with the sun. We go to the foaming creek to wash our hands and faces. The plunge into the icy water is painful but the reaction is beneficial. We breath deep of the intoxicating air of high places.

Ours was a short stay. But there are old-timers in the valley who live the simple life the year around. The old Sourdough is a queer animal. With all the world to choose from, he will select for his dwelling place a spot so buried in the mountains that his only visitors are those who wander there by accident; so encompassed by rocks and trees that his only outlook is the sky above him. Bush rats scamper up and down the roof, coyotes howl outside his door of nights and gophers trill their shrill staccato notes by day. Dawn is his alarm clock. The pangs of hunger are his dinner bell; the shades of night his curfew.

We have not space to tell of the beauties of the Yukon River between White Horse and Dawson, the old city of the Klondike. We did not follow the old trail of '98 covered by so many gold seekers thirty years ago. We traveled in easy stages by way of the White Pass and the Yukon railroad—parlor cars and comfort all the way. We took the steamer *White Horse* down to Dawson, a distance of 460 miles.

We had much costly tackle on this trip and it was a problem to care for it properly during our various moves from stream to lake. The rods were carried in an aluminum case. Flies, leaders, lines, and lures were kept in a Green tackle case. We made this selection after due thought. It is built of treated bone-dry cypress, covered with gauge steel and reinforced with steel angles and heavy hardware. We checked it through when possible, and it withstood the knocks of travel to which it was exposed. The wooden inner box eliminated the sweating damage usually caused by salt sea air.

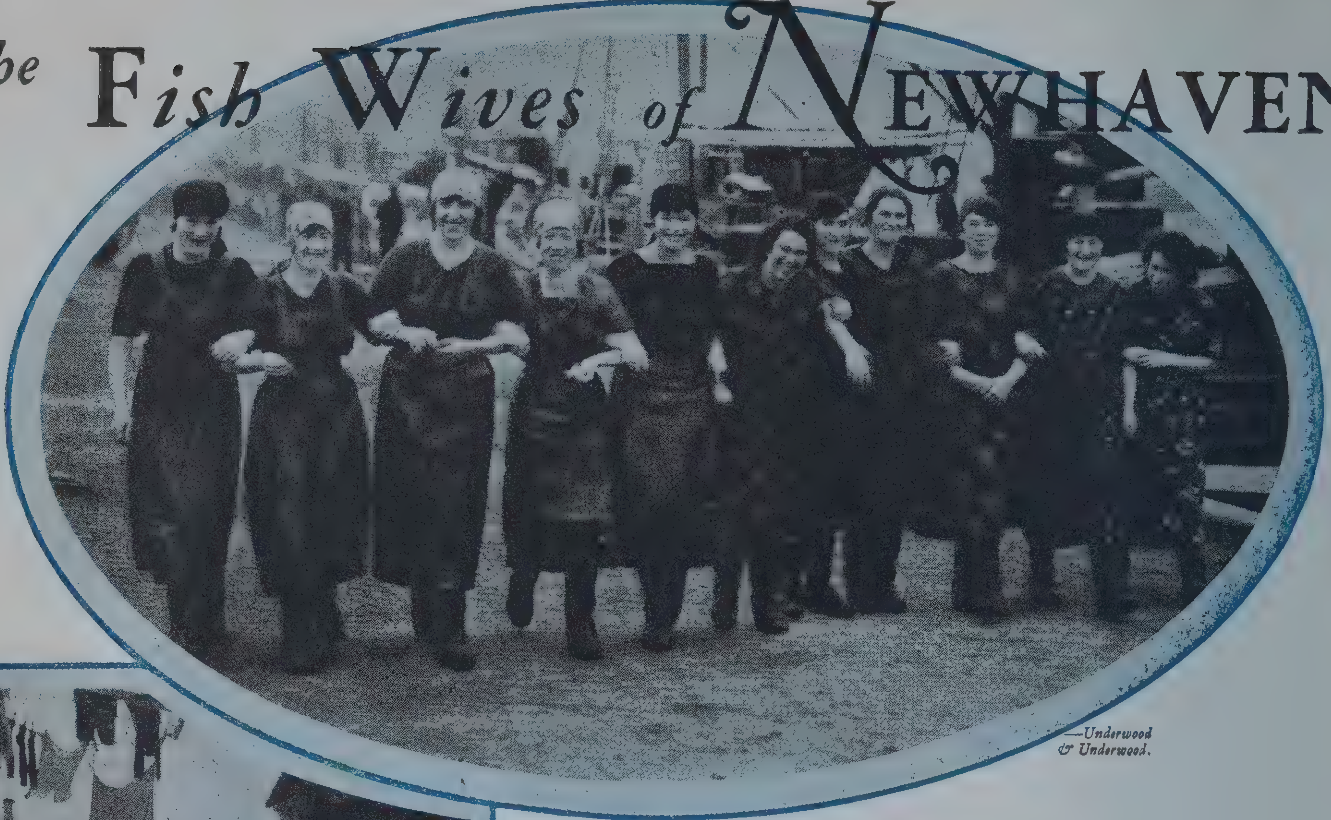
* * *

We are back to the daily round of the average civilized being. Jim is in school and I am at work. Jim comes home and bursts into the study.

'Gee Dad! How'd you like to be up at First Portage tonight? I know I could catch a bagful of grayling.'

I smile but do not answer. I can hear the roar of canyon waters, feel the misty spray of the cataract of the First Portage, and smell the freshness of the early morning breeze high in the Alaskan mountains. Another odor I fancy is that of simmering mulligan. But the aroma that rises in the delicate texture of the steam from a coffee pail is more seductive than any. Camp-fire coffee is too vigorous a liquor to be associated with indoor life; it requires the stirrings of appetite at three thousand feet's elevation. In fancy I am flicking an artificial fly over a whirling spray of water by a certain lichened rock. A swirl of violet, a savage tug—but what's the use? We're three thousand miles from the Yukon!

The Fish Wives of NEWHAVEN



—Underwood & Underwood.

—Ewing Galloway.

By PAUL TYNER

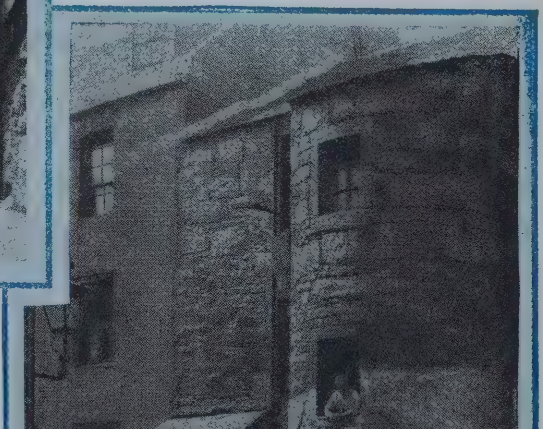
Oval—
Scottish fisher girls taking a respite from work along the boat docks.

Left—
Street in a fishermen's settlement along the Firth of Forth.

THE visitor to Edinburgh cannot fail to be struck by the frequent appearance in the streets of women who go about in the residential districts selling fish.

Remarkably hale and hearty these women appear. There is even a touch of arrogance in their easy stride and their assured facial expression, as of beings apart from and somewhat superior to the common herd. Yet this touch of dignity is charmingly combined with an air of confiding amiability free from assertiveness. These fishwives are plainly to this manner and expression born, as they are to their costume also. What is more, as it proves, they have come into both dress and manner by right of long descent.

'Are these women Scottish?' I asked an Edinburgh woman.



—Ewing Galloway.

Homes of the fisher folk near Edinburgh.

'They are Scottish and they are not,' she answered.

'That is to say, they are the famous Newhaven fishwives, and Newhaven is a little fishing community on the shore of the Firth of Forth included in the corporation limits of Edinburgh since the capital city absorbed the old borough of Leith, Edinburgh's port; Leith had previously grown all around Newhaven and absorbed it. Although Scottish by birth, they are descended from a people who came to Scotland hundreds of years ago. Some say these strangers were Danish, others Norwegian or Saxon.'

This vague uncertainty as to the origin of the dwellers in Newhaven I found prevalent, even on the borders of the village itself. And yet it should not have been difficult to hit on the truth. Surely I had seen this very costume on the banks of the Zuider Zee and along the wharves in Amsterdam. Has it not been immortalized also by the brush of Frans Hals and by other Dutch and Flemish painters? All that was lacking in it was the wooden *sabots*, so handy for the kiddies to set sailing on a pond when not really needed for foot-covering!

This guess was verified by a little investigation. I found that Newhaven (it is spelled as one word, like our Newburgh), dates back to the middle of the 15th Century, to a time well antedating Columbus' discovery of America.

Accepted tradition has it that its first settlers were refugees from Flanders, which with all the Low Countries suffered extremely from oppression during the Thirty Years' War waged against these 'heretics' by Charles V, Emperor of Spain and 'Lord Paramount of the Low Countries.'

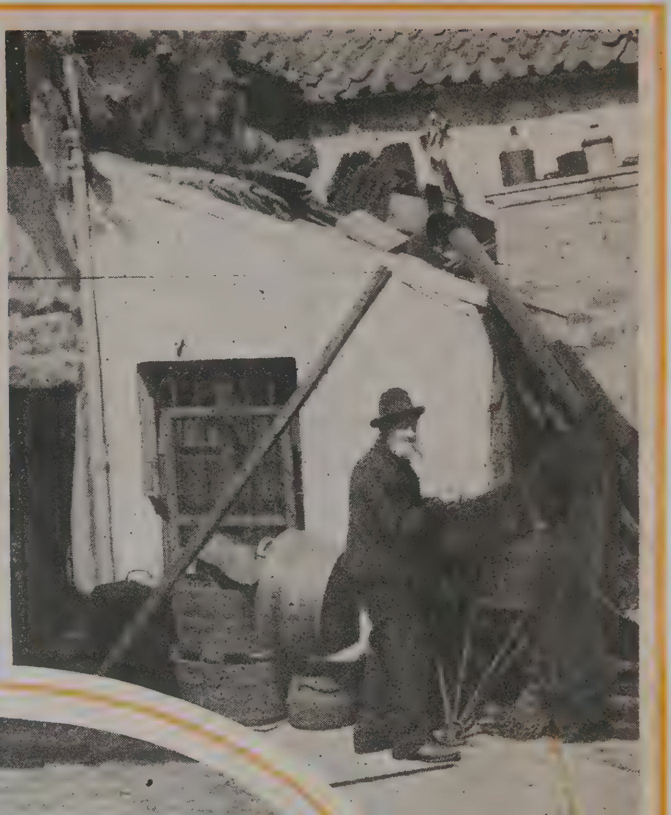
As sea fishing was the habitual occupation of many of these exiles, on settling in Scotland they naturally turned to it, their proverbial hardihood and diligence giving conspicuous example to British fishermen and revealing new wealth in British waters.

AMONG many evidences of the Flemish colonization of Newhaven was the institution, as early as 1572, of a 'Free Fisherman's Society,' with careful rules and provisions for mutual benefit. These rules were plainly an adaptation of those of the ancient Flemish trade guilds, the adjective *free* being meant to mark their own sense of deliverance from Spanish despotism. Observant travelers are sure to note among the people of Newhaven, as I have hinted, certain undoubted resemblances to the Flemish and Dutch fisher folk in the matter of village customs, idioms, family names and costumes, marked, as already remarked, in the dress of the women, and only less so in the kiddies, who seem like rosy-cheeked Dutch dolls. It is marked, too, in the wide trousers and blue caps of the older skippers hanging about the docks.

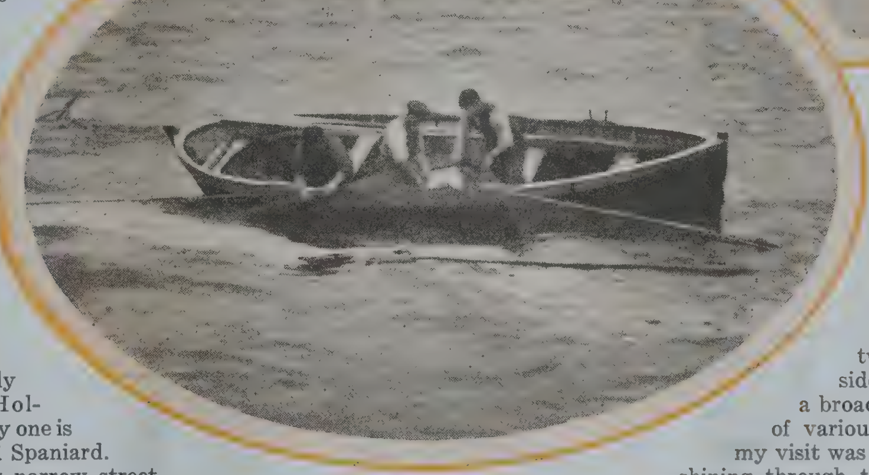
Like the Flemish women these Newhaven folk are noted for their interest in elaborate collections of crockery, plants, and old furniture, and for their thrifty habit of making special provision against the time when daughters leave home as brides. The wedding processions and celebrations at one or another of the little 'hotels' along the shore are also similar to those of the Dutch. The resemblance is also marked in the matter of hair and complexion, the women being distinctly blonde like any typical Hollander—although occasionally one is found as dark as the typical Spaniard.

New Lane is a typically narrow street mounting a gentle slope and lined on both sides by ancient two-story stone cottages with outside stairways. Often these are occupied by a family on each floor. The lane itself—being a thoroughfare only for those living in it—is the scene of much of the domestic life: women, young and old, washing and gossiping, and children playing. The dwellings would seem to be far from sanitary; but the fresh salt air off the sea breathed by the inhabitants, who spend most of their time out of doors, evidently counteracts the indoor stuffiness. At any rate, the toddlers are lively, chubby, and rosy-cheeked, and the women strong and agile. There are about a dozen such lanes or 'closes.'

In these times, as a fisher family accumulates a little money and seeks to get up in the world, it is likely to move out of the little two-story house into a flat (or as the Scotch call it, a 'house') in one of the tall stone buildings of Newhaven Road. It was in such a flat, one flight up, that I found good Granny Ramsay-Johnson surrounded by children and grandchildren, with a great-grandson in the offing. Granny has been a fishwife in her time and comes of more generations of fishwives and fishermen than she can count. She recently celebrated her 94th birthday. It is a joy to hear her reminiscences of happenings in Edinburgh sixty to eighty years back. From her sixteenth year, she had been accustomed to attending the fish market on the shore in Newhaven every morning before sunrise, obtaining her supply of forty or fifty pound of fish; packing it in her creel with top for cleaning knife, board, and scales; placing it on her back and trotting off two miles to Marchmont Street in Edinburgh to serve her customers. Her mind bright as a button, her eyes twinkling with genuine humor, she expresses with deep interest her opinions on the events of today as compared with the happenings of more than half a century ago. It seems very likely that she will fulfill her prediction of rounding a century.



—Ewing Galloway



Above—
This Scotch fisherman has devoted all his life to his industry.

Oval—
Hauling in salmon nets, off the shores of Scotland.

The fish market at Newhaven is a sight well worth getting up early in the morning to behold. Scores of small boats bearing catches of silvery herrings from the nearer waters of the Forth line the big semicircular dock. Many of the fish go directly to the curing establishments to be turned into 'kippers.' Wharves on the other side of the market accommodate larger steam vessels, either the trawlers themselves or the vessels to which they have transferred their catches at sea. These deep-sea fish—halibut and sole, haddock and cod—are all neatly packed in stout boxes holding about fifty pounds each. They are quickly transferred to the shore, and from the shore to low platforms in the interior of the substantial brownstone and steel building, the openings of which are equipped with great steel venetians, or folding shutters.

All sales are by auction. Buyers gather about some twoscore stands at the sides of the building, leaving a broad way for drays and carts of various sorts. The morning of my visit was a foggy one. The lights shining through the yellow mist gave the scene an eerie aspect. Hurrying and scurrying dealers and buyers seemed like phantoms. Business on the market is entirely wholesale, of course; but a fisherman takes pride in favoring a friend with a fine sole or a big slice of choice halibut—just as a gardener might present a choice rose, or an author his book. Among the most interested attendants at these sales are hundreds—often thousands—of sea gulls which circle over sea and shore, or dart hither and thither, uttering their pathetic moaning cry. It reminds one of the old-time cry of the fishwives, to which Lady Nairn has given metrical setting:

'Wha'll buy my caller herrin'?
They're bonnie fish and wholesome fairin';
Wha'll buy my caller herrin',
New drawn frae the Forth?

When ye were sleepin' on your pillows,
Dream'd ye aught o' our poor fellows,
Darklin' as they faced the billows,
A' to fill the woven willows?
Buy my caller herrin'
New drawn frae the Forth!

Wha'll buy my caller herrin'?
Oh, ye may ca' them vulgar farin';
Wives and mithers, maist despairin',
Ca' them lives o' men!

Una, Their First Child

(*Continued from page 2*)

—Culver Service.
Fireplace in the dining room of the 'Old Manse.'

made. The unforgettable wonders of the Atlantic trip came and passed, and the fascinating strangeness of foreign life began. Una and I absorbed it hand in hand, but our reactions differed. She sipped the new draught meditatively but I drank without drawing breath. Soon she had a piano; books interested her; the mysterious and beautiful mother-daughter period set in. My father, with amused patience, oversaw my vagaries. The baby, Rose, was the focal point common to us all.

Before long, however, the Liverpool climate so affected my mother that she had to seek the soft air of Portugal and Madeira, and of necessity take the two girls with her. In 1855 the three embarked for Lisbon, and nearly a year had passed before they returned. Una was then in her thirteenth year, and she seemed to me, when we first met again, a woman grown. She had acquired a certain poise and dignity in the society of the little Lisbon Court (to which John O'Sullivan, our old family friend, and then Minister to Portugal, introduced the three). She had lived a life of which I knew nothing. But after a day or two, the strangeness wore away, and we were full sister and brother again. She had many wondrous tales to tell me; a new intimacy began. Children do not understand nor recognize time—it is but a modification of outward costume. If Una now gave me more than formerly, it was because she had more to give; but it was all gold from the Una mint, with her stamp upon it. We voyaged to uncharted seas, but still in the same ship.

The horizons of personal romance, however, had not risen upon her. Nor did she find intimates among girls of her own age; her closest friendships were with much older persons. And when we left England for Italy, her imagination was carried captive by Rome and Florence. The spirit of that mighty past seized her; she felt, behind the ruins and the art, the life that had begotten them. We had added to our family a young American woman, a college graduate, in the capacity of governess, though in fact it was rather her supposed pupils who governed her. She was a very good and agreeable young lady of twenty-two or -three, full of the recently acquired learning of the schools, though of life and realities she knew nothing whatever. The children loved and respected her, but couldn't help dominating her; nor did she struggle for the mastery. She was, at any rate, a convenient companion for Una in exploration of the city, Una the elder and the guiding mind of the two. She often, unawares, provoked Una's sense of humor—an arch and playful mischievousness. At other times their conversation became much too recondite for my comprehension, Rome, to me, being a prodigious playground, with no serious side to it. I wandered away with Edmund Thompson, son of the painter who had made a portrait of Hawthorne two or three years before; Edmund was a fanatic for butterflies, I for shells; history, legends, pictures, we heeded not, though I had a strong love of statues. But Una had all Rome by heart, including the ballads of Macaulay and the poetry of Byron. Edmund, by and by, revealed to me, in awful confidence, that he was in love with Una, but I was never to let her know. I never did, and she never suspected it, and for his part, he never betrayed it; boys of twelve seldom do.

Una, in white, was a figure in the Roman carnival. She was a slim girl, rather tall for her age, and on her head was piled a great coil of red-gold hair, which, loosened, would fall to her knees. Her gray eyes softened and kindled; her lips were rather full, but delicately moulded. Hers was a face expressive of all moods of sensitive maidenhood. The courtiers of the pageant tossed their bouquets and sugarplums till her carriage was overflowed. It was her first encounter with the world, and a triumph, though she didn't know it, for it was the spectacle, not herself, that preoccupied her.

* * *

The coming of the dangerous Roman summer sent us north to Florence, where we lived a sparrow's flight from weird little Elizabeth Barrett Browning and her tumultuous husband. Our abode was an ancient one, looking down from an historic tower on the valley of the winding Arno; its more than forty shadowy rooms afforded each member of the family a private suite, with still much to spare. Una's apartment, solidly built of stone, vaulted and groined, had its haunting ghost, a tragic wraith, with which she communed without fear; but with the spiritualistic yearnings of Mrs. Browning she evinced small sympathy, sharing rather the common-sense scepticism of Robert Browning and her own father. Our Yankee governess turned out to be, much to her own distaste, a 'medium,' and there were seances for a while. Day after day we would descend the hill, and passing the city gates, immerse ourselves, together or singly, in the delectable streets and galleries. Una became a Florentine, and almost forgot her Rome.

But by the end of October it was necessary to return to Rome, where Hawthorne designed to write the Italian romance he had been meditating, and then to pass through England on our way back to New England. By common report, October in Rome was the last month of danger from the fever; we took an apartment there in November; but Una, strolling in the Palace of the Caesars after six o'clock one evening, showed disquieting symptoms next morning, and was soon very ill. The local doctor—the best to be had—dosed her with quinine; months went by, and death seemed near; her mother was her only nurse. The doctor finally said, 'If the crisis is not favorable tonight, she must die.'

Her mother, alone in the chamber with the almost unconscious girl whom she loved, looked out from the window at the dark clouds that covered the sky, and, for the first time in the long weeks of sleepless watching, with despair. She struggled against it for faith and resignation. She had been faithful all her life. The moment came when she was able to say, 'I will not fight against God's will any more!' The heaviness passed from her soul, and when she went back to the bedside and touched the girl's forehead, it was moist and cool and Una slept naturally. No one who has fought the battle that Sophie Hawthorne won that night can read the story except with reverence.

Una recovered, but the effects of the quinine remained. For several years she was a semi-invalid; there were periods of her former brilliance and strength alternating with obscure failings, the spirit contending with the physical frailty. In her twentieth year, however, during her attendance at the Dio Lewis Girls School of Physical Culture, she seemed wholly restored to strong, vigorous, cheerful, wholesome young womanhood. In a blizzard that winter, facing a gale with a temperature ten degrees below zero for four hours, we walked side by side. I was in the prime of athletic condition, and at the finish she was fully as fresh as I. But in the subsequent years, trouble other than physical depleted her again: one blow after another fell upon her, and the stern ascetic regimen which her religious convictions demanded reduced her still more, till at the end hardly anything of her but the spirit was left.

* * *

After her mother's death Una, too, it seemed, was now done with the world. She joined a charitable organization of the Church of England, and was active and devoted in the care of orphans and destitute children. Rose unexpectedly married; I came to England and settled with my own family in Twickenham, near London; Una, in 1874, lived with me there, going off, now and then, on her charitable errands. She was contented in this industry, and laughed and chatted, and gave humorous descriptions of events, in her old manner; but in silent intervals the lines around her mouth would droop, and a brooding look dim her eyes.

Circumstances arose which made her feel she should visit America. She had the faculty of quietly taking care of herself; she packed her trunk and was off. Rose was living in New York with her husband and was about to become a mother; Una stayed with them at times, and met a young American, Albert Webster, who had written some stories which had such pith and originality that he seemed likely to stand high in our literature. He had a strong, simple, masculine nature, and his ambition was pure and lofty; he was, however, very modest as to what he had done, but single-minded in his resolve to do better. Una wrote of him to us with ardor, but intimated nothing of personal relationship. At the end of a few months she returned to us, her mood brighter and lighter.

After two or three weeks, a letter came to her from New York, in the marked, individual handwriting of Albert Webster. As I handed it to her there was a sparkle in her face; she held the envelope for a moment against her breast, and went to her room. That evening she gave me the letter to read, saying nothing, but with an eager look.

I remember the quaint formality of its beginning: 'My dear Miss Hawthorne: I am going to ask your pardon for the liberty of addressing you with a view to marriage.' It was like the reverent obeisance of an 18th Century cavalier. Several pages of manly, frank, innocent writing followed, expressing the sincere homage and worship of an honest heart. He would have spoken long before (he wrote) but that he had believed he had a weakness of the lungs, which might not justify him in offering himself to the woman he loved; but a recent medical examination had given him hope, and he was about to follow the advice of his physician to make a voyage to Honolulu. Should his hopes of cure be fulfilled, and her reply to his petition be favorable, he would immediately come to her in England. Meanwhile he would continue his letters.

The south parlor of the 'Old Manse.'

—Culver Service.

She sat before me as I read the letter; and when I looked up at her, I saw her bloom and burgeon as she had not done since the young days before the Roman illness, and with a radiance more exalted than then. This man was her true mate at last, and the felicity she had imagined and failed to find had come to her in an overflowing tide.

His promised next letter must be written on the outgoing ship and be mailed in Honolulu; it would not be looked for in England for more than a month yet. But she was joyfully busy in making her preparations, and in writing to his island address. They were letters which neither he nor any other was to read; but they were the utterance of a great soul, and as such their essence and perfume could not perish. Immortality enters into them, and they are known to the immortals.

A letter bearing the Honolulu postmark came at last; but I saw, as I took it from the letter carrier, that the handwriting was not Webster's. But Una, all alight, was at my shoulder, and there was no chance for temporizing; I gave her the letter, and she went back into the living room and sat down to open it. After a glance at the first page, she quickly turned to the second, and read it slowly, drawing a long breath. 'Yes—yes!' she murmured, a strange smile touching her lips. In those moments, I suppose, she had given up her hopes of earthly happiness, and realized that the warmth and beauty of life were to be found only in another world. Her hands fell in her lap; she raised her head with a blind look, and presently got up and went to her room. I didn't see her till the next day, when she gave me the letter. It was from a friend of Webster's who had made the trip with him. Webster had died on the trip; he would be buried on the island. A package was to come to her, containing a few personal things.

She made no complaint; she did not avoid speaking of Webster, but as if he still lived. She had cast her burden upon the God in whom she trusted, and did not let it weigh on us. By and by she resumed her church affairs, and was received formally into the church to wear the plain dress of a sisterhood. After two or three months, her rich auburn hair was gray. She still dwelt with us, but was often absent on charitable duties. I removed to Hastings-by-the-Sea, and she then took up her abode with the sisterhood at Clewer, visiting us from time to time. By entering into the destitute lives of others she kept herself from self-pity. Her eyes could still grow luminous with wit and humor; and I thought that, like our old friend Elizabeth Hoar, who had also lost her lover on the eve of their wedding, she might outlive the wound.

We had not seen her for some weeks, when I got a telegram from Clewer; I arrived there about midnight, and a lady who met me at the railway station said, 'You are too late.' My sister had died that morning, and I found her body, covered with a white sheet, in a little cell-like room in the sisterhood building.

Here is that poem of hers that I spoke of:

'I saw dead sunshine, beautiful in death:
Wrapped on its bier in Autumn's yellow shroud;
Gone was its life, that breathed with sunshine's breath,
And in green myriad leaves had sung aloud.

Along the road a golden impress left
Recalled its glory to my lingering eyes,
A tender memory, not yet bereft
Of sunshine's soul, which from its grave would rise.

Farewell, lost splendor, warmth to life and heart!
Above thy tomb bows winter, hoar and chill:
But my prophetic fancy stands apart
And sees thy springtime green on field and hill!'

Boys' Commonwealth

(Continued from page 3)

'It's so high,' he protested. 'I'll fall off.' His bed previously had been a pile of rags.

Untruthful, unmoral, profane—almost every derogatory adjective in the dictionary might be applied to Raymond. He came to the Commonwealth after robbing his uncle one night while he slept, the uncle only escaping death because he awakened in time to push a revolver away. Raymond resisted the efforts of his associates at the Commonwealth for a long time. At last one night when Mr. Starr was reading a classic aloud he interrupted to give his philosophy on life.

'A fiend roasts the other fellow but is never roasted himself,' he declared. He hoped to be bad enough to be able to do all the roasting and escape personal punishment. It took a long time to straighten his views, but in the end he became a stanch Christian.

Not all the boys who arrive at the Starr Commonwealth are 'bad.' In fact, none of them are in the opinion of Floyd Starr.

'There is no such thing as a bad boy,' he declares. And where he has been left free from outside interference by courts or parents, he has proved his theory.

BOYS who come to the Commonwealth may have an abundance of 'misdirected energy,' but they are never bad. The old belief of one rotten apple spoiling the barrelful has no place in Floyd Starr's scheme of things. 'With apples, yes,' he says. 'But with boys, no. Especially when the boys have learned from experience how much more fun it is to be good than bad.'

This 'fun in being good'—there's something new. Lewis' mother had died in a large city hospital. His father—it was just before Christmas—took him downtown to see the toys in the store windows. While Lewis was standing enraptured before a particularly alluring window the father slipped away. For a time Lewis was a ward of the city, drifting from place to place and growing more undisciplined all the while. At last he reached the Starr Commonwealth. Another Christmas came round. Lewis approached Mr. Starr rather hesitantly.

'Uncle Floyd, how much does a dinner cost?'

'Why?'

'I wanted to know if you wouldn't let me go without my dinner and I could send the money to a little fellow in Detroit who hasn't all the good things I have here.'

From the boy's question came one of the Starr Commonwealth's practices: one day of self-denial when dinner is omitted and the whole Commonwealth fasts. A tithe is taken from different funds, and the whole sent to some source for distribution among those less fortunate than the Starr Commonwealth members. One time the fund was sent to Rabindrinath Tagore, the great Hindu poet and philosopher (he has visited the Commonwealth twice) for distribution among flood sufferers in his native province. Again it went to newsboys in Mexico; again to children of a mission in Africa.

The Starr Commonwealth has grown with the years. Instead of one lone cottage there are now several, centering on the Emily Jewell Clark Memorial School building. Here are the classrooms, the chapel, the library and the splendid art collection which Mr. Starr has assembled for his boys. Art and music form an important and integral part of the Starr plan.

A regular course of scholastic training prescribed by the State of Michigan is followed. It carries the pupils through the ninth grade (junior high) and includes agriculture, music, manual training and expressional work.

One of the first things a visitor to the Commonwealth notices is the atmosphere of love in which it is bathed. 'Love' is a much misused word, and yet love is the only word which can adequately describe the Commonwealth. As one noted writer put it:

'The work is founded upon one man's love for unfortunate boys, his abounding faith in some innate spark or germ of goodness that abides either active or dormant in every boy, and his determination to create an environment of love and trust and beauty, a proper soil, if you will, in which this germ of goodness and purity will find its necessary nourishment, warmth and light for normal growth.'

The youth entering the Commonwealth for the first time immediately encounters this atmosphere of love. He is made to feel that he is part of a community. He is treated as an individual, not as one of a mass. Those with whom he comes in contact, his house mothers and teachers, are persons of refinement. Boyish energies are not restrained; they are directed into useful channels. Cultural development is stressed. Religious training is a vital part of the Commonwealth's work, but it is nonsectarian. Vesper services and chapel are held regularly.

The cottages in which the boys live were given by friends of the Commonwealth. Each has its own dormitory, its own pantry, living room and dining room. In the living rooms are large fireplaces, and shelves lined with choice books. Deep-seated chairs and lounges lend comfort. The dining rooms are attractively furnished. The boys (and this is another surprising thing to the average visitor) have table manners that no one need be ashamed of. Food is cooked in a central kitchen and delivered to each cottage. Meat has no place on the Starr Commonwealth diet; vegetables and fruit, many of them grown by the boys themselves on the Commonwealth farm, form the main dishes.

THE boys sleep on individual cots in the dormitories. There are no pillows; the sheets are clean and white, and the blankets warm. The boys make their own beds on arising, and this utilitarian task has been raised by them to a fine art. Each cottage is spotlessly clean. The house mothers in charge are all exceptional women, selected for their ability to understand boyish problems and direct boyish energies.

It must not be imagined that the youngsters of Starr Commonwealth are prigs. The reverse is true. They are normal, healthy, boisterous lads, active in games and sports, noisy at times, as all boys are, but withal frank, open in their actions, clean-minded and well-trained. They are proud of athletic and scholastic prowess; yet they are not ashamed to arise at Vespers and tell of good deeds they have seen others do during the day. This is one of their strong community traits, the desire to help one another. The youths are self-governing in all matters. They have a student council which administers their affairs with a judgment and restraint that would do credit to many an older body. There is no set penalty for any offense. For some breaking of rules the privilege of skating may be taken away; for repeated offense against table etiquette a boy may be deprived of accepting outside invitations until his name is again placed on the eligible list.

There are now some seventy boys at the Commonwealth. There is no endowment, and the Commonwealth 'carries on' by means of private subscription, the sale of Christmas seals, and proceeds from tag days. It costs about $400 to maintain a boy for a year; surely a small sum if considered as an investment in good citizenship.

THE fame of the Commonwealth is widespread. In England there is a school at St. Hilary modeled after it, which looks upon the Michigan organization as the parent school. Not long ago the children of St. Hilary's sent a gift of money for the purchase of some token of remembrance.

Much of Floyd Starr's time is taken in giving lectures in various parts of the world on the work he is doing. Much, too, it must be admitted, is taken with the ever-present problem of finance. Funds must be raised, and to do this many wearying trips must be made. But Floyd Starr is happy. He has the friendship and love of many boys; and he has the appreciation of many men. Nothing, perhaps, is closer to his heart than the message he received a few years ago from Rabindrinath Tagore, after the poet had visited the Commonwealth. And this message may well stand as the Commonwealth's valedictory:

'Amidst a desert of unprofitable days,' so wrote Tagore, 'my visit to your place has been to me like some oasis with its spring of the water of life. Other things of bigger dimensions will be forgotten but the memory of your little school will remain a part of my life to the end because I had a touch of truth there and I came away richer than when I visited the place.'

Great Figures in Fiction

(Continued from page 15)

the law has pursued him relentlessly. Society, discovering that he has been a galley slave, makes him an outcast. He can be secure only under an assumed name. He must live where he will not be recognized. He is the victim of the ferocity of villains like Thenardier, and of the upright sternness of such a guardian of the law as Javert. The error of his untutored years follows him as an old man through the sewers of Paris.

Whether the bitterness of such injustice as Jean Valjean endures can be wiped out by the charity of a bishop, accepting and applying the precepts of the gospel literally, may be a question for the psychologists. Romanticism dates itself in France from Victor Hugo: and the regeneration of a human being from the depths of despair or the gutters of degradation is a romantic thing. It is also, no doubt, a possible thing, and Jean Valjean is the great fictional revelation of that possibility.

Scotland's *Great* Stonemason

By VICTOR MITCHELL

NEAR the end of the year 1834, when William IV was king of Great Britain, there might have been seen in the old churchyard of Cromarty a tawny-haired, gray-eyed man, of massive brow and rugged frame, cutting inscriptions on the tombstones. This was Hugh Miller, the stonemason, and future geologist, plying the mallet, as he himself said, like Scott's 'Old Mortality.'

With the exception of Thomas Carlyle, Scotland did not produce a greater intellect during the 19th Century than Hugh Miller, writer, thinker, and man of science, whose opinion was sought by the world's most brilliant men; who, through his masterly exposition of the secrets of the Old Red Sandstone, revolutionized the world's knowledge of the works of the Great Master himself. He showed, among other things, that what we usually call the New World is in reality the Old World; that it arose from the mighty deep long before the part which lies on the eastern side of the Atlantic and comprises Europe.

In the landlocked bay of Cromarty, where Admiral Beattie's fleet found secure anchorage during the great World War, there rises from a green upland which overlooks the Moray Firth a pillar of red sandstone surmounted by a statue. This is the monument erected by his countrymen to Hugh Miller. Not far from the base of the pillar stands a humble cottage, with thatched roof and crow-stepped gables, in which he was born on October 10, 1802. During his boyhood he was dependent on a widowed mother who maintained herself by the 'sedulously plied but indifferently remunerated labor' of her needle. Much of his mother's sewing was in making garments for the dead, and in the earthen-floored room, by the open peat fire, the boy would sit on a little low stool in the winter evenings, while his mother sat on an oaken sea chest dressing a shroud or a winding sheet by the light of a solitary candle. Sometimes she would start up, and after listening intently declare that she heard mysterious sounds and rappings which foretold the death of someone; her own husband had been drowned at sea, as had many from the little town of Cromarty.

It was in such a weird environment that the boy's imagination was developed. At his birth the sage old dame who acted as nurse said that, judging from the conformation of his head, the child would turn out an idiot. He was only five years old when his father, a brave and hardy shipmaster, perished at sea. Long after everyone else had ceased to hope for the return of the mariner, Hugh might be seen on the grassy knoll behind his mother's house, looking wistfully out upon the Moray Firth for the missing sloop 'with the two stripes of white and the two square sails.'

Hugh Miller

When Hugh went to the village school he amused his companions with long blank-verse effusions of his own composition about sea fights, storms, ghosts, and desert islands, and later treated them to extracts from the life of Sir William Wallace, by Blind Harry, that ancient minstrel whose writings had also profoundly affected the imaginations of Robert Burns and Walter Scott. So much attention did the boy give to such things that he neglected the more solid paths of learning, and the schoolmaster considered him a hopeless dunce.

Meanwhile he had been 'learning to read in a book whose lessons he could not outgrow'—the book of nature. He loved to wander by the seashore at ebb tide and gather the shells and pebbles and strange little fish that he found there. In spite of the entreaties of his mother and other relatives he rejected the offer of a university education, and was apprenticed to a stonemason, as he wished to study in his own way during the winter months when work at his outdoor calling had ceased. His first work was in a quarry, and it was in this quarry, when tons of rock were riven by explosives, that he had his first glimpse of the hidden world.

When Hugh Miller became a journeyman mason he found employment at Niddrie, near Edinburgh, and here he began a poem of a supernatural cast, called 'The Boatman's Tale,' in which the influence of Coleridge's 'Ancient Mariner,' and Hogg's 'Queen's Wake' are traceable. He also sent an 'Ode on Greece' to the editor of the *Scotsman*, who promptly returned it. On his return to Cromarty he formed the project of collecting his fugitive verses, and shortly afterward they were issued under the title of 'Poems Written in the Leisure Hours of a Journeyman Mason.' They met with a success that might have turned the head of any rhyming artisan.

The 'Lines to a Sundial Placed in a Churchyard' was quoted in magazine and newspaper, and the author was assured that it displayed 'a refinement of thought, an elegance and propriety of language, that would do honor to the most accomplished poet of the day'; but Miller had the good sense to see that in spite of this laudation his compositions fell below the mark of good English poetry, and he resolved to devote his spare energies to the cultivation of prose.

Principal Baird, at this time one of the most eminent ministers of the Church of Scotland, was one of the first to stretch out a friendly hand to the Cromarty mason, and suggested that he might move to Edinburgh where there would be better opportunities for his advancement. Miller, in declining, said that the Scottish capital, with its historic and literary associations, appealed to him.

'I have sauntered,' he declared, 'for whole hours opposite the house of Sir Walter Scott in the hope of catching a glimpse of him; but I must achieve at least a little of what I hoped to achieve before I go to Edinburgh'; and this resolve he fulfilled. Soon after the appearance of his poems he began to work on a traditional history of his native parish. He soon had enough to fill a goodly volume, and Sir Thomas Dick Lauder, the author of *The Wolf of Badenoch*, who had formed a high estimate of his abilities, exerted himself to procure a publisher.

In the autumn of 1834, Hugh Miller was employing his spare time as a carver of epitaphs in the kirkyard of Cromarty, and in collecting geological specimens for a certain George Anderson, of Inverness, whom he calls 'one of the most thoroughbred geologists in the north of Scotland.' Some of the specimens he procured were exceedingly curious; they contained the petrified remains of animals that no longer existed except in a fossil state—bits of charcoal, pieces of wood, and nondescript substances which could hardly be referred to either the animal or the vegetable world. Thus, almost unrealized even by himself, his knowledge of the unrevealed in nature increased day by day.

Despite his literary aspirations—for at this time Hugh Miller did not seriously entertain scientific ones—he still finds himself at the age of thirty-two a journeyman stonemason. He had formed an ardent attachment for Miss Mackenzie Fraser, a girl of refinement and literary tastes, who had resided in Edinburgh in the house of George Thomson, the correspondent of Burns, but whom he resolved not to marry while he continued to earn his bread as an ordinary workman. He then began to entertain a scheme of emigration to America; and Miss Fraser's mother agreed, if nothing suitable turned up, to give up three hundred pounds belonging to her daughter, of which she had the life interest; and with this sum the two young people 'were to face the great wilderness.' Such was Hugh Miller's outlook when the agent of the Commercial Bank in Cromarty offered him the accountancy. Taken by surprise, he was at first inclined to refuse, but ultimately proceeded to the branch of the bank at Linlithgow to be initiated into the business. His spare moments were spent in correcting the proof sheets of the 'Scenes and Legends in the North of Scotland.' This was his first serious effort in prose, and he found a publisher in Adam Black, of Edinburgh, who had become convinced that the Cromarty mason, just developing into a bank clerk, was a man with a future. Leigh Hunt gave the book a kind and genial notice in his *Journal*, and it was reviewed by Robert Chambers no less favorably in his.

On returning to take his place in the bank at Cromarty, Miller applied himself with assiduity to his duties as accountant, and in January, 1837, he was married to Miss Fraser. At the conclusion of the wedding trip he set up his modest household at Cromarty. His salary was but sixty pounds a year, and the addition which he made to it by literary work was as yet small. An attic room was fitted with shelves, on which his few books and fossils, the nucleus of an extensive library and valuable museum, were arranged.

The first and last poignant sorrow that he experienced was the death of his first-born—a little daughter—and when he had cut the little headstone for his loved one, he never again handled the chisel. During the last few years of Miller's residence in Cromarty the question as to whether his supreme devotion should be to literature or to science often came before him.

'I may mention,' he says in a letter to Robert Chambers, 'that a geological chapter in my little volume of *Scenes and Legends* has attracted more notice among the learned than all the other chapters put together.'

Hugh Miller's next move was to Edinburgh to assume the editorship of a new biweekly newspaper, the *Witness*, which was to be the organ of the Free Church of Scotland. One day there appeared in the *Witness* the first of a series of articles under the title, 'The Old Red Sandstone.' There were seven in all, each occupying two or three columns. The Old Red Sandstone formation had hitherto been considered by geologists to be remarkably barren in fossils, but Miller asserted that he had 'a hundred solid proofs' that the fossils of the system were extremely numerous. Miller's reputation as a geologist was made. In this remarkable work the writer's imaginative power is characteristically exhibited. As one critic remarked, his fossil fishes swim and gambol in primeval seas, his stone branches bud like the rod of Aaron, and his forests, breaking from their sepulchers in the rock, grow green again.

The fruit of eight weeks' wanderings through England in the autumn of 1845 was his *First Impressions of England and Its People*. In Dudley glen he found himself surrounded with rocks containing marine fossils of the Silurian period amid the trees of an English woodland a hundred miles from the sea.

In the beginning of the following year a book was published under the now familiar title of *My Schools and Schoolmasters*. Its success was immediate and decisive. Famous writers were glad to meet Miller in a field from which controversy of every kind was excluded, and to mark his literary skill.

In another work—*Footprints of the Creator*—Miller endeavors to reconcile geological science with the Mosaic vision of the Creation. In a memoir written by Louis Agassiz, that great authority says he was so struck by the beauty of this work that he obtained permission from the author to publish an American edition. This was done at Boston in 1850.

In the autumn of 1856 Miller was working at the proof sheets of his last work, *The Testimony of the Rocks*, and in the pursuance of this task there was a feverish intensity which amazed his friends and saddened his wife. In this book Miller reconstructs his theory as to the Biblical aspect of the Creation, and while still reverently acknowledging that all was the work of the Great Master, he expresses the belief that the six days mentioned in the Mosaic narrative were not six natural days of twenty-four hours each, but six distinct periods in which the various stages of the divine work were accomplished.

Miller points out that birds make their first appearance in the footprints in the Red Sandstone deposit of the United States, namely, in the valley of the Connecticut. They were apparently all of the Grallae or stilt order of birds—an order to which the cranes, herons, and bustards belong, with the ostriches and cassowaries, and which is characterized by possessing but three toes on each foot. And in almost all the footprints of the primeval birds of the Connecticut there are only three toes exhibited, and some of these measure eighteen inches in length from the heel to the middle claw. These birds were almost as gigantic as the roc of Sindbad the Sailor.

'They are fraught with strange meanings, these footprints of the Connecticut. They tell of a time far removed into the bypast of eternity, when the great birds frequented by myriads the shores of a nameless lake, to wade into its shallows in quest of mail-covered fishes of the ancient type, or long-extinct mollusks, while reptiles equally gigantic, and of still larger proportions, haunted the neighboring swamps and savannahs; and when the same sun that shone on the tall moving forms beside the waters, and threw their long shadows across the red sands, lighted up the glades of deep forests, all of whose fantastic productions—tree, bush, and herb—have even in their very species long since passed away. And of this scene of things only the footprints remain—"footprints on the sands of time."'

It was while Hugh Miller was correcting the last proofs of *The Testimony of the Rocks* that an overworked body and brain were torn asunder under the strain. His nightly vigils told heavily upon him.

In a letter referring to Miller's last great work Carlyle said: 'There is forever connected with the very title of this Book the fact that, in writing it, the cordage of a strong heart cracked in pieces; that the ink of it is a brave man's lifeblood.' John Ruskin said: 'It seems so hard that a little overwork, a few more commas to be put into a page of type, a paragraph to be shortened or added, in the last moment, should make the difference between life and death . . .'

This was true of Hugh Miller, the expounder of 'sermons in stones.'

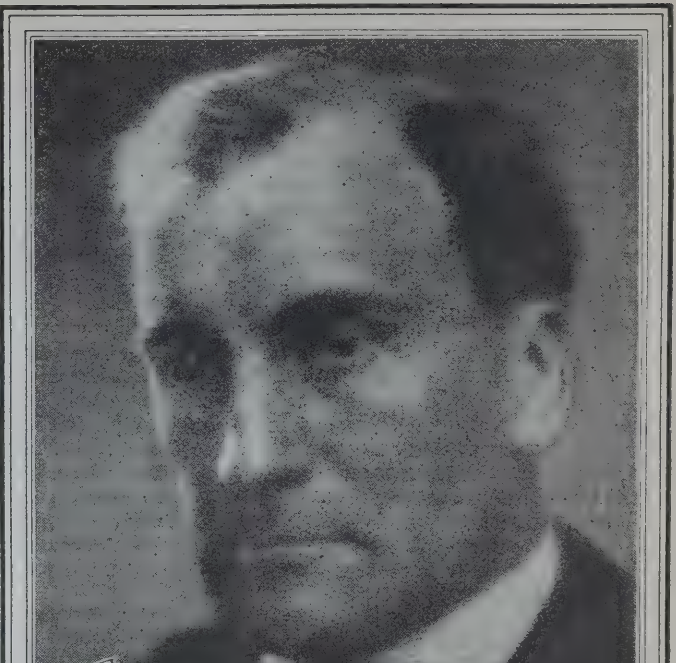
Neckties

CARL SANDBURG

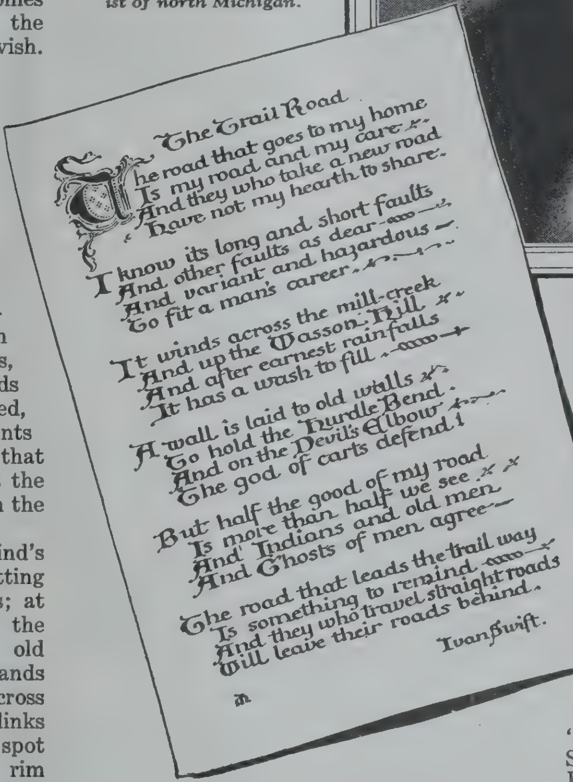
FRITTERS used to say, 'There is poetry in neckties.'
He picked neckties with a theory of color and design.
He knew haberdashers the way book bugs know where second-hand book stores are.
For a picnic he wore pink, for a fall fog day a grey blue,
And a four-in-hand, a bow, a bat-eye, each of its separate individual silk, plain or striped or spotted;
Each had its message, its poem, its reminders, for Fritters.
'I know how to pick 'em,' he used to say, 'I know the right scarf for either a wedding or a funeral or a poker party, there is poetry in neckties.'

Evangel of the NORTH COUNTRY

By ELDEN SMALL



—Portrait by O. H. Linstead.
Ivan Swift, poet and artist of north Michigan.



The Trail Road
The road that goes to my home
Is my road and my care.
And they who take a new road
Have not my hearth to share.

I know its long and short faults
And other faults as dear—
And variant and hazardous—
To fit a man's career.

It winds across the mill-creek
And up the Wasson Hill
And after earnest rainfalls
It has a wash to fill.

A wall is laid to old walls
To hold the Hurdle Bend.
And on the Devil's Elbow
The god of carts defend!

But half the good of my road
Is more than half we see
And Indians and old men
And Ghosts of men agree—

The road that leads the trail way
Is something to remind—
And they who travel straight roads
Will leave their roads behind.

Ivan Swift.

THERE are animals and birds which in the mind of man—the subconscious mind, perhaps—are invariably associated with the land or locality or the sun-quality that homes them. Instance the eagle, the camel, the Polar bear and the dancing dervish.

In much the same way, it is exceedingly difficult for me to dissociate Ivan Swift from the mental picture of a cabin buried in the tall woods of the northern Michigan country, the Little Traverse Bay section. That country *is* Ivan Swift, no more, no less, as he is it. Many years now I have known him—in city drawing-rooms, in painters' studios, in all the moods and minds of a cosmopolitan. Together we have trailed truth through the jungles of modern cities, and followed art amid the far pyramids of an imitation East. We have essayed, with varying success, to find the footprints life left in crossing this dull plain or that hilly country—or at times to pick out the way life would presently fare forward in the ever-fruitless quest of the Grail.

And yet it is impossible for my mind's vision today to see him except in a setting of greenwood and yellow beach sands; at the door of his self-created home in the Chippewa Cove borderland of the old Michigan pine country. Maybe he stands looking from his Dutch-door pane across the water to where Skillagalee light blinks in the early purple night—'like a spot welder riveting a purple island to the rim of the world.' Or it may be that within the cabin—he calls it his 'shop-home-church-forum in the big timber by the big lake'—he is at work at his easel fastening the sunrise flush to a canvas. Or it may be tendering a concession to mere human man by exercising a can opener and a skillet.

For although this north Michigan country sees Swift a few months each year, he sees it and breathes it the full twelvemonth, day in and night out, as he should and must, for he is its mouthpiece and its evangel. There is rare beauty in this summer country, and upon its bounty he was reared; there is likewise a loyalty almost as rare in the heart of Swift which chains his soul to the color and free beauty and sweet-breathed enchantment of the region which is and always must be his home.

Of the man Swift, much of the world already knows as many details as it needs or as may concern it. Of the artist Swift, hanging committees have gone down on record in various exhibitions, and folk who were selecting paintings for libraries or drawing-rooms or galleries East and West have solidly expressed their views. Of Swift the poet, much might be said, had not considerable of that already been better worded by other writers, and by editors who occasionally pay for engaging verse, and by us mere reading people who generally are compelled to settle for it, one way or another, or lose it after the first introduction.

But the real Swift is none of these, separately; rather, he is in part all of them together; and more and better than that, he is the Ivan Swift of the North Michigan country!

I know of none other who knows so well, nor so intimately, that vanishing advance agent of modern Midwest existence, the old *coureur de bois*, the picturesque habitant of the storied yesterday, with his quaint French-English and his friendly knowledge of the region and its scarce-peopled but full-crowded life lore. Swift has let his hopeful feet lead him far afield sometimes; he has painted and soldiered and learned first-hand of life under various suns and conditions and administrations. But always his course was a circle that led back to Michigan's upper lakeland. And ever he found its welcome freshly spontaneous and healing.

'Nature's fingers
Seem to play upon my strings
In minor harmonies up here—
Where shells of convents shelter
Echoes only,
And the last Indian has laid
His flints and legends
On the grave-mound of the older time.'

If you have met him in a parlor, discoursing upon something of which he may know and guess much or little with like facility and confidence, why, that is one thing. If you know him by his poems or his paintings—and I always have trouble separating them in my own silent contemplation—that is still another thing.

But the real Ivan Swift is neither of these. Rather, a clean-cut profile, an almost ascetic suggestion in rough garb—a cheery word from the doorway of 'The Lofts,' his cabin in the north woods. It is more than a cabin, because it combines many features of many different sorts of buildings. But most or many of these are by suggestion, and I cannot convince even myself what it would be like without him there in the flesh. It is an attractive picture with a sharp, unusual, dominant human note in it.

What difference where he was born, or where he studied, or what he did, or what you or I or anybody else thought of it—or him? Less than nothing, good folk, when we come to weigh real values that are not personal nor individual. For I hold that, in the final casting up, no man is merely what he is or what he has received—but rather what he has done, what he has accomplished or what he has been or has learned of life. And in some instances he is a part of a scene or chapter or picture that would be incomplete without him.

WOULD you have a glimpse of the real Swift? Let us drop in (a silly phrase that one may use in cities but should not in the great out-of-doors) at 'The Lofts.'

An inviting structure, with high gables 'for head room and air space and snowslides and squirrel tobogganing.' The ridgepole extends outward on both ends, where owls and gulls may perch, while there is a chimney built outside for no more romantic reason than to save space within. It connects with an hospitable fireplace, and fits perfectly the visible framing of old-weather timbers, joined with ligaments of mortise and tenon and peg—'to yield but not break,' as Swift explains. Good timbers, good joining, do not need covering, and they may resent it, as honest houses and dwellers may resent a deluge of partitions and drapes and cupboards. The small windows are toward the south, curtained and shutter-awninged, but the large windows offer an unobstructed view northward toward the high banks of Pisgah Bluffs and St. Peter's Point. That speaks the painter's search for working light.

As we reach for the latchstring, which is at once a brass knocker and pull, we may notice a stone, white and regular, as if man-chiseled on the wall sill, extended perhaps to support a corner joint—or maybe not. At any rate, the words scratched upon it may tell of this hermit's early coming and sometime going:

'So be it I am soon forgot of men
And laid in alien soil by stranger hands;
The pines above my head will mourn me then,
And waves intone my requiem on the sands.

Say rather this: He chose to make his friends
In wood and field, with bird and flower and tree;
Began his labor where our labor ends,
And saved—the faith in Immortality.'

Within—here's a picture as strange in this setting as might be a Fenimore Cooper Indian. Navajo rugs and wooden sabots for one who might desire to walk over stones left bare by receding lake waters, and a Naples-yellow amphora from Italy, and a brass-grill lantern swung from a rafter to remind of a thousand years of Chinese culture. Do you picture it? Then, a frieze above the shelf timber that might be the triumphal processions of Greek heroes, but which happens to be instead a string of portraits of real Hopis done in red chalk. There are such tools as the woodsman uses in the logging season.

The back door is wider than the front, 'that guests who like us not may depart in fullness as they entered in freedom,' and a wall motto says something about strife and talebearers, quoted, I think, from Solomon. But if we stay for a bite—that's quite another tale. There is the larder—a range of covered glass jars on shelves, each openly if noiselessly testifying to the state of the place in terms of food on hand. There is old English picture plate that runs back to the time of Dickens. There is a table, like the other furniture, handmade, containing the designer's idea of maximum utility with minimum display or concession to fad, and it is hinged to the wall to save the making and inconvenience of legs.

There are ladders to the open loft where, under the rafters, is the 'king's chamber' and under another light is the bookbindery with which this interesting hermit likes to intrigue the hours not otherwise invited. There are other things about the interior—sketches and partly finished pictures, a bronze or two, a bust or so, a few odd little things of this neighborhood or gathered under another sun. But these things I have set out count more particularly.

'After my years of unquietness
This house is as a candle in the dark;
But it seems a burial place of something I have known,
Of something that has been a part of me in cities,
Or something I have sensed among romping children
And the reminiscences of kinsfolk
Who pass the time in homely converse.

Somewhere, on other shores, in peace with night,
Are my fellows, content with little candles
In quietness, keeping the landmarks—
Content with a strong house of clean faith,
And removed from the light of Skillagalee
Nine miles across the water.'

Malay Pirates

(Continued from page 5)

heavy surf and the darkness, all the boats reached land without mishap. The divisions were quickly formed on the beach, and day was just breaking as the column disappeared into the jungle.

The attack was made simultaneously in several places. By dint of hard fighting the Americans succeeded at last in forcing the gate of the outer defenses. But the hardest part of the work remained.

In the center was an elevated platform mounted with several cannons. From these the defenders poured down a murderous fire upon their assailants, who were obliged to fight without shelter. All attempts to scale the platform had failed, when Lieutenants Edson and Hoff came up fresh with their troops. Taking a position between the fort and the water, they poured in an effective cross fire.

At the same time additional aid came to the Americans from a totally unexpected quarter. Some days before, Po Adam had sighted the *Potomac:* he suspected her real character and had collected a small number of his tribesmen, whom he secreted in the jungle, and awaited developments. He had a bone to pick with the Quallah Battooans also. They still held the schooner that they had taken from him the year before, and he hoped for an opportunity of regaining it.

As it happened, his schooner and two others were moored on the south side of the river as a defense for the fort on that side. This was near the place where Po Adam and his men were hidden. When the Americans made their attack on the fort, he led a surprise raid and got possession of the schooners.

The defenders of the fort were subjected to a telling fire from these batteries. It was little short of a slaughter for the men on the platform. Yet they fought to the end with savage desperation. And it was not until almost all were killed that the Americans succeeded in carrying the position. The guns were spiked and dismounted.

On the opposite side of the river was another large fort. During the attack it had kept up an annoying fire from a twelve-pounder. It was too difficult to get at, however.

Fire was now set to the flimsy houses of the town, which was rapidly reduced to ashes. The fort in the jungle, which Pinkham had failed to find, now disclosed itself by opening fire. A detachment was sent against it, and after a spirited struggle put the occupants to flight.

LARGE numbers of Malays now began collecting in the rear of the town, and Shubrick wisely decided to retire to the boats. The surf, too, was beginning to run high, making it unsafe for the boats to remain near the shore. With their dead and wounded, the Americans reëmbarked and returned to the *Potomac.*

'At 5.15,' says Downes, who remained on board his ship, 'the firing commenced on shore. Hoisted American colors.

'At 7.30 the U. S. flags were seen flying on the principal forts on shore. At 8 the whale boat returned bringing two wounded men, viz., Henry Dutcher, wounded in the thigh with a musket ball, and John L. Dubois, sea., wounded in head and arm with musket ball, and reported the death of Wm. P. Smith, sea., shot by a musket ball through the head and two or three other men wounded . . . The expedition returned from the shore having destroyed the forts and leaving the town in flames.'

The next morning he brought the frigate in closer and 'at 12.15 came to anchor within a mile of Quallah Battoo. At 12.20 commenced a fire upon the remains of the town and forts with long guns and carronades, which was continued until 20 minutes after 1. At 2 observed the forts on shore hoisted white flags, which we returned with a white flag at our main. At 5.30 got under way and stood out from the land.'

Thinking he had inflicted enough punishment on the town, Downes 'dropped down to Soosoo,' a friendly port, where he took on water and fresh vegetables. The next day a boat arrived from Quallah Battoo with a flag of truce 'bearing a message from the principal chiefs for a cessation of hostilities.'

He explained to the emissaries that the destruction of their town was in retaliation for their mistreatment of Americans and American property, and warned them against repeating the offense. Six years later, however, it was found necessary to visit punishment upon them again. The American frigates *Columbia* and *John Adams* laid Quallah Battoo in ruins a second time.

The *Potomac* then proceeded by way of China to her station in the Pacific, touching the Sandwich Islands and putting in at the port of Valparaiso. Downes made his report and his conduct met the approval of the Government.

New Year's Night in Montreal!

(Continued from page 8)

—Courtesy, Canadian National Railways.

Place d' Armes Square, Montreal.

the road, and elms arch overhead, till it seems as though you are walking down the pillared aisle of a cathedral. The gentlemen of the Seminary of St. Sulpice are still the keepers of the romance of Montreal. The old fleurs-de-lis on the seminary down on Notre Dame Street beside the great church are a promise in stone that romance shall endure.

On a June afternoon I stopped to watch a little priest who was wandering alone with his thoughts on the lawns. His slow, meditative walk ended beside a flower bed. For a long time he regarded the bright blossoms; then kneeling down beside one he blessed it and touched it tenderly with his hands.

COMMERCE is an odd master. In one respect—the fur trade—it has written romance deep in Montreal. The Northwest Company, the great rival of the Hudson's Bay Company until the two united in 1821, was built by such old Montrealers as McTavish, Sir Alexander Mackenzie and the Frobishers. It was this old company which established the modern commercial greatness of Montreal.

Eleven hundred and twenty canoemen went up the Ottawa for the great loads of rich furs. Long before the Lachine Canal was built they had deepened the 'Little River' which still runs beneath Foundling Street. Up this meandering stream around the rapids they dragged their canoes.

The annual leave-taking of the great brigade was an event of dash and color. On that day Montreal moved to Lachine. Wives, daughters, children and sweethearts lined the quay. In fancy you may see them. Each voyageur of the chief factor's brigade wears a jaunty feather in his cap and bright sashes splash against the creams and tans of the birch bark.

Floating idly past the isle in a canoe some summer afternoon, you may see reflected in the still waters the venerable ivy-covered ruin of 'Château Brilliant,' which still clings to the edge of the late Sir Edward Clouston estate some twenty miles from Montreal. A mile downstream is a tiny stone cottage smothered in bright blossoms. In it there lived years ago the Irish poet, Thomas Moore, who was so struck with the rhythm of a chanson of the old voyageurs that he wrote the 'Canadian Boat Song.'

In the autumn the voyageurs came back down the river to Montreal with the furs which were stored to harden and were not to be sold before another season. Down at the lower end of McGill Street near the water you may find the long, low warehouses. Under the little gable of one of them there is a crusted pulley wheel by which the bales of furs were hoisted to the loft in the days of the old Northwesters.

Today when you climb Peel Street hill and enter the mountain park, you will see an obelisk marking the grave of Simon McTavish, the father of the Northwesters. Almost on this spot he was engaged in 1804 in erecting one of the hospitable mansions which the fur traders loved to build along the slopes of the mountain overlooking the city. His death stopped the work on the villa and for half a century the ruins were the dread of children, and were known as McTavish's 'Haunted House.' Walls massive as a fortress now inclose the ample grounds and on the site of the haunted house stands 'Ravenscrag,' the residence of the late Sir Hugh Allan.

It is a place where one feels the long-settled dignity and proudly concentrated independence of an ancient family. And I like to think fickle fate erected this gray stone villa on the mountain as a reminder of those which once were the homes of the old fur traders who formed the 'Beaver Club.' There are pieces of silverware and glassware, jealously guarded, in the city which were formerly the property of this ultra-exclusive club, the approval of which gave entry to the most exclusive society of Montreal.

As you remember, Jacques Cartier, the St. Malo navigator, found himself on the great river of Canada on the tenth of August, 1535. August tenth being sacred to St. Lawrence, Cartier gave the river that name. Then he sailed on, landed and visited the Indian village which four centuries ago occupied the spot of land in Montreal adjoining the grounds of McGill University on Sherbrooke Street.

Last year I climbed a narrow, winding staircase to the roof of a building in the business heart of Montreal and entered a broadcasting room presided over by a dark-eyed, intensely active young man with a thin, eager face. He was Jacques Cartier, a direct descendant of the old navigator.

When Jacques was not announcing, first in French and then in English, we chatted. 'I had an odd experience in Toronto recently,' he said. 'An old man, an historian I should judge, came up to me and said: "Pardon me, but I can't help remarking how closely you resemble the pictures of Jacques Cartier."

'I handed him my card. The old gentleman took it and nearly fainted when he saw the words "Jacques Cartier" on it.'

I suppose I may as well tell you I hurried to have a look at an old oil painting of Jacques Cartier, and the similarity was startling.

Montreal is a city of haunting memories, but it is also a city of festivities and merriment. Both are part of the New Year's season—the Old and the New.

—Herbert.

A composition of man and nature in Park Lafontaine, Montreal.

CAN YOU TELL ME?

Question. Can you tell me what became of Adam J. Slemmer, who with only eighty-one men held Fort Pickens several months for the Union troops against heavy odds during the Civil War, thus preserving the key to the Gulf of Mexico? Did he receive any promotion or recognition for his services?

Answer. Slemmer was made major of the 16th Infantry in May, 1861; was inspector-general of the department of the Ohio, and participated in the siege of Corinth and the relief of Nashville, Tennessee. He became brigadier general of volunteers in November, 1862, and took an active part in the battle of Stone River on December 31, 1862, where he received wounds so severe that his field service was practically ended. On February 8, 1864, he became lieutenant colonel of the 4th Infantry, and in March, 1865, he won the brevets of colonel and brigadier general for gallant conduct. General Slemmer left the volunteer service in August of the same year and spent the rest of his life in command at Fort Laramie, Kansas, where he died of heart disease on October 7, 1868.

* * *

Q. Can you give me any information regarding Charles Mason, who was graduated in the class of 1829 at West Point?

A. Charles Mason was born at Pompey, New York, in 1804. He was graduated from West Point Military Academy in 1829 and assigned to the engineer corps; he resigned from the army on December 31, 1831. He was admitted to the bar in 1833, practising in Newburg, New York, and in New York City. He moved West, settling at Burlington, Iowa; and when Iowa Territory was organized in 1838 he was appointed its chief justice. He died in 1882.

* * *

Q. Will you tell me who were Ethan Allen's parents? Did he have any children?

A. Ethan Allen's parents were Joseph Allen, a farmer, and Mary Baker; he was a descendant of Samuel Allen, one of two brothers who emigrated from England to the colonies and in 1632 settled at Chelmsford, Massachusetts. Ethan Allen was married in early life to Mary, daughter of Cornelius and Abigail (Jackson) Brownson, whose death probably occurred in 1783. In 1784 he was married to Mrs. Frances Buchanan. By the first marriage he had one son, who died at the age of eleven, and four daughters, of whom two died unmarried, one married Samuel Hitchcock and became the mother of General E. A. Hitchcock and one married Eleazar N. Keys. By the second marriage he had one daughter, Fanny, who entered the sisterhood of the Hôtel Dieu at Montreal; and two sons, Hannibal and Ethan Allen, the latter the father of Colonel Ethan Allen of New York.

Q. Will you please give me the national flowers of some of the various countries?

A. The national flower of England is the rose; of Scotland, the thistle; of Ireland, the shamrock; of Wales, the leek; of France, the fleur-de-lis; of Spain, the pomegranate; of Germany, the cornflower or *Kaiserblume;* of Mexico, the nopal cactus, or prickly pear. The national flower of Japan is the chrysanthemum, but from early days there have been two royal crests in Japan; one is the paulownia tree, which is seen only on the seals of the Emperor's family; the other, the chrysanthemum, is used for all governmental symbols outside the palace. The lily or lotus is the sacred flower of Egypt as well as of India.

* * *

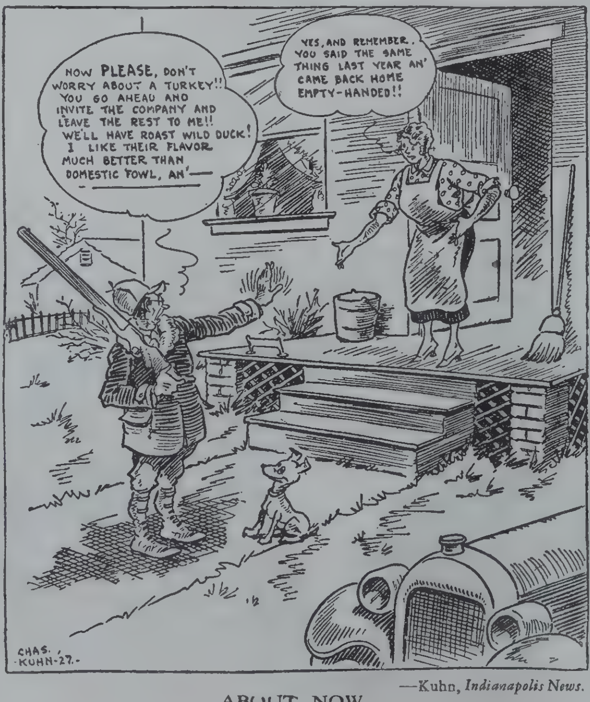
Q. What does it cost to print and engrave the various forms of paper currency?

A. The cost of the paper, engraving plates, printing and finishing the currency is as follows: United States currency, \$.0082 a note; Federal Reserve notes, \$.0089 a note; National Bank currency, \$.0145 a note.

* * *

Q. Why is gold and silver money notched on the edges when nickels and pennies are not?

A. To insure constancy in the weight of the coin it is necessary to protect it against clipping and against unnecessary wear and tear. The notching, or reeding, of the edge of a coin shows at once any attempted clipping. It is hardly thought likely that any attempt would be made to clip coins where the metal is of so low an intrinsic value as that in nickels and pennies.



NOW PLEASE, DON'T WORRY ABOUT A TURKEY!! YOU GO AHEAD AND INVITE THE COMPANY AND LEAVE THE REST TO ME!! WE'LL HAVE ROAST WILD DUCK! I LIKE THEIR FLAVOR MUCH BETTER THAN DOMESTIC FOWL, AN'——
YES, AND REMEMBER. YOU SAID THE SAME THING LAST YEAR AN' CAME BACK HOME EMPTY-HANDED!!
CHAS. KUHN-27.

—Kuhn, *Indianapolis News.*

ABOUT NOW.

Q. Who was Charlotte Corday?

A. Marie Anne Charlotte d'Armont Corday, the assassin of Marat, was a French noblewoman by birth. She sympathized ardently with the cause of the French Revolution in its earlier phases; but when the fall of the Girondists ushered in the Terror, she swung immediately to the opposite pole. She became convinced that Marat and Robespierre were the enemies of France, and she determined to save the nation by murder. Telling her father she was bound for England, she journeyed to Paris on July 1, 1793. Twice delayed, she found Marat at last on July 13 at his house. He had asked that morning in the *Ami du Peuple* for 200,000 heads, and Charlotte told him she could give him those of the Girondists at Caen. As he was setting down the names she uttered, she drove a knife into his heart. Marat died immediately. The girl was captured, brought for trial, and speedily condemned, dying calmly on July 17, 1793.

* * *

Q. Is it lawful to elect a noncitizen as president of an incorporated club or society?

A. Unless the by-laws of the society expressly forbid it, there is no reason why a noncitizen should not be so elected.

* * *

Q. What states, if any, grant a divorce solely on grounds of insanity?

A. Divorce is granted for insanity in the following states under the described conditions—Alabama: confinement in insane asylum for twenty years, provided insanity is incurable. Delaware: marriage may be annulled for insanity and lunacy. Georgia: mental incapacity. Connecticut: when both husband and wife are residents, if either has become incurably insane and has been legally confined in a hospital or asylum for at least five years next preceding date of bringing complaint. Hawaii: incurable insanity (three years or more). Iowa: insanity or feeblemindedness; marriage may be annulled if insanity existed at time of marriage. Idaho: insanity. Mississippi: insanity existing at time of marriage. New Jersey: marriage may be annulled for idiocy if it existed at time of marriage. North Dakota: insanity; party having been inmate of state institution for five years; no divorce for insanity to be granted until thorough examination by committee, all of whom must agree that insanity is incurable. The marriage may be annulled if insanity existed at time of marriage. South Dakota: marriage may be annulled if insanity existed at time of marriage. Utah: permanent insanity. Washington: at the court's discretion in case of incurable chronic mania, or dementia, for five years or more, while under confinement by order of a court of record. West Virginia: marriage may be annulled if insanity existed at time of marriage.

The Lincolns in Their English Home

(*Continued from page 7*)

—Ewing Galloway.

Gate in the old wall of Lincoln, England.

is Boston, which through its intimate relation to New England immigration gave name to the chief city in Massachusetts. In the same county is Willoughby, home of Captain John Smith of Virginia fame. In that county also is Gainsborough, site of George Eliot's *Mill on the Floss,* famous also as the home of old King Canute, and the place where Sweyn of Denmark was killed and where many centuries later Cromwell fought. There are many places hereabout of deep interest to Americans.

In this picturesque and historic county the name of Lincoln as a surname arose. Indeed, there must have been a time when everyone living in the county was 'de Lincoln,' whether definitely so called or not. In the nature of the case, here, sooner than elsewhere, the possessors of that name had to be distinguished from each other and took other names. The earls of Lincoln and the bishops of Lincoln almost alone retained it.

The first recorded use of the place-name *Lincoln* as a family name appears in the *Domesday Book* in 1086. Alfred de Lincoln was a Saxon by birth, but his lands were saved from confiscation by his marriage to a Norman lady.

Although it is practically certain that the family name of Lincoln originated in Lincolnshire if not in Lincoln city, that county and town would appear to have been among the earliest from which the family name disappeared. The three volumes of Lincolnshire pedigrees, edited by A. R. Madison, compiled for the publications of the Harleian Society and published in 1902-04 and 06, contain the name of no Lincoln family. *Mr. Hasting of the Time of Lincoln*, by T. H. Allen, in two volumes, 1834, has a list of subscribers, with no Lincolns among them.

Perhaps the reason for the disappearance of the name from the locality of its origin may be explained on the theory that there of all places it lacked any element of distinction. Every family in Lincolnshire was a Lincoln family, according to the free manner of choosing or accepting names of location as family names.

We pay our chief respects to Lincoln as the original home of the Lincolns, but we must seek elsewhere for anyone of that name whom we can connect even remotely with a migration to America, there to become of note through their possible relation to Abraham Lincoln.

There is no Lincoln parish in Lincolnshire. But the name survives in the city which is the county's capital and in the diocese whose enduring visible monument is the cathedral; and those who, scattered over the English country, now bear this surname carry a title as old as that of Julius Caesar.

The name of Lincoln as belonging to families appears early in England in different counties, mainly in the eastern part of England in the proximity of Lincolnshire. In Norfolk we find it with greatest frequency, and it is from that county that it came to America.

Norfolk, like Lincolnshire, is comparatively level country. There one may see in process the evolution through which the fens of Lincolnshire passed. It is a county of meadows and of shallow lakes, the latter known as 'broads.' The Norfolk Broads are lakes of two to five hundred acres each in size, the total water area being about five thousand acres. The broads are connected by narrow and sluggish rivers, of which the Bure with its tributaries is chief. Wide expanses of reed and marsh adjoin these shallow lakes, which are popular among hunters, fishermen, and artists. There is no crag nor torrent, but there is abundance of moor and fen.

Thirty of the 101 passengers of the *Mayflower* came to America from Norfolk.

The Puritan movement was strong in Norwich and in all the region about; it was with their Puritan minister, the Reverend Peter Hobart, that the Lincolns made their migration from Old Hingham to New Hingham.

Lincoln Cathedral, Lincoln, England.

We journey about fifteen miles from Norwich to Old Hingham. It is a sleepy but attractive little hamlet. Its most picturesque feature is, of course, its Church of St. Andrew. It dates from 1316, and is of the Decorated Style, perhaps the finest example of that style in East Anglia; it is most attractive in its setting. There are not a few Lincolns buried in and about it. In the nave is a bust of Abraham Lincoln, the gift of Americans, presented on October 15, 1919, by the Honorable John W. Davis, then ambassador at the Court of St. James.

It is not enough for Americans who visit England to see London only; there are many places associated with American tradition, and one is the Lincoln region.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S PAGE this week discusses The Advance of the World.

* * *

Concerning Julian Hawthorne's article on his sister Una, appearing in this issue, he writes as follows:

'Of my father, Nathaniel Hawthorne, and his Concord friends I have told enough, but nothing of his eldest daughter, Una. She died in her young womanhood, unknown to the world; but she was a powerful element in the lives of those who knew her. Her father's love for her was very deep, partly because she was his first child, partly because of their singular mutual understanding and sympathy; and partly because she, at the threshold of womanhood, was afflicted by a sickness—the so-called Roman fever—from which she never entirely rallied, though regaining comparative health. But the long-drawn anxiety which her father underwent told heavily upon him, and he died twenty years before his time, in 1864.

'Una's story is a beautiful one, and to many in this generation it will come as a wonder and a help. Great strength was combined in her with extreme delicacy and sensitiveness. She was full of a genius allied to her father's, but without adequate ability to express it in writing or in art. Its effect in her nature and character was all the more potent. She was noble and profound within; without, cheerful, playful, full of fascinating humor. In her, the father's and the mother's qualities were blended, so that she was the true flower of a marriage exceptionally happy.' (p. 1)

* * *

Countless happy boys have been celebrating these Yuletide festivities amid pleasant home surroundings under the kindly guidance of their parents. Life seems rosy for them, indeed; but how about the Jerrys and the Tims from whose lives parental care has disappeared. They, too, are part of society and as such have a potential value. How one man, Floyd Starr, is leading a noteworthy movement to secure these lads for productive citizenship is described by Pierce Cumings. (p. 3)

* * *

Samuel Lincoln and his wife Martha had eleven children. Samuel crossed the Atlantic in 1637, apprenticed to a Norwich family; and settled eventually in New Hingham, Massachusetts. Smallpox took Samuel in 1690, and three years later his widow followed him. They were the first American ancestors of Abraham Lincoln. Doctor Barton has brought to light numerous interesting side lights on the Lincolns in their English home, Old Hingham. (p. 6)

* * *

The Yukon seems to have lost none of its spell and lure. 'One day as we climbed the mountains back of our cabin, the sun lifted the clouds, and there before us lay the entire upper reach of the Yukon Valley. The pass lay to the south, Lake Bennett could be seen downstream. Frazier lay below us, and to the north stretched range after range of high mountain peaks, snow-capped for the most part. The region is a paradise for the botanist, the lover of animal life, the seeker after mountain air, the amateur photographer, the camper and hiker . . .' Thus the mighty river valley seemed to James Clyde Gilbert and his son Jimmie, as they sought the Arctic grayling in its waters. A description that will make the reader want to follow the same trail! (p. 12)

* * *

New Year in China starts February 2 and ends fifteen days later. It is the only legal holiday for one-fourth of the human race, and as a festival it has come down from antiquity. Although many of the Chinese do not now believe the customs literally, they practise them for the sake of tradition. Identical paper gods are pasted in practically every home throughout the length and breadth of China at New Year. Several of them are depicted in this issue. (p. 16)

* * *

Centuries ago an alien people arrived in Scotland and settled near Edinburgh. Tradition has it that they were 'heretics' who had fled from Flanders to escape persecution by Charles V, Emperor of Spain. Their costume today much resembles that worn in the Low Countries. Their customs also recall those of the Flemish women; and their complexion is as fresh and rosy as that of their Dutch sisters. By trade they are fisher folk, and the fishwives of Newhaven are an interesting feature of Edinburgh life. (p. 20)

The poetry of Carl Sandburg has a flavor and rhythm quite delightful in its simplicity and homely truth. Sometimes its simplicity is deceiving, for the truth lies deep. The poem, 'Neckties,' in this issue of THE DEARBORN INDEPENDENT, as well as 'The Scrubwoman' in the Christmas number, are both typical of Sandburg's mellow thought and rounded style. (p. 26)

* * *

Ivan Swift, of Detroit, is truly an evangel of the North Country. He portrays the wild ruggedness of the Mackinac shore, breathing its freshness in his poetry and depicting its wildness on his canvas. His articles recently in THE DEARBORN INDEPENDENT reflect his quaint philosophy and his love for the native North. Elden Small has described Swift in the words of one who knows the artist's soul intimately. (p. 27)

REMARKS BY OUR READERS

Philadelphia, Pennsylvania.

I have just read your editorial on the tomb of the Unknown Soldier, published in your issue of December 17. Such a protest should have been sounded long ago. We seem to commercialize everything sacred in America, chiefly through publicity seekers who want only an excuse to have their pictures circulated. Such a practice if continued could only result in wearing away all the respect we feel for our shrines.

(REV.) F. M. BARDEN.

Portland, Oregon.

All told, we take about thirty magazines, including some of the oldest and what are generally considered to be the best in the United States, and of all of these, or any other magazines we have bought, we have liked THE DEARBORN INDEPENDENT best.

E. P. H.

Toronto, Ontario.

Congratulations on the paper you are turning out. In your most interesting article on Westminster Abbey, Wm. T. Stidger makes an error in using the word 'Home' instead of what is on the monument, i. e., 'House.'

'They buried him among the Kings because he had done good toward God and toward his House' is the correct quotation.

God's House is the House of David which has been seated on the throne of Israel, in the Isles, since the House and throne of David was removed from Palestine. Jehovah having promised this House existence so long as the sun and moon were in the heavens, the protectors of that God-given God-upheld throne and House were doing good toward God and toward His House, that is, the throne set up by God who selected David and his seed to rule over it forever as recorded in the Eighty-Ninth Psalm.

I thought perhaps your readers might be interested in this correction which gives a higher spiritual value than a man fighting for his 'home.' He was fighting for the House set up and held up by God Almighty. When emperors, kings and thrones were toppled over by the dozen as a result of the Great War, the God-set-up throne is more sure on its God-given foundation where it will 'stay put' until He comes whose right it is to rule over Israel in the Isles and her numerous offspring nations of which the USA was the first to set up on their own foundation.

W. G. MACKENDRICK,

MEDITERRANEAN BORDER LANDS

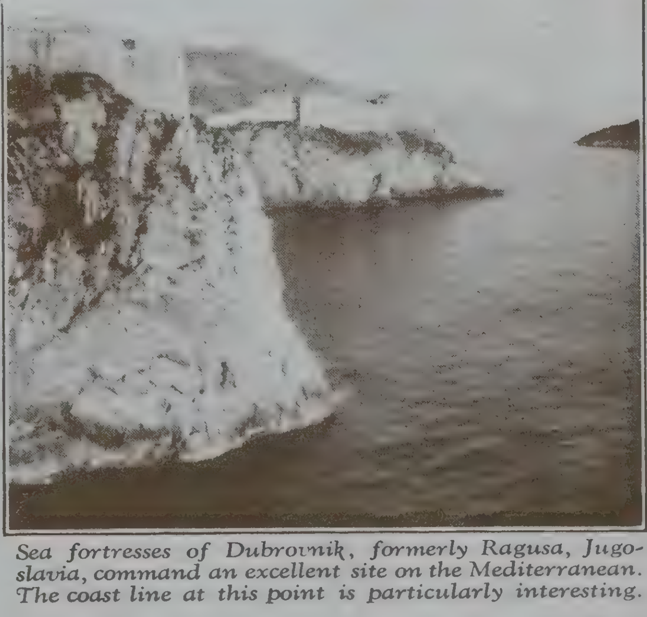
Historic Landmarks *and* Rocky Shores *Along* Blue Waters

Royal Vesuvian Observatory on the slopes of Mt. Vesuvius is equipped to measure the pulse of the volcano, and to take its temperature.

—Publishers' Photo Service.

Excellent view of Monaco and Monte Carlo, looking across the yacht basin toward the viaducts across the gorge of St. Devote.

Cliffs at Sorrento, Italy, rise 200 feet in height. The town is famous for its cliff hotels overlooking the Mediterranean, which command a beautiful view.



Sea fortresses of Dubrovnik, formerly Ragusa, Jugoslavia, command an excellent site on the Mediterranean. The coast line at this point is particularly interesting.

THERE is a time in every man's education when he arrives at the conviction that envy is ignorance; that imitation is suicide; that he must take himself for better or for worse as his portion; that though the wide universe is full of good, no kernel of nourishing corn can come to him but through his toil bestowed on that plot of ground which is given to him to till. The power which resides in him is new in nature, and none but he knows what that is which he can do, nor does he know until he has tried.
